THURSDAY, JANUARY 4, 1906.

No. 2979.

## The Year at Home and Abroad

### The Course of National Affairs

In the United States the past year was one of great prosperity. We have already published (on the 21st ult.) a review of agricultural, industrial, and commercial conditions in 1905. There was but little national legislation, and no general election was held. But the elections of November in a few States and several large cities were exceptionally interesting and significant. President Roosevelt's popularity was increased by his successful efforts for a peace agreement between Russia and Japan, by his public addresses, and by the leading features of his executive policy. Public attention was continually drawn to his acts and opinions, and the Senate's disagreement with him excited much interest in the first and the last months of the year. The chief events in the current history of the Cabinet were the death of Mr. Hay (in July), the appointment of Mr. Root in his place, the retirement of Mr. Paul Morton (whose successor is Mr. Charles J. Bonaparte), and the President's remarkable public defence of Mr. Morton against charges arising out of his alleged connection with the Atchison Railroad Company's violations of law. Mr. Roosevelt appears no longer to desire a revision of the tariff, but he persists in earnestly striving to obtain legislation for the federal supervision and regulation of railway freight rates. The tendency of the Democratic party, so far as this is shown by the party press and by addresses at Jefferson Day banquets and on similar occasions, is, for the majority, in the direction of government ownership of the means of interstate transportation and

communication and of the municipal ownership and operation of street railways and of gas and electric lighting plants. The conservative element, represented by Judge Parker and his friends, appears to be a minority of declining influence. Mr. Bryan is making a journey around the world. He has repeatedly commended Mr. Roosevelt's attitude toward the railroad companies and other great corporations, but at the same time has opposed such centralization as would deprive the States of the powers which they now exercise.—In the last months of the session of Congress which ended on March 4th the record of legislation was one of failure rather than of accomplishment, so far as new subjects for action were concerned, owing chiefly to the attitude of the Senate. No new States were made, the House bills concerning railroad rates and the Panama Canal Commission came to nothing, and the tariff on imports from the Philippines was not reduced. Opposition to the President's railway policy was quite manifest in the Senate, where (in the regular and also in the special session) his action with respect to certain treaties was disapproved. Arbitration treaties with eight European nations were so changed, by a vote of 50 to 9 (to require the submission to the Senate of every case for arbitration), that the President laid them aside, declining to ask the eight nations for an approval of the changes made. A commercial treaty with Newfoundland was so changed, in the interest of protection, that Newfoundland rejected it with indignation and proceeded to retaliate. No action was taken upon the important

treaty with Santo Domingo, which followed the memorable "protocol" of January 20th, the negotiation of which had excited resentment in the Senate. At the beginning of the new session, in December, the Senate was in a resentful and hostile mood, severely criticising the management of Panama Canal affairs and still opposing the treaty with Santo Domingo, as to which the President's position was affected to his disadvantage by a new revolution in the little republic. —Senator Mitchell, of Oregon, was convicted of violating the law in connection with certain land claims, and sentenced to be imprisoned. He died in December. Senator Burton, of Kansas, was convicted a second time, and given six months in jail. For Representative Williamson, of Oregon, (land frauds), the sentence was ten months. Oregon's other Representative, Mr. Hermann, is soon to be tried for a similar offence. These convictions (Senator Burton's excepted) are a part of the fruit of Secretary Hitchcock's attack upon land thieves, hundreds of whom have been indicted. Testimony taken in the life insurance investigation has caused a movement in New York designed to procure the resignations of Senators Depew and Platt.—The elections of November 7th indicated a popular protest against boss rule, machine dictation, and corruption. In Maryland, where Senator Gorman had insisted upon making his Constitutional Amendment for disfranchising negroes the only issue, the Amendment was rejected. Ohio elected a Democratic Governor, as a protest against certain liquor legislation, machine dictation, and the rule of a Republican boss in Cincinnati. This boss had been denounced by Secretary Taft in a campaign speech. In Pennsylvania a Democratic Treasurer was elected by a plurality of 88,000, owing to the reform movement in Philadelphia and to proof of ring domination in the State Government. Although fusion of the opponents of Tammany in New York city was prevented, Mayor McClellan, renominated, had a plurality of less than 3,800, on the face of the returns, over William R. Hearst, candidate of the Municipal Ownership League. Having failed to obtain a recount, Mr. Hearst, believing he was

elected, will attack the Mayor's title by *quo warranto* proceedings. Mr. Hearst's strength at the polls lay mainly in a popular protest against the influence of franchise corporations in the city government and in a demand for municipal control and operation of new subways.

### The President's Policies

Many important events of the year were so intimately related to the President's declared policies that our brief references to them may be grouped under this head. Most memorable was his movement for a peace conference between Russia and Japan, in June, followed by a peace agreement at Portsmouth at the end of August. Mr. Roosevelt's views upon a great many topics were set forth in numerous speeches during his two long tours. In the first of these, beginning in April, he went to San Antonio, enjoyed there a Rough Riders' reunion, and then spent a vacation in hunting wolves in Oklahoma, and bears in Colorado. In the second he passed slowly thru the seaboard Southern States, visited Alabama and Arkansas, and ended his land journey at New Orleans, then just recovering from the epidemic of yellow fever. This tour, with its speeches, commended him to the South, whose valor in the Civil War he praised, saying he was half Southern and pointing to his two uncles who served in the Confederate Navy. Great crowds of people greeted him in all the cities, and he was received with very notable expressions of admiration and friendship.—Altho no Federal law has yet been enacted in accord with his railway policy, public discussion and the prosecution of rebaters has caused the companies (in December) to agree at a conference that violations of the law shall be detected and prevented by their own action. Prominent roads have also ceased to give passes.—Following the Garfield report upon the Beef Trust, the five great beef companies and eighteen of their officers were indicted, in July, and the trial of them is now about to take place. The attack of Kansas upon the Oil Trust has led to an investigation of that Trust by the Government. Suit has been brought against the combination of railroads that control all the facilities for

crossing the Mississippi at St. Louis.—Both the Santo Domingo “protocol” and the subsequent treaty were negotiated because, in Mr. Roosevelt’s opinion, such agreements were required by our support of the Monroe Doctrine. This he has repeatedly explained in long addresses and messages. It remains to be seen how the agreement will be affected by the new revolution now in progress. Mr. Roosevelt had said that revolutions would be prevented by the arrangement for the collection and division of the revenue by American agents.

#### The Panama Canal

At the beginning of the year the House, at Mr. Roosevelt’s request, passed a bill abolishing the Panama Canal Commission, then not quite a year old, but the Senate refused to concur. Whereupon he removed the seven Commissioners and so filled their places that control was exercised by an executive committee of three, these being Chairman Shonts, Judge Magoon (Governor of the Zone) and Chief Engineer Wallace. The last-named soon retired, under circumstances which led Secretary Taft to denounce him as “a deserter.” Red tape, fever and inefficient management had made the employees on the Isthmus discouraged. There has been a change for the better, but almost no digging has been done for several months, substantially all of the 17,000 men being employed in sanitary work, in building houses and otherwise in preparing for actual canal work. In December the Senate attacked the salary account, complained because Mr. Shonts retained the presidency of a railroad company, and severely criticised the salary and duties of the secretary, Mr. Bishop, one of Mr. Roosevelt’s trusted friends. Mr. Roosevelt then promptly nominated Mr. Bishop to be a Commissioner, and the Senate does not regard this as a conciliatory act. By a vote of 8 to 5, the Advisory Board of Engineers decided in favor of a sea-level canal, but it is understood that Mr. Roosevelt and a majority of the Commission prefer a canal with locks. The Attorney-General holds that the eight-hour law must apply, altho this will increase the cost of the work and also the time required to complete it.

#### Downfall of Philadelphia’s Ring

A corrupt ring undertook, in May, to extend for seventy-five years the United Gas Improvement Company’s lease of Philadelphia’s gas works, agreeing for \$25,000,000 to surrender more than \$100,000,000 of prospective revenue (together with an approaching reduction of price to 75 cents) and providing for a rate of 90 cents to 1980. The anger of the people compelled a withdrawal of the lease after the Councils had approved it by a very large majority. Thus was started a memorable and successful revolt against municipal misrule, and the leading figure in this revolt against a Republican ring was the Republican Mayor, Mr. Weaver. Employing eminent counsel, he attacked the thieves, took the police and the public works out of the hands of their agents, uncovered one job after another, and so completely exposed their rascality that in November the ticket nominated by the Republican organization (which they controlled) was defeated and the Reform party’s nominees were elected by a majority of 43,000. This movement in Philadelphia, together with disclosures as to deposits of State funds in favored banks for the use of politicians (as in the case of the broken Enterprise Bank), caused the election of a Democratic State Treasurer by a plurality of 88,000. After the election Governor Pennypacker, who had opposed the Mayor and approved ring bills designed to deprive him of his powers, called a special session of the Legislature to undo his own work and promote reform. The leader of the ring in Philadelphia was Insurance Commissioner Durham, and the ring’s most profitable operations were in connection with the new filtration beds and new boulevards. Its power had been obtained and kept chiefly by means of wholesale fraud and much intimidation at elections. On the voting lists, out of a total of 375,812 registered names, 60,083 were found to be fraudulent.—Judge Edward F. Dunne was elected Mayor of Chicago, in April, upon a platform calling for the immediate municipal ownership and operation of the street railways. His plans for such ownership and operation have been rejected by the City Council, which is now inclined to make

a new agreement with the railway companies, giving them a franchise for twenty years, upon condition that they reconstruct their lines and pay the city by percentage rates that in twenty years will yield about \$45,000,000.

### The Philippine Islands

During the year there was fighting in several provinces. General Wood exterminated Pala's band of outlaws in Jolo, killing about 500 of them. In Mindanao, the insurgent chief, Datto Ali, was slain. The fanatical Pulajanes of Samar were subdued. Large bands of ladrones in the Luzon provinces of Cavite and Batangas were so troublesome that martial law was proclaimed there in February. In the course of time, however, 300 of these bandits were killed, others were imprisoned, and peace was restored. The Government has possession of all the lands of the friars. Disputes as to the Dominicans' title were settled, and they received about \$3,500,000. Having invited bids for 1,200 miles of railroad, under an offered guarantee of construction bonds, the Government received bids for 800 miles, but rejected them in order that it might advertise again with some change of specifications. The administration of Governor Wright has not been wholly satisfactory, because, it is said, his views as to questions of race superiority have not commended him to the people. He is now in this country, and it is reported that he will be succeeded by Commissioner Smith. Secretary Taft visited the islands in August, with a large party of tourists, among whom were many Congressmen and Miss Alice Roosevelt. Before arriving at Manila they were in Japan, where they were entertained by the Emperor with marks of distinguished favor. Before returning to the States Miss Roosevelt was for a time the guest of the Dowager Empress of China and the Emperor of Korea. Several of the Congressmen were led by their observations to change their opinions and support the Secretary's legislative projects for the benefit of the islands. He explained in public addresses that the President's policy was to retain the islands until the capacity of the people for self-government should be developed. This would require at least

one generation. He asks Congress to remove all our tariff duties on Philippine products, sugar and tobacco excepted, making those one-quarter of the Dingley rates. In September a typhoon of great violence swept over the islands, sinking ships, killing many persons, and causing a loss of \$5,000,000 in the hemp-growing districts.

### Labor Questions

At the beginning of the year the Fall River cotton-mill workers' strike, then six months old, came to an end thru the mediation of Governor Douglas, who undertook to measure the margin of profit which should in the future call for an increase of wages. In March a strike on the New York subway and elevated roads was a failure at the end of three days, owing to the employment of strike-breakers and to the repudiation of the local union's action by the national officers of the organization. The strikers had broken their agreement with the company. The most disturbing and disorderly labor controversy of the year was the strike of the teamsters in Chicago, beginning in May and continuing for three months. It was marked by much violence, but Mayor Dunne declined to ask for troops, relying upon the police and about 6,000 sheriff's deputies and special patrolmen. Nineteen persons were killed and several hundred injured. Many union officers were indicted. At the close of the year five of these were convicted, together with two ruffians they had employed to make a murderous assault upon a workman named Carlstrom, who died of his injuries. The pay for the work was \$15. This strike slowly yielded to public opinion, after the address of President Roosevelt to a committee of union men, in Chicago (on his return from the mountains), an address in which he emphasized the necessity of preserving order and suppressing mob violence. Investigations by a grand jury disclosed much evidence of strike corruption during recent years, employers as well as union officers sharing in it. At the end of July the teamsters gave up the fight. The strike had originated in a sympathetic movement against one firm on account of the discharge of twenty gar-

ment-workers. At the end of the year a contest was impending between the Typographical Union and employing printers in the large cities owing to the union's demand for an eight-hour day.—By a vote of 5 to 4 New York's law for a ten-hour day in bakeries was declared unconstitutional; but the same court sustained Missouri's law for an eight-hour day in mines.—Wages were increased voluntarily in the woolen factories and great steel mills.

#### Cuba and Porto Rico

Increasing prosperity has enabled the Cuban Government to give the soldiers of the revolution \$29,000,000 in addition to the \$35,000,000 already paid. President Palma, who had joined the Moderate party, was re-elected in December. There was no opposition ticket. The campaign was marked by some disorder. Gen. José Miguel Gomez, nominated by the Liberals, withdrew and came to New York, asserting that intimidation and fraud had made it impossible to hold a fair election. Just before the election of registration boards, in September, bombs were found in the rooms of Enrique Villuendas, a prominent Liberal Congressman, at Cienfuegos, and in a controversy caused by the search for them several persons were killed, among them Villuendas and the Chief of Police. This affair is to be investigated by Congress. The Liberal candidate was Governor of Santa Clara, and in that province the City Hall at Vueltas had been burned by his supporters, apparently to prevent an examination of municipal records by the national Government. Gen. Maximo Gomez died in June. A commercial treaty with Great Britain, not yet ratified, is not acceptable to our Government. American settlers in the Isle of Pines have elected Territorial officers and set up the claim that the island belongs to the United States. This claim is disproved at Washington, where the treaty which definitely cedes the island to Cuba has not yet been ratified. Havana has had a small epidemic of yellow fever, beginning in November.—A non-partisan convention of all the municipalities in Porto Rico asks for a Senate of elected members, empowered to confirm or reject the Governor's nominations. Bishop

Van Buren says that such a change would lead to the support of Catholic schools by the Government. President Roosevelt recommends that the islanders be made American citizens.

#### The Russo-Japanese War

The greatest event of the year has been the conclusion of the struggle between Russia and Japan in Manchuria. At the beginning of the year the Baltic fleet was on its way toward the Pacific to join the fleet in Port Arthur, then closely besieged, and the two armies confronted each other along the Sha and Hun rivers, south of Mukden. On New Year's Day General Stoessel telegraphed the Czar that he was obliged to surrender Port Arthur, and on the following day capitulated to General Nogi. At first admiration for his heroic defense was expressed all over the world, but later revelations indicate that the fortress was better provisioned and in less danger of destruction than was supposed. The Russian ships were sunk in the harbor, but were so little disabled that they have all been since raised and put into active service by the Japanese. By the surrender General Nogi's veterans were released for action in the north. By March both armies were prepared for what was felt to be the decisive battle of the war. General Kuropatkin had chosen a position on the north side of the Hun river just south of Mukden, the ancient capital of Manchuria, and had fortified it with all the skill of modern military science. The Japanese made an energetic attack upon his left, then threatened to turn his right, and finally, after two weeks of fighting, broke thru in the center, scattering the troops and taking many prisoners. The Russians now, under General Linevich, retired to Harbin and Kirin, while on the railroad their outposts held Chang-Chung Pass. The Japanese rested on their arms and did not attempt to drive them from this point, which, therefore, in the conclusion of peace, became the dividing line between the Japanese and Russian spheres of influence. On April 8th the Baltic fleet, under Admiral Rojestvensky, passed thru the Strait of Malacca, and, after spending a month on the coast of French Indo-China, went north and at-

tempted to pass between Japan and Korea thru the Strait of Tsushima on the way to Vladivostok. Here Admiral Togo was waiting for him, and on May 27th and 28th was fought in the Sea of Japan the greatest naval battle of all history. Within two hours after the Japanese began the bombardment at long range with their heavy guns, several of the Russian vessels were disabled and the fleet began to scatter. Some of the ships were sunk, some were captured, some took refuge in Manila Bay and other neutral ports, and some escaped to Vladivostok. Admiral Rojestvensky was among the prisoners. On June 7th President Roosevelt addressed identical notes to Russia and Japan, urging them to begin direct negotiations for peace with each other, and this was responded to favorably by both Powers. On August 8th, after a formal visit to the President, at Oyster Bay, the envoys met at Portsmouth. After three weeks of debate they came to an agreement and signed a treaty, which, being ratified by the Emperors of Russia and Japan on October 15th, put an end to the war which began February 8th, 1904. According to its provisions, Japan secured the recognition of her dominant interests in Korea, the Russian lands, buildings and property at Port Arthur and Dalny were surrendered to Japan, Russia held the railroads north of Chang-Chung, and Japan south of it, but both agreed to use them for commercial purposes only, defending them with a limited number of guards. Russia positively refused to pay any indemnity or to cede any territory, but the island of Sakhalin, which had been taken by Japan, was divided between the two Powers.

Russia has had to suffer, not only a crushing defeat in the war, but also a year of unparalleled internal strife, in which race feeling, religious hatreds, industrial interests and political aspirations have been the factors. The repeated concessions from the Government have only added fuel to the flames, and no faction has yet been able clearly to dominate the situation. The leaders of the zemstvos, or provincial assemblies, who come more nearly to constituting a body of representatives of

the people, have, in spite of imperial reproofs and commands, met several times in Moscow and carefully considered practicable forms of constitutional government. These have, however, been ignored by both the bureaucracy and the proletariat. The policy of the Government has vacillated between repression and concession, sometimes two almost contradictory manifestos being issued in the name of the Czar on the same day. The year began with the massacre by the soldiers of St. Petersburg workmen marching to present a petition to the Czar, led by Father Gapon, a prison chaplain. It ends with a still more terrible slaughter in Moscow, where the troops have, after ten days of street fighting, captured the quarters of the city held by strikers and university students. Between these two dates not a week has passed without somewhat similar scenes in Russian cities. In Warsaw, Lodz, Radom and other Polish cities there have been many conflicts between the strikers and police, altho the Polish Nationalist leaders have held somewhat aloof from the conflict. In Odessa anti-Jewish massacres took place, exceeding in extent and brutality those of Kishinef. For the relief of the victims of this and similar riots in Russia the Jews of America and England have raised a fund of over \$2,000,000. In the oil region of Baku and vicinity race wars between the Armenians and Tartars caused great loss of life and destruction of property. Agrarian riots have broken out in many parts of the empire, but are worst in the Baltic Provinces, where the Lettish and Lithuanian peasants murdered their German landlords and yet have virtual possession of the country districts. The battleship "Kniaz Potemkin" revolted in the harbor of Odessa, but afterward surrendered in the Rumanian port of Kustenji. Again in Sevastopol the same vessel raised the red flag, but was recaptured. In both cases the marines on shore revolted, as they did also at Kronstadt, but all these mutinies proved unexpectedly weak and futile. On August 19th the Czar announced the assembling of a Duma, or elective advisory body. But the demand of the people was for a true national assembly with legislative powers, and on October 30th this

was practically granted by an extension of the privileges of the Duma and making the ministers responsible to it. This was not yet according to the plan of the zemstvoists, and still further from the demands of the socialists, and the other extensions of the suffrage have not yet satisfied them.

#### Norway and Sweden

The growing antagonism and conflict of commercial interests between Norway and Sweden resulted in a peaceful separation of the two countries. The specific cause was the consular question. Norway has for a long time insisted upon a separate consular service, which Sweden considered incompatible with a unified foreign policy. Finally, tired of fruitless negotiations and delays, the Norwegian Storting on May 27th passed the law establishing a Norwegian consular service, which was at once vetoed by the King. On June 7th the Storting declared the dissolution of the union and the deposition of Oscar as King of Norway. The Swedish Riksdag and the King refused to recognize such action as valid, but commissioners appointed by the legislative bodies of the two countries reached an agreement as to the terms of separation in their conference at Karlstad September 23d. King Oscar having refused to allow one of his sons to accept the crown of Norway, it was offered by popular vote to Prince Charles of Denmark, who entered Christiania on November 25th and assumed the title of Haakon VII.

#### China

One effect of Japan's victory has been to rouse China to a sense of its national interests and of the importance of adopting some form of modern civilization. This patriotic feeling has taken some commendable and some very unfortunate forms, and its results cannot yet be foretold. With a view of determining what foreign notions it is desirable to imitate, missions composed of prominent men have been dispatched to the various countries of Europe and America to study our institutions. Thousands of young men have gone to Japan to study in the universities and technical schools there. Baron Komura on his return to Japan was sent to Peking to nego-

tiate with the Chinese Government for carrying out the provisions of the Treaty of Portsmouth, and an agreement has just been reached in regard to these points. Japan succeeds to Russia in her Manchurian privileges and agrees, as did Russia, to evacuate Port Arthur by 1923. The Chinese merchants and officials object to the granting of any further franchises or concessions to foreigners, holding that they are able to work their own mines and construct their own railroads. The Government has bought back for \$6,750,000 the franchise for the Hankau-Canton railroad, which was owned by J. P. Morgan. A strong anti-American boycott movement has developed in Southern China on account of the restrictions and annoyances imposed upon Chinese students and merchants visiting this country, and some violence has occurred in Canton and Shanghai. At Lien-Chau five American missionaries were massacred by a mob and the hospital and other buildings burned.

#### Other Foreign Events

In England the most conspicuous event of the year is the fall of the Balfour Cabinet, December 4th, and the return of the Liberals to power under the leadership of Sir Campbell-Bannerman. Lord Curzon resigned as Viceroy of India on account of the increased power given to the military department under Lord Kitchener. The Prince of Wales is now making a tour thru India, visiting especially the native princes. The partition of Bengal aroused great animosity among the natives, which has taken the form of a boycott of foreign goods. The increase in pauperism in England has been a matter of serious concern, and a relief fund has been started by a contribution of \$10,000 from Queen Alexandra. The firing upon the Hull fishermen in the North Sea by the Baltic fleet failed to cause a breach of the peace between Russia and England and was settled by the voluntary payment of damages. The alliance between Japan and England has been replaced by a still stronger one, according to which the two Powers mutually agree to defend each other's interests in Asia.—The peace of Europe was seriously threatened by the Morocco difficulty, but dan-

ger was averted by the coolness of France. The Kaiser put a stop to the plans of France for the "pacific penetration" of Morocco by a visit to Tangier in his yacht, and insisted upon the dismissal of M. Deleasse, Minister of Foreign Affairs, who had conducted the negotiations. Premier Rouvier complied, and, taking the matter in hand himself, came to an agreement with Germany for an international conference to settle the status of Morocco.—In Spain there has been a succession of three Conservative Cabinets and one Liberal one, but none of them has been able to hold a majority in the Cortes on account of the financial and industrial difficulties caused in part by the terrible famines in Andalusia.—In Hungary the Liberals were defeated for the first time since 1867, and Count Tisza was forced to resign as Premier. Count Fejervary, who was appointed in his place, has not succeeded in obtaining a majority in Parliament, because the Hungarian coalition of parties, which control that body, insists upon the use of Magyar language of command in the army, which the Emperor-King refuses to grant.—The Sultan of Turkey was forced to adopt the plan of the Powers for financial reforms in Macedonia by a naval demonstration at Mitylene and Lesbos. The Arabian rebellion was quelled and Sanaa recaptured.

#### Religious Events

Most important and historical of all the religious events of the year has been the abolition of the Concordat between France and the Pope, and the proclamation of separation of Church and State in the French Republic. This is the end of an agreement which has existed since the time of Napoleon. The older clergy will be pensioned and all will have aid for a briefer period. The property used for religious purposes will be held by boards of trustees without rent, but in the case of the older buildings will be held in the name of the Government. Quite a number of the Catholic bishops and progressive clergy believe the effect will be favorable in the end. The Pope has not yet expressed himself as to any action to be taken at Rome; but hereafter the State will have no interest in the election of

bishops or in ecclesiastical government. Already the effect is seen in the withdrawal of some French protection of Catholic interests abroad, and the assumption of their protection by the Italian Government where the priests are Italians. The new Pope shows himself more interested in religious than in political matters. During the year the blunder of the justices in the House of Lords in giving to the "Wee Frees" the property which the Scotch Free Church had brought into the United Free Church has been largely corrected by a Commission which has given to the "Wee Frees" only what, by a generous construction, they are able to manage. In England, and especially in Wales, the protest against clerical control of education has continued, and has its effect in increasing majorities for the Liberal candidates in bye-elections, so that it is now expected that the coming Parliament will modify the laws that have given offense, and may very likely introduce a measure for disestablishment of the Anglican Church in Wales. In anticipation of coming events the Anglican Church has drawn up a scheme for self-government which will unite the two provinces of York and Canterbury in a single Council. In this country the principal event ecclesiastically has been the meeting in this city in November of 500 delegates chosen by nearly thirty denominations to organize a federation of churches, to be called the Federal Council. Eighteen million communicants were represented, and perfect harmony and enthusiasm prevailed. The plan of federation will have to be approved by the denominations in their national organizations, which will take three years. The corporate union of the Northern Presbyterians and the Cumberland Presbyterians has been approved by both denominations and is progressing favorably. The closer federation of the Congregationalists, United Brethren and the Methodist Protestants has met approval, and their appointed representatives meet in February to arrange the terms. This has been a year of more than usual activity in evangelism. The Welsh revival has been very pervasive, and active leaders have carried on campaigns in Australia, England, Scotland and the United States.

# Our Mismanagement at Panama

BY POULTNEY BIGELOW, M. A.

[Mr. Bigelow has spent many years in the study of colored races and labor conditions in tropical countries. In 1896 he went to South Africa for the purpose of studying economic conditions in Natal, Mozambique, Transvaal, Basuto and Cape Colony. He also made analogous studies in Northern Africa. He has three times been to the Far East for the study of native questions, and has published accounts of colonial methods in the Dutch East Indies, the Malay States, the Philippines, Borneo, China, Japan, Samoa, Australia, Sandwich Islands and the German Colonies in the South Seas, as his "Children of the Nations" and other volumes attest. The Negro labor question he has studied not only in Africa but in South America and every Island of the West Indies, from which the present laborers are recruited. He has also studied our own Negro in each of our Gulf States.—EDITOR.]

AT the close of this year, 1905, it may prove useful to look back over the eighteen months of our activity; to pause for a moment and take an observation from a standpoint which is neither that of an office-holder nor of an office-seeker, much less that of a disappointed contractor or invalided laborer.

I have had abundant opportunity to hear the views of opposing witnesses, but I have also been in a position to examine on the spot many things which have so far been conspicuous by their absence in so-called "official" and authoritative reports.

The strictly engineering or technical difficulties in the way of building the Canal have vanished, if they ever existed. These difficulties are magnified now and then at the instigation of powers who have other interests to serve. The Canal should prove a boon to the railways of this country no less than to the community at large, and yet many railways are credited with systematic obstruction to the waterway for reasons analogous to those which make the proprietor of a livery-stable say uncomplimentary things about chauffeurs.

We must also make allowance for a generous amount of professional jealousy which induces one engineer to speak slightly of a competing colleague.

The Culebra Cut and the even more dreaded Chagres River have nothing intrinsically discouraging to such of our many practical engineers as have had to do with analogous work in our own country under conditions somewhat, but not wholly, dissimilar from those prevailing to-day at Panama. To-day the Canal is a feasible project, provided we

have the three conditions—MONEY, LABOR, ADMINISTRATION.

We have, fortunately for us, money enough.

There is plenty of labor to be had for the asking.

The administration that is reflected in our great railways and that challenges the admiration of the world for economy and efficiency is on all sides of us waiting for a call from Washington.

On November 9th of this year the Chairman of the Isthmian Canal Commission, Mr. Shonts, made a speech, which was reported in full in the chief paper of Panama, and which bore all the distinguishing marks of a statement prepared by official authority for the purpose of warming the enthusiasm of otherwise lukewarm shareholders.

This gentleman, along with many in similar positions, holds up to public scorn those who do not see things through his official glasses. This method has its merit up to a certain point, but not beyond.

Certain officials treat our serious interests in a pleasant, airy manner, assuring us one day that the Filipinos are our most loyal and happy subjects; on the next day that our military organization is the most perfect in the world; on the next that nothing can surpass the splendid work done on the Isthmus of Panama by self-sacrificing politicians—and other engineers.

This is not saying that our luminaries round the White House would wittingly do a wrong.

No!

But they have generated an atmosphere in which the Ten Commandments walk zigzag—where plasticity of the

tural vertebrae seems to suggest bowing acquaintance with kindred chronic complaints at present affecting some of my Christian fellow citizens who are missionaries of life insurance corporations.

In the famous speech of Chairman Shonts is a strange slur upon our colored fellow citizens! "Unless a much greater efficiency can be developed than can be developed at present we shall have to look elsewhere for our labor!"

Does Mr. Shonts know that all the labor at the Isthmus is negro? Must we believe that negro labor is a failure and in the one spot of all others where it should meet with the highest regard?

On landing at Colon I started for a stroll of inquiry and soon fell into conversation with a splendid specimen of manhood, a negro such as would have been recruited with pride into the Tenth United States Cavalry. He said that he was trying to get back to Jamaica. He was a sick man, could walk with difficulty, his system weakened by malarious fever.

Naturally I expressed surprise that he should be returning to Jamaica when the cry of Colon was for negro labor! He said he came here for work, but had been deceived—he found the place unfit to live in; he found that the wages which had been promised to him, \$1.50 in gold, were paid in silver equal to \$0.75; he found that these wages were not paid punctually, but after two weeks, and sometimes more.

He was a well dressed, self respecting negro, and his words would have impressed Mr. Taft could he have spared time for independent inquiry.

I asked him why he did not sail on the morrow rather than wait five days for a Leyland steamer; he answered me that the next steamer was already crowded with "deckers," and he could not afford any but a deck passage, having used up all his money by reason of his fever. And indeed the Jamaica negro spoke truth—the steamer which sailed next day took away 400 negroes, all returning to Jamaica in disgust.

Marsh View From the Front Street of Panama.

A Fever-Breeding Pool.

Not long after this I was in Jamaica and spoke on this subject not only with the Governor, Sir Alexander Swettenham, but also with the Chief Justice, Sir Fielding Clarke, both men of the first rank in their respective spheres and both competent witnesses. They both confirmed what I had heard from dozens on the Isthmus, and what is denied by official authority in Washington, namely, that the negroes are returning from the canal in portentous numbers, in spite of the fact that nominal wages there are twice or three times higher than in the adjacent British islands. But the negro is a man who thinks more of fair treatment than wages.

The story of Jamaica I heard on good authority in Barbados and Trinidad, and the negroes with whom I talked who hailed from Martinique or Guadeloupe spoke in the same strain. The mere fact that my own ship from Colon carried 400 negroes to Jamaica, and that the ship which followed four days afterward carried an equal number, and that each ship

leaving the Canal Zone has been freighted with negroes abandoning high wages—these facts alone suggest that some of my political friends have signed reports mechanically.

The Governor of Jamaica, who is personally familiar with labor conditions in the Far East no less than with those of the West Indies, was persuaded that the negroes on the Isthmus were not honestly or humanely treated, and that there should be some special agent whose duty it should be to see that the official promises of the United States Government were respected.

Last week, for instance, a negro workman applied for his pay. He had finished his week's work and wanted to get away on the steamer which was about to sail. This was at Carozal.

The negro waited all day Sunday, and at the close of the day was told to come again on the morrow. He came again on Monday and waited until three o'clock in the afternoon, thus losing a full day's work. The foreman again put

him off—said he was busy—told him to come again next day.

The negro, whose steamer would not wait, became impatient and begged the white man to give him his money and let him go. The foreman met this appeal by ordering him off the premises and addressing him as an "impertinent, sinking black."

The negro, who was from the self-governing island of Barbados, felt indignant at this, and very properly let fly his fist against the front of the foreman, and then, knowing the nature of Panama law, took to his heels.

He was captured, hauled before an American Judge and sent to jail for ten days. The white foreman was not even reprimanded. This story was vouched to me by a leading merchant of Colon, a Scotchman, who had verified the details.

Another white merchant, whom I had known fifteen years ago at St. Kitts, in the Windward Islands, told me that only a few days prior to my arrival a white man came up to a negro and demanded of him the loan of the horse he was leading.

The negro refused, on the ground that his master had ordered him to let no one have it. The white man sought to intimidate him. The negro remained true to his trust. The white man then attacked the negro with his fists. The negro, in self-defense, pulled a revolver and shot the assailant. The negro was promptly convicted of manslaughter—the white man as promptly declared innocent.

My negro friend depressed me.

I reminded him that Mr. Taft had given a very pleasing picture of conditions down here—and, indeed, from where we stood talking, I pointed out to him a clean, smooth street running parallel with the railway, and on this street a handsome ambulance pulled by two costly mules and driven by a pompous negro.

I naturally felt proud at this evidence of municipal enterprise, and pointed this out to my malarious mentor.

"Fore God, sir, ah'm tellin' you de troof!" said the negro, with tears in his voice. "Mr. Taft an' all dose big people dey didn't see real things—dey went to dances an' talked with politicians. Dey

don't know how de workman has to live!"

And so I determined to act on this hint, and for this purpose hunted up an American merchant, who has lived in Colon since 1857, who has been connected with the original railway and with every subsequent great industrial movement on the Isthmus.

I had many letters to official people. I had none to him. As a rule, I find official people dangerous guides, unless their statements are rectified by such as have no axes to grind.

Mr. Robinson kindly laid aside his work for the day, and at my request conducted me through the whole of Colon for the purpose of finding an explanation for the strange exodus from what should be a labor paradise.

We passed along the front street—the show street—the only street. We went to the Central Market, which covers a block, around the four sides of which I found merely pools of stagnant water—"handy for drowning babies," as a negro foreman playfully remarked. Every whiff of air blew poison into the public market; the strings of meat on the butcher stalls hung unprotected against flies, dust, and the plentiful body of germs which were breeding luxuriantly in the hot, moist air.

While a dozen or more amateur physicians were gunning after mosquitoes, here in the Central Market was a gathering of all that was vile in the way of microbial propagation. The market testified to the poorness of the food supply, to the absence of roads or farms in the neighborhood, in short, to the indifference of the Government upon a matter of prime necessity—food for the laborer.

One glance at the Central Market is enough to account for the chronic state of pest which characterizes this city—in spite of all official bulletins to the contrary.

"Did Mr. Taft inspect the labor quarters?" I asked of Mr. Robinson.

"No," answered my venerable friend. "I prayed him to let me show him the real state of things on the Isthmus, but he declined; he professed to know all about it from 'official' sources!"

"Mr. Taft spent five days down here,"

said an eminent engineer to me. "In that time he attended three dances and a succession of social functions. But he had no time to look into the condition of the laboring man."

Mr. Taft, it seems, and most of the other high officials who had run down at Government expense, made themselves ridiculous in the eyes of the residents by exhibiting a panicky dread of disease in a place where thousands of their fellow men were exposing themselves freely.

The natural thought in the minds of many was: "If this place is too rotten for such as Mr. Taft, why does not he order it immediately drained and cleaned? Is his life so much more precious than ours that he is hauled out to sea every evening on board a Government transport while we who have also come down here for the United States Government are condemned to sleep in a poisonous swamp?"

For the benefit of Mr. Taft I made a house-to-house visitation thruout the best part of a blazing hot day. Nor did I permit myself to be "steered." Wherever I chose to stop haphazard I did so, and entered houses and inquired of the tenants how they fared. So soon as they saw Mr. Robinson they treated me as a friend.

To name all those with whom I talked along the streets of Colon would be impossible—a hundred or more huts did I enter, a hundred or more back yards and latrines did I inspect, and these in every street excepting the one show front street where the costly ambulance paraded up and down.

Where shall I begin?

There is Madame Thérèse, for instance. Her premises face the Episcopal church and the new big hospital, of which so much praise is sung. She struck me by her personal neatness, and I asked to inspect her home. She had two rooms, each exquisitely clean and tidy. Her bed linen was snow white. Her ornaments well rubbed. She was much depressed and wanted to get back to her native island. The street was a pool of water in front of her—the water lay green and slimy under the house. I went to the back of the house and saw

a vista of swamp, broken only by the fences and the latrines of the adjacent owners.

The word house is misleading; these shelters are houses by courtesy only—they would disgrace the most unworthy sections of shanty town. The dwelling is but a shelter of unpainted boards—a floor, a roof, four wooden unpainted walls—no kitchen, no plumbing, no conveniences of any kind. At the back of the house is a swamp whose bottom we know not. Out in this swamp is a quasi sentry box, which is inaccessible by reason of the green slime, from out of which protrudes now and then some coarse weed or piece of broken furniture.

Of course, I insisted upon inspecting the latrine—and planks were brought and propped up so that I could reach it without wading thru the filth.

My experience of life in the slums of Chicago, of Canton, of San Francisco—nothing prepared me for the smell of Colon. The real latrine was obviously the swamp immediately under the flooring of the bedroom—not that the inhabitants were indifferent, but simply because the latrine in the yard was inaccessible, save under the greatest difficulties—notably in time of rains.

Madame Thérèse told me that in the day time the stench was tolerable, but at night when the breeze blew across the poisoned waters it made her head ache and she could not sleep well. She said she had appealed over and over again to the Board of Health, but they did nothing to relieve her distress.

Maybe her case is singular, you say. On the contrary, she had at least a board walk in front of her and was close to the front street, where the ambulance parades all day.

One house which I entered had an upper story—eight rooms to the house, each room representing one family, each family representing as many as could crowd in. The swamp stretched underneath as well as around the premises. Little children were crawling around the crazy board walks or gangplanks in imminent danger of falling off into the poisonous water. Some were cooking on open fires outside the house; all were

A House on the Marsh. A Typical Colon Scene.

personally clean and the rooms were invariably tidy.

I went up the outer stairway, a rickety set of steps, to the upper story—the first room I entered there greeted me a negro broken with fever. His wife was tending him. They were from Jamaica. They have four children and pay \$12 silver per month. For three weeks he has been unable to work and looked appealingly when referring to his yearning to be home once more.

"But why don't you go to the hospital and be treated free?"

"I did try, sir," said he, dejectedly, "but the doctor just talked harsh to me, and gave me some medicine and told me to go 'way!"

The wife told me that they had been here three months, but in that time four people had been carried out from that house—dead—from fever. And when I looked at the swamp in which they were living I wondered at the favorable death rate!

Mr. Taft would have felt his warm

heart ache had he been with me to see the needless suffering to which these confiding negroes were subjected—driven into a swamp because the Government gave them no ground on which to pitch a tent, and there exploited by landlords because even this swamp became a prime necessity.

In one back yard I noted a sturdy and active negro woman trying to hang out the linen she had been washing. The only water she could procure was the drip from the roof, and therefore she had to be painfully economical, not to say dangerously unsanitary.

But to dry this wash she had no ground. She stepped with catlike agility from one clump of mud to another, and spread the towels and sheets and underwear with marvelous dexterity across some odds and ends of swamp shrubbery, sticks or bits of abandoned utensils which here and there cropped up out of the ooze. And these clothes belonged to white engineers of Colon!

The laundress must be careful how

she complains, for otherwise a young political inspector of medical things will come round and order her barrels of rain water poured out by way of official reminder. Officialism, when not strictly controlled, manifests itself on like lines the world over, whether in China or Russia, Caracas or Colon.

But that is a digression which I reserve for another occasion.

If Colon were in the Berkshire Hills instead of near the equator it would still be unhealthy. Here, however, at the Isthmus, where we are officially invited to admire the so called sanitary system, I noted such criminal neglect as could not be matched today in any city of Italy or Spain—not even in Turkey.

The lowest rents I found to be, \$6 a month, silver, these being single rooms almost inaccessible by reason of the swamp. Where the room was fairly accessible by means of rickety boards propped up on stakes the price went up to \$12 a month. Where a street was convenient, where people could make their way along a safe board walk, the

price went up to \$20. But the moment you applied for a single room where the conditions of life were half way normal, or say up to the standard of a slum in any American manufacturing town, then the price was from \$25 up (silver).

Thruout my pestiferous excursion up and down this filthy city I could find not a single man or woman who had not suffered or was not suffering from fever of some kind; not a single one who did not want to go home, but was prevented by the want of money.

Is there a good reason why we should not have made a camp for the negro laborers who are doing a great service to the United States by offering their labor?

There are plenty of fine, open, healthy meadows, not far from the railway track, where ten or fifty thousand negroes could be quartered under canvas and where they could at least be kept in physical health pending their assignment to work elsewhere.

One street running from the water front at right angles into the swamp

Dissatisfied Negroes Leaving Panama.

town had an awning about a quarter of a mile long stretched over a wholly useless gutter in the middle of the marsh.

I asked what the awning was for.

Answer—To protect the workmen from the sun!

No one could invent such midsummer madness as this.

Close to this endless awning I saw a monster steam dredge stuck in a swamp, which at that point was officially labeled "street"!

I made inquiries in several quarters, of an engineer among others, but could discover nothing save that it had been hauled to this place three months ago

The Famous Dredger Stuck in the Swampy Street. The Swamp is Overgrown With Weeds Which Conceal It. Mr. Sands, Secretary U. S. Legation; Mr. Tracy Robinson.

and left there with the avowed purpose of digging a canal along this street.

The street immediately beyond this one was much wider and in every way better adapted to a canal; but for some mysterious reason the dredge was here, lying idle, and slowly sinking out of sight on what is officially called a thoro-fare of Colon.

At present writing there is not a single drainage canal made at Colon—the very first need of a swampy community. The dredge which I saw stuck in the mud was also turned the wrong way; but that is a detail, save as it indicates the presence of political or amateur engineers.

A first class machine man (white) came here ten days ago and was put to work at \$100 (gold) a month in the Culebra Cut. Soon afterward a flabby young man was brought up to him and introduced as his future chief! It soon transpired that said flabby young man had never had any practical experience whatever—had come down here with political protection and had been given a job as engineering inspector at a salary \$50 larger than that of the thoroly trained man first mentioned.

"But does this young gentleman know nothing of the job?" asked my friend in amazement.

"Well, no. We expect you will teach him!" was the answer of the engineering chief.

My friend laid down his tools and handed in his resignation, and is now working for a private company at double his previous salary.

One day I stopped to chat with a well-dressed, intelligent and energetic negro who was managing a gang of fellow Africans in a street near the American post office. They were digging up the street. He was encouraging his men, and they answered him cheerily. They obviously liked him, and worked well under him. He wore a clean collar, a black derby hat and a good suit of clothes—an educated and prosperous sample of his race. He told me that he had been here seven months from Jamaica, and was doing his best to deserve promotion. The cost of living was high and the wages not as much as had been originally promised, but his main griev-

ance was that as a man of color he received no encouragement for his work; no one seemed to care whether he got good work out of his men or not—all the white men about him were trying to see how little they could do, each for himself.

Next day I came to the same place for another chat. He was not there. A white man wanted his job and had got it. That white man was sitting on the curbstone, looking more like a worthless tramp than a foreman. His head had sunk between his knees and he was in a comfortable doze. The gang of negroes had also lost all interest in their work and were listlessly seeking to emulate the example of their so-called foreman.

At present the work at Panama resembles an army of recruits without any commander, or rather with a dozen ones, who spend their time in commanding and countermanding. Our Panama patriots are kept busy in finding occupation for young men with political affiliations, who amuse themselves by playing the doctor and the engineer, the foreman, the inspector, the general boss.

While we in Colon are compelled to live in a swamp, each incoming vessel is boarded by two young medical men, who do their best to delay commercial intercourse by insisting upon a series of alleged tests regarding the health of passengers, oblivious of the patent fact that any one arriving in good health is pretty sure to be down with some form of disease within a few hours—thanks to local conditions.

Shortly before my arrival there entered Colon a shipload of colored passengers from the French West Indies. They were forbidden to land unless vaccinated. The doctors would not permit their being vaccinated otherwise than on their arms, where the scar would interfere with their manual labor for a week or more. These negroes therefore refused to land.

They were still further discouraged regarding Panama when they were told that they would have to live in a swamp and that their wages would be paid, not in gold, but in silver. The agents of the company refused to take them back—ordered them to leave the ship. They protested that they had been coaxed to this

port under false pretences and therefore insisted upon their right to go back. The French Consul came at the instance of the company and also failed in his efforts to induce his fellow Frenchmen to disembark into this unbiblical pool. The company cut off their supply of food—for twelve hours. But even this did not break the spirit of these citizens of the French Republic. Finally brute force was invoked. The police was turned in on them with clubs. Many were maimed—and finally all were turned adrift into the swamp—a fate little better than death.

This outrage upon human nature has made a deep impression thruout the West Indies.

At Corozal, three miles from Panama, I was taken by an official of the canal company to see a magnificent hotel erected by our Government. It was a splendid edifice and cost, of course, a corresponding sum of money. But it was deserted.

Our political architect, builder, sanitary inspector and engineer had placed this hotel in a depression of land which became a lake, or, rather, vast hog-wallow, when it rained, and consequently it was a breeding ground for pestilence.

Why did he build here? This land has been known intimately for at least fifty years. The Isthmus has been a highway of travel since the days of Charles V.

Yet in this year 1905 an engineer representing the most practical nation on earth locates in a well known swamp a hotel intended to protect our employees from the alleged deadly climate of Colon or Panama!

This is merely a sample. At Panama I had a talk with an American engineer representing the most important electric company in America. He had been many months on the Isthmus.

He told me that the big new dredges at the Culebra Cut did not do 20 per cent. of the work originally promised, and that when he was up there he found that one of them had been capsized owing to the rain washing the soil from under it, and that in general the situation there was one to make an honest mechanic want to find a job somewhere else.

Mr. Taft refused this engineer's request for an interview for reasons anal-

ogous to those which permitted him to rebuff Mr. Tracy Robinson's kindly meant offer.

But as practical men of affairs we have a right to ask:

What good does it do to send commission after commission to make a picnic run to Panama and come home with no news save what is told to them by their own officials?

We have had canal boards *ad nauseam*. We have had commission after commission tripping to the Isthmus at the expense of the nation—and what does it all amount to, stripped of partisan coloring? Less than nothing.

In October, 1905, a great party of "specialists" came to the Isthmus with Chairman Shonts and did pretty much what the Taft party repeated later.

They were met at the wharf by political deputations and a special train, with disinfectants, strong drinks and mosquito nets. Then they ran across the fifty miles of railway and back.

Each of the short five days was occupied by some short, easy railway excursion under the most elaborate precautions lest an insect more or less should jeopardize the success of their inexpensive outing. On October 5th the run was to the site of the Bohio dam, and such was the scare in the party that only one man ventured to the edge of the water. Next day another railway run was made to the site of the proposed Gamboa dam—under similar precautions.

Each night they were all carefully towed out to sea beyond the range of Colon smells, alligators, mosquitos and other savage beasts, and slept the sleep of those who sleep while others scratch. Next day (October 7th) the visit was to the famous and much exaggerated Culebra Cut, where many of the party declined to enter for fear of catching some disease germ. Sunday was officially labeled a day of rest, if we may speak of rest in the case of those who are weary of sitting down.

On the 9th there was an exchange of official visits, cigars and drinks at Panama, next day the illustrious commission held a farewell reception on board the Government yacht, and on the day following, October 11th, they headed for

home, having seen the "official" Isthmus and having carefully avoided the swamp in which the majority of Colon labor is today forced to congregate.

And yet this eminent chairman made a speech in Washington wherein he said (November 9th): "If we have not made the dirt fly we have made the filth fly!" adding this cruel joke: "If sickness could ever be regarded as a boon, it may be thought so in Colon!"

Mr. Taft promised officially that by December 1st Colon would have a splendid water supply! There is today no water supply in Colon. Mr. Taft does injustice to his countrymen by treating flippantly questions involving human life by the thousands. We are not all children or fools. We do not need reports which read like the circulars of doubtful land companies.

I went to see the sewer system of Panama City. Our political engineer had put in a single pipe calculated to carry away both human offal and rain water. In dry weather the human filth stuck in the pipes and would not pass on. During the last rain, a few days ago, the volume of water was so great that it backed the sewage up into the cellars and ruined many houses, to say nothing of threatening the foundations of many more.

Who did this job? Has he been dismissed from the service or has he been brought to trial?

When I looked into matters of this nature I soon learned that So and So was the protégé of Senator this or Senator that—there was nothing to do but keep it out of the papers and lay all the blame on the climate or the rain.

A plain man naturally asks, Why was a sewerage system undertaken without first knowing something of local conditions? Or I might go further and ask, Why was a sewer built at all? What we need on the Isthmus is not sewers, but common cleaning of the streets, back yards and cesspools. Sewers are things of doubtful utility in communities that are not trained to them. Madrid has no sewers. Berlin had none until after the war with France. Baltimore is but now talking about the matter.

What we need on the Canal Zone is an honest and efficient corps of sanitary police who shall go daily from house to

house, not with medicines and ridiculous disinfectants, but with shovels and brooms and carts, doing daily for Panama what the Japanese or Malay head of a village does in his little paradise.

That form of sanitation can be controlled, and it is, moreover, in harmony with the traditions of the people.

An official of the railway called my attention to needless waste of time and money, saying, in substance:

Let us suppose that the chief orders a certain house repaired—and there is much of this, for the old French Company has left us a handsome legacy of excellently planned and built houses extending the whole line of the canal.

The work begins, and, according to official rules, the estimate is made and application filed for a fixed amount of supplies, calculated according to such needs as were apparent at the time of survey.

The gang of carpenters, etc., are at work—and let us note again parenthetically that under present conditions it is something to brag of when you can hold a gang of negroes long together to do such a job!

Well, as you proceed with the repairs as ordered, you may discover certain defects which were not apparent on first inspection. A new estimate must be made. A new application must be filed. This application must pass to a superior bureau—a higher official must endorse it and pass it on to another. Finally the order is approved and filed with the railway company. They take their time, and thus, for the sake of a few feet of planks or a pound of nails, the chief engineer may be compelled to hold up for many days a work involving hundreds of men, all drawing pay for doing nothing.

This red tape is one reason why the negroes have to wait so long for their pay—often more than two weeks. The accounts have to be audited in so many different ways that many a negro, particularly if he is sick and anxious to sail for Jamaica, will sacrifice his pay rather than lose "the number of his mess" on board the steamer.

When the hospital work was consolidated—that is to say, the Republic of Panama made to work together with the

doctors of the American Canal Zone—the American medical chief insisted upon buying his professional instruments in America.

The Panama medical chief objected, on the ground that they were better in Germany, to say nothing of being less costly. The American chief, however, insisted and carried his point, on the ground that it was more patriotic to be cut up with a costly, but inferior, implement rather than buy one that was cheap, but foreign.

But on the day when the American chief was embarking for New York in order to purchase his supplies of American tools the Panama doctor came to him and said: "I can buy those identical American tools here cheaper than you can buy them in New York! A German house orders them for me. They go from New York to Berlin and from Berlin a second time across the Atlantic, and in spite of all that travel I get them here cheaper than you can in New York!"

If any one doubts this story I beg to offer him all the evidence that would carry conviction in a court of law.

On the occasion of my visit the clergy of the Isthmus were loud in protest because the United States authorities had imported at considerable expense several hundreds of colored ladies.

Prostitutes are not needed on the Isthmus—and if they were there is no call to send for them at the expense of the taxpayer. They may be trusted to come without any especial assistance whenever Colon clamors for kindred consolation. For further details in this matter I refer the inquisitive reader to ministers of the gospel now on the Isthmus—for instance, the Rev. Thomas H. Wood, who has been a missionary in South America; Rev. Mr. King, of the British Wesleyan Church; the rector of St. Paul's Episcopal Church, Mr. Es-kins.

The correspondent of the New York *Herald* at the Isthmus is an ornament to his difficult and honorable calling, and his letter of November 18th, which arrived in time to flavor the Thanksgiving sermons of many American pulpits, is a document which our Washington officials should occasionally refer to when

preparing an address on the elevating influence of American rule over alien races!

The way to fight such immorality at the Isthmus is to raise up conditions favorable to family life. In order to encourage young men we should prepare places where they can bring their wives and rear families. Furthermore, the same power which recruits the man should also have some say anent the woman who is destined to make or mar his career. We want no vapid village belles or women who come here limp from idleness and overeating. We want women who can sew and cook and bring up babies and cheer their husbands, and of this kind we cannot have too many.

Today we have the grotesque picture of a legal tribunal at the Isthmus the head of which is Spanish, serving out law according to Spanish usage; and with him are associated two Americans who know but their own local American law, and who are not even familiar with the language of the place, which is Spanish.

The confusion resulting from this may be compared to what would result if we attempted to run a transcontinental train without determining beforehand a standard of time.

I met many American officials who knew not a word of Spanish. Even the two doctors who came aboard my ship to torment innocent passengers knew not a word of Spanish, albeit they were in a Spanish port and dealing with passengers from Spanish speaking countries.

Criticism is barren unless sympathetic and constructive. Is this narrative discouraging?

Not at all, for it has, I hope, helped us to note the fact that the alarms which have been raised about the Isthmus are largely bugaboos, and that the present problem is one with which we, in our mechanical and engineering capacity, are familiar.

In other words, we have but to apply business methods to a business proposition, and then, and not till then, will the filth fly, and also the dirt at the bottom of the big ditch. But first of all we must make the politicians fly—the barnacles, the drones, the men with weak chins and flabby lips who today are standing about

the works of the Isthmus and acting as a constant source of discouragement to negroes who know the difference between a real man and the "ornary, mean white trash!"

We are practical men—let us therefore profit by the experience of our predecessors.

The practical man does not build a hotel in a swamp; he makes inquiries and does not select a site where fever is the main crop.

The practical man drains his fields before inviting his friends to build homes. A practical man would have drained Colon before permitting 10,000 negroes to settle there.

The practical man would immediately take those negroes away from that swamp, where they are losing their strength, and locate them in camps on the neighboring hills.

The practical man asks why there is not common justice for the negro; why there are not tribunals before which labor disputes can be summarily treated.

The practical man wants to know why we cannot appoint agents for the protection of negro interests, just as we appoint similar officers to protect immigrants arriving in New York.

The practical man asks for the dismissal of the present army of useless white officials and a selection of competent men at fair salaries, according to business principles.

Civil service examinations should be required—such examinations as would satisfy a practical man—a physical examination, and, above all, a searching moral one, in order to satisfy us that he has the qualities that go to make an all round, sound, straight and common sense servant of his Government.

Today it would be a reckless father who would advise a son to take employment on the Canal Zone. Yet under

practical conditions such a service would draw our best young men.

The pay need not be high, but the candidates must feel that the eye of an honest commander is on them and that they will be promoted according to merit.

The practical man also realizes that the success of the canal is bound up with the nature of the powers which may be given to the general commanding the labor forces on the Isthmus.

The man to whom this honor is entrusted should be made to feel that his position is not for this year or even for ten, but for life. He should be the Dictator of the whole Zone and its adjacent municipal territory, and in this post feel the same security as a judge of the Supreme Court at Washington.

The salary should be generous, with a retiring pension for disability or old age. He should have an official palace in which to receive official guests, and also an adequate allowance for necessary entertainment.

Such a commander would immediately cut off from the pay rolls the fancy men drawing \$10,000 for worse than useless duties. He would abolish the \$10,000 a year press agents, who are not needed, unless you admit that the Government needs to conceal the truth.

This proposed chief is not far off—there are plenty of them within call of the White House telephone. West Point alone could furnish a dozen of them tomorrow, to say nothing of the Boston Institute of Technology.

Mr. Roosevelt and Mr. Taft no doubt mean well when they give us the assurance that political jobbery is foreign to their natures. At the same time, jobbery flourishes under their noses and they appear to be incapable of stopping it. The people at large need to appreciate this fact and to consider some change in a system which already gives ominous signs of rottenness.

PANAMA, DECEMBER, 1905.

# Two Autumn Sonnets

BY ALFRED AUSTIN

POET LAUREATE OF ENGLAND

I

NAY, do not bear away the fallen leaves,  
But, where they fluttering fell, there let them  
lie;  
For widowed Autumn ponderingly grieves,  
And she will weep until her tears be dry.  
Treat not her sacred mournfulness as though  
It were but the passing petulance of Spring;  
Here is a real and not a wanton woe,  
And in her woods no wooing minstrels sing,  
Yet hath she got a music all her own,  
When the leaves rustle, and the acorns fall,  
And ever and anon some warbler lone  
Doth with brief note glad midsummer recall.  
Walk by her side and she will take your hand,  
And speak wise thoughts until you understand.

II.

In this resplendent Autumn of your days  
You seem yet lovelier even than in Spring,  
More musical your voice, more young your gaze,  
More dear, more richly dowered in everything.  
Now in your promise lurks no faithless vow,  
Nor in your tearful tenderness caprice;  
Blossom and fruit together deck you now,  
And Love abides, companionéd by Peace.  
O keep, then, as you are, nor let Time cast  
One shadow on the dial of your days,  
Nor wintry rime nor desecrating blast  
That beauty rob where nothing yet decays.  
But, should Love's last petition be denied,  
You still will find me, faithful at your side.

ASHEFORD, KENT, ENGLAND.

# Our New Government in England

BY JUSTIN McCARTHY

THE long looked for change has come at last, and even more suddenly than of late we had been led to expect. While men were still doubting whether Mr. Arthur Balfour would dissolve Parliament all at once or would wait to see what might come of a new session under the same Government, he has taken neither the one course nor the other, but has resigned his office, brought his administration to an end, and thus enabled the Liberal Party to return at once to power after some ten years spent in opposition. One immediate result of this step is that the Liberal Ministers will have to appeal to the country by a dissolution of Parliament and a General Election before many weeks have passed, and will thus have the whole trouble and the responsibility put on their shoulders.

The readers of THE INDEPENDENT will have learned long before this article of mine reaches New York who the men now in office are, and I shall therefore only offer such comments as occur to me and shall not endeavor to make my article a summarized record of these passing events. Every one knew already that Sir Henry Campbell-Bannerman was to be the Prime Minister, and most of us had already formed our judgment as to his capacity for such a position. I spent many years in the House of Commons while Sir Henry was a leading member there, now in the Government and more lately in opposition, and he always appeared to me to be a man certain to become under the existing conditions the head of a Liberal Administration. He has a distinct political capacity, a remarkable firmness of resolve, and a quality of steadfastness and courage which makes one feel that no ordinary difficulties will ever induce him to turn back from any path on which he has deliberately entered. Those who have met him in private life well know that he is endowed with a happy gift of humor which enables him often to find

amusement where other men might only find vexation and trouble, and this happy gift is sometimes displayed in his parliamentary speeches, altho not so often as many of his friends might wish to find it. Intellectually he is not the equal of such men as John Morley and James Bryce, who are now his associates in the Cabinet; but he has a distinct capacity for administrative work and parliamentary leadership which is not necessarily found in conjunction with the higher intellectual gifts. He is, like Morley and Bryce, one of the Liberal leaders who have stood firmly by that policy of Home Rule which Mr. Gladstone was the first Prime Minister to put into the form of a legislative measure. On the whole, I do not see how the Liberals could possibly have found a better man just now for their Prime Minister than they have in Sir Henry Campbell-Bannerman.

Among the difficulties which must confront the present Administration are those arising out of the fact that some members of the Government are not so firm, or I suppose so thoroughly convinced, on the Home Rule question as is the present Prime Minister. There are some of the new Ministers who, altho not avowedly or perhaps actually opposed to the principle of Home Rule for Ireland, are yet inclined to regard it as a measure which will bear postponement and to believe that it might conveniently be kept out of sight for some coming sessions or that Home Rule might be reduced to some minor measures dealing with what might be called municipal administration in Ireland. These men have not, indeed, followed Lord Rosebery in his actual renunciation of Home Rule—much, I fancy, to his disappointment—but they are understood to be not steadfast and energetic Home Rulers, like John Morley and James Bryce, for instance, and they may perhaps do their best to keep the whole question in the background for the present. Now, the Irish National Party

H. H. ASQUITH.

is at present, and is certain to be, no matter how the General Election may turn out, an element of immense importance in all the movements of the next Parliament. It is now a thoroly disciplined body, if we except one or two Irish Nationalists who still hold somewhat apart, and it has a leader endowed with great eloquence, the highest skill and judgment in the conduct of his parliamentary work, a man who is every day rising to higher consideration in the House of Commons and in the English press, Mr. John E. Redmond. The Irish National Party is now so large in numbers that it would be hardly possible for the Liberal Administration to remain in power if it were to turn the Irish Nationalists against it by any effort to postpone indefinitely the introduction of a Home Rule measure. I am therefore strongly inclined to hope and to believe that Sir Henry Campbell-Bannerman will be able to exercise such authority over some of his colleagues in office as may compel them to leave Lord Rosebery to the plowing of his lonely furrow and to regard that dismal figure as a warning and not an encouragement.

One of the most prominent figures in

the newly constructed Cabinet is that of Mr. John Burns, who holds the important office of President of the Board of Trade. Mr. Burns began his life and carried on, I might almost say, the whole of his life thus far as a workingman, and he is the first belonging to the order of workingmen who has ever held rank as a Cabinet Minister. Other workingmen have indeed been members of an Administration, but my American readers are, I am sure, well aware of the difference between membership of the Cabinet and membership of the outer Government circle. Mr. Burns is a man of great ability, energy and eloquence. He is, and has always been, a total abstainer of the most rigorous and consistent order, and he seems to have found his principal enjoyment of life in his earnest efforts to amend the condition of his working brethren and indeed of human beings everywhere. I cannot help feeling a little puzzled to conjecture what John Burns will contrive to do with the large salary which he is to receive from his office, a salary of £2,000 a year. He certainly will not spend any of it on dry champagne or in costly cigars; in expensive fashionable clothing, or for jewelry for the women of his family. But I think I may take it for granted that he will find many cases of honest poverty and of unemployed industry where some temporary and timely help might prevent disastrous results and supply a chance for a new and a happier course of life, and I take it for granted that John Burns will have an open hand for all such claims and that none of his official salary will fail to be well spent.

Another interesting appointment, altho one of a very different order, is that of Winston Churchill, who has been made Under-Secretary for the Colonies. Winston Churchill is the son of the late Lord Randolph Churchill, one of the most brilliant members of the House of Commons during my recollection. When I first entered the House Lord Randolph was a member of that famous Fourth Party, a party consisting of only four members, who acted in absolute independence of all the recognized and established parliamentary parties and made themselves occasionally a trouble to Liberals and Tories alike, while some-

times combining with our Irish Nationalist Party to obstruct and bewilder our opponents. The other members of the Fourth Party were Arthur James Balfour, the late Prime Minister; Sir John Gorst and Sir Henry Drummond Wolff—names already known to readers in all parts of the civilized world. Winston Churchill, who is still a young man, served as a cavalry officer in many campaigns and expeditions, but more lately he took to political life and obtained a seat in the House of Commons. He entered Parliament as a Conservative member, but some of the doings of the late Conservative Government, and especially the dealings of the Conservative Party generally with Mr. Joseph Chamberlain, converted Churchill into an opponent of the then existing administration, and, a rare event in the House of Commons, he actually crossed the floor of the House and took his seat on the benches of the Liberal Opposition. He has all his father's independence of spirit; has thus far given promise of great parliamentary capacity, and is, I think, a man of higher culture and more literary and artistic taste than his gifted father seemed to have developed. Unquestionably Winston Churchill did much to shake the confidence in the late Conservative Administration, and the new Liberal Government has acted with wisdom as well as with gratitude in offering him a place among its leading members. Sir Henry Campbell-Bannerman has certainly got around him an unusually large number of men endowed with great and genuine capacity.

One of the most brilliant speakers among them is Mr. Asquith, who has accepted the office of Chancellor of the Exchequer. I must own that I had not expected to see in Mr. Asquith the coming Chancellor of the Exchequer. He is a barrister by profession and has proved himself a thoroly brilliant and successful pleader, and since he came into the House

of its most ready, versatile and impressive debaters and held the office of Home Secretary in one of Mr. Gladstone's Governments. I think we may therefore take it for granted that the present Prime Minister must have had good reason to know that Mr. Asquith would prove himself a successful financier as well. Mr. Asquith is very popular in London society, and his wife, who was once Miss Margot Tennant, daughter of Sir Charles Tennant, is one of the leaders of that order of metropolitan society which claims to be at once fashionable and artistic. Sir Henry Campbell-Bannerman has, in fact, not introduced into his Ministry any one who could not be said to have made for himself a distinct name before opportunity had arisen for inviting him to take part in the government of the empire. It is quite common for a Prime Minister, when forming a new administration, to offer places to men who have merely family claims to ministerial position, but, altho Sir Henry

SIR HENRY CAMPBELL-BANNERMAN.

of Commons has ranked as

has brought with him to the work of government several men who are entirely new to official place. He has not brought in any man whose name has not already commended itself to public confidence. In Ireland the new appointments which have to deal with that country have given the fullest satisfaction and are received with a genuine welcome. Lord Aberdeen enters on the office of Irish Viceroy for the second time, and during his former administration made himself thoroly popular with the national public, while his wife, Lady Aberdeen, won for herself absolute affection everywhere thruout the island by her sympathetic nature and her unceasing work of help and of charity. Mr. James Bryce enters on a new career as Irish Chief Secretary, and I shall be much surprised, indeed, if that new career does not entwine the shamrock with his already won laurels.

Thus far I have written only on political subjects, and, indeed, just at present there is not much talked of here but political charges, prospects and personalities. Nothing very remarkable in literature has been brought out within the last few weeks, but I have just received from Canada a book by an English author which interests me deeply, and it, too, deals only with political questions. This book is "Irish History and the Irish Question," by Professor Goldwin Smith, the famous scholar, thinker and author, who has for some years past been living in Toronto, Canada. The volume is published by Messrs, Morang & Co., Toronto. I have had the honor of knowing Goldwin Smith for many years, and the longer I have known him the greater has become my admiration for his intellectual gifts, for his energetic character,

and for his sympathy with every effort to add to the happiness of humanity. I sincerely hope that this latest volume of his will find readers in every part of the civilized world. I can express this wish none the less sincerely, altho there are some of Goldwin Smith's views as to the recent and the present conditions of Ireland with which I cannot entirely agree. No one can question his sincere sympathy with the sufferings of the Irish laboring population and with all earnest efforts made to bring about a better system of land tenure in Ireland. But when he comes to deal with the great national question, that of Home Rule, and with the history of what I may call the Irish National Parliamentary Party, I do not think that he shows his usual penetration and foresight. He appears to me too much inclined to think that Ireland's needed remedies are only some improvements in her local and municipal systems, and does not seem to appreciate the national claim and the national desire of the Irish people to govern Ireland according to their own ideas and experiences, while still remaining as Canada and the Australasian colonies remain loyal partners in the empire. Goldwin Smith appears to be under the impression that Home Rule means nothing but a breaking away from any association whatever with Great Britain, and also that the Irish Parliamentary Party have been given to the encouragement openly and secretly of disturbance and outrage. These are the principal and, indeed, the only serious faults I have to find with this volume, which must undoubtedly add, if such addition be needful, to the author's reputation as a philosophic thinker and as a student and a lover of humanity.

LONDON, ENGLAND.

# Billy: A True Yarn

BY JAMES H. WILLIAMS.

ONE of the best *men* I was ever shipmates with was a he goat, and one of the worst *hounds* was a brute called, for courtesy's sake, a man.

The bark's name was "Helaroara," of Run Around, No Breakfast.

The captain's name was Larruper, and from the fact that he always wore a red skull cap, the boys dubbed him "Old Antichrist."

Tom Swattem was bos'n, and the Mongolian pot wrestler was designated on the ship's articles as Ah-Chuk, and otherwise nicknamed "Chink."

I was the oracle of the forward end.

Whenever anything came on board for which no name or use could be found, it was always brought to me to be officially christened and assigned to its proper place in the sphere of natural economy—usually over the side, where there's plenty of room for everything.

At Ilo-Ilo somebody brought two Malays on board in exchange for a couple of advance notes and a bottle of canea.

They—the Malays, not the advance notes—looked so much like monkeys I almost thought I recognized them.

I named one of them Johnny Hilo and the other one Patsey, and the names stuck.

Johnny got a job in the cockpit tarring the anchor chains and Patsey found steady employment holystoning the 'tween decks. That's all they were good for and they were not much good at that.

At Honolulu we got a pig, a quaint, inquisitive little cuss, who soon became a general favorite. I named him Punch and appointed him Head Squealer, and assigned him to duty at the fore-castle door to call the watch every morning at breakfast time.

Punch made a most efficient and reliable squealer, but unfortunately he got washed overboard in a gale of wind one night before we got ready to eat him, so I don't know what his name is now.

At Penang the most esteemed acquisition to our floating menagerie was the

biggest and ugliest dog ever pupped. I never saw his color anywhere else, so, of course, I don't know the name of it. As to his breed—well, refer to Darwin.

I labeled him "Bos'n," out of compliment to my esteemed friend Tom Swattem, and assigned him to gangway duty, so I might get a chance to snooze in my anchor watch. The dog made much the better bos'n of the two.

My hero, the goat, came on board at the Isle of France, where we loaded chemicalized railroad ties for Rangoon.

I christened him "Billy" on the spot. Billy was no ranik or destitute Paddy West send off, but a full rigged, respectable seafaring goat, of the noble "butt in" breed. And he carried all his belongings with him.

Billy always wore a mixed suit of brown, yellow and white goat hide, with a black patch pasted across his memory pane.

Billy's chief pride lay in a long pair of aggressive looking horns and a splendid set of Yankee Doodle whiskers.

Billy also brought with him an appetite and a disposition, and he was highly perfumed with essence of get out.

Billy greeted me with a friendly nod as he mounted the gangway with the strong assistance of a block and strap.

We shook—er—horns cordially, and I volunteered to escort him forward and introduce him. The main deck was only about forty-seven feet wide, but after a long series of "Alphonse and Gaston" antics, during which Billy continually insisted that the right of personal precedence should be given to me, we managed to squeeze thru and reach the fore-castle.

The day happened to be Sunday, and when I introduced Billy to the boys, who were loafing under the forward awning, they made way for him with splendid unanimity.

Billy nodded pleasantly all round (none of the boys could talk goat), and then I showed him his quarters under the fore-castle head.

Owing to my own ignorance of goat at that time, I had considerable difficulty in explaining to Billy the great importance of preserving the windlass bitts intact. It was also a hard matter to convince him that the manilla lanyard which I bestowed upon him was to preserve him from personal injury in case of accident.

I visited Billy after supper, and offered him a couple of pan-tiles and a chew of tobacco, all of which he gratefully accepted, especially the chew, for Billy reeked some, but he did not smoke.

After bidding Billy a cordial good night I went and turned in.

About 11.30 p. m. that night I was awakened by a most unusual commotion on the main deck. Jumping hastily into my dungarees, I hastened out the fore-castle door, and there I saw the Bos'n and Billy engaged in a heated dispute over the question of official mascotship. Billy was rearing boldly on his hind legs looking for an opening and Bos'n was dodging warily around trying to secure a strangle hold.

In the wind-up Billy carried the day, or rather the night, by butting his rival overboard thru an open side port, to be eagerly gobbled by a vigilant shark.

That settled the question, and next day Billy was elected ship's mascot by unanimous consent.

Tho somewhat aggressive in his habits and a little reckless in his general deportment, Billy made an excellent mascot, and the ship had good luck from that day forward.

Billy was a proud goat, somewhat aristocratic in his demeanor and rampant in his habits. But he never took anybody's back-wash and he never starved for the want of a mouth.

He was very discriminating in the selection of his friends, but beyond that no respecter of persons. In bestowing his favors he never drew the line anywhere from the taffrail to the knightheads.

The only two people on board with whom Billy could by any means be persuaded to associate were the emasculated little cabin boy, which the captain carried for a football, and myself, the ship's oracle. As for the rest, Billy only regarded them as a set of ninepins, to be bowled over at will; but his pet aversion

was Ah-Chuk, the Chinese cook, a feeling which was strongly reciprocated by the Chink himself.

It should be recorded right here, however, that this feeling of mutual ill-will was entirely due to the characteristic perverseness of Chinese stupidity and not to the inherent offensiveness of the belligerent goat.

Altho there was a great deal of pride in his character, Billy was not particular in the matter of diet. He *could* eat scupper-nails, but other things seemed to agree with him better.

I hate to cast any reflections on the personal honesty of an old, esteemed shipmate, but for veracity's sake I must admit right here that I never let Billy know where I kept my oilskins and sou'-wester.

The mutual animus which existed between Billy and the cook began at Mauritius and ended on the way to Rangoon, in the manner which I shall hereinafter relate. I may also add, in passing, that Billy's opinion of Chink was heartily endorsed by every man Jack before the mast.

Since Billy's name did not appear on the ship's articles, it was assumed by the afterguards that he was mascot by sufferance only, and no allowance was made for him in whacking out the daily rations "under the act."

For this reason I had earnestly entreated Chink to set aside the yarn parings and other galley refuse for the special delectation of his goatship.

But this he obstinately refused to do and persisted in laboriously throwing them over the side instead.

"Me no come fleedee gloatee," he exclaimed testily when I urged this point in Billy's behalf.

"Me no likee gloatee! You likee him? You fleedee. Gloatee stinke! Damn gloatee!"

"Damn you, too, ye bloody heathen," growled old Tom Grunt, bristling up. "You didn't come to feed anything, 'ceptin' yer own dirty, yaller face. Yer coffee is all merlasses an' yer tea is all slops; yer duff is all putty, an' ye scoff all ther menavelius yerself. Ba! If I was a goat I'd butt ther stuffin' out o' yer yaller hide."

But criticism only served to make

Chink still more obstinate, and the luscious leavings which Billy craved so much still continued to go over the side. Driven by the pangs of hunger, Billy had already made a few unsuccessful raids on the galley, which Chink had cruelly resented by deluging him with hot water, which treatment did neither serve to improve the creature's temper or diminish his appetite.

While we were engaged in washing down one morning I noticed poor Billy nibbling reflectively at a corner of the fore hatch tarpaulin and casting, meanwhile, a wistful eye on a pan of flapjack batter which stood alone and unprotected on a corner of the galley mess locker.

I appreciated Billy's feelings on the subject of fresh batter, and was seized with a desire to help him out. Looking in the galley door where Chink was flip-flopping about in great haste with his breakfast preparations, I called out: "Chink, lay 'aft quick, the steward wants you."

Chink threw off his apron with an angry gesture, and started 'aft on the double shuffle to find out what he wasn't wanted for.

Presently he came shuffling back, looking more vexed than when he went.

"Stewee no wantee me," he snapped angrily. "What for you lie me? Sailor-man too muchee liee!"

"That's all right, Chink," I answered, cheerfully; "he will want you pretty soon. Go ahead."

When Chink got back to the galley there stood Billy with his fore hoofs braced upon the ledge of the mess locker, his long face immersed nearly to his eyes in the sacred cabin batter, and slobbering away to his heart's content. Chink emitted a yell, something between a death-wail and an Indian war-whoop, and made a savage lunge at Billy with a convenient pot-hook. Billy beat a hasty but dignified retreat before the advancing pot-hook, and came on deck with smacking chops and dripping whiskers.

Captain Larruper, a strict and stern disciplinarian in all things, was above all an especial stickler for punctuality at meal times, and particularly at breakfast time. Whoever was responsible for a late breakfast would remain the object

of his unbridled wrath for the remainder of the day. No one knew this better than Chink, who had had the misfortune to fall under the ban of autocratic displeasure more than once for slight lapses of duty in this regard.

Seven bells was drawing near, and there was no time to waste; so Chink stirred up his pan of bewildered judy paste, just as it was, and went ahead with his flapjacks.

Now, the weather was warm and Billy was shedding badly; consequently, he had inadvertently dropped some of his superfluous hairs among the judy paste.

That morning the old man had flapjacks for breakfast with whiskers on 'em.

Shortly after seven bells there came a muffled bellow, couched in wild and blasphemous accents, from the direction of the poop, indicating in set terms and with certain uncomplimentary allusions to his physical, mental, moral and spiritual make-up, as well as that of his "Asiatic" ancestors, that the cook was wanted 'aft.

It was no joke now; he *was* wanted this time, sure enough.

I am not cruel enough to prolong the agony, but when Chink was suddenly ejected from the cabin door and left to roll helplessly in the lea scuppers, Billy and I both felt that our wrongs had been in some degree avenged.

But the final taming of Ah-Chuk occurred some days after we left port.

By some strange and unfathomable perversity of the Chinese mind the episode of the bewhiskered pancakes only increased the cook's obstinacy, instead of teaching him common sense.

If we fared badly before that, we fared infinitely worse afterward. If the coffee was boiled molasses before, it became tar syrup thereafter; if the tea had been slops, it degenerated into dirty water; the duff, which had been made without plums, was now made without flour, and so on *ad lib*.

Protests and pleadings at the galley door were alike unavailing. Threats or violence of any kind were out of the question, the cook being a ship's officer, according to statute.

Therefore, Billy and I got our heads together and rigged up a purchase either

to get better grub or put the almond-eyed grub-spider out of commission.

Now, like most other independent characters, Billy nearly always disclaimed friendly advice. On one point, however, he was always in full accord with my views; that was, that anything I held my cap in front of deserved butting into, no matter whether it was the cabin window or the samson post. Strict economy was always observed on board the "Helaroara" in all things appertaining to the ship's stores or provisions. The fag end of everything had to be scrupulously saved.

One day I happened to observe our mutual *bile nui*, the Chink, at the top of the ladder leading down into the half-deck, industriously pounding the dusted lining from inside the staves of an empty barrel of flour.

Chink was leaning well down into the barrel, intent only on his task and utterly oblivious to all the world beside, the wide cloths of his baggy trousers flapping gaily in the wind like the after-leach of the spanker. Such a splendid opportunity to secure redress was not to be lost, and I promptly called Billy's attention to it by holding my old watch cap about three feet astern of Chink's other end. Billy took the hint, and landed on the proper spot without further bidding with the force of a battering ram.

Chink went first into the barrel and then thru it, by force of the unexpected impact. Then he went end over end, and round and round, down the steep ladder into the half-deck, where he landed with a crash, and rolled about for a few moments as snug as a crank in a straight-jacket.

Chink got some control over his new surroundings after a while, and, thrusting a scared, flour besprinkled face thru the bottom of the barrel, he looked up appealingly at Billy and me, standing at the top of the ladder. Billy was rearing and ramping impatiently, waiting for the next round.

"Take l'off! Take l'off!" wailed the cook from his station in the prostrate flour barrel.

"Take what off?" I asked, a little exultantly; "take it off yourself, you heathen fool."

"No can do, Johnny, no can do," he

pleaded; "him gloatee too muchee lolry." "Why don't you feed him, then?" I returned, coldly.

"Me fleedee, me fleedee, plenty fleedee," he promised eagerly; "take l'off, take l'off. Me by-m-by fleedee."

"Will you save all the scraps for Billy if we let you up?" I asked.

"Yes, yes; me savee, plenty savee."

"Will you stop spoiling our coffee with black molasses?"

"Yes, yes."

"Will you put more tea in the water?"

"Yes, yes," consented Chink, wagging his head eagerly.

"Will you put more raisins in the duff and more peas in the soup?" I went on sternly.

"Yes, yes; take l'off. Pitty gloatee."

"And say, Chink," I resumed, heartlessly, "will you send the 'menavelins' into the fore-castle every night and give us the Sunday 'dog-basket'?"

"Yes, yes; me givee, plenty givee," wig-wagged the imprisoned Chink contritely.

"And look a-here," I urged again, "will you promise to stop scalding Billy with hot water and calling him heathen names in that outlandish gibberish of yours?"

"Yes, yes," agreed Chink, with a floury grin. "No more scaldee Missee Gloatee. Nice gloatee! Take l'off. Take l'off!"

"What do you think, Billy?" I asked. "Had we better let up on him?" Billy wiggled his horns and stamped doubtfully, but turned away from the hatch, indicating that he was willing to give Chink another trial.

"Well, all right, Chink," I said finally, "we'll let you off easy this time, but next time you try to starve or scald any of us look out."

Billy and I went forward and enjoyed a laugh that would have cracked the ribs of a clinker-built whaleboat, leaving Ah-Chuk to extricate himself from his predicament as best he could.

Whatever else there may have been to complain of on board the "Helaroara" after that the grub, if not all that could have been desired, was certainly all that could be expected, and I actually began to get some of the wrinkles out of my belly Ba Ba.

It was at Rangoon that Billy distinguished himself as a snake charmer, and undoubtedly saved some of our lives at the imminent risk of his own.

It happened on a Sunday afternoon, when we were all enjoying an after-dinner siesta underneath the forecastle awning.

I was just dozing off into a comfortable snooze, entirely oblivious of any lurking danger, when all hands were startled by an unusual commotion on the main deck. I could hear Billy's treble bleat tuned to an unusually excited key, followed by a rapid and intermittent stamping of hoofs.

"Ba-a-a! Ba-a-a!" Cá-chug, ca-chug, ca-chug, went Billy with voice and hoofs, over and over again.

"What's the row with Billy now?" yawned some one next to me. But Billy's shrill bleat continued louder and more excited than ever, while the accompanying ca-chug, ca-chug, ca-chug of his hoofs plainly told us there was something doing.

I could not bear to leave my old chum in trouble alone, so I jumped up and ran down on deck, followed by all hands, and there, not six feet from the starboard forecastle door, we were horrified to see poor old Billy engaged in a life-and-death encounter with a big spotted snake.

The snake was writhing, twisting, hissing and darting with lightning-like movements, while faithful, courageous Billy was stamping on him with all the hoofs he had. "It's all up with poor Billy," I moaned, as I ran for a handspike to help him out with.

Before I could return to the scene of conflict, however, and bring the handspike to bear Billy had successfully chopped the snake into mincemeat with the sharp edges of his shapely hoofs.

I brought the handspike down once or twice on the snake's head for good measure. Then I got hold of Billy, who was quivering with excitement, and examined his wounds. I found that he had been fanged in several places by the snake.

But "while there's life there's hope," so I ran aft to the steward and got a stick of lunar-caustic from the medicine chest. With this I treated Billy's wounds and poulticed them with tar and mud.

For some days Billy's life was despaired of, but gradually he improved, and at the end of two weeks was as rampant and dignified as ever.

There was not gold enough in all India to buy Billy after that, and he was decorated with a new collar and a brass knob for each of his horns and given the entire range of the decks, poop and all.

He made the finest snake-charmer I ever saw. I could easily use up a ream of paper writing the authentic history of Billy's exploits, but lack of space prohibits me from mentioning but one more, and I fear the reader will kick over that.

That, however, was Billy's crowning exploit, and the one that endeared him to me and to nearly every one else, more, even, than the charming of the snake.

Captain Larruper was a large brute, weighing about two hundred and fifty pounds. The wretched little cabin-boy weighed about two hundred pounds less—just the convenient weight for handling. Unfortunately, the Old Man had no dumb-bells with him; therefore, he spent most of his leisure time, which was nearly all the time, practicing on the boy, to reduce his weight.

One fine morning—we were out in the Pacific at the time, on our way to the West Coast—I got relieved from the wheel at eight o'clock, and started forward to breakfast, followed by my constant companion, Billy.

Walking forward on the lee side, I saw Captain Larruper busily engaged in his usual morning pastime of knocking seven bells out of the cabin-boy with a rope's end. He stood near the break of the poop, leaning over the writhing form of the suffering boy, whom he held between the clutch of his massive legs, while he vigorously applied the rope with his right hand.

So intent was the Old Man over his exercise that he did not notice our approach. In passing I paused to scratch my head and rather absentmindedly extended my hand with the cap in it about three feet abaft the Old Man's position.

Instantly there was a bleat, a little scurry of hoofs, and Billy suddenly landed full tilt on the Old Man's sternpost with a thump that must have sprung his rudder-head.

The Old Man shot over the boy,

cleared the break of the poop, and turned an awkward flip-flop before he reached the main-deck, where he struck with a mighty jar and rolled into the lee scuppers.

When I saw Billy proudly prancing with bristling horns on the break of the poop, and loudly bleating his defiant challenge to the fallen tyrant to renew the conflict, I could not help regarding him as the noblest brute I had ever seen in command of a ship.

At the court-martial which followed I voluntarily appeared as Billy's advocate.

The Old Man was simply aching for summary vengeance, but I reminded him that to kill a ship's mascot, except for food, would be to violate the most sacred of all ancient maritime traditions, and would certainly tend to jeopardize the success and good fortune of the voyage, if not of the ship itself. I dwelt long and feelingly on Billy's many noble qualities and good deeds, and especially on his heroic exploit in killing the snake at Rangoon. In this connection, I asked the court pointedly which it would prefer, to be butted by a goat or bitten by a snake?

The court stroked its whiskers and relented somewhat, but decreed that thereafter thruout the remainder of the voyage Billy's movements should be restricted to that portion of the deck space abutting and a-bounding between the foremast and the fore-castle head.

I got separated from Billy on the coast of Chili, where we went to load salt-peter.

While lying at Pisagua it suddenly occurred to five of us that we had important business at Antafagasta, about one hundred miles further up the coast. [This

is Mr. Williams's way of saying he deserted.—EDITOR.] Not much of a place to look at, but something of a place to get to.

The route lies through a wide strip of nitrate soil, where no water exists and the transportation facilities available there at that time were not much better than those in vogue on Staten Island at the present day.

We had no money to buy horses and no time to borrow any, so I had to leave Billy behind, because I could not lug water enough for both of us. But I kissed him between the horns before I slid down the jib downhaul and started on my journey and urged him to ever remain as, he was, a good, game goat.

I suppose that in the nature of things Billy must have long since gone to his account.

I never learned the way of his going, but I am ready to wager the price of this yarn that he gave a good account of himself in the last round. And, at this time of life, I feel that I could not put my pen to a better or nobler use than to pay this humble but heartfelt tribute to his memory.

Thruout all the realms of recorded literature there is not a single passage which I admire more than the scriptural tribute to the majestic qualities of the he goat.

The old sage who wrote that knew what he was talking about if none of the rest did.

Looking down a long list of friends which I have made and lost during the past thirty years, there is not one whose character I more admire or whose memory I cherish with more veneration than my old shipmate, Billy Ba! ba!

Keep pure amid earth's sin and sorrow,  
As though you faced some bright tomorrow,  
And felt, beyond life's setting sun,  
Your soul's new day had just begun.

# The Voyage of the "Discovery" and the Continent of Antarctica

BY GENERAL A. W. GREELY, U. S. A.

AUTHOR OF "THREE YEARS OF ARCTIC SERVICE," "HANDBOOK OF ARCTIC DISCOVERIES," ETC.

FROM the voyage of Magellan in 1520, which placed a fictitious polar continent on the map of the world, until the twentieth century, Antarctic voyages have been rare in number and comparatively fruitless in results. Meanwhile the long and hazardous voyage along the Antarctic Circle of the great navigator, Captain Cook, eliminated the Magellanic continent from geographical realities. Later the mythical land was replaced in part by the initial discovery of the American sealing captain, Palmer, supplemented by the explorations of Ross, Wilkes and others. Finally its outlines were charted by the prophetic vision of the great oceanographer, Sir John Murray, who demonstrated the existence of the continent of Antarctica.

The most extensive explorations previous to those of Captain Scott are those of Sir James C. Ross, which made extensive additions to our knowledge of the south polar regions. He not only discovered a mountainous, ice clad country, South Victoria Land, but skirted its supposed coastal lines, which were marked by an unbroken sheet of the so called ice barrier. Ross described it as from 120 to 240 feet above the ocean, with level top, without fissures, precipitous and impracticable on its sea face. Most astonishing of all, two volcanic cones about 12,000 feet high dominated the ice clad land, one, Mt. Erebus, being aflame with frequent eruptions.

In late years Larsen, Evenson, Borchgrevink, Gerlache and others have added a little here and there, thus creating renewed interest in the southern continent. As a result four expeditions were sent forth—the German under Drygalski, the Swedish commanded by Norden-skiöld, and the Scottish under Bruce. The English, in the "Discovery," com-

manded by Scott, distinctly carried off the honors, and this work will be briefly discussed.\*

The expedition owes its inception and support to the Royal Geographical Society, especially of its president, Sir Clements Markham. Captain Robert F. Scott, a young officer of the Royal Navy, was given command. The assigned objects were physical observations, especially a magnetic survey, the exploration of Ross's ice barrier and adjacent regions; these were accomplished with unusual success.

It appears best to give a summary of the results attained, and later dwell briefly on various phases of the work.

There was no unusual incident, save the accidental death of a seaman at Lyttelton, N. Z., in the voyage from London, July 31st, 1901, to South Victoria Land, where a record of movements was cached at Cape Crozier, in January, 1902.

An open sea permitted a full survey of the Great Barrier, of which "Ross had exaggerated not only its height, but its uniformity." The Parry mountains, Scott says, soon proved to be non-existent, the "strong appearance of land to the south-east" reported by Ross at his extreme easterly point in 1842 being groundless.

Conditions of ice and weather enabled Scott to follow the edge of this wonderful barrier for a distance of 400 miles. He found its perpendicular front to vary from 10 to 280 feet in height, while ocean soundings in its front ranged from 1,500 to 2,900 feet. At a favorable point, Balloon Inlet, the "Discovery" was moored to the barrier, 20 feet high, with 315 fathoms of water under her keel. A party made a short march over the ice, finding it to be a series of crests and val-

\*THE VOYAGE OF THE DISCOVERY. BY Captain Robert F. Scott, C.P.O., R.N. Illustrated. In two vols. Charles Scribner's Sons, New York. 6 1/4 x 9 1/8 in. 576, 520 p. \$10.00 net per set.

leys, with comparatively sharp grades. At the ship a unique method of surveying, suggested by Sir Joseph Hooker, was followed; a war balloon inflated with compressed hydrogen carried in steel tubes. From an elevation of 800 feet nothing but a continuous ice cap, with striated surfaces, was seen to the south.

A sounding of 100 fathoms, in 152 degrees W., 76 degrees S., indicated the nearness of land, and an ice clad region was reached January 29. Scott says: "But what a land! On the swelling mounds of snow above us there was not one break, not a feature to give definition, to the hazy outline." This region, named King Edward VII Land, while largely snow covered, showed well defined hills, with occasional peaks over 2,000 feet high.

It may here be said that the explorations made by Scott and his lieutenants refute the previously accepted idea that the ice barrier is the sea face of a continental ice cap, of which it is a constituent and adhering part. While it is certain that the barrier-ice is formed on land, Scott shows clearly that it is an enormous ice sheet, thousands of square miles in area, embayed and floating in the great inlet between King Edward VII and South Victoria lands.

This great inlet extends easterly on the seventieth parallel from 170 degrees E. longitude to 158 degrees W. longitude, and it certainly reaches to 83 degrees S. latitude, tho doubtless with decreasing width.

Retracing her course from the east end of the ice barrier, the "Discovery" went into winter quarters in McMurdo Sound, at the foot of the well-known active volcano, Mount Erebus. There she remained from February, 1902, until her release from ice and homeward voyage of 1904.

From the ship three important sledge journeys were made, two by Captain Scott and one by Lieutenant Roalds. Roalds' journey, of about one hundred and fifty miles, extended southeasterly over the barrier-ice, which was generally level, with occasional hummocks and crevasses. It proved that the inlet, which might well be named Scott Inlet or Gulf, subtends sixteen degrees of longitude between the seventy-ninth and

eightieth parallels of latitude. Scott's western journey of two hundred miles into the interior of South Victoria Land discloses a mountainous ice-covered region of great extent. His great sledge trip of three hundred miles to the south carried him to 82 degrees 17 minutes S., which exceeds by two hundred and fifty miles any previous southing in the Antarctic regions. The journey was made over the level barrier-ice, his route flanked on the west for the whole distance by a bold, mountainous land, broken by deep and probably glacier-filled fiords.

This daring and successful journey goes far to prove that very extended land masses exist, probably forming the continent of Antarctica alone, tho possibly broken into two or three separate lands.

The scientific discoveries are naturally treated briefly, but disclose facts of interest and importance. The upper winds are generally westerly, as indicated by the smoke of Erebus, and the *sastrugi* of the high plateaus. The snowfall approximates five inches annually; the snow comes frequently with a warm southerly blizzard, doubtless a foehn wind. Central Victoria Land rests on a base of gneissic rocks. Granite was found in large masses, dolorites in great sheets, and a beacon sandstone very uniform in texture. In the latter were carbonaceous fossils, possibly from vegetation, but identification is impossible. Zoological studies disclose in vegetation a few low forms of moss and lichen and a terrestrial fauna of one minute wingless insect. Seven species of whales and dolphins, five seals, and twelve birds were found. The magnetic pole is in the neighborhood of 156 degrees E. longitude, 78 degrees S. latitude.

The "Discovery" went into winter quarters February 8, 1902, at Cape Armitage, putting up huts on shore for scientific work, for food, coal, etc., and kennels for dogs. Life was not without incident. In skiing one man broke a leg, another was sadly crippled, while Lieutenant Armitage fell into the sea one night and barely saved himself.

The worst experiences occurred to an autumn sledging party. Polar writers have dwelt on the special dangers of autumnal sledging, which should be care-

fully planned and cautiously executed. The first journey, involving two nights, ended fortunately, tho Scott says they "nearly got into serious trouble by continuing their march in a snowstorm, and were so exhausted that they were frequently frostbitten." The next journey not only failed, but had a sad ending. Scott frankly says: "Our ignorance was deplorable; we did not know what would be required as regards food; how to use our cookers; how to put up our tents. Amid the general ignorance that pre-

discussion the fatal decision was made to abandon their sledges and attempt to reach the ship, a few miles distant."

The drifting snow blinded the men, the ice surface was smooth, with a sharp incline, the footgear was unsuitable, and, despite every effort, the men separated. The sledge party, wandering blindly, one man fell over the ice-front into the sea and perished, his companions barely escaping. Fortunately, a sledgeman reached the ship and eventually the rest were saved, altho severely frost-

by Charles Scribner's Sons.

ailed lack of system was painfully apparent."

Lieutenant Royds, with three officers, eight men, and eight dogs, left March 4th for a short journey to Cape Crozier. Things going badly, Royds pushed on, sending most of the men back. Traveling after a blizzard commenced, they finally camped in a sheltered spot. "The party was exhausted from their heavy pull, and more or less frostbitten from efforts in the driving snow. Neither cooking apparatus was in order, and they could not even melt snow to drink with their icy cold lunch. . . . After some

bitten. One man was forty hours without shelter, other than his clothing and freshly fallen snow, and others had most thrilling experiences and hairbreadth escapes. Scott, calling it "one of our blackest days," adds that "it was an experience that had to be bought."

Other autumnal sledging was less tragical, tho invariably unsuccessful, the last trip of three days covering nine miles.

The four sunless months of winter passed with the usual round of polar duties and amusements, unmarked by any serious events. Earnestly striving

to profit by mistakes, Scott devoted himself during the dark days to working out the details of fieldwork, and at last he admirably succeeded. Of endurance to cold Scott says: "It is quite a mistake to suppose that one becomes hardened to the cold; however, one becomes more expert in keeping oneself warm."

The dogs were wolfish in nature, falling on each other and fighting to the death without apparent cause, and were necessarily tied to their kennels. An interesting incident was the escape of two dogs, who killed a large seal, which nearly proved fatal to one dog, who was found pinned to the snow by his chain, frozen into the ice under the seal's body.

With indefatigable energy the sledging campaign of 1903 opened with short journeys of varying fortunes but no casualties. During one trip the boatswain fell into a crevasse, and again a loaded sledge was similarly engulfed; fortunately, the man was well-roped, or he would have been injured or lost.

The "Armitage's" trip of three weeks to find a route to the inland ice of Victoria Land developed scurvy. This threatened the failure of all sledge-work, but by energetic sanitary efforts, change of diet, etc., very great improvements were effected. Scott's remarks on scurvy can hardly be indorsed; and his statement that Nansen has performed an unsurpassed feat as to scurvy is incorrect. The expeditions of Nordenskiöld, De Long and Greely were free from scurvy previous to Nansen's.

The description of dogs, sledging, outfitting and camp routine, and especially of the penguins, are all interesting, even if at times the opinions are to be questioned. Antarctic conditions are so different from the Arctic environment that comparisons are difficult. Scott's journeys are distinctly inferior in distance to those of McClintock, Lockwood and other Arctic travelers, especially to that which most nearly resembles Antarctic sledging, Peary's repeated trips across the Greenland ice-cap.

In his great southern journey of 1902, Scott keeping to the barrier-ice, to the east of Victoria Land, covered 960 miles by dog-sledging in ninety-three days. Save incipient scurvy, there was no notable incident, it being a case of hard

field service, under the usual Polar conditions of high winds, severe cold, and limited food. The extreme point reached was  $82^{\circ} 17' S$ . To the southwest was the steadily rising mountainous, snow-covered Victoria Land, culminating in Mount Markham 19,000 feet high; to the south the level ice barrier continued beyond view, with lofty mountain peaks on the farthest horizon.

In February, 1903, the expedition was visited by the relief ship "Morning," but the "Discovery" was frozen up in fast ice and so obliged to pass a second winter.

In 1903 Scott made, in fifty-nine days, a journey of seven hundred miles to the interior snow-covered plateau of Victoria Land. It is a record of constant struggle against difficulties. His sledges broke down, half his men had to turn back, the winds were so violent that he was seven days stormstayed, the temperature fell nightly to forty degrees below zero, incipient scurvy appeared; but nothing discouraged the indomitable leader. Passing a point due south of the magnetic pole, he turned back, after having traversed two hundred miles of changeless snow, at an elevation of about eight thousand feet. He tersely describes it as "The most desolate region of the world. None other at once so barren, so deserted, so piercingly cold, so wind-swept, or so fearfully monotonous."

In February, 1904, two relief ships, the "Morning" and "Terra Nova," joined the "Discovery," which fortunately was able to leave her enforced anchorage. The most critical phase of the expedition then followed.

During a violent gale the "Discovery" was driven on a rocky ledge, where she seemed to be hopelessly and irretrievably lost. For a day she was hourly in process of pounding into pieces, but favorable changes of wind and current averted the horrible prospect of total shipwreck after the hazardous polar work seemed a matter of the past.

Captain Scott is happier as an explorer than as an historian. From his narrative and charts is absent the name of the American who discovered the Antarctic continent, Captain N. B. Palmer. Further, not only does Scott omit

mention of Palmer and erase his name from the Antarctic map, but he gives the credit for the first discovery of land in the Antarctic regions to the distinguished Russian navigator, Bellinghausen.

The discovery in the summer of 1820-1821 of Palmer Land, from the summit of Deception Island, South Shetlands, is described in Fanning's *Voyages*, p. 435. Captain N. B. Palmer in the sloop "Hero" visited this land, and on his return passage fell in with Bellinghausen, whom Palmer informed of the mountainous land to the south.

It is regrettable that a narrative of

such forcefulness, determination and success should be marred by even unintentional neglect of a predecessor; the more so as Americans have not infrequently experienced unfair treatment from British authors.

Despite blemishes, this story of effort will long endure as a standard of high endeavor and heroic accomplishment.

The volumes are greatly enhanced in value by excellent reproductions of Dr. Wilson's unsurpassed series of polar photographs. Many of these are of scientific importance, and all happily elucidate or supplement the narrative.

WASHINGTON, D. C.,

## A Letter to the Czar and His Advisers

BY COUNT LEO TOLSTOY

**G**ENTLEMEN, bethink yourselves! Bethink yourselves now, while you are yet appealed to in words! For the question of life must, at last, arise even to you. For to this alone, to this question of life, the voice of the people is now turned.

No one believes any longer in your sovereign wisdom and your love for the country. You are the first and only enemy of Russia's salvation and the people's welfare!

Remember! No matter what new atrocities, no matter what new horrors, your skill as hangmen may devise—more blood will no longer frighten anybody. Having grown accustomed to look death straight in the eye, the people have ceased to fear your bullets and bayonets. You have trained them to blood and death; and they fear no longer your threats. You have succeeded in transforming a peaceful people into brave champions for freedom; you have succeeded in kindling the fire of revolution in the working people. You have been striking Russia until it broke the disgraceful chain which you have forged. You have tortured the great silent sufferer until he has shown you his hungry teeth. You have done everything to start the revolutionary conflagration.

You have gone from one end of Russia to the other with noose, bayonet and knout, and you yourselves have aroused it from its long sleep. From the humble huts to the mansions of the millionaires, from the dull villages to the great cities, you have everywhere awakened the vengeance of the people.

And when the people, still unarmed, wanted to shake off without bloodshed your will, you have killed them with increased cruelty. You have driven away the people who turned to you with a petition. You have devastated villages that begged you for land and freedom—for bread and rights. You have fired upon peaceful working people who came to you with a petition in their hands. You have done everything to make cursing and vengeance the watchword of the entire land. You have been comforting yourselves until all Russia was set on fire by revolution. And you yourselves have taught the people what "language" to use in "speaking" to you. Stationing yourselves openly on the ground of violence, you yourselves have confederated the way of violence. Sending troops upon the people, you have shown that you are the enemies of the people and of Russia! And when the people saw that it was necessary to take from you, not to

all, you like a cornered antagonist, threw to the people "kind-heartedly" one piece after another. Ignoring your orders, the people held meetings of their own accord—you have "permitted" them to discuss their most urgent needs. Ignoring your "laws," the working people have stopped the life of the entire great land. You have signed a manifesto acknowledging that the people should have the rights of man. Waiting in vain for an answer to their demands, the peasants started to plunder the villages. Then you issued another ukase to relinquish redeemable taxes. The press seized the right of freedom by force. Then you pretended that you yourselves had wished it long ago. *You have given all these rights only when they were taken from you by a successful struggle!*

But here, too, you were a dishonest foe. Here, too, giving up your positions, one after another, in the course of the battle, you begin again your campaign, trusting that innocent people will believe your promise of peace!

Now you again recover courage. Now you want war again. The highest circles again demand new blood, new vic-

tims. The black clique, treacherously breaking the promise, again starts its bloody campaign.

Bethink yourselves! Bethink yourselves! The power is not in your hands now. Life has again gone ahead of you all, and the Russian people have really seized the power. Now that the union of all peasants thruout Russia has awakened to a conscious life, you must give up all thought of regaining your former power. The last resort—to re-establish the dying organization with fire and sword—has gone away from you.

Remember, now the national parliament can be called together without your aid and paper orders, and the blood-stained land has been torn out from your hands. But the people want no war. The people do not want to shed even "black" blood. To you they send once more their messenger. Once more they demand a constituent assembly on the principle of the electoral rights proclaimed by the entire country.

Gentlemen, bethink yourselves! Bethink yourselves, and do not decline the last branch of peace, which the long-enduring Russian people bring to you.

YASNAYA, POLYANA, RUSSIA.

## The Church, the University and the Labor Union

BY REV. ALEX. F. IRVINE

PASTOR OF THE PEOPLE'S CHURCH, NEW HAVEN, CONN.

**M**Y first night in a labor union was not only one of great religious value to me personally, but one which accentuated the well known fact that while the Church is considered there to be of very little value, if not a hindrance, to social progress, the name of Jesus calls forth the most profound expressions of reverence and enthusiasm.

How I came to be there presents a picture of modern church life by no means rare. The New Haven church of which I was the minister at the time was one of those known in our city as "con-

servative." For four years of my ministry there the church was united and active. Its social activity in the agitation for public bath houses, playgrounds, kindergartens, etc., was not at all at the expense or to the exclusion of either home or foreign missionary interests. The contributions to foreign missions were quadrupled.

All the rich people in the community were churched—all the poor were unchurched. Along the banks of the river, which is one of the parish boundary lines, there are hundreds of hard-working peo-

ple. Could they be attracted to the house of prayer? Under certain conditions I was sure they could. I had a tacit understanding with the conservative element of the church that the morning service was to be of such a character as would suit the "churched." The evening meeting would be different—it was for a different kind of people. We organized a committee of wage-workers, the purpose of which was to awaken an interest in the church. The membership of the committee was confined to those who had never done any kind of church work. Twenty-five men joined the committee and did excellent work under the direction of the minister. Very soon the working people, not only from the banks of the river, but from all parts of the city, began to come. For four winters the church was filled as it had not been in all the years of its existence before. Church membership is very little of a test of a religious renaissance, but during the last year of my work there one hundred and seventeen men, women and children were added to the church membership. Additions to the church I considered the smallest item of the service rendered to the community. The church heartily backed me in every movement. We founded a social settlement in the heart of the city. We held up the ideal of a public bathhouse before public officials and public bodies until it became visible in the form of a brick structure. In the problems of "applied" religion, in social activity, in missionary activity, home and city and foreign, we had succeeded beyond our most sanguine expectations.

Then a crisis came. A large corporation wanted a renewal of its franchise. The Connecticut corporations escape taxation by paying a very small amount to the State instead of to the municipalities in which and by whose patronage they make their money. The Connecticut farmer, having inherited a well of pure, sweet water at his door, goes to the State Legislature by fifty or sixty votes and puts into the statute law of the State the conditions under which the citizens of New Haven may buy their water from a special privileged corporation. The corporation in question had not only been paying nothing for its franchise, but had actually charged tens of

thousands of dollars for the supply of its commodity to the city hall and public schools.

The wage workers entered protest, and demanded a readjustment. The Trades Council called upon the ministers to declare themselves on the ethics of the question. Some of them waxed wroth at the challenge. Two ministers took note of the request. One of them is the pastor of the Universalist Church. The president of the corporation is a prominent church member and a member of the Yale corporation. The directors and stockholders are all good disciples and church members. The oneness of the University and the churches with the corporate interests may not have been the reason for their silence on the ethics of the question, but the labor men thought it was, and said so.

The Board of Aldermen held public hearings on the matter. The great majority of the protestants were wage workers. The last of the hearings was held on the annual business meeting night of our church. I noticed that night that several of our most prominent men were absent. I closed the meeting at ten o'clock and made haste to reach the meeting. The chamber was crowded. Behind the railing sat the committee. On one side a crowd of toilers—angry and vociferous. On the other side a group of well-groomed business men, among whom were the absent officers of our church. The doors were blocked, but I made myself known and got inside. Straightway I was called upon to speak. All the calls, and some of them were loud, came from one side of the chamber. I spoke very briefly and as much to the point as I could.

Next morning in the back part of a little store near the church some of the rich men of the church met and made up their minds that I was a Socialist. The evidence of it lay in the act of asking the corporation either to pay for the franchise or supply the city buildings with its commodity free of charge.

"I shouldn't wonder a bit," said the wife of one of the rich men when told that I was a Socialist: "he's so social."

I was fully aware of what had happened at that meeting. My personal interest had come into competition with

the general good. The next thing to do was to fold my tent. I was asked squarely not to "interfere" in public matters. I refused to promise. This was the beginning of the end. Meantime, men who had long since despaired of the church and her officers became busy in an effort to show their appreciation. I was invited to become an honorary member of one of the largest labor unions in the city. I accepted, and a date was set for the initiation.

It was a wild winter's night—the streets of the city were covered with snow and the thermometer registered five above zero. Few hard working men would come out a night like this. Who would expect them? I was rather glad of the inclement weather. I was weary and tired and hoped the thing would soon be over. I entered an old office building on Orange street and climbed to the top floor.

A man met me as I reached the top of the stairs and led me to a door where certain formalities were performed. There was an eye-hole in the door, thru which men watched each other. There were whispered words in an unknown tongue, then a long pause. Why all this secrecy? What means this panther-like vigilance? It is a time of war. This body of craftsmen is an organized regiment. The battle is for bread. Before the door is opened there is a noise like the sound of far-off thunder. What can it mean? To what mysterious doings am I to become an eye-witness to-night? I became a little anxious, perhaps a little nervous, and regretful. An eye appeared at the hole in the door; there is a whispered conference and I find myself between two men marching up the center of the hall to the desk of the presiding officer.

My entrance was the signal for an

outburst of applause such as I had seldom heard before. The hall was small, and it was a mystery how six hundred men could be packed into it. But there they were, solidly packed on both sides of the hall, and as I marched through them they seemed to shake the whole building with their cheers. The chair man rapped for order and made a short speech.

"I ain't what ye'd call a Christian," he said, "but I know the genuine article when I see it. If the Bible is true, Jesus went to the poor, and if the rich wanted him they'd have to look him up. Do you fellows ever notice the church ads in the Sunday papers? They remind me of the columns where ye look for a rent. They all advertise their 'modern improvements.' This minister is doin' th' Jesus business in th' old way. That's why we like him, an' that's why he's here."

Once again the rafters seemed to shake with the violent vibrations of enthusiasm, and it was some time before order was restored. My initiation concluded, I made an address. It was as brief as the chairman's.

"Reference has been made to a great Master to-night," I said. "Let me ask you craftsmen of New Haven to stand and with all the power of your hearts and lungs give three cheers for Jesus the Master Craftsman of Galilee."

There was the shuffling of many feet for an instant—then a pause, a pause which was full of awe—then with a roar like thunder six hundred throats broke into wild applause for Jesus, whom such people ever gladly heard; and straightway, for the first time in the history of organized labor in New Haven, a union was closed with the apostolic benediction.

NEW HAVEN, CONN.

# Literature

## Walters's History of Pottery

THIS work\* in two volumes of over eleven hundred pages, including table of contents and bibliography, with sixty-nine plates and two hundred figures, gives us after long waiting an adequate history of ancient pottery, of which vases are the chief item.

In this period excellent histories of ancient sculpture, some in repeated editions, have appeared. But those who wanted information about ancient vases have been referred to the utterly inadequate and antiquated work of Samuel Birch or the torsos of Rayet and Collignon, and of Dumont and Chaplain. Students have had in the meantime recourse to hundreds, perhaps thousands, of monographs and articles in periodicals. But "in the fulness of time" a book has come which gives to students a conspectus of this great field; and they may well give a sigh of relief. They may now with this work in hand sit down in any well-equipped library, draw books and periodicals in which the principal vases are found in illustrations, and easily ascertain in what museums the actual vases are to be found.

Mr. Walters, who prepared in collaboration with Cecil Smith a catalog of the vases of the British Museum, has performed his present gigantic task with credit. He even goes beyond vases, and treats of every product of classical art in clay.

But the chief theme is, of course, Greek vases, which, though broken to pieces, experience a resurrection and defy barbarians and time. In fact, the famous François Vase has recently come forth from a *second* destruction somewhat improved.

It is known from ancient writers on art—Pliny for example—that Greek painting was as much esteemed as sculpture. But while we have Greek sculpture preserved to the present day in many good copies and a few originals, Greek painting has passed away, with no hope of a

resurrection. But a branch of mere industrial art, their "pots and pans," scattered all over the Mediterranean basin, testify to their fine artistic sense, not only by their exquisite shapes but by their paintings. It is from these that we gather some notions of what real Greek paintings were like. Even fragments that cannot, when put together, make a whole are often treasures, especially those found since 1885 on the Akropolis at Athens in the *débris* left by the Persians.

The principal known centers of vase manufacture were Corinth, Athens and Chalkis, on the mainland; Miletos, on the coast of Asia Minor, and Samos, an island only a few miles away from it. Kyrene, on the north shore of Africa, also exported her vases. In the seventh and sixth centuries B. C. there was a bitter potters' war between Athens and Corinth. The struggle for the export trade to Etruria is shown in the Etruscan tombs. There was an enormous export of vases, particularly of large vases, probably filled with olive oil, first from Corinth and later from Athens. Athens was constantly improving its technique, and in 520 B. C. they controlled the great Etruscan market. This was a staggering blow to Corinth; and it was to her a sweet revenge to fan the flames of the Peloponnesian War, which ruined Athens. No more Athenian ware appears in Etruscan tombs after the end of that war.

It is a curious fact that Italians, from local pride, claimed all these vases as local production, and almost down to our time they passed under the name of "Etruscan vases." Etruria did produce pottery, but oh! how different!

It is quite certain that Athens made the change from the so-called black-figured ware to red-figured, changing from dark figures on a red ground to red figures on a dark ground. We see tentative trials of first painting a *part* of a vase in the new way. The final introduction of it brought delicacy in interior lines, drawn on the red forms. It was probably this which made Corinth succumb in all markets. The superior excellence of the red-figured style is seen

\* HISTORY OF ANCIENT POTTERY: GREEK, ETRUSCAN AND ROMAN. By H. B. Walters, M.A., F.S.A. Imported by Charles Scribner's Sons, 1905. \$15.00.

by comparing the François Vase with the Euphronios cup, in the illustrations here given, in which the white represents the red of the original. That the potters who worked at Athens were not all Athenian born is shown by names of the painters' or makers inscribed in many cases on their work.

All the great museums of Europe have large collections of Greek vases. The British Museum has 5,000 (1,000 unpainted). The Louvre was a little late in getting a share in the great Vulci finds, but it has now about 6,000 vases. The Berlin Museum has carefully collected material with practically no rubbish. In 1885 Furtwängler had cataloged over 4,000 vases; and the Museum is making steady gains. Athens, Munich and Naples have collections of great value for study. In America the Boston Museum has been especially active in collecting. Museums have sometimes paid several thousand dollars apiece for these vases. One, called the Capo di Monte vase, brought \$5,000; \$7,500 was paid for a vase now in Naples, the highest price on record. A lekythos, in the British Museum cost \$1,000, while in ancient Greece, according to Aristophanes, the regular price of a good lekythos was an obol, about three cents. In an inventory six kraters, mixing bowls, presumably painted, are put down at about sixty cents apiece, while a lot of lekythi are put down at three cents apiece. As these were vases of the fifth century, B. C., they would probably sell in the modern market for hundreds, perhaps thousands, of dollars apiece. Verily, the Greeks, if they do not "rule us from their urns," make us pay high prices for them.

Considering the current prices, it is no wonder that forgeries are constantly at-

tempted. But most Greek vases were covered with a firm coating of varnish, which cannot now be imitated. The varnish of spurious vases is readily affected by weak hydrochloric acid, or even by alcohol, which the genuine Greek varnish withstands. If a dealer will not submit a fair-seeming vase to this test it is a proof that he fears to see those pretty pictures vanish. One who has a thoro acquaintance with vases needs no such test. Little details generally betray the forgery. Of vases that dealers offer, false stories as to the place of origin are almost universally told. Hence the value of those found in excavations.

Nearly all the recent excavations in Greece, except those at Olympia, have brought to light vases of many periods. The American excavations at the Argive Heraion yielded such a large quantity of so-called Proto-Corinthian ware that it was proposed to substitute for it the name Argive. The fact, however, that the still more recent excavations at Corinth constantly turned out the same ware

tends to keep the balance from tipping decidedly against the old name.

Before the excavation of the Athenian Akropolis it was currently believed that the red-figured ware began at about 480 B. C. But the finds of red-figured ware in the "Persian débris" showed that it began its career nearly half a century earlier. The Panathenaic amphoræ by a strange conservatism retained until the very end the black-figured style; and this, too, when the manufacture of vases had passed away from Athens to Southern Italy, the Crimea and other places, leaving Athens with a monopoly of only the white funereal lekythi.

Whenever a book like this appears it must run the risk of appearing a little too

The François Vase in Florence.  
Illustration from "History of Ancient Pottery,"  
by H. B. Walters.

early for something or other. There is no use in regretting that this book comes too early to give an adequate description of Cretan pottery, altho two excellent examples are given, viz., a pithos of the usual Cretan kind and a splendid piece of Kamaræ ware from Palsekastro.

Nothing is lacking in the equipment of this splendid book. The paper, the print and the illustrations can hardly be overpraised. Of course, the interest flags a little at the last half of the second volume when we come to Roman times. But even this part is enlivened by a description of the work of Dragendorff

occasionally traversed a second time. Perhaps, on the whole, this need not be regarded as a blemish, even if it does somewhat increase the size of the book.

The use of the word "glaze" for varnish is likely to convey a false notion to many. The frequent use of "matt-white," "matt-black," etc., seems rather German than English. Perhaps "dull" white, etc., would do just as well. In I., p. 321, for "Eretria" read *Eubæa*. I., p. 365, "Doubtless" is followed immediately by "perhaps." I.; p. 445, For "similarity" read *identity*. These are trifles. But the following, p. 286:

Kylix by Euphronios (in Munich): Herakles Slaying Geryon.  
Illustration from "History of Ancient Pottery," by  
H. B. Walters.

and Déchelette on comparative unimportant material. Chapters 12-15 are of the nature of a running comment on the pictures on vases classified by subjects. The most *generally* interesting parts of the book are chapters 1, 2, 6-11, and 16, 17, the last being an account of inscriptions on vases. It becomes evident from these inscriptions that vase-painters were quite free in their spelling. To take a single example, the name of the hero of the Odyssey is spelled in seven different ways, but never with a "d" in it. To say that chaos reigns in the potter's "orthography" would be putting the case none too strongly. Chapter 16 gives cuts representing the more current forms of vases with their names, also examples of the more usual forms of ornamentation.

Among so many excellences it may be invidious to seek for blemishes. By the arrangement chosen the same ground is

"By a conventional attempt at perspective the figures are often placed above the central group when they are supposed to be on its farther side, just as the fresco from Tiryns, and an 'Island-gem' of the Mycenaean period, a man leading a bull is represented over his back," is a strange interpretation, in the light of the scenes of bulls tossing men, and women, too, on the walls of the palace at Knossos; especially so since the ivory figurine from the same place appears to show the man held above the bull by a band around his waist.

It may not be amiss to close this review with mention of jealousy among Athenian potters. Euthymides, jealous of the much greater Euphronios, put on one of his amphoræ, 'Euphronios never made the like.' *ὡς οὐδέποτε Εὐφρόνιος*. This represents the keen competition already brought to light in Hesiod's *καὶ ἀγῶνές τε καὶ ἀνὰ νότον*.

RUFUS B. RICHARDSON

## Henry James

In her study of the novels of Henry James,<sup>1</sup> Miss Cary expresses modestly a sane reverence for the depth and extent of Mr. Henry James's genius, and for his "indefatigable interrogation of the living model—complete saturation in the composite air of reminiscent experience," by which he has acquired "atmosphere." She follows with intelligent zeal his growth in power of delineating American and English life; and the student of James, with her little book in hand, and, under the lamp, say, three of the author's best books—"Daisy Miller," "The Portrait of a Lady," and "The Golden Bowl"—will be able to get very deep into the manner and purpose of the distinguished inventor of the international novel.

In *English Hours*<sup>2</sup> are bound up many essays and studies of English life. All have been published before, and each, with the happy illustrations by Mr. Pennell, is quite worthy to represent Mr. James at his best—the "London" being his very best, perhaps, as illustrating the vast, historic London, birthplace of kings, scholars, and statesmen, home of palaces and cathedrals. So charming is it, in fact, both in its old features and new, as Mr. James broadly and richly treats them, that we almost forget to be glad that we didn't live in the old with no hope of being handed down by survival of the aristocratic fittest into modern London.

The third volume<sup>3</sup>—smallest of the three—is of wholly new material, as to the book publication. It is made up of two valuable lectures—"The Lesson of Balzac" and "The Question of Our Speech." Both are of the author's tantalizing best. There is so much charm in the fine arabesque of words by which he half conceals the real Balzac so as to reproduce him as a remote tumultuous mountain range of sky-piercing genius, that one is irresistibly drawn to think of the dusky "grille" in the Parliament

House thro which peeresses and peerless ladies look down upon the Commoners of England. Out of the phantasmagoria of flowers and fluttering images, visions of reality, and figments of the fancy we catch glimpses now and then of the real Balzac in his dimly lighted study, but we never become quite sure whether the deep-browed Frenchman got his little world of human life in all its infinite variety and perfection of detail thro the infinite pain of observation, or whether he possessed the molds, varied and shapely, into which he poured the fused metal of a golden imagination, as did our English Shakespeare. The creative imagination is wonderful in its power of making a small amount of actual observation go far. Hawthorne, better than James, perhaps, states the case, with its inevitable limitations, when, in one of his early love letters, he says in his inimitable American-English, without the arabesque: "I used to think I could imagine all passions, all feelings, and states of the heart and mind; but how little did I know! Indeed, we are but shadows; we are not endowed with real life, and all that seems real about us is but the thinnest substance of a dream—till the heart is touched. That touch creates us—then we begin to be—thereby we are beings of reality and inheritors of eternity." "What admirable locution!" we say of Hawthorne. "What admirable circumlocution!" we sometimes feel tempted to cry out of Mr. James. But we fall back on the "admirable," in the Lesson of Balzac—on the charm of the arabesque, on the tantalizing mystery of the grille, and stand ready to believe in the peerless virtues behind.

The case is harder with *The Question of Our Speech*. Mr. James, newly arrived out of the murk of London, stands blinking under the bright skies of America. But only for a moment. He hears the American voice and immediately begins to cast aspersions on our parts of speech—nay, on the very organ of our speech—the *vox Americana*, inherited primarily from so many "laidy" mothers of Warrickshire, so many "feythers" of Lincolnshire and a 'ole 'ost of hunambitious hancestors from Cockneydom, who for centuries lived *with* the "tone standard bearers" of England

<sup>1</sup> THE NOVELS OF HENRY JAMES. A Study. By Elizabeth Luther Cary. With a Bibliography by Frederick A. King. New York: G. P. Putnam's Sons. \$1.25.

<sup>2</sup> ENGLISH HOURS. By Henry James. With Illustrations by Joseph Pennell. Boston: Houghton, Mifflin & Co. \$5.00.

<sup>3</sup> THE QUESTION OF OUR SPEECH. The Lesson of Balzac. Two Lectures. By Henry James. Boston: Houghton, Mifflin & Co. \$1.00.

without being materially affected by its tone—that is, in the direction of the “assured amenities.”

America has no “tone standard” at all, he finds. We can’t be “conceived of as represented in the international concert of culture.” The “French, the Germans, the Italians, the English people ‘in particular,’ and many other people, Occidental and Oriental, not excluding the Turks and the Chinese, have for the symbol of education, of civility, a tone standard; we alone flourish in undisturbed and in something like sublime unconsciousness here of any such possibility,” and, until we possess ourselves of this particular one of the “great attainable amenities,” it is hardly “a thinkable thing” that we can have “any fruitful association with each other.”

Becoming a little—well, perhaps “unparliamentary,” not to say Western in his plainness of speech—it may be “vigorous” in the Blue Grass variety of human expression, he states the case thus: “Our national use of vocal sound, in men and women alike, is slovenly—an absolute in-expert daub of unapplied tone.”

After that, how can an otherwise senseless girl from Philadelphia, who says “garz,” or a sweet souled Southern “bir-rd” of Paradise ca’m her song among the palmettoes sufficiently to say “yep” to a lord among the tone standard bearers of England?

Mr. James, however, it ought at once to be said, does not leave the maids altogether without hope. They may, “in fifty years,” perhaps even in less time, by great and assiduous attention to vocal gymnastics, lift themselves from a condition of “mere helpless slobber of unconnected vocal noises” to a distant view of the “assured amenities.” Upon the young girl graduates of our colleges he urges this consideration. They will not, he fears, find any considerable organized body of the elect ready to help them—not even so many, perhaps, as Mr. Matthew Arnold’s “remnant.” It may well be that only one or two “articulate individuals”—“torch bearers”—“guardians of the sacred flame,” will rise up to lead the heavenly choir. He urges them, however, to try. And surely every good American will second the motion heartily. One might suggest lessons in tone from

the “Heathen Chinees,” for he has the tone standard—it would be flute-like; or from the Dago, tho it might be a somewhat monotonous staccato of patter; or a little assistance—only a little—from the volcanic throat disturbances of our Teutonic kinsmen. A little would go a great way. These all have a tone standard. It would be useless, probably, to go to London. Besides the fact that so many of us drifted thru that metropolis of “our consecrated speech” in former centuries without getting the standard adjusted to our vocal apparatus, we have Mr. James’ word for it that even London is not a sure guide—or it was not, in 1888, because of “the terrible way in which the idiom is misused by the populace in general, than whom it has been given to few races to impart to conversation less of the charm of tone.”

Think of it—with the whole Parliament of Great Britain pouring euphonious speech upon the city for so many centuries! Somehow we must all get together and have the standard, if we have to buy it with the Carnegie Fund.

## The Sea Power in 1812

There is no failure to point a moral in Captain Mahan’s latest work.\* Nor is the reader permitted to forget it for a moment, for it is reiterated wherever possible. That moral is the need of naval strength and preparedness; and the particular application with which he adorns his tale is the eleven-year period from 1801 to 1812, during which the earlier naval policy of the Government was reversed, and weak gunboats supplanted efficient frigates. Did anything untoward happen on land or sea? Look to the naval policy of Jefferson and Madison. Even when Commodore Chauncey is recorded, at the end of the war, as recommending the building of one small vessel to take the place, on Lake Ontario, of a number of heavy schooners, we have the commentary: “It is to be feared that the long ascendancy of the gunboat policy in the councils of the government had sapped the professional intelligence even of some naval officers.”

\*SEA POWER IN ITS RELATIONS TO THE WAR OF 1812. By H. T. Mahan. Illustrated. Boston: Little, Brown & Co. Two volumes. \$7.00.

From "Sea Power in its Relations to the War of 1812," by Capt. A. T. Mahan.  
Little, Brown & Co., Publishers, Boston.

No doubt the Jeffersonian policy was short-sighted. Its fruits were bitterly reaped both before and during the war. We had no power with which to impress upon Great Britain the inadvisability of impressing seamen from our merchant vessels, and after the blockade was made rigorous in May, 1813, both war and merchant vessels, save for exceptions winked at by the British officers, were swept from the sea. Of course, no amount of ship-building possible to the young nation could have made the United States by 1812 a serious rival to

Great Britain. But had the earlier policy been followed she would by then have attained a strength sufficient to deter Great Britain, then in the midst of her Napoleonic wars, from risking a fresh collision.

Captain Mahan relates not only the sea and lake actions, but the land actions as well. His work is thus, virtually, a comprehensive history of the war. More than 300 pages are taken up with an introductory survey, in which particular attention is paid to Great Britain's assertion of sea rights not claimed by other

nations. Beginning with the passage of the Navigation Act of 1651, he traces the development of Britain's sea policy and of her sea power. Impressment of deserters serving on foreign merchant vessels had come to be one of her inviolable rights, not to be yielded in any circumstance. And tho the United States offered the passage of a law debarring British deserters from serving on American vessels, no point would be conceded. Only a naval power strong enough to threaten Great Britain with disaster could have been effective in stopping the practice of impressment.

To the navy fell most of the glory of the war, to the army most of the shame. In at least two instances, moreover, naval victories had decisive results in fixing the terms of peace. To Captain Mahan it appears certain that the British demand that the United States should set apart a territory in the Northwest for the Indians was so weakened by Perry's victory on Lake Erie that it could not be pressed. This demand, made in consideration of Britain's obligations to the Indians for their aid, would have alienated a section of American territory to the status of a British quasi-protectorate. And had the British remained in undisputed control of Lake Erie it is possible that the demand would have been given as an ultimatum. Thro Perry's victory and the consequent regaining of American territory by General Harrison, the project faded until but a shadow of it came to appear in the final articles of peace. Macdonough's victory on Lake Champlain had a similar result. The British had sternly insisted upon a sufficient cession of land to establish a direct route between Quebec and Halifax. "To the battle of Lake Champlain it was owing that the British occupancy of United States soil at the end of the year was such that the Duke of Wellington advised that no claim for territorial cession could be considered to exist, and that the basis of *uti possidetis*, upon which it was proposed to treat, was untenable."

Tho prolix in style, and tho reiterations occur with unnecessary frequency, the work attains an exceptionally high standard of historical writing. The wealth of detail, patiently gleaned from

many sources, is remarkable, and the treatment is studiously fair. In so far as it is an argument and a plea for naval preparedness, the work is, of course, written from an American standpoint; but in the treatment of data, particularly in its comparison of the relative merits of British and American vessels and commanders, its standpoint is international, and none but a zealous jingo can find much to criticise. The work concludes the series of volumes on "The Influence of Sea Power Upon History" as originally conceived by the author.

### The Business of Life Insurance

This book\* will be found good reading by all who are interested in life insurance; and, in these days, who is not? All phases of the subject, from the mathematical basis of insurance to the sins and troubles of the agent, are dealt with in a way at once sound and suggestive. Mr. Dawson is the knight errant of the actuarial tribe. Not that he has anything of the Don Quixote in his make-up; he breaks no lances for lost causes; but he is never for one moment content with things as they are; whatever good he sees in them, he is always on the lookout for some way in which they may be made better. For instance, he would like to democratize the life insurance corporation, and he has an idea that this might be done by abolishing the proxy voting for directors, and substituting voting by mail, and he adduces the Australian Mutual Provident as a notable example of successful administration under this system. It is likely that such a reform would do no harm; but it does not seem likely that it could work any material change toward real supervision or control by the policyholders at large. Competitive corporations are driven by the very law of their being to become essentially oligarchic, even monarchic, since such concentrated forms of administration are most effective in the war of competition; and the changing of the method of choosing directors will not neutralize this tendency.

Mr. Dawson's ideal would be to see the

\*THE BUSINESS OF LIFE INSURANCE. By Miles Melander Dawson. New York: A. S. Barnes & Co. \$1.50.

life insurance business carried on by a great number of small companies, all democratically governed and handled. This is an ideal which has charms, but, after all, it belongs to a period of social development now passing away. The inexorable logic of corporate business tends to concentration and not to diffusion of economic power, and the way out of this phase, so odious in many respects, is forward to an entirely new phase, and not backward to one outgrown. Mathematicians are supposed to be minus prejudices, and we are surprised to be shown, as we are by Mr. Dawson, that the world of insurance is dogma-ridden, like the religious world. With perfect good temper, yet with an illumination which there is no escaping, he points out that text books and legislation have united in holding as sacrosanct a formula for reserve which actually ignores one of the weightiest elements in the case—the cost of the effort which brings the new man into the insured circle. This old blunder is still dominant, notwithstanding the three greatest doctors of insurance science have attacked it—Zillmer in Germany, Sprague in Great Britain, and McClintock in America. The multiform unfairness, and the damage to innocent interests, which this misconception has imported into insurance law, arouse the chivalry of our knight errant, and he comes to the rescue with sensible proposals for righting the wrong. In his present function of adviser to the investigating committee, it may lie in his way to bring this with other reforms into practical politics, and it is to be hoped that such efforts will avail.

**The House of a Thousand Candles.** By Meredith Nicholson. Indianapolis: The Bobbs-Merrill Company. \$1.50.

A good book to read when you are sitting in the station waiting for a train. You will be oblivious of surroundings and delay, but liable to miss your train. The story is common in type, but unusual in quality. Its various ingredients, the eccentric grandfather, the will improperly restricting the course of true love, the mysterious mansion, the secret passage, the unrecognized heroine, the disinherited villain, the triumphant dé-

noucement, all these are very familiar. All the more credit, then, to the other who has combined them so ingeniously that even the veteran reader of mystery stories will find it impossible to read in advance of his eyes. The tinted illustrations by Christy are good, but poorly registered in the printing.

**American Diplomacy, Its Spirit and Achievements.** By John Bassett Moore. Harper & Brothers. New York: 1905.

When John Bassett Moore has anything to say on the subject of American diplomacy it is worth our while to give heed. His monumental work, *History and Digest of International Arbitration*, published by the government, would in itself have made him the greatest living authority upon American diplomacy, but his work and research have gone deep into every phase of our international relations. The present volume is simply a revision of a series of articles that appeared in *Harper's Magazine*. One chapter, that on the "fisheries question," is added. Mr. Moore does not attempt a chronological narrative of our diplomatic history, but seeks rather to point out the principles which have guided American diplomacy. He records the achievements of our diplomats in establishing liberal and humane doctrines for the settlement of international questions. Our long struggle with England for the freedom of the seas is the subject of one of the most interesting chapters. Mr. Moore writes:

"In maintaining the right of neutrals freely to navigate the ocean in pursuit of innocent commerce, the early statesmen of America . . . gave their support to a cause from the eventual triumph of which the whole world was to derive an incalculable benefit."

To gain that end they resisted the "right of search," causing it to be abandoned, and they extirpated piracy in the Mediterranean Sea and elsewhere. At the same time the "Fathers" were fighting the long fight with commercial restrictions. The spirit of national monopoly had fettered commerce until, at the time Americans won their independence, there was not a single port in the Western Hemisphere outside the thirteen States with which an American vessel could lawfully trade. Against these pretensions the United States set its face,

and in time was triumphant. Its next struggle was for non-intervention with South American states and the assertion of the Monroe Doctrine. Another long and interesting contest was for the establishment of the doctrine of expatriation. Aside from the fundamental principle of American political philosophy—the freedom of the individual—it was important to the nation with vast areas of free land, which must be peopled from foreign lands, that the English assertion, "Once an Englishman, always an Englishman," should not hold. The story of the struggle for this concession is told with the same masterful command of all the material which characterizes each of the essays in this most valuable volume.

**Alcestis and Other Poems.** By Sara King Wiley. New York: Macmillan & Co. 75 cents.

Sophocles's tragedy of Alcestis's sacrifice, her life for that of her king and husband, Admetus, one of the lasting stories of the world, is rendered by Mrs. Drummond (Sara King Wiley) in the classic Greek dramatic form, yet with a modern spirit, or, better, that of Christianity. Courage and sincerity infuse the play and hope glows in it. Good cheer and a fine appreciation of nature characterize the poems completing the volume. Here is the "Envoy":

"Lightly I cast my wild flowers on the sea,  
While the slow surges, swelling, turn and break,  
And sinking, suck them down to depths unknown,

Unnoted specks in the tremendous gulf.  
Some waif afloat, at chance of wind and wave,  
May Time, that old and crabbed mariner,  
With cold, slow fingers thrust uncertainly,  
Draw out, and weave within the coronal  
That binds Athene's bright immortal brows."

**Gli Avenimenti in Sina nel 1900, e l'Azione della R. Marina Italiana.** 8vo, pp. xiv, 731. Ulrico Hoepli. Milan.

This stout volume tells the story of the Italian share in the expedition which relieved the foreigners in Peking at the time of the Boxer outbreak. Connected with it is a large mass of documents and matter of historical interest. But it must be understood that in the supreme crisis, the attack on the imprisoned foreigners, it is almost only the Catholic and especially the Italian missionaries and their converts whose condition is de-

scribed, mostly from Bishop Favier's diary. It will be remembered that they were by themselves in the Cathedral, and had their separate dangers. Accordingly there is no account of the main defense of the missionaries and their native converts. It may be that this was not in the aim of the anonymous writer, but while it satisfies the Italian public, perhaps, it misleads them as to the extent and courage of the defense.

## Literary Notes

THE average business man would do well at least to glance at L. E. Ludwig's "Scientific Business Letter Writing." Writing letters is an art, and in this book an expert gives advice founded on ten years' experience. (Publicity Publishing Co., Boston.

....The Everett Press, of Boston, publish, under the title of "Frozen Dog Tales," a collection of stories and anecdotes, written by Col. William C. Hunter, of Idaho, which bristle with Western ideas and color. Humor, pathos and philosophy all find a place in this little book. (Price, \$1.00.)

....The occasion of the Garrison centennial gives interest to a dozen of the "Old South Leaflets," published by the Old South Meeting House, Boston, relating to Garrison particularly, and to the general anti-slavery struggle. They are furnished at five cents a copy, to cover the cost of printing.

....The Library of Congress at Washington have issued a list of Benjamin Franklin papers, compiled under the direction of Worthington C. Ford, chief of the division of manuscripts. A large number of these papers were bought by the United States Government at an executor's sale in France in 1882.

....The Norwegian Storthing has decided that the Baroness Bertha von Suttner has done more than any one else for the promotion of peace and international arbitration by her novel, "Die Waffen Nieder," which tells of the horrors of war and the evils of militarism, and she has consequently been awarded the Nobel Medal and \$40,000. An authorized translation by T. Holmes is published by Longmans, Green & Co., N. Y., for 75 cents.

....Putnam's publish in two handsome volumes at \$5.00 a series of literary and historical essays of Sainte-Beuve, selected from his *Causeries* and *Portraits* and translated by Miss Katherine P. Wormeley, under the title of "Portraits of the Eighteenth Century." This is similar in form and style to the "Portraits of the Seventeenth Century," which we reviewed at length [Vol. LVII, p. 505]. The present set is prefaced by a critical introduction on Sainte-Beuve's life and method of work, and contains twenty-five sketches, including Montesquieu, Voltaire, Franklin, Chesterfield, Diderot, Buffon and Rousseau.

# Editorials

THE semi-annual index of THE INDEPENDENT for the last six months of 1905 is now ready, and will be sent free to any subscriber who will notify us he wants a copy. Of course, those who return us the twenty-six issues of the magazine will have the index bound in the volume.

## A Year for Peace

IF the oppression and virtual slavery of the people is the greatest curse of the world, war is the evil next to it, even when it is necessary to gain freedom. The question of peace or war is the chief anxiety of the New Year.

So far as we can see, the outlook is for peace. The United States is not a jingo nation, and wants no war, and sees none in sight for us. Our chief intercolonial business now is, to see to it that the Philippines and Porto Rico and Panama are righteously governed.

Russia cannot make war. She is in the throes of a tremendous revolution, in which thousands have been killed and will be; but it is a purely internal conflict. While fighting within she cannot indulge in fightings without. There is much more danger that the unwieldy Empire will be broken up. The issue passes all power of prophecy, except that we may know that the old autocracy is dying and a considerable measure of liberty will come to the people; but whether by a constitutional monarchy or by a republic no one can tell.

We cannot believe that the Emperor William wants war with France or with any other Power. The French are nervous over his protestations and his aggravations, but they are fairly safe, with their new alliance with Great Britain. The provoking of war would be so criminal an act that it would arouse horror over all the world; and, we believe, in Germany itself, where the strong Socialist party is based on international sympathies.

Great Britain and France are now the best of friends, as they always should be, and there is not the smallest cloud of war in their sky. Their alliance is al-

most a guarantee of peace the world over.

Whatever fears we may have of a new China as well as Japan, there is no likelihood of war in the East for some years to come. China will first get fully awake and adopt the new education, and with it the new organization of her government and her military force. When that is accomplished those Western nations may look out which maintain ports and concessions in Chinese territory. Russia has been driven back in Manchuria; but England, Germany and France have their holdings in China, and may not hold them another generation. "China for the Chinese" is a patriotic ambition.

There remains the interminable Turkish difficulty. Turkey does not seem able, as China is, to reform itself. A Young Turkey may be aroused to active life when the present Sultan passes away, but with him there is no hope. Yet he has yielded in Macedonia, and conditions will probably be no worse. The world is likely to be patient with religious conflicts and massacres, and to wait for that internal improvement which must come at last in Turkey, as it will in Russia.

So the dove of peace, with an olive branch in its mouth, looks about somewhat anxiously, but hovers ready to alight; for it will be a year of peace between the nations and of hope for all, even for Russia.

## Eddies and Currents

THE temptation is irresistible to regard the first of January as a natural division of history as well as of time, to look upon the New Year as a New Era, to speculate upon how it will differ from its predecessor as we do how much a child will inherit of his father's characteristics. So, too, we find ourselves watching the events of the first few years of the new century with an especial curiosity, as tho we could prognosticate from them what the whole century would be, just, as some people foretell the weather for the year from that of its first four days.

If we thus recognize the artificiality

of this use of our divisions of time, we may as well acknowledge its convenience and fall in with this easy custom in discussing the course of events in recent history. Some broad contrasts can thus be drawn with sufficient truth to bring into prominence certain real tendencies.

The nineteenth century was an era of national integration. The twentieth century appears to be an era of national disintegration. This does not mean that the work of the one century is being undone by the other. The German Empire shows no tendency to fall apart into its original atoms. Piedmontese and Sicilian are keeping house together with greater harmony than their best friends once thought possible. But, on the other hand, the movement toward continually greater unification, which formerly seemed irresistible, is now definitely checked, and even reversed. The Pan-Scandinavian fervor has cooled down so far that those who forty years ago were striving to bring the three nations closer together have now accomplished the separation of the two that were united. The Pan-Slavic impulse, for which so much enthusiasm was expended and so much blood shed, is now apparently dead beyond hope of resuscitation. So far from all those peoples, who with more or less right claimed the name of Slav, being gathered together under the hegemony of Russia, we find them actively engaged in cutting each others' throats. The little kingdoms taken from the side of Turkey prove to have an independence and vitality very surprising and disconcerting to their creators. A few years ago there seemed no hope that the Finns and Poles, Letts and Jews, would escape complete digestion and assimilation by the Russian Empire. Now they have acquired a new lease of national life which they are not likely to lose, no matter what the outcome of the Russian embroglio. We hear no more of the great Latin union which was to bind together all the Mediterranean races. Zionism died with its founder, Herzl. The vigorous courtship of Latin America which we carried on for many years has developed more antipathy than affection. No one is more skillful at coaxing than Mr. Chamberlain, but he has failed to get the British colonies to draw closer

to the mother country. The Irish question is again to the front, and a patriotic boycott in India is proving harder to suppress than a Sepoy rebellion.

The long anticipated and much dreaded unification of the yellow race now has a fair chance of accomplishment, but China's anti-foreign feeling seems to be extending to Japanese as well as to white people.

Historical and literary study is arousing local patriotism. Minor races claim equality with the greater. Dialects insist that they are languages. Obsolete tongues are revived and become weapons of party warfare. Mobs fight each other in the streets over nice points of philology as they used to over questions of theology in the Byzantine Empire. Magyar leaders sacrifice everything to secure twenty-one more words in army commands, and all the races under their domination demand the same linguistic rights. It is hard for an outsider to see what there is about the Polish language that children should cry for it, yet the world is called upon to admire and pity the boys and girls in Prussian schools who suffered punishment rather than speak German. Black-letter chronicles are ransacked to bring to light traditional ceremonies and local *fêtes*. National costumes are being revived or invented. All these divisive forces are especially active in this new century.

As a matter of fact peoples are not drawn into confederations and empires by mutual affinity, but are forced into them by outside pressure, such as a commercial or military war against a foreign nation. Just now such external forces are not acting. Norway does not see why she cannot go out alone safely since Switzerland does, and Hungary is likely to shake off the chaperonage of Austria for the same reason. Canada knows that in case of war she would not suffer half so much as the mother country. The heavily armed powers are either so peaceable or so jealous that small nations have rather the advantage. So political aggregation is not likely to increase. Instead of consolidation, we shall have federation, alliances and friendships.

For, in spite of political separations and the revival of race prejudices, there

are deeper processes of unification going on unchecked. Telegraph wires and steel rails bind nations closer than treaties and royal cousinhood. The nineteenth century resorted to world's fairs to bring people together. They have lost some of their attraction for us, for every large city has now its world's fair as a continuous performance. Inventions cannot be kept in bounds even by international patent laws. Scientists ten thousand miles apart work on the same problems and help each other as tho they were at adjoining desks. Esperanto is only a hope, but the eagerness with which it is seized upon shows how much men desire to break thru the barriers of language. The nations are getting neighborly; they call over the back fence to each other, "Don't you want to borrow my new municipal function? See how well it works."

"Proletarians of all countries unite," was the call of Marx, and it is now being obeyed. "Capitalists of all countries unite," was the dream of Cecil Rhodes, and it is being fulfilled more completely, tho in a different way than he intended. International labor unions combat international trusts. Societies for philanthropy, reform, research and culture bring together in world conventions the like minded of all countries.

These new syntheses, founded upon self interest or mutual interests, are more likely to be useful and stable than the old one of political expediency and geographical contiguity. People are not getting further apart; they are getting together in new ways. History is a game of anagrams, forever spelling new words with the old letters.

### The Duty of Chief Pastors

WE observe a new doctrine of the power of the Episcopate to be developing in the Methodist Church. It begins to be taught that the Bishops of that Church are responsible for the purity of its faith. The last General Conference made the Bishops responsible for the orthodoxy of the teachers in the schools of theology. Until that time the Methodist Church did not understand that she had such a standing forum of her true faith, but imagined that she

could depend on her standards as interpreted in her conferences, where each pastor's character is annually passed. Now this new notion that questions of theology must be passed over to the Bishops for their decisions begins to find currency; and a great revolution it is. Says one of the principal *Christian Advocates*, that of St. Louis:

"The Bishops of the Church should be in some distinct manner the custodians of the faith of the Church. In the Roman communion they are entirely so. The theory of the episcopate, or chief pastorate, involves it. The Bishops are the pastors (shepherds) of the flock, and the injunction, 'Feed My sheep,' lays on the chief pastors the responsibility of pondering and to some degree deciding what that 'feed' shall be."

Hitherto the Bishops have been chosen for their administrative power; if this new duty is to be imposed upon them they will have to be theologians, and a new conflict, and perhaps acrimony, will be imported with their election.

A principal argument, however, in favor of the new duty of Bishops, is that it will give peace to the Church by saving it from theological discussion. Says the same journal:

"There was indeed a forum—the press of the Church. And into the press the various phases of criticism rushed, with the pens of steel and ink of bloody hue. When we reflected on the blight and paralysis which that battle brought on the Presbyterian Church, particularly in those centers where the war was most intense, we could but wish that there were some judicial and final forum, sitting apart, undisturbed, independent, adequate, resolute, to which contestants in our own Church could come. . . . Naturally that forum was and must be before the chief pastors of the Methodist Episcopal Church. We . . . believe that some such plan is vital both to the purity and the peace of the Church."

"Peace," "peace" is what is asked for as the chief blessing of the Church. We do not believe in intellectual peace, which means stagnation. We have never known a great discussion as to religious truth that has not done more good than hurt. We do not believe that the Presbyterian Church would wish to have lost its few years of stress on a great question. That Church is no weaker for it now; and it has never done so much for evangelism as it is doing today. That discussion waked up the whole Church, and interested the whole country. That

kind of a storm clears the air, even if it does drive some timid souls to their cyclone caves. It is healthy to set the whole people to thinking about great themes. The question involved in the case of Professor Mitchell is of serious importance to the Church; and just as in political matters we set the whole country to discussing a question of tariff or currency, and then trust the people, so would we have all the Church, ministers and laymen, enlightened in matters that belong to the Church. The other way is to have twenty professors and trustees of a theological school confer in secret session, or by correspondence, with a dozen or two "chief pastors," and those "chief pastors" shall by a majority vote "decide what that feed shall be" that shall be given to the flock. It is the method of secrecy and tyranny and apathy. It teaches the Church that it has no business to think. That belongs, "as in the Roman Communion," to "the custodians of the faith of the Church," to an order of men superior to the other pastors. Accordingly, the present matter must not be discussed in the press or anywhere else. And the journal from which we have quoted, after explaining the decision of the Bishops and showing their right to rule as well as feed the flock, thus closes the case and shuts off all discussion:

"We have now endeavored to put the whole case before our readers, as is their right. We have refrained from discussing in this connection in any minutest particular the views of Dr. Mitchell, or of higher criticism in any of its phases. With repression of our personal views we have compassed the question in all its respects, and, having done so, will proceed on the theory that our readers, as well as the explicit language of the General Conference wish the incident regarded as closed."

The "incident closed"! Discussion disallowed; free speech forbidden! What are they afraid of?

*The Outlook* publishes an important article by Prof. G. A. Coe, of Northwestern University, a Methodist institution, where he holds the chair of Mental and Moral Philosophy, severely criticising the action of the Bishops in the removal of Professor Mitchell from his chair in the School of Theology, in Boston University. But why should Professor Coe be compelled to go to an undenominational journal to discuss a Methodist

matter? Why do the Methodist official papers shut their doors against discussion of the great question of biblical authority that is involved? Must the Church be forced to seem a unit on matters of scholarship and theology, just as, under a rule in its Board of Bishops, the minority is silenced, and every action is given out as unanimous? Does it injure the authority of the United States Supreme Court that a minority can give a dissenting opinion, as in the late case where Justices Brewer, Day and Peckham published their dissent and argument in the case of an American-born Chinaman who was to be deported? We wait to see the editorial padlocks removed. Thus far, for an expression of dissent Methodist readers have been compelled to go to non-Methodist publications.

## Museums, Their Treasures and Their Forgeries

THESE have been days of special interest to our public museums. The Boston Museum of Fine Arts has lost Mr. Edward Robinson, as the result of a difference with the trustees as to the relative importance of the scientific and the popular uses of such an institution, and Boston's loss of so superior an authority has been to the gain of the Metropolitan Museum in New York. And now it is announced that our Metropolitan Museum receives by the will of Mr. Yerkes a magnificent collection of paintings and other objects of art, as well as two buildings on Fifth avenue in which they have been kept, the whole of the value of several million dollars. Then there is the offer of Mr. Freer, of Detroit, to the Smithsonian Institution, on certain conditions, of what President Roosevelt says is a "priceless collection" of old Chinese and Japanese art, and of paintings by Whistler and other artists, and, with all this, half a million dollars for a building to house the collection. Then, finally, there is the charge that a large number of the chief treasures in the great collection of gems given by the late Maxwell Sommerville to the Pennsylvania University Museum are forgeries. These are the incidents of the past few days.

Gifts to museums are a most proper

benefaction from wealthy collectors. They have taken great pride in gathering such collections, and it is to them a sad thought that their treasures will be scattered, and very likely destroyed and lost after their death. They do not like to think of such things going to the auction room to settle up an estate. They especially like to think that their names may be recorded and remembered for their taste and their benefactions after their wealth is dissipated and the memory of it is forgotten. Here is a fine opportunity to mingle a certain laudable self-esteem and love of a good name with their honest wish to benefit the people. This is the best way that they can do it. It is to be desired and expected that the choicest treasures in private collections will thus become the wealth of the public. It is said that in Boston a man is hardly considered decent who does not leave something to Harvard University; and this is very much the feeling that should control wealthy collectors of art treasures elsewhere.

But it is to be desired that such collectors should disguise their ambition for a name, and leave to the museums the generous duty of recognizing their worth. Conditions with gifts may, and often do, negative the very purpose which the givers have in view. It is very likely that the conditions cannot be accepted. The trustees of a museum may find it quite feasible to give a special room to carry the name of the giver of its contents, but the giver ought not to impose it, and the time may come when it would be a serious burden. The case of Mr. Freer's offer is in point. President Roosevelt and the press generally urge that his offer be accepted with the conditions attached. But one of them is that this separate building to be erected to hold the collection shall bear his name, and that nothing shall be added to the collection or taken from it. It would be a most extraordinary collection which our Metropolitan Museum would accept on those vulgar conditions. They indicate more personal vainglory than love of the dear people.

We much regret that the University of Pennsylvania should be called upon for another house-cleaning, and we hope

it will have a more satisfactory conclusion than that of the late investigation. But in the Hilprecht matter there was no question of the genuineness of the objects under discussion. To our knowledge neither the tablets nor the cylinders were "fakes"; he had simply made claims as to them that could not be substantiated. In the case of the Sommerville collection of gems it is asserted on the authority of Dr. Furtwangler, the leading German expert in Greek art, that the choicest of all these gems, and a multitude of others, are not antiques but modern copies or productions. It is not claimed that Mr. Sommerville was a party to the fraud, any more than that Mr. Morgan is a party to fraud in the case of any forged antiques which he may have purchased and given to the Metropolitan Museum. Mr. Sommerville was a most indefatigable collector, and was liable to be deceived. The volume which he published describing his gems shows the amiable collector, but gives no evidence of technical skill or scholarship. Such a rich man is apt to be the victim of sharpers who will deceive the very elect, as in the case of the Moabite pottery bought by the Berlin Museum, and the Saitaphernes diadem more lately purchased by the Louvre. Any museum is likely to contain such objects, and it is a duty to sift them out. And this illustrates the wisdom of the advice that prospective givers do not put conditions on their gifts, which may turn out to be of as little value as the diadem of Saitaphernes. Very likely the Sommerville chief treasure, the large cameo "Triumph of Constantine," is a mere copy. Antique gems were greatly discredited over a hundred years ago by the enormous number of beautiful gems made for a famous Russian collector, signed with the assumed names of the Greek artist, which were distributed by public sale after his death, and which are now known as the Poniatowski gems. The careful investigation of the genuineness of objects of art whose value depends in large part on their age is a chief duty of museums; and careful discrimination gives the museum honor and not discredit. Even the gift horse has to be looked in the mouth.

## Intellectual Organization

THE system of conventions of kindred spirits, which has long been familiar in politics, in philanthropic work and in business, has also been put into service by numerous organizations of men of learning thruout the country. During the recent holiday week, which is a favorite time for such gatherings, a dozen annual meetings of various national societies have been held, among which the largest, and in many ways the most interesting, was the joint meeting at Baltimore of four learned bodies—the American Historical Association, American Economic Association, American Political Science Association and Bibliographical Society of America. The interests of these societies lie so closely parallel that many people hold membership in more than one, and like to attend sessions of each; and the joint meetings are an excellent example of the co-operation of men of learning, and even form a kind of federation, the common affairs of which are under the supervision of a permanent joint committee. The number of registered attendants at Baltimore was not far from 500, besides a numerous delegation from the city. Such gatherings find a natural center in some institution of learning, and Johns Hopkins University hospitably opened its doors, furnishing rooms for the sessions and conveniences for personal intercourse and conference.

The Historical and Economic Associations have now an experience of about twenty years; the Political Science Association was holding its second annual meeting; the Bibliographical Society was making its first bow to the public; and before the adjournment a fifth society made its appearance thru the organization of the American Sociological Association—an offshoot from the Economic Association. This budding process from the older societies is an evidence of the rapid expansion of interest in the study of man as a social and political being. A few years ago sociology was not even recognized as a branch of learning which could be separated from philosophy and economics. Now it requires a special society to provide for its nurture.

In organization, these various societies closely resemble each other: they all

contain the two elements of college professors and independent scholars, together with a larger contingent of leading and thinking people thruout the country, who are interested without professing expert knowledge, and a considerable number of men and women in the public service of the United States and the States take an active part in the societies. In addition to the annual meetings the societies all publish the proceedings of those meetings, which include many valuable papers; some of them also support a special journal, the most conspicuous example being *The American Historical Review*, to which the American Historical Association subscribes for each of its members. The societies have also set on foot various activities, each of which is placed under a special commission or board appointed for that purpose.

The Economic Association thru a committee has in progress a great economic history of the United States, supported by a liberal annual grant from the Carnegie Institution. One of the most impressive sessions of the whole series was the business meeting of the Historical Association, in which reports were submitted from the Historical Manuscripts Commission, which has collected and published important series of the papers of public men; from the Public Archives Commission, the function of which is to arouse State and local authorities to the wealth of their own manuscript materials; from committees on two prizes, one in American and one in European history; from the editor of a series of Reprints of Original Narratives of Early American History; from a committee which is making a thoro study of history in elementary schools; and from other like sub-committees. It was a remarkable showing of combined and harmonious effort to discover, publish and make available the materials of history.

One of the notable things about the meetings was the disposition to discuss topics of living interest, and to hammer out the subjects man to man. A discussion of the regulation of railway rates caused an electric discharge of dissent and criticism in the Economic Association; innocent papers on the present conditions of negro suffrage and labor by the Political Science Association proved to possess unexpected explosive powers.

The meetings as a whole show that no branch of learning in the country is more thoroly and harmoniously organized than the political-historical subjects represented by these associations; and that by the co-operation of men of learning and men of affairs such societies helped to apply the experience of the past to the problems of the present.

### A Belated Use of Power

WHEN the responsible traffic officers of all the great railway companies agreed, a few days ago, to prevent rebating and other unlawful discrimination on their lines, to help the Commission in its work of enforcing the law, and even to act as informers against offenders for whose shortcomings neither these officers themselves nor their corporations could justly be blamed, we were reminded of the following editorial remarks in THE INDEPENDENT of February 9, 1905, almost a year ago:

"There are ten capitalists in the United States who could stop this rebating and other discrimination on the railroads if they should undertake to do it. Railway consolidation and community of interest have given them power enough, if they would exercise it. They ought to see that such a use of their great influence would be for the good of all, for the benefit of their railway corporations and all legitimate railway interests, as well as for the advantage of the general public. It is one of the results of such consolidation as has taken place that ability to enforce justice on our railway systems has been thus lodged in the hands of a few. If they fail to use their power as the people desire it to be used, they will be required to submit to new legislative restrictions."

It appears that they have now decided so to use it. At the head of the new Law-Enforcement and Detective Committee is the traffic vice-president of the Harriman transcontinental roads. Associated with him are the traffic vice-presidents and traffic managers of the other great companies. This concerted movement is not due to the initiative of these officers; it is the work of the capitalists who control the policies of the companies that employ them.

These capitalists could have avoided much annoying discussion and prevented a demand for legislation which they now regard with apprehension if they had exerted their influence in this way some

time ago. The public is inclined now to distrust the sincerity of those who were saying, up to a recent date, that the giving of rebates had almost wholly ceased. There is too much evidence to the contrary. For their present attitude the companies should have due credit, but these promises come too late to silence the popular demand for the enactment of at least that part of the President's program which provides for an official examination of traffic accounts, for the supervision of private car lines and side tracks, and for the restoration of the penalty of imprisonment for the discrimination that has for many years been prohibited by law.

### Governor-General Wright's Successor

The report is revived that Governor-General Wright will not return to the Philippines, and it has been stated that General Smith, now of the Philippine Commission, is to be his successor. Before his appointment it should be considered whether he is in personal, kindly sympathy with Filipinos, or whether he shares in the feeling which has so nearly wrecked American good will since Mr. Taft's return. For the farewell banquet given to Governor-General Wright before his departure from Manila, at the beginning of November, the Spaniards of Manila contributed about one-half of the subscription raised, the Americans next, British and other foreigners next, and the Filipinos practically nothing. Practically no Filipinos, except those of the half-caste element who are virtually allied with Spanish interests in Manila, and certain of the radicals who have long been disaffected toward Secretary Taft, attended the banquet. It was held in a new building of the chief Spanish tobacco company of the Islands, and the place was adorned conspicuously with the red and yellow of Spain. Difficulty was found in getting Filipino speakers, and one of the two who spoke in ostensible representation of the Filipinos is a Spanish half-caste with Spanish tastes and affiliations. The chief Filipino newspaper, *El Renacimiento*, in its issue of November 2, commented on the almost Spanish color given to the affair, and recalled portions of President McKinley's instructions to the Commis-

sion in 1900 as evidence that a policy of preference to the Filipinos was then proclaimed that is not compatible with the literal extension to foreigners of the same favors and privileges and of treatment on the same plane as natives. It closed thus:

"A pleasant voyage to the Hon. Mr. Wright, and may the sea breezes be beneficial to his health. If he is to come back to the Philippines, may he bring the lotus-flower and his baggage well filled with amendments, unless he desires to divorce himself absolutely from the natives of the islands."

*La Democracia*, the organ of the Federal party, formerly the chief defender of American government in the islands, was only less explicit. The Filipinos assert that the American newspaper of Manila, *Cableness*, is receiving a subsidy of \$1,000 a month from the Government in the islands. Both this newspaper and the *American* have been publishing surreptitious attacks on Secretary Taft in connection with the question of Governor-General Wright's retention of his office. We want to see a Governor-General in Manila who does not look with contempt on the natives, and American women there who are not too haughty to mingle with their native sisters.

**Panama** We believe Mr. Poultney Bigelow to be a faithful and impartial witness of what he sees. He is the son of John Bigelow, who was Minister to France during our Civil War. He talks all necessary languages, and has spent his time for years in visiting the outlying regions of the world in the study of colonial conditions where Europeans or Americans rule other races. We believe Mr. Bigelow writes in no feeling of prejudice or ill-will, but that he simply tries to tell of things as he sees them. What he says deserves very serious consideration. It is not pleasant for us to publish such a report. We would much rather have given as glowing an account as certain official visitors have given, but we have not felt at liberty to withhold his report. Particularly what he says as to the health conditions surprises us; and we are pained to see his confirmation of the story which had previously appeared in print, and been denied, that women were

brought under United States authority for immoral purposes. The workmen who are invited should be allowed to bring their wives with them for their own care and comfort. The papers tell of great dissatisfaction on the part of the laborers brought from the West India islands, and the reason for their leaving is made clear enough in Mr. Bigelow's article. These matters, and the assertion of wasteful expenditure as charged by Mr. Bigelow and by certain Senators, will doubtless call for investigation by Congress. Neither the President nor the Secretary of War, under whose charge the Canal is, could desire any concealment. They are pledged to public scrutiny, whether for the management of great corporations or the great canal.

**Britain for Arbitration** Nothing more important was said, or could have been said, by the new British Premier, in his first public address to the Liberal Party, on the subject of peace and arbitration. After referring to Gladstone's "priceless precedent in the 'Alabama' case," he said:

"The growth of armaments is a great danger to the peace of the world. The policy of huge armaments, keeps alive, stimulates and feeds the belief that force is the best if not the only solution of international difficulties.

"As the principle of peaceful arbitration gains ground it becomes one of the highest tasks of statesmanship to adjust these armaments to the new state of things. Great Britain can have no nobler rôle than at the fitting moment to place itself at the head of a league of peace, through whose instrumentality this great work can be effected."

If Great Britain could attempt "no nobler rôle," she will attempt this. We may expect Sir Henry Campbell-Bannerman to lift the banner of peace, and to seek an agreement of nations for a reduction of armaments. If we are to have more arbitration we shall need smaller armies and navies.

The paragraph in *THE INDEPENDENT* of last week was sent to President Eliot, of Harvard University, in which comment was made on his notice of the fact that late legislation limits liberty. He writes us:

The author of the cutting from *The Independent*, which you were good enough to send

one assumes that every law is a limitation of liberty. I venture to suggest that this is a very incomplete statement. Most laws are intended to restrict the liberty of some persons and to enlarge the liberty of others. Thus the law, "Thou shalt not kill," cited in the cutting, limits the liberty of murderers, but greatly enlarges the liberty of the much more numerous persons who are liable to be murdered. A law abolishing the slave trade limited the liberty of traders, but greatly enlarged the liberty of the Africans who were traded in. The law which permits any group of persons to incorporate themselves to carry on business with only a limited liability for the debts of the corporation was, on the whole, a prodigious, wonder-working enlargement of liberty. It seems to me, therefore, that the statement, "Every law is a limitation of liberty," is one liable to be misunderstood in dangerous ways.

It is to be feared that there is no truth in the report which comes from Tahiti, formerly called Otaheite, that the United States proposes to purchase the island from France. The people are said to desire to belong to the United States. In Eastern Oceanica the French own also the Marquesas Islands and the Low Archipelago, as well as the Society Islands, which include Tahiti; and they are all just east of our possessions in Samoa. The Marquesas once belonged to the United States, when Commodore David Porter took possession of them in 1815, but before that some of them had been discovered by another American and called Washington Islands. We unfortunately lost the Caroline Islands in the Spanish War thru the failure of one of our ships to stop there on the way to Manila, altho the civilization of the islands had been created by American missionaries. Such annexations are principally of benefit to the islands themselves, and indirectly to us, except as they are closely related to the Hawaiian Islands, which are of great value to us.

Coal smoke is an evil that blackens the sky in England, and in some parts of this country, and which ought to be abolished everywhere. The world has the right to heaven's blue against all the greed and grime of factories. Coal smoke is not a disinfectant, says Sir Oliver Lodge in a late address, but does produce sulfurous and sulfuric acid. The best way, Sir Oliver suggests, to get rid of the smoke nuisance, where soft coal is used, is to con-

vert it into gas at the pit's mouth, and then use gas fires for heating purposes as well as for light. He would use gas even in the engines of factories. That is a happy district that can use anthracite, which gives out no smoke.

It was an excellent resolution by President Roosevelt that postmasters who have a good record should be retained in office, regardless of recommendations of Congressmen. It is not clear why he should have broken his own rule in the case of the postmaster at Kokomo, Ind., simply on the request of Congressman Landis, who wanted a political friend to have the place. It was admitted that the postmaster had done his work well, and, said the President, "was a good fellow." We wish the President had stuck to his own rule.

The Princess Eva, who will marry the young King of Spain, is to be converted. The Cardinal Archbishop of Toledo and nine archbishops and forty-six bishops are to perform, or celebrate, the function. It will be beautiful, grand. It will precede her marriage, and a fine bullfight will follow. We see no reason why she should not change her faith, as it is evident she has none founded on conviction; and a faith based on policy and profit should be changed for the same reasons, just as one changes her slippers for a dance; and the show fits that sort of conversion.

In his article this week Mr. Justin McCarthy mentions that John Burns's salary as a member of the British Cabinet will be £2,000. He does not mention that Mr. Burns once declared that no man is worth more than £500 a year. We presume that, as Mr. McCarthy says, his sympathetic nature and his principles will find a good way to spend the extra salary which goes to the President of the Local Government Board.

Tho Norway and Sweden have separated, the Northern and the Cumberland Presbyterians are coming together. The session of their two committees on the plan of union last week in St. Louis was most harmonious, and consolidation seems to be an assured fact. Now let other denominations take courage.

# Insurance

## The Insurance Investigation

THE Legislative Insurance Investigating Committee finished the taking of testimony last week, and the results obtained by it will now be embodied in a report presently to come before the State Legislature. Not only the Legislature of this State but these representative bodies in other States will doubtless be immediately concerned with remedial legislation framed to prevent a recurrence of the scandals and abuses that have been revealed during the progress of the Armstrong investigation. With the resignation of John A. McCall from the Presidency of the New York Life Insurance Company another of the reforms advocated in THE INDEPENDENT of November 23d is accomplished. As a preliminary to the McCall resignation the New York Life's treasury was enriched by the sum of \$235,000 which Andrew Hamilton received in 1904 and which Mr. McCall had promised to make good in case the accounting made by Mr. Hamilton was not entirely satisfactory. The Fowler Committee of the New York Life, in common with the public, did not regard Hamilton's statement satisfactory as an explanation of his transactions, and the McCall pledge was accordingly made good.

Among the more recent acts of the Armstrong Committee have been the examination of the Bankers' Life Insurance Company; John Tatlock, the recently elected President of the Washington Life Insurance Company; Cornelius Doremus, of the Germania Life Insurance Company, and Superintendent Francis Hendricks, of the New York Insurance Department, whose testimony showed, among other things, that he was content in the conduct of his great office to leave the management of the companies over which he exercised control to the officers of the companies. Another concern whose affairs and methods were before the Armstrong Committee in its closing hours was the Life Insurance Club of New York. This concern, it appears, employs no agents, but gets all its business thru advertisements in magazines and other periodicals.

Under the new conditions which now

prevail the life insurance business, reorganized and to be reorganized, cannot fail to be conducted along far more conservative lines than has been the case for more than a decade. The death knell of syndicate participation, in so far as the officers of any reputable insurance company is concerned, has doubtless been sounded. It is unlikely that an officer of a great insurance company will in future be permitted to have connection with a private banking house from whom investment securities are purchased. The business outlook at the present time is exceedingly good. The principle of insurance remains as beneficent as was ever the case, and in spite of the setback necessarily following in the train of such an investigation as that on the part of the Armstrong Committee the forthcoming reports of many of the insurance companies will almost certainly show increased surpluses.

It is expected that a bill will be introduced early in the present Legislature to prevent life insurance companies from owning more than twenty per cent. of any one other company, to prevent the abuse of life insurance companies owning so many subsidiary companies. The field of investment is also likely to be somewhat circumscribed in the near future, even if it is not made to conform to investments permitted to savings banks.

JAN KUBELIK, the Bohemian violinist, now performing in this country, is very heavily insured. According to *The Weekly Underwriter* he carries a policy for \$50,000 upon his fingers. This policy, at the rate of \$5,000 for each finger, was taken out by the violinist's manager, at Lloyds in London, to protect him against loss in case Kubelik's fingers are injured so as to forfeit the large cash guarantees put up for the virtuoso's appearance. Kubelik also carries insurance on his feet, and the loss of a toe or one foot means the payment to him of \$25,000 on this account. Injury to both feet or a toe on each foot would be followed by a payment of \$50,000. The artist's eyes are also protected to the extent of \$25,000 insurance.

# Financial

## Electric Roads and Steam Lines

AMONG the interesting developments in the railway business during the past year has been the action of great steam companies with respect to trolley roads and trolley competition. The New York, New Haven & Hartford Company, which owns about 450 miles of the 700 miles of trolley in Connecticut alone, was the first to acquire large municipal trolley systems at various points on its main lines, and it began to do this before the year 1905; but it was in the past year that several other prominent companies adopted the settled policy of not only buying such existing trolley systems, but also of constructing new electric lines parallel to their own steam tracks, their purpose being both to forestall the threatened competition of other builders and to relieve their main lines of local passenger traffic which interfered with the free passage of through trains.

The New York Central's recent purchase of the Rochester trolley and lighting system by paying \$125 per share for common stock having a par value of \$6,500,000, is a long step toward the projected chain of electric service roads from Albany to Buffalo which is to be operated by that great corporation. The Central owns several other trolley lines along this course, and is now electrifying a considerable part of the parallel West Shore steam road. This part of its business is controlled directly by a new corporation, the Mohawk Valley Company, capitalized at \$10,000,000. The Erie is to construct an electric road parallel to its steam line from Binghamton to Corning, seventy-six miles, to forestall competition and relieve its steam line of local traffic. This appears to be the aim of the New Haven company in undertaking the construction of an electric line paralleling its main tracks from Norwich to Worcester. On its road from Philadelphia (or Camden) to Atlantic City, sixty-four miles, the Pennsylvania has decided to substitute electric power for steam, but it will be affected by new competition there, for Chicago capitalists have undertaken to spend \$6,000,000 on a third-rail electric line between the same points.

In addition to the projected use of electric power for the suburban parts of great steam lines near their New York terminals, it should be noted that provision has recently been made for fast electric service on separate lines from Newark through tunnels to New York, and that the trolley line from Camden (virtually from Philadelphia) to New York is to be straightened and otherwise improved. In some parts of the West, steam lines are meeting the competition, actual or threatened, of electric parallels by the use of gasoline motor cars on their steam tracks. A successful trial of such cars on its main track between Chicago and St. Louis was made last week by the Alton company, which will at once substitute them for steam trains on several of its interurban lines in central Illinois.

EUGENE GALVIN has been appointed an assistant cashier of the Mutual Bank.

....Robert Goellet has been elected a director of the Lincoln Trust Company to fill a vacancy.

....Reports received by the *Railroad Gazette* show that the equipment companies built 168,006 cars and 5,491 locomotives in 1905, or more than in any previous year. This work represents an expenditure of \$260,000,000. The totals do not include the large number of cars built in the railroad companies' own shops. Only 62,950 were made by the equipment companies in 1904.

....Dividends announced:

Mutual Bank (yearly), 1904, 6 per cent.; 1905, increased to 8 per cent.

Harlem Savings Bank, 3½ per cent., payable January 15th.

Franklin Society (thirty-fourth semi-annual), 5 per cent., payable January 2d.

Twelfth Ward Bank (semi-annual), 3 per cent., payable January 2d.

N. Y. & N. J. Telephone Co. (quarterly), 1½ per cent. and extra 1 per cent., payable January 15th.

Franklin Savings Bank, 3½ per cent., payable January 15th.

United Copper Co. (Preferred), 6 per cent., payable January 31st.

United Copper Co. (Common), 1½ per cent. and extra ½ per cent., payable January 31st.

## Survey of the World

### National Topics

The hearing in the case of Senator Reed Smoot, of Utah, will be reopened by the Senate committee that has the matter in charge, and additional testimony will be taken, chiefly, it is said, concerning the endowment oath of the Mormon Church, which some hold to be inconsistent with a Senator's oath of office. There seems to be a clear majority in the committee against Senator Smoot. Nearly all of the Republican members are said to be in favor of excluding him or of declaring his seat vacant, but a majority of the Democrats prefer expulsion.—Senator Joseph C. S. Blackburn, of Kentucky, who has been in Congress for nearly a quarter of a century, will not be re-elected. His successor will be Judge Thomas H. Paynter.—Additional convictions of men indicted for land frauds are reported. A. A. McKean, the Clerk of Yuma County, Cal., is to be imprisoned for two years at hard labor. Two men in South Dakota, Stearns and Horsnell, have been sentenced for shorter terms, with fines. Many other accused men are soon to be tried. The trial of John H. Benson, a very wealthy man and an old offender, will take place in Washington.—It is reported that the President has been conferring with his advisers as to a project for creating a General Staff for the Navy by executive order rather than by legislation.—By the sentence of a court martial, Lieut. Roy I. Taylor, of the Coast Artillery, will be reduced twelve files for humiliating Sergeant Patrick J. Butler, of his company, by causing the latter to leave his seat in a theater at New London and seek another at some distance. Butler was in uniform and had been quietly sitting near the lieutenant and some of

the latter's friends. The trials of midshipmen at Annapolis for hazing have resulted in the acquittal of Stephen Decatur, Jr., and the conviction and dismissal of Trenmor Coffin, Jr.—Much public interest has been manifested with respect to the forcible expulsion, under somewhat distressing circumstances, of Mrs. Minor Morris, a sister of Representative Hull, of Iowa, from the executive offices at the White House, on the 4th inst., by policemen acting under the orders of Assistant Secretary Barnes. Mrs. Morris had come to see the President about the recent removal of her husband from a clerkship in the War Department. She insisted upon seeing Mr. Roosevelt, against the decision of Mr. Barnes, and declared that she would remain until her purpose was accomplished. Her statement as to the manner in which she was put out and taken to the police station is not in full agreement with what may be called the official report. In the House, Mr. Sheppard, of Texas, has introduced a resolution for an investigation of the affair, which he regards with much indignation.—It is understood that the Senate Committee on Foreign Relations has decided to remove from Secretary Root's bill for Consular Reorganization and Reform the provisions for examinations, by a Board, of applicants for admission to the consular service.—The Chicago, Burlington and Quincy Railroad Company and several of its officers having been indicted for giving rebates to the United States Steel Corporation, President Corey has issued an order that the Steel Corporation shall not accept rebates hereafter.—Discontinuance by several prominent railways of the practice of giving passes has suggested to some legislators the need of

new laws concerning railway traffic. At Washington, a proposition for amending the coming railway rate bill by establishing a uniform passenger rate of two cents a mile east of the Mississippi is under consideration. Representative Grosvenor, of Ohio, suggests that the annual appropriation for railway postal service, nearly \$50,000,000, should now be reduced by 20 per cent. In the House, Mr. Reeder, of Kansas, has introduced a resolution asking the Attorney General to ascertain whether the Pennsylvania, Baltimore and Ohio, Chesapeake and Ohio, and Norfolk and Western roads have not virtually been consolidated, and are thus maintaining a combination of parallel and naturally competing lines, in violation of law.—Because it is expected that in the near future China will be disturbed by a popular uprising against the present political system, our Government has decided to increase the number of soldiers in the Philippines, in order that troops may be near at hand for the protection of American interests. The addition thus far ordered to be made consists of two regiments and two batteries.

#### A Message About the Canal

Congress received from the President on the 8th the annual reports of the Isthmian Canal Commission and the Panama Railroad Company, a letter from Secretary Taft, and a message from the President himself, mainly in reply to recent criticism in the Senate and elsewhere. Mr. Roosevelt says that "the work on the Isthmus is being admirably done," and that great progress has been made in the last nine months. Sanitary work "has been pushed forward with the utmost energy and means." All the work has been done "in the most careful and thoro manner," and a high standard of efficiency and integrity has been maintained by the Government's representatives engaged in it. Referring to "various publications purporting to give an account of jobbery, or immorality, or inefficiency, or misery, as obtaining on the Isthmus," he asserts that he has "carefully examined into each of these accusations," and that "in every instance" they have "proved to be without foundation in any shape

or form." Every specific charge, he adds, from whatever source, "has been immediately investigated, and in no single instance have the statements of these sensation mongers and the interested complainants behind them proved true." He attacks the authors of the charges in question, saying that the reports in some cases originate with men having a personal grievance—rejected engineers, disappointed bidders, or office holders suspected of corruption and dismissed; or that they are the work of sensational investigators "incapable of observing or repeating with accuracy what they see, and desirous of obtaining notoriety by widespread slanders." Any attempt to cut down the officers' salaries, he says, would be ruinous. "Men fit for the work will not undertake it unless they are well paid." At the end they will be left to seek other employment with, as their chief reward, the reputations they achieve. The work, he asserts, "is infinitely more difficult than any private work," owing to the peculiar conditions of the tropics, to "the peculiar limitations inseparably connected with Government employment," and because men engaged in public work "must expect to be made the objects of misrepresentation and attack." Suitable men cannot be kept "if they are to be treated with niggardliness and parsimony." In conclusion he says again that the work "has been done, and is being done, admirably"; that the mistakes have been "extraordinarily few and of practically no consequence," and that the zeal, intelligence and efficient public service of the Commissioners and their subordinates have been noteworthy. "I court," he adds, "the fullest, most exhaustive, and most searching investigation of any act of theirs, and if any one of them is ever shown to have done wrong his punishment shall be most exemplary."—The Commission's report was published some time ago. Secretary Taft's letter gives the history of the Markel contract for supplying food, and of a sale (and re-purchase) of bonds by the railroad company.—After the President's message had been read Senator Gorman said he hoped the investigation for which the President asked would be made. Responsibility for doing everything in con-

nection with the Canal should not be placed upon the President. Mr. Hale said that the President had now referred back to Congress all powers that had been committed to him. He hoped the Canal Committee would take up the whole subject at once, fix salaries, and decide upon the type of canal.—Owing to reports that Chairman Shonts desires to give up his office, he says he does not intend to resign. There are indications that the Commission prefers a lock canal, with its summit level at an elevation of eighty-five feet.

#### **Santo Domingo and the Treaty**

Following the flight of President Morales, on the 25th ult., from his capital, where he was at variance with Vice-President Caceres and the Cabinet, there was a brief revolution in Santo Domingo. On the 2d inst., Puerto Plata, on the north coast, was attacked by General Rodrigues, the commander of the forces of Morales. After two days' fighting the assailants were routed by the troops of the Government, or of Caceres, who had been elected Acting-President. Generals Rodrigues, Perez and Lico were killed. This appeared to be the end of the insurrection, although General Jiminez, formerly President, may do a little fighting for himself. Having been impeached by Congress, Morales asks to be allowed to leave the country without being molested, and Caceres may consent to let him go. The Caceres Government and the party now dominant are in favor of supporting the treaty now pending at Washington, and the existing agreement under which Col. Colton is collecting the revenues and depositing 55 per cent. of them in New York for the republic's creditors. But they would have the treaty amended, preferring that any request for the aid of the United States in time of disorder should be made by the Dominican Congress, rather than by the Dominican President. There is an impression in Washington that ratification of the treaty has been made more difficult, and probably impossible, by this little revolution. Even if all the Republicans should stand by the treaty, a few Democratic votes would be needed, and it is said that these cannot be had. Mr. Tillman has introduced a hostile resolu-

tion of inquiry, asking the President for information about Morales, and Mr. Rayner has spoken at length against the President's views as to the requirements of the Monroe Doctrine in such cases.

#### **Politics and Legislation at Albany**

For several reasons, the beginning of the annual session of the New York Legislature excited considerable interest beyond the boundaries of the State. Governor Higgins, with the approval of President Roosevelt, had suggested that James W. Wadsworth be made Speaker. This was a part of the movement for the overthrow of ex-Governor Odell, for some time past the leader of the party organization and chairman of the Republican State Committee. Owing mainly to testimony in the insurance investigation, it was determined that the party must get rid of him and his lieutenants. Mr. Wadsworth is only 27 years old. His wife is a daughter of the late Secretary Hay, and his father is a member of the House at Washington. In the caucus he had 75 votes, while the candidate supported by ex-Governor Odell had only 14. Mr. Wadsworth's election, of course, followed. In due time Mr. Odell will be deposed from the chairmanship of the State Committee.—On the first day of the session there was introduced in the Senate by Mr. Brackett (Republican) a resolution calling upon United States Senator Depew to resign. This was the subject of an acrimonious debate. Senator Depew was defended by several members, one of whom remarked that he was one of the grandest characters in the civilized world. Another asserted that Mr. Brackett had the instincts of a hyena and the attributes of a polecat. The resolution was temporarily withdrawn, to be introduced again this week.—The Armstrong Insurance Committee has closed its memorable investigation and returned to Albany, where it is preparing a report. Probably the inquiry will not be renewed, altho the Legislature is urged by the press to prolong it in order that further attempts may be made to ascertain who received the great sums expended at Albany and elsewhere by Andrew Hamilton and other lobby agents of the three leading life companies.—Insurance reform

is the subject of a large part of Governor Higgins's annual message. While he does not seek to anticipate the recommendations of the Armstrong committee, his suggestions are probably in accord with the committee's views. Having urged a careful examination of the severe provisions of Germany's new insurance law, he says:

"The funds of insurance companies should sacredly be safeguarded for the policy holders by the State and every element of personal gain eliminated from their management. To accomplish this result it has been suggested that large amounts ought, for the safety of the insured as well as for the good of the community, to be invested in bonds secured by mortgages on real estate at a conservative valuation; that deposits with or loans to moneyed corporations should be subject to suitable restrictions; that the control of subsidiary companies should not be permitted; that insurance directors should have no conflicting business connections; that investments in corporate bonds should be regulated so as to prevent speculation and loss from an attempt to float doubtful enterprises; that policies should be of standard forms so that the abuses arising from ambiguity, complexity, and incompleteness of the contract may be eradicated and the contract made definite in form and substance; that a uniform system of audits and accounts should be prescribed by the Insurance Department; that full publicity to policy holders should be assured; that deferred dividend policies should be prohibited or greatly restricted; that policies should be further safeguarded from forfeiture; that an equitable distribution of the gains of the company to the policy holders entitled thereto should be required; that policy holders should have an effective voice in the government of the companies and that the discretion of the directors should be subject to judicial or administrative review."

He recommends that it be made a penal offense for a corporation to contribute money for political purposes, and that all officers and agents of a corporation so contributing who know and approve thereof be subject to fine and imprisonment.

**Labor Questions** In New York, eighteen years ago, there was enacted a law making it a penal offense for an employer to require a workman entering his service to agree that he would not join a union. The Appellate Division of the Supreme Court now decides that this law is unconstitutional. One Marcus had been found guilty of violating it. The judgment of conviction is reversed and the defendant dis-

charged.—At the Metropolitan Opera House, in New York, last week, the chorus went on strike for a large increase of wages and for a recognition of their union, recently formed. This action was taken only two hours before a performance of "Faust." It appears that the strikers broke their contracts with Manager Conried. He declared that he would deal only with individuals and must be free to hire any one whom he might select. Three days later the strikers returned. They obtained a part of the desired increase of wages, but their union is not recognized.

### The Philippine Islands.

Having remained for some time in Manila, Mr. Bryan is now making a tour of the islands. He has been received with much enthusiasm, but at the banquets which he has attended he has avoided partisan questions. At one of these banquets in Manila, where he was introduced by Vice Governor Ide as the representative of 6,000,000 American voters, he was hailed by radical Filipino speakers as the savior of the islands, and earnest wishes for his election to the Presidency were expressed. In his response he refrained from criticizing the policy of the Washington Administration and counseled his audience to support the Government, saying in addition, however, that the islanders should strive to realize their reasonable aspirations.—It is again reported that Governor Wright will retire from office, and that he may be succeeded by General James F. Smith, now a member of the Commission. General Smith (a Catholic) is a lawyer who volunteered for the war with Spain, rose to the rank of brigadier general, and after the war was, in succession, Governor of Negros, Collector of Customs at Manila, and Associate Justice of the Supreme Court.—In a memorial addressed to Congress the New York Chamber of Commerce asks that the proposed exclusion of foreign ships from trade between the islands and the States be deferred from July next until 1909, pointing out that a lack of United States steamships in the trade between the islands and Atlantic ports would divert existing commerce by sea with these ports to the trans-Pa-

cific and transcontinental railway route, at an increase of expense that might destroy certain industries on or near the Atlantic coast.—In the House, at Washington, the bill reducing the tariff on Philippine products has been the subject of a lively debate, in which Democrats have attacked the whole Dingley tariff. At last accounts the fate of the bill was in doubt. The beet-sugar interest (in opposition) claimed enough Republican votes (in addition to those of Democrats) to defeat the measure. Attempts were made to strengthen the opposition by combinations involving the Statehood bill and a project for the repeal of the differential duty on refined sugar. Mr. Fordney, of Michigan, the leading representative of the beet-sugar interest, and a Republican, asserted that the bill was in violation of the pledges of his party and its candidates concerning a protective tariff. He also called for the repeal of the treaty of reciprocity with Cuba.

#### The English Elections

On Monday, January 8th, the King dissolved Parliament, which is summoned to meet at Westminster on February 13th. The polling will begin on January 13th and close on January 27th. The campaign is the hottest England has known for twenty years. The number of candidates for Parliament is larger than ever before, as even the strongest Unionist seats are being contested by the Liberals. In practically every borough of England, Scotland and Wales there are two or even three opposing candidates. The new Premier, Sir Henry Campbell-Bannerman, opened the campaign with a severe arraignment of the record of the Unionist administration of the last ten years, saying that the last decade represents a wellnigh unbroken expanse of mismanagement and legislation conducted for the benefit of privileged classes, of wars and adventures abroad hastily embarked upon and recklessly pursued, and that the legacy which the Unionists bequeathed to their successors is in the main a legacy of embarrassment, an accumulation of public mischief and confusion absolutely appalling in its extent and ramifications. He made no reference to the Irish question, but

said that the policy of his Government would be to hold fast to the time honored principles of liberalism, peace, economy, self-government and civil and religious liberty, and to pursue a substantial continuity of the foreign policy without departing from the friendly and unprovocative methods adhered to by previous Liberal administrations. He characterized protection as immoral and oppressive, based, as it must be, on the exploitation of the community in the interest of favored trades and financial groups. The election address of ex-Premier Balfour declared that fiscal reform would be the first task of Unionists if returned to power, and Mr. Chamberlain in his speeches defines the proposed policy as a moderate scientific tariff of retaliation and preference, framed for the purpose of giving the workers of the United Kingdom more employment. His motto is "Treat foreigners as they treat us, and treat our friends a little better than our opponents." Lord Rothschild in supporting a protectionist candidate at Watford declared himself "a free trader in favor of the negotiation of tariff treaties with other countries." The election address of Sir Charles Dilke to his constituents of the Forest of Dean Division of Gloucestershire, which he has represented as an advanced radical for fourteen years, consisted of one sentence of seven words: "I solicit a renewal of your trust." John Burns, the labor leader, is bitterly attacked by the Socialists for his acceptance of a seat in the Liberal Cabinet. For example, *Justice* says:

"At last our condemnation of his betrayal of his class stands fully and clearly justified by this crowning act of treachery. Brazenly and unashamed, he puts the seal upon his treason, and accepts the reward of his recreancy. . . . As a 'labor leader,' John's career has closed with his acceptance of the handsome Judas bribe his Liberal paymasters have now given him."

In defense of his action Mr. Burns says that he had to choose whether, for the next ten years, he would indulge, perhaps in the futility of faction, perhaps in the impotency of intrigue, or accept an office which in their day and generation he could make fruitful of good work. What he is working for is "fewer workhouses and more homes; smaller

charities and larger wages; more pleasure and less drink; smaller cities and larger villages." He has announced himself opposed to the House of Lords and "all other hereditary privileges," a statement which the Unionists construe as an attack upon the King, whose minister he is, and accuse him of treason.

#### The Conference of Algeciras

The conference of the Powers on the Moroccan question will take place on January 16th, at Algeciras, a Spanish town of about 13,000 inhabitants, six miles west of Gibraltar. The King of Spain requested the Sultan of Morocco to allow it to meet at Madrid, as did the previous Conference of 1880, on the ground that the hotel accommodations of Algeciras were inadequate, but the Sultan replied that if Algeciras was not satisfactory, the envoys could meet in Tangier. This proposition was, naturally, not acceptable. It is the contention of the Emperor of Germany that the reform of Morocco should be carried out, not by France, but by the Powers which undertook it in 1880; therefore the new Conference will have substantially the same composition as the old. Denmark and the new Kingdom of Norway have declined to enter. The United States will be represented by Ambassador Henry White, of Italy, and Minister Grummere, of Morocco. Italy has chosen Marquis Viconti Venosta. M. Paul Révoil, formerly Minister to Tangier, and later Governor of Algeria, will represent France. The Austrian delegate will act also as the representative of the Vatican, and will present in behalf of the Pope a proposition for freedom of worship in Morocco. Besides the countries named, Great Britain, Sweden, Holland, Spain and Portugal will take part in the Conference. According to the agreements of July 8th and September 28th, between Premier Rouvier and Chancellor von Bülow, the sovereignty of the Sultan, the integrity of Morocco and the rights of all nations freely to participate in its commerce, are not to be questioned by the Conference. The subjects which are proposed for discussion are:

"the organization of a police force, regulations for the surveillance and repression of the contraband trade in arms, financial reforms con-

sisting chiefly in the establishment of a State Bank, in the study of the best tariff measures and in the creation of new revenues, and, finally, the fixation of certain principles designed to safeguard economic liberty."

The difficult question is, of course, not what reforms are needed in Morocco, for on this point there is a general agreement, but who shall carry them out. France claims this right on historical and geographical grounds. Morocco she regards as an island surrounded by French territory, and destined inevitably to be absorbed in the French African empire. Germany recognizes the interests of France in the policing of the Algerian frontier, but opposes any attempt to extend French control over the coast region, which, she insists, should be kept in order by an international police force, as is now done in the case of Macedonia. Great Britain, by the Convention of April 8th, 1904, resigned her claims in Morocco to France, in consideration of the relinquishment by France of her rights in Newfoundland and Egypt. France secured the acquiescence of Spain by the Convention of October 7th, 1904, by granting certain compensations and guarantees which have not been made public. Italy was won over by an agreement, made with the Marquis Venosta, at that time Minister of Foreign Affairs and now envoy to the Algeciras Conference, by which France was to help Italy in Tripoli in exchange for Italy's help in Morocco. These three Powers may be expected to stand by their bargains and support France in the present crisis. How the other Powers will line up is uncertain. Austria takes an interest only in the commercial aspects of the question, and is expected to join with Germany in demanding an extension of the thirty-year period of free commerce fixed by the Anglo-French Convention. About the attitude of our Government nothing is officially made known, but it is supposed that the United States will insist upon the open door in Morocco, as in Manchuria, and will stand, as in 1880, for the protection of Jews and naturalized citizens of foreign countries. Senator Bacon, of Georgia, has introduced a resolution into the Senate asking for the instructions to our delegates and all other papers concerning the Moroccan Conference. The delegates of the Sultan

of Morocco, of whom the chief is Haj Mohammed el Mokri, will make no proposals to the Conference and have no power to give a final acceptance to the reforms agreed upon by the Conference, but they will recommend the Sultan to accept all its proposals, provided that these are unanimously agreed upon by the Conference, that they do not affect the sovereign rights of the Sultan or the integrity of the country, and that the introduction and execution of the reforms be not entrusted to any one country. Obviously, this puts it into the power of Germany or any other one Power to block the whole Conference.

#### **The Revolution in the Caucasus**

The revolutionary movement in Caucasia, as in the Baltic Provinces, takes the form of a territorial rebellion. Russian authority in this region has been for three weeks largely superseded by that of the revolutionists, called the "North Caucasian Republic." A civic guard has replaced the Cossacks and the country is more orderly than it was under imperial administration. In the city of Novorossysk, a petroleum shipping port on the Black Sea, the people have elected a new Mayor in place of the Russian Governor, who has fled. The railroad from this place to Rostof and also the Transcaucasian Railroad are now being managed by the strikers. In Poti, another Black Sea port, the authorities have been expelled, the population is armed with excellent rifles of foreign manufacture, and the garrison dares not venture outside the fort. Twelve hundred Cossacks who were sent against the rebels were treated so well by them as guests that they retired to Ekaterinodar and refused to obey orders to crush the revolutionary movement at Poti. For seven years Socialistic doctrines have been making progress among the Georgians and Armenians, and even the Tartars have been affected by them. The movement has caused a unity of feeling and purpose which transcends the barriers of race and religion, so that now they seem to be able to join together in declaring independence of their Russian oppressors. There have been three distinct revolutionary parties in the Caucasus—the Social Democrats, or orthodox

Marxians, who believe in a strong centralized government and national ownership of land; the Socialist revolutionaries, who are federalists and advocate the communal ownership of land, and the Dashnakhtzutun, or Armenian Nationalist party, whose aims were political rather than social. All these and the numerous minor factions have now united to form a republic.

#### **Russian Conditions**

The suppression of the revolt in Moscow has been followed by the execution of many revolutionists, and the Government is vigorously hunting out suspects and deposits of arms and incendiary literature. Forty-two printing offices have been closed on account of printing Socialistic papers. No one knows what the loss of life has been, but the official report of forty-seven ambulance stations says that between December 20th and 30th they removed 548 killed, including 100 children, and 1,065 wounded, including 165 women and children. The pecuniary loss due to the strike is estimated at \$3,125,000. Governor General Dubassov claims that all losses have been greatly exaggerated, as the only large establishments burned were three factories. The Czar has sent \$50,000 for the relief of the needy in Moscow. The Jewish relief fund, which now amounts to \$3,300,000 from all countries, including \$500,000 raised in Russia, is being distributed, with the object of granting sufficient assistance to render the recipients immediately capable of self-support and of preventing emigration. The Government issued an order prohibiting the distribution of relief funds except with official supervision, but this was rescinded the following day.—The arrangements for the Duma, which is to assemble in March or April, are being completed. In St. Petersburg 70,000 persons of the taxpaying class have registered for the election. The Socialists and workingmen are in most cases taking no part. The upper house of the Duma will consist of a hundred members, of which fifty will be appointed by the present Cabinet or Council of the Empire. Of the fifty elected members twelve will be chosen by nobility and thirty-eight by the other classes. By this

scheme the decisions of the lower and popular house will be still under the control of the bureaucracy.—General Sollogub, who has been appointed Governor of the Baltic Provinces, is dispatching columns of troops to the disaffected centers and garrisoning the towns. The burning and looting on the large estates by the peasants yet goes on in some districts.—The return of the troops from Manchuria has caused serious disturbances along the line of the Siberian Railroad from the Ural Mountains to Lake Baikal, and it has been found necessary to place the road under martial law. Mutinous soldiers are running the trains to suit themselves, without regard to time tables, and the station masters and employees in many cases have fled from the stations.—A sensation was caused by the publication in the *Novoë Vremya*, with the permission of the Minister of Marine, of a letter by Admiral Rojestvensky, in which he states that the Admiral of the British fleet “had concentrated his forces at Wei-hai-Wei in expectation of receiving an order to annihilate the Russian fleet if this, the final object of Great Britain, was beyond the power of the Japanese.” The British Embassy at St. Petersburg at once demanded an explanation of this serious charge in an official statement, and Count Witte has announced that it represented only Rojestvensky’s personal views, and that the allegation had been overlooked by the Minister of Marine.

#### Montenegro Granted a Constitution

That an absolute monarch should voluntarily grant a constitution to his people and create an elective national assembly without being threatened by war or revolution is sufficiently remarkable to merit attention even tho the country concerned is not a large one. Prince Nicholas, of Montenegro, who since 1859 has ruled in the patriarchal manner the unconquerable little mountain realm, issued on October 29th a proclamation expressing his opinion that “every man belonging to civilized society should be a free citizen,” and that the times demanded that Montenegro should have a constitutional form of government “founded upon the best models taken from European States.”

“Therefore, my gallant people, select your Deputies in the manner indicated by my Government; let them assemble around me, I shall teach them their duties, and by our united action we shall bring about a great development of the liberties and prosperity of our country.”

The election was held November 27th, and on St. Nicholas’s Day, December 19th, the deputies assembled at Cettigne to receive the speech from the Throne. The assembly is composed of elected representatives from the fifty-six military districts of Montenegro and from the towns of Cettigne, Dulcigno, Podgoritza and Nicsich, with the addition of nine appointees by the Prince, comprising the six Ministers of State and three ecclesiastical deputies representing the Orthodox, the Roman Catholic and Mussulman churches. The ministers will be responsible to this new assembly or *skupshchina*. It is suggested that one motive for the innovation is to improve his chances for succession to the throne of Servia in case of the fall of the Karagevitch dynasty.

#### A New Japanese Cabinet

The war ministry of Japan under Count Kakura has been replaced by a cabinet formed by Marquis Saionji, the leader of the Constitutional party. Three of the former Cabinet are retained, including Yoshiro Sakatani, Minister of Finance, in order to give foreign investors confidence in the continuity of policy. The Diet, which is now in session, passed the treaty recently negotiated with China by Baron Komura, before changing the administration, thus completing the work of the war period. The new Premier, Kinmochi Saionji, was born in Kyoto in 1849. He is of noble birth and received the title of Marquis in 1884. He studied in Paris from 1870 to 1880, and on his return to Japan edited a democratic paper called *Oriental Liberty*, which gave such offense to the aristocracy that its publisher stopped it. He has filled many offices at home and abroad, among them those of Minister to Austria and to Germany, Minister of Foreign Affairs and Education, and for three terms temporary Prime Minister. He is a close friend of the Marquis Ito, who has recently been made President-General at Seoul, that is, practically Governor of Korea.

# ❧ The Franklin Bicentenary ❧

Benjamin Franklin was born in Boston, January 17th, 1706, just two hundred years ago. He was the most picturesque and original character in all the early American history. He covered more fields of thought and influence than any other man, every province but that of the soldier. He was the very personification of the homely common sense of the common people, at the same time that he was a philosopher, a discoverer, a statesman, a diplomat, and the honored companion of the greatest European scholars and rulers of nations. He remains more than Washington or Patrick Henry, or even Lincoln or Grant, the typical American. It seemed therefore proper that we should celebrate his bi-centenary by asking a number of the most competent American scholars to treat each of some one phase of his extraordinary career. The veteran John Bigelow, now late in his ninth decade, himself a diplomatist and historian, and editor of *Franklin's Works*, discusses Franklin as a Man; and Prof. E. S. Nichols, a distinguished student of electricity, treats of Franklin as a Man of Science, recalling that even now we are returning to Franklin's theory of electricity. No one better than John W. Foster, ex-Secretary of State, and author of "*The History of American Diplomacy*," could treat of Franklin as a Diplomat; while Senator Lodge, himself an accomplished student of American history, discusses Franklin and His Times; and Mr. Worthington C. Ford, who is Chief of the Division of Manuscripts in the Library of Congress, and who has collected and published Franklin's papers, describes Franklin's relations with Earl Chatham. Who better than our beloved Edward Everett Hale, who, like John Bigelow, almost seems to have come down from Franklin's time, could show the wit and wisdom of Franklin as a Philosopher and Moralist? We conclude the list with Mr. Paul E. More, a critic of acknowledged rank, and author of a *Life of Franklin*, who values Franklin as a Literary Man; and Mr. A. H. Smyth, who is editing the new edition of *Franklin's Works*, and who tells us the unique place of Franklin as a Printer in the Colonial period of our history. These articles will together give a many-sided view of a many-sided man, and will be found well worth preservation and study.—Editor.

## Franklin as the Man

BY JOHN BIGELOW, LL.D.

EX-UNITED STATES MINISTER TO FRANCE AND AUTHOR OF "THE COMPLETE WORKS OF BENJAMIN FRANKLIN."

IN the course of his long life Dr. Franklin was in touch with more varieties of human nature, perhaps, than any other man of equal eminence that ever lived. There was no class of social life, except the criminal, with which he was not only familiar, but to which he had not himself at one time belonged.

It is one of his great distinctions that in each of these classes he was always first among his peers. To quote Cicero's estimate of Cato, *populi primarium fuisse virum*.

He emerged from his father's tallow-chandlery a schoolboy, to become an apprentice to the printer's trade in Boston with his older brother, who published the *New England Courant*. He amused himself occasionally in writing for the paper, under a pseudonym to avoid his brother's jealousy. When the brother got the paper into difficulty with the government in consequence of a too great freedom of speech Franklin proved to be the fittest man to take his place as its manager. He was not long in realizing that either

Boston or his brother's printing office offered too circumscribed a sphere for him, and at seventeen he left both and wandered away to Philadelphia, where he took employment in another printing office. Here, also, by his superiority in many ways, he inspired the jealousy of his employer, which resulted in his starting another paper, by the profits of which, in a few years, he accumulated the modest fortune which enabled him to devote the remainder of his life to the public service. Any single sheet of his newspaper, the *Pennsylvania Gazette*, to-day would probably bring a larger price in the market than a sheet of any other newspaper ever printed.

While editing the *Gazette* he published an almanac, recently described in a London metropolitan journal as "the most powerful magazine ever published—a magazine which made a nation." His contributions to this print have been translated into more languages probably than any other book ever printed except the Bible.

When the Penn family claimed exemption from the taxes on their lands in Pennsylvania for the defense of the colony from the Indians, Franklin was found to be quite the most useful man that could be selected to go abroad and fight its battle in London.

Before accepting this mission, however, he had discovered the relations between lightning and electricity, which the Royal Society at first laughed at and refused to print his account of his experiments in their "Transactions." But a few years elapsed, however, before that learned body was constrained to make Franklin one of its honorary members, and under more flattering conditions than were ever extended, I believe, to any other member. His electrical discoveries have affected the industries, social life and commercial relations of the world so universally and to such a degree that if, by a fiat of Infinite Majesty the world could be suddenly deprived of the agencies and conveniences depending upon them and abruptly restored to its condition in the days of Franklin it would render valueless and unavailable probably nine-tenths of all the property in what are called civilized countries, and condemn to death by starvation a large proportion of the world's present population.

It was to his extraordinary talent, tact, forecast and energy during that period of his life that Philadelphia owed most of her early municipal improvements; her police, her postal facilities, her pavements, her first public library, her Philosophical Society, and the best wood-consuming stove ever devised to this day—despite the cheaper dark anthracite which is now realizing the prophecy of Bryant's muse in making

. . . Mighty engines swim the sea,  
Like its own monsters—boats that for a guinea  
Will take a man to Havre—and shalt be

The moving soul of many a spinning jenny,  
And ply thy shuttles, till a bard can wear  
As good a suit of broadcloth as the mayor.

As a diplomat, England refused to listen to his counsel and his warnings. As a consequence he was sent to France to invoke the friendship and sympathy of the French Government and people for the oppressed colonies. He did this with such success that he not only got the required military and financial assistance, but acquired for himself personally a

fame in that country and thruout Europe, both as a statesman and as a diplomatist, which is not enjoyed to-day by any other person of his time. After so successfully accomplishing the purposes of his mission, and, as he wrote to the President of Congress, having "never gone thru so much business during eight years in any part of his life as during those of his residence in France," he returned to the United States in the eightieth year of his age; was promptly elected a member of the convention which adopted the Constitution of these United States, and also Governor of the new State of Pennsylvania, which latter office he held for three years, when he felt constrained to renounce all public business, by the increasing infirmities of age, from which the same year he was released by death.

Thus ended the earthly career of the most eminent of Americans, who had passed thru every stratum of social life, from well-nigh the humblest to the very highest yet reached by any of his compatriots, and, I may add, of his contemporaries. He had learned what each of them had to teach him. He knew what in all of them was worthy of respect and sympathy, so that, ceasing to belong to any class, he was in sympathy with all classes. There is scarcely a State in our Union that has not a county named after him, nor a city that has not streets or parks or public monuments or institutions—educational, financial or industrial—named in his honor. In France there is no name of any American with which so large a portion of its population are familiar. There is no one of the fine arts, I believe, that has not contributed in some way to perpetuate his features or the memory of his achievements. In the multiplicity of his "counterfeit presentments" no monarch in Europe has ever been his successful rival.

In reviewing Franklin's checkered career one is surprised to see how much the larger share of it was devoted to the promotion of the interests of his fellow-creatures rather than of his own. From his incalculably valuable discoveries in science he never asked or received a penny. He never asked for a copyright nor for a patent, tho he rarely looked at a utensil or an institution that his fertile

genius was not sure to see a way of improving it. Tho he spent more than half of his life in the public service, he never permitted himself to treat office-holding as a bread-winning profession, or to become for one moment a dependent upon his government for his livelihood; and, tho his literary skill has done more than any of his works to secure the durability of his fame, the evidence of that skill was left by him almost exclusively in manuscript, and was not disclosed to the public till fully a generation after his decease. He wrote to teach, to persuade,

in any biographical dictionary of this generation.

His marvelous self-control, his unfaltering faith in the ultimate supremacy of the right, his aversion to and successful avoidance of all contention for personal ends, are among the rare virtues to which he was indebted for the respect, and even the affection, of most of the best men of his time, in foreign lands as well as our own, and also for the steady increase of his fame, as those virtues are more thoroughly and widely known.

It has been the fashion of a certain

#### PORTRAITS OF FRANKLIN.

to guide, but not for fame, nor, except as and while in early life a journalist, for money; and, tho there have been two successive publications of what purported to be his complete works published during the lifetime of the present generation, there will not be found in either of them a line for which he received any pecuniary reward except the few pieces taken from the columns of the newspaper of which he had been the proprietor. But for his correspondence, which he never gave to the press, the name of Benjamin Franklin would have scarcely appeared

class of critics who are always wishing to appear wiser than him they criticise, to say that Franklin never dwelt upon any of the higher planes of spiritual life. If not, where did he get the secret of that supernatural wisdom which always led him to seek the good of each in the advantage of all? What gave him in such extraordinary measure the confidence of men and of nations? Whence came that extraordinary common sense that discomfited all controversy? Whence the mysterious and indefatigable vigor which crowned with such uniform success all

the varied and important enterprises of his long life and made him not only one of the most useful but also one of the most illustrious of men? Tom Hughes, the author of "Tom Brown's School Days," has wisely said this of him:

"He is a man who has shaken off the yoke of definite creeds while retaining their moral essence, and finds the highest sanctions needed for the conduct of life in experience tempered by common sense. Franklin is generally supposed to have reached this ideal by anticipation, and there is a half truth in the supposition. But whoever will study this great master of practical life in the picture here painted by himself, will acknowledge that it is only superficially true, and that if he never lifts us above the earth or beyond the domain of experience and common sense, he retained himself a strong hold on the invisible which underlies it, and would have been the first to acknowledge that it was this which enabled him to control the accidents of birth, education and position, and to earn the eternal gratitude and reverence of the great nation over whose birth he watched so wisely and whose character he did so much to form."

Franklin accepted the Bible as the safest guide of human conduct ever vouchsafed to men, and tho he forebore

to profess unlimited faith in its Divine inspiration, this was rather from a constitutional unwillingness to dogmatize about what he had neither the learning nor ability to prove than from any conviction that it was not of Divine origin or that a belief in its inspiration would work any harm.

Franklin believed in all the virtues which were sanctified by the life and death of Jesus. If he did not practice them all at all times, he simply failed in what no descendant of Adam has succeeded; to what extent I leave those to determine who have led less selfish lives; who have done more for their fellow creatures; who have more conscientiously expiated their errors; who have been less frequently a stumbling block to their weaker brother; who in their lives have more successfully illustrated the fidelity with which prosperity and happiness wait on good works, and on that faith in the right of which good works are begotten.

23 GRAMERCY PARK, NEW YORK CITY.

## Franklin and His Times

BY HENRY CABOT LODGE

UNITED STATES SENATOR FROM MASSACHUSETTS AND AUTHOR OF "THE STORY OF THE AMERICAN REVOLUTION," ETC.

MANY years ago, when in London for the first time, I remember being filled with the indignant astonishment of which youth alone is capable at seeing upon the pedestal of a statue placed in a public square the single word "Franklin." A Boston boy, born within a stone's throw almost of the birthplace of "Poor Richard," I had never deemed it possible that any Franklin but one could be referred to by that name alone without further definition or qualification. I knew, of course, who the subject of the British statue was, a brave naval officer and bold explorer, who had lost his life in a futile effort to achieve an almost equally futile object. But I had a vague impression that "gallant sailor souls" had very fortunately been

not uncommon among English-speaking people, whereas I had supposed that men like Benjamin Franklin had been rather rare among the people of any race. I have passed the British statue many times since then. My youthful and indignant astonishment has long since vanished, and the humor of the inscription has become very apparent to me. I know now that that inscription merely represents a solid British habit of claiming everything, ignoring the rest of mankind, and enlarging to the utmost their own achievements, both great and small, upon the entirely sound principle that a constant and fearless assertion of one's own virtues will lead a considerable proportion of a very busy and somewhat indifferent world to take one at one's own

valuation. The highly humorous side of describing Sir John as the only Franklin and relegating to obscurity a man who achieved greatness in literature, in science, in politics, and in diplomacy, and who was one of the most brilliant figures in a brilliant century, has come in the lapse of time to give me no little real pleasure.

I have also learned that my early estimate of the man commonly referred to outside of England as "Franklin" was not only vague, but, although right in direction, was still far short of the truth, which a better knowledge enables me to substitute for an ill-defined belief. Two hundred years have elapsed since his birth in the little house on Milk street in Boston, and as the anniversary of that event is now being celebrated it is well worth while to pause for a moment and consider him. Few men, be it said, better deserve consideration, for he not only played a great part in shaping events and influencing human thought, but he represents his time more completely, perhaps, than any other actor in it, something which is always in and of itself a memorable feat.

Franklin's time was the eighteenth century, which his long life nearly covered. When he was born Anne was Queen, and England, agitated by dynastic struggles, was with difficulty making head against the world-wide power of Louis XIV. When Franklin died France had been driven from North America, the British Empire had been divided, his own being one of the master hands in the division, the United States of America had started on their career as a nation, and the dawning light of the French Revolution was beginning to redden the skies. Marvelous changes these to be enclosed within the span of one brief human life, and yet they were only part of the story. The truth is that the eighteenth century was a very remarkable period. Not so very long ago this statement would have been regarded as a rather silly paradox, and in a little while it will be looked upon as a commonplace. But as yet we are not wholly free from the beliefs of our fathers in this respect. The nineteenth century, in its lusty youth and robust middle age, adopted as part of its creed the belief that its predecessor upon

the roll of time from whose loins it sprang deserved only the contempt and hatred of mankind. Incited thereto by the piercing invectives of the romantic school, brimming over with genius, and just then in possession of the earth, and by the clamors of Thomas Carlyle, the nineteenth century held that the eighteenth was a period of shams and conventions, of indifference and immorality, of unspeakable oppressions and of foul miseries hidden behind a gay and glittering exterior, the heyday of a society which in a word deserved the fate of the cities of the plain.

This view was true enough, so far as it went; but it was by no means the whole story. It had the fascination of simplicity and of convenience which half-truths nearly always possess; but, as Mr. Speaker Reed once said, "half-truths are simple, but the whole truth is the most complicated thing on earth." The time has now come when we may begin to approximate the whole truth. Indeed, before the nineteenth century had closed it had begun to modify its opinions and to be less sure about the total depravity of its progenitor. Under the skillful manipulations of bric-à-brac dealers the art and the furniture of the eighteenth century have become and are now the fashion. It is a pretty, trivial art at best, very inferior to that which the nineteenth century, in France at least, has produced; but it is always pleasant to observe the whirligig of time bring in its revenges, and it must be admitted that the eighteenth century furniture is an indescribable improvement over the dreadful taste known as Victorian, but which really poured out like the Goths and Vandals of old time from the heart of Germany to submerge and ruin a careless and unsuspecting world. Still, whatever their merits may be, the eighteenth century in pictures and chairs and tables is again in high fashion, and perhaps we can now begin to see also that it had its great side as well as its bad one, and that it was in reality a very wonderful time.

It is usually said as beyond dispute that it had no poetry in the nobler and more imaginative sense, and if by poetry is meant the immortal work of the Elizabethans on the one hand and of the Ro-

manic school on the other we may be sure that, speaking broadly, the eighteenth century, like Andrey, was not poetical. Yet none the less this unpoetical, unimaginative century produced

century of Bach and Handel and Haydn; it gave birth to Mozart and Beethoven—something of a record for an unimaginative century in the most imaginative of arts. Even those who decry it most ad-

Gray and Burns in Great Britain, Chénier and Gilbert in France, the first part of "Faust"—enough glory in itself for many centuries—and the "Wallenstein Trilogy" in Germany. It was, too, the

mit its greatness in prose, where it developed a style which culminated in Gibbon and Burke. In pure intellect it can hardly be surpassed by any of its fellows, for it was the century of Im-

manuel Kant. It was likewise the century of Louis XV., perhaps the meanest thing that accident ever cast upon a throne, but it was also the century of Frederick the Great. It was illustrated in its youth by the Regent Orleans, and illuminated at its close by George Washington. It was the century of Casanova, most typical and amusing of rascals, and it was equally the century of John Wesley. It was a time when men persecuted for a religion in which they had no faith, and sneered at the doctrines of the church to which they conformed. The classes revelled in luxury and the masses were sunk in poverty. Corruption ran riot in the public service, and the oppression of the people was without limit on the Continent, where the *lettre de cachet* of the French King flung men into prison and wretched German princelings sold their subjects to die in foreign wars that they might build ugly palaces and maintain still more ugly mistresses. Yet in those evil days more was done to set free human thought and strike off the shackles of priestly rule than in any century which history records. More was then done to give men political liberty and build up constitutional government than in all the previous centuries, for it was the century of Montesquieu and Rousseau and the *Federalist*, of the revolt of the American Colonies and of the French Revolution. It was the century of kings and nobles, yet it gave birth to modern democracy. The spirit of revolt went side by side with the spirit of reaction and convention. There were indeed two voices in the eighteenth century. We know which one truly foretold the coming days. But which was the true voice of the time? Was it Voltaire, pleading the cause of the Calas family, or that of Foulon, declaring that the people might eat grass? Which was the true leader, George Washington at Valley Forge or George III. hiring Indians and Hessians to carry out his mother's injunction, "George, be a King"? It was veritably a wonderful century, full of meaning, rich in intellect, abounding in contradictions.

It produced, too, many great men, but none more fully representative than Benjamin Franklin of all that made it mem-

orable. He reflected at once its greatness and its contradictions, although not its evil side, because in those years of change and ferment he was ranged with the children of light, and was ever reaching out for new and better things. Of pure English stock, born in a community where Puritanism was still dominant, where religion was rigid and morality austere, he was an adventurer in his youth, a liberal always, a free thinker in religion, the moralist of common sense, and pre-eminently the man of the world, at home in all societies and beneath every sky. He had the gift of success, and he went on and up from the narrow fortunes of a poor, hard-working family until he stood in the presence of kings and shaped the destinies of nations.

The Puritanism to which he was born fell away from him at the start, and in

This Inscription is on a House on the Heights of Passy, Paris, Overlooking the Seine and the Champs de Mars.

his qualities and his career it seems as if he reproduced the type of the men of Elizabeth's time who founded Virginia and New England, for he had all the versatility, the spirit of adventure, the enormous vitality and splendid confidence in life and in the future which characterized that great epoch. Yet he had also the calmness, the self-control, the apparent absence of enthusiasm which were the note of his own time. The restlessness of mind which marked the Elizabethans was his in a high degree, but it was masked by a cool and calculating temperament rarely found in the days of the great Queen.

Franklin was born not only a Puritan Englishman, but a colonist; yet never was there a man with less of the colonist

of the provincial about him. A condition of political dependence seems for some mysterious reason to have a depressing effect upon those who remain continuously in that condition. The soil of a dependency appears to be unfavorable to the production of ability of a high type in any direction until the generation arrives which is ready to set itself free. Franklin was a colonial subject until he was seventy, and yet no more independent man than he lived in that age of independent thought. He rose to the highest distinction in four great fields of activity, any one of which would have sufficed for a life's ambition; he moved easily in the society of France and England, he appeared at the most brilliant court in Europe, and no one ever thought of calling him provincial. The atmosphere of a dependency never clung to him, nor in the heyday of aristocracy was his humble origin ever remembered. The large-mindedness, the complete independence, the entire simplicity of the man dispersed the one and destroyed the memory of the other.

Modern history contains very few examples of a man who, with such meager opportunities and confined for many years to a province far distant from the centers of civilization, achieved so much and showed so much ability in so many different ways as Franklin. With only the education of the common school and forced to earn his living while still a boy, he became a man of wide learning, preëminent in science, and a writer, in the words of one of the first of English critics,\* "of supreme literary skill." His autobiography is one of the half-dozen great autobiographies which are a perennial joy. His letters are charming and his almanacs (was there ever a more unlikely vehicle for good literature?) were translated into many languages, delighted with their homely wisdom and easy humor thousands who thought of America only as the abode of wolves and Indians and made the name of "Poor Richard" familiar to the civilized world. Yet literature, where he attained such a success, winning a high place not only in the literary history of his country, but of his age and his language, was but his

pastime. The intellectual ambition of his life was found in science, and he went so far in that field that the history of one of the great natural forces, which in its development has changed the world, cannot be written without giving one of the first places of pioneer and discoverer to the printer of Boston and Philadelphia.

Yet neither literature nor science, either of which is quite enough to fill most lives, sufficed for Franklin. He began almost at the very beginning to take a share in public affairs. His earliest writings when a printer at the case dealt with political questions. He then entered the politics of the city, thence he passed to the larger concerns of the great Province of Pennsylvania, and at every step he showed a capacity for organization, an ability for managing men and a power of persuasive speech rarely equaled. He had a way of carrying measures and securing practical and substantive results which excites profound admiration, since nothing is more difficult than such achievements in the whole range of public service. This is especially true where the man who seeks results is confronted by active opposition or by that even more serious obstacle, the inertness or indifference of the community. Yet nothing pleased Franklin more than such a situation as arose when in time of war he overcame the Quaker opposition to putting the province in a state of defense. His method was not as a rule that of direct attack. He preferred to outwit his opponents, an operation which gratified his sense of humor, and a favorite device of his was to defeat opposition by putting forward anonymously arguments apparently in its behalf, which, by their irony and extravagance, utterly discredited the cause they professed to support. To his success in the field of public discussion he added that of administration when he became Postmaster-General for the colonies and organized the service, and then again when he represented Pennsylvania and later other provinces as their agent in London. It was there in England that he defended the cause of the colonies before both Parliament and Ministers when resistance to taxation began. He came home an old man, verging on seventy, to take his place as one of the chief leaders

\*Mr. Augustine Birrell in his essay on "Old Booksellers."

in the Revolution. These leaders of revolution were, as is usual, young men, and yet there was not one among them all with greater flexibility of mind or more perfect readiness to bring on the great change than Franklin. He returned again to Europe to aid his country in the war, and it was chiefly due to him that the French alliance, which turned the scale, was formed. When the war drew to a close it was he who began alone the task of making peace. He had nearly completed the work when his colleagues appeared in Paris and by incautious words broke the web so carefully spun. Patient and undisturbed, Franklin began again. Again he played one English faction against the other. Again he managed France, turning to good advantage the vigorous abilities of Adams and the caution of Jay. Finally, boldly disregarding the instructions of Congress, he emerged from all complications with a triumphant peace.

Even then his work was not done. He came back to America to govern in Pennsylvania and to share in making the Constitution of the United States, thus exhibiting the power to build up as well as to pull down, something most uncommon, for the man of revolution is rarely a constructive statesman. He closed his great career by setting his hand to the Constitution of the United States, as he had already done to the Declaration of Independence.

Yet after his achievements and services have all been recounted we still come back to that which was most remarkable—the manner in which he at once influenced and reflected his time. The eighteenth century has for long been held up to scorn as destitute of enthusiasm, lacking in faith and ideals, indifferent and utterly worldly. Franklin was certainly devoid of enthusiasm, and yet one unbroken purpose ran strongly through his life and was pursued by him with a steadiness and force which are frequently wanting in enthusiasts. He sought unceasingly the improvement of man's condition here on earth. Whether it was the invention of a stove, the paving of Philadelphia, the founding of a library, the movement of storms, the control of electric currents, or the defense of American liberty, he was always seeking to in-

struct and help his fellow-men and to make their lot a better and happier one. The morals he preached were indeed worldly; there never was a bit of morality more purely of the account book kind than the familiar aphorism about honesty, and yet it may be doubted whether all the pulpits in America did more to make men honest and thrifty, good and sober citizens than the uninspired preachings of "Poor Richard." He was a skeptic, as were nearly all the great men of the century, but his honest doubt helped to free the human mind and dispel the darkness which had stayed the march of intellect. He never scoffed at religion; he did not hesitate to appeal to it at a great crisis to sway the minds of his fellows, but he suffered no dogmas to stand in the way of that opening of the mind which he believed would advance the race and soften by its discoveries the hard fate of humanity. He was conservative by nature in accordance with the habit of the time, but that which was new had no terrors for him, and he entered upon the path of revolution with entire calmness when he felt that revolution had become necessary to the welfare and happiness of his people.

There was nothing inevitable about the American Revolution at the particular time at which it came. It would have failed indeed on the field of battle had it not been for George Washington. But when the British Government, among their many blunders, insulted Franklin and rejected his counsel they cast aside the one man whose wisdom might have saved the situation and, so far as they could, made the revolt of the colonies inevitable. It was an indifferent, cold-blooded century, and both epithets have been applied to Franklin, no doubt with some justice. But it is never fair to judge one century or its people by the standards of another. Franklin was a man of extraordinary self-control combined with a sense of humor which never deserted him and which is easily mistaken for cold-blooded indifference. He signed the Declaration of Independence, it is said, with a jest; yet no man measured its meaning or felt its gravity more than he. He stood silent in the cock-pit while the coarse invective of Wedderburne beat about his head and made no

reply. The only revenge he took, the only answer he ever made, if tradition may be believed, was to wear when he signed the treaty acknowledging American independence the same coat of Manchester velvet which he wore when the pitiless abuse of England's Attorney-General was poured out upon him. He was not a man who displayed emotion or gave way to sentiment—it was not the fashion of his time. He was a philosopher and a stoic. Perhaps, as Mr. Birrell says, he was neither loving nor tender-hearted, yet he managed both in his life and in the disposition of his property to do many kindnesses and much good to those to whom the battle of life was hardest. His sympathies were keen for mankind rather than for the individual, but that again was the fashion of his time—a fashion which shattered many oppressions gray with the age of centuries and redressed many wrongs.

Franklin was very human, far from perfect in more than one direction. It is easy enough to point out blemishes in his character. But as a public man he sought no private ends, and his great and versatile intellect was one of the powerful influences which in the eighteenth century wrought not only for political liberty, but for freedom of thought, and in so doing rendered services to humanity which are a blessing to mankind to-day. We accept the blessings and forget too often to whose labors in a receding past they are due. We owe a vast debt to the great men of the eighteenth century who brought out of the shams and conventions and oppressions of that time the revolutions in politics, in society and in thought, the fruits of which we of today now enjoy. To no one of these men is the world's debt larger than to Franklin.

WASHINGTON, D. C.

## Franklin as a Man of Science

BY EDWARD L. NICHOLS, Ph.D.

AUTHOR OF "THE ELEMENTS OF PHYSICS," ETC.

IN Europe, just before the middle of the eighteenth century, there was a passion for dabbling in natural philosophy of the lighter sort and especially for playing at electricity, and nearly every one with pretensions to culture or even merely to a position in the fashionable world engaged in experiments with the electrical machine and the Leyden jar.

The wave of public interest reached Philadelphia in 1747, and Franklin, who was so far from being a specialist that his mind interested itself in nearly everything which happened to be brought to his attention, was so taken with electrical experimentation that he gave up active participation in his business, which he had by long-continued exertion brought to prosperity, and for several years devoted himself to this branch of science. He at once became the leader of the American group of investigators whose

results were embodied in the remarkable series of letters published in England under the title "Experiments and Observations on Electricity Made in Philadelphia in America by Benjamin Franklin." This volume, which consisted in part of his own observations and speculations and in part of those of his associates, met with an immediate and hearty success, and several editions were issued. It was also translated into French and other languages and served to make Franklin's experimental results and his theoretical views known on the Continent, where they were received with far greater enthusiasm and interest than had been the case in England. That the greater public, which at that time was amusing itself with electricity, should be the first to read and appreciate Franklin's book is not surprising, for the lucidity, homely simplicity and dry humor which have made his other writings pop-

ular are to be found in these letters also and give them a character unique among scientific treatises.

With this class of readers—especially in England, where his papers were at

original and at variance with those accepted in Europe at the time, came more slowly. Those who adopted Franklin's one-fluid theory of electricity, as opposed to the prevailing two-fluid theory

JOHN JAY. JOHN ADAMS. WILLIAM TEMPLE FRANKLIN.

first refused by the Royal Society—Franklin's success was spontaneous and immediate. Recognition of the underlying scientific values, particularly of his theoretical views, which were highly

of the European savants, became known as Franklinists, and a very lively controversy arose between them and their opponents, gleams of which may still be discerned by those who read the works of

the Abbé Nollet and of his contemporaries.

Of the amateur spirit of many of the devotees of science, and particularly of electricity in the middle of the eighteenth century, the literature of the period affords abundant evidence. The very woodcuts suggest the drawing-room rather than the modern laboratory, a sort of elegant dilettantism or virtuosity rather than the sober-mindedness of the modern investigator. The electricians of the American colonies pursued their science in the same light spirit of play, as tho their experiments were primarily a higher form of entertainment. When Mr. Kinnersley, one of Franklin's most enthusiastic playmates at this new and absorbing game, for example, devised an experiment to illustrate the mechanical reaction of charged points, he gave his tourniquet the form of a pair of toy horsemen, mounted at the ends of a horizontal rod pivoted at the middle. When the apparatus was electrified the spurs of the riders, somewhat exaggerated, served as the points the repulsion of which furnished the power.

Franklin entered fully into the spirit of the time. At the close of his fourth letter he says:

"The hot weather coming on, when electrical experiments are not so agreeable, it is proposed to put an end to them somewhat humorously, in a party of pleasure, on the banks of the *Skuylikil*. Spirits, at the same time, are to be fired by a spark sent from side to side thru the river, without any other conductor than the water, an experiment which we some time since performed, to the amazement of many. A turkey is to be killed for our dinner by the *electrical shock*, and roasted by the *electrical jack* before a fire kindled by the *electrical bottle*, when the healths of all the famous electricians in *England, Holland, France and Germany* are to be drank in *electrified bumpers* under the discharge of guns from the *electrical battery*."

That Franklin, the practical man, kept the overhand of Franklin the man of science—even while he was most busily employed in his investigations—appears from many passages in his letters.

For instance, in excusing certain explanations previously made and subsequently considered doubtful, he says:

"Nor is it of much importance to us to know the manner in which nature executed her laws; 'tis enough to know the laws themselves. 'Tis of real use to know that china left in the air will fall and break; but how it comes to fall and why it breaks are matters of speculation.

'Tis a pleasure indeed to know them, but we can preserve our china without it."

It is a characteristic passage and gives us insight into the type of Franklin's intellect; which, in spite of his notable achievements in pure science, turned ever by preference to the utilitarian and away from the theoretical and speculative aspects of things.

Elsewhere he expresses himself as "chagrined a little that we have been hitherto able to produce nothing in this way of use to mankind."

It was too early, even for the mind of a Franklin, to see in the phenomena of frictional electricity any promise of the profound influence that in a later form the science was to exert upon the material development of the civilized world. The tremendous possibilities that lay dormant in electricity were to remain latent for another century yet and the science was to be pursued as a science, intensely interesting to the philosopher but useless to mankind, by Davy, Oersted, Ohm, Ampere, Faraday, Weber, and a host of others, before its technical applications should become manifest.

The discovery that before all others has been associated with the name of Franklin was his demonstration that thunder and lightning are electrical manifestations precisely similar in kind to those produced on a small scale by artificial means, tho vastly greater in extent and intensity. The fact was perhaps not more important from the standpoint of science than many others which Franklin had succeeded in the course of his investigations in establishing; but it, from its very nature, appealed more strongly to the imagination of the general public.

The idea was not altogether new. The resemblance of lightning to the artificial electric discharge was sufficient to suggest a relation between the two. Nollet, indeed, who, after experiments made in France, had verified Franklin's hypothesis, demanded a share in the honor of the prediction. The following passage, which he quotes in making the claim, is, however, in itself a sufficient refutation:

"All these points of analogy, about which I have been thinking for some time, begin to make me believe that one might, by taking electricity for a model, form for one's self ideas more sure and probable concerning thunder

and lightning than those which have been imagined up to the present time."

Franklin, on the other hand, wrote in his note book on November 7th, 1749:

"The electric fluid is attracted by points—we do not know whether this property is in lightning—but since they agree in all the particulars wherein we can already compare them, is it not probable that they agree likewise in this? Let the experiment be made."

He furthermore describes in detail the method to be pursued to determine the question whether the clouds that contain lightning are electrified or not:

"I would propose an experiment, to be tried where it may be done conveniently. On the top of some high tower or steeple place a kind of sentry box big enough to contain a man and an electrical stand. From the middle of the stand let an iron rod rise, and pass bending out of the door and then upright twenty or thirty feet, pointed very sharp at the end. If the electrical stand be kept clean and dry, a man standing on it when such clouds are passing low might be electrified and afford sparks, the rod drawing fire to him from a cloud."

The actual experiment was first performed by D'Alibard at Marly in France, where sparks were drawn from a vertical bar of iron forty feet high, and the tests were subsequently repeated in Paris. When Franklin performed his famous experiments with the kite the fact that an electrical charge could be drawn from the clouds was therefore already established.

The idea of the lightning rod was already in Franklin's mind in 1749, at the time when he suggested the method of deciding the question whether lightning was an electrical phenomenon. He wrote:

"If these things are so, may not the knowledge of this power of points be of use to mankind in preserving houses, ships, etc., from the strokes of lightning by directing us to fix on the highest parts of those edifices upright rods of iron made as sharp as a needle and gilt to prevent rusting, and from the foot of those rods a wire down outside of the building into the ground."

Tho he was unable to imagine any way in which electricity could be of use to mankind, his inventive genius was at least able to offer mankind a device for protection against the universal dread of the effects of lightning and to give the timid a sense of security which they had not before possessed.

In the course of a dozen years the wave of passion for experimentation seems to

have spent its force on both sides of the water. In a letter written in 1862 to Father Beccaria, in acknowledgment of the receipt of a copy of the latter's well known work upon electricity, Franklin said:

"I wish I could in return entertain you with anything new of mine on that subject; but I have not lately pursued it, nor do I know any one here who is at present much engaged in it."

He then described at some length his method of preparing and tuning a set of musical glasses. He says of this singular musical instrument:

"My largest glass is G, a little below the reach of a common voice, and my highest G, including three complete octaves. To distinguish the glasses more readily to the eye, I have painted the apparent parts of the glasses within side, every semitone white, and the other notes of the octave with the seven prismatic colors, viz.: C, red; D, orange; E, yellow; F, green; G, blue; A, indigo; B, purple; and C, red again; so that glasses of the same color (the white excepted) are also octaves to each other.

"This instrument is played upon by sitting before the middle of the set of glasses as before the keys of a harpsichord, turning them with the foot, and wetting them now and then with a sponge and clean water. The fingers should be first a little soaked in water and quite free from all greasiness; a little fine chalk upon them is sometimes useful, to make them catch the glass and bring out the tone more readily. Both hands are used, by which means different parts are played together. Observe that the tones are best drawn out when the glasses turn from the ends of the fingers, not when they turn to them.

"The advantages of this instrument are that its tones are incomparably sweet beyond those of any other; that they may be swelled and softened at pleasure by stronger or weaker pressures of the finger, and continued to any length; and that the instrument, being once well tuned, never again wants tuning.

"In honor of your musical language, I have borrowed from it the name of this instrument, calling it the Armonica."

Franklin was above all a man of affairs, and science was an episode in his versatile career. Practical matters of increasing importance demanded more and more his attention, and altho he never wholly lost his interest in science, his activity as an investigator waned and vanished. It is no unusual thing for men of great intellectual power but no scientific training to take up science as a diversion at some period in their career. Goethe, to recall a well known example, thought much and wrote much on scientific subjects, but he contributed little to our

knowledge and added nothing to his own reputation. Franklin stands almost alone in this respect. Without the training usually considered necessary to the successful study of science and without giving to it more than a portion of his time for a small part of his long and active life, he gained for himself an eminence in science scarcely second to his position in literature and in affairs. To the science of electricity, which he took up like most of his contemporaries as a hobby, he contributed as much, perhaps,

of a difficulty, but the likeliest way to obtain information, and therefore I practice it; and I think it honest policy. Those who affect to be thought to know everything, and so undertake to explain everything, often remain long ignorant of many things that others could and would instruct them in if they appeared less conceited."

The range of topics with which his active mind occupied itself, and concerning the nature and laws of which he endeavored to form an idea, is amazing; and not less so, considering the paucity of the data upon which he founded his

ARTIST, C.W. PEALE. OWNED BY MRS. JOSEPH HARRISON, PHILADELPHIA, PA.

TWO PORTRAITS OF FRANKLIN.

that has stood the test of years as any man of his time. Nor was his interest in science confined to electricity. Before that subject was brought to his attention and after he ceased to occupy himself with it he was in the habit of thinking about all sorts of scientific and philosophical questions and of writing out his thoughts. His attitude was always that of the true investigator, open minded and truth seeking. In a letter written in 1755 he says:

"I find a frank acknowledgment of one's ignorance is not only the easiest way to get rid

of a difficulty, but the likeliest way to obtain information, and therefore I practice it; and I think it honest policy. Those who affect to be thought to know everything, and so undertake to explain everything, often remain long ignorant of many things that others could and would instruct them in if they appeared less conceited."

conclusions, was his success in dealing with many of the subjects about which he wrote. He is said to have been first to announce the direction in which storms move. Perhaps because his frequent voyages afforded him suggestions and the opportunity for reflection, he interested himself particularly in all sorts of nautical phenomena, collecting data concerning the movement of the Gulf Stream and measuring its temperature; studying the effect of oil upon water waves and of the depth of water upon the speed of ships; making observations

upon the phosphorescence of sea water, and gathering information from many sources concerning whirlwinds and waterspouts. He was a fertile inventor, and many of his suggestions deal with devices for the handling of ships; with the shape and size of sails; with the form of the hull; with anchors and with novel modes of propulsion.

Along with this practical turn Franklin possessed in the highest degree a scientific imagination, and in the most difficult and subtle matters of speculation he did his own thinking and reached his own conclusions, quite independent of the prevailing opinion of the time in which he lived.

In so vexed and difficult a question as that of action at a distance he demanded,

as a necessity, the conception of a medium pervading all space, by means of which the attractions and repulsions of bodies distant from one another may take place; and in discussing the theory of light he renounced the corpuscular hypothesis of Newton as physically impossible, and sought to explain the phenomena of optics by means of the vibration of an elastic ether. To hold such views at the middle of the eighteenth century was to stand almost alone, and to be able to stand alone is the sign of fitness for original work of the highest order. Had he given his whole time to science instead of a mere fragment of it Franklin would inevitably have been one of the first men of science, not merely of his own day, but of all time.

## Franklin as a Diplomat

BY JOHN W. FOSTER, LL.D.

EX-SECRETARY OF STATE AND AUTHOR OF "A CENTURY OF AMERICAN DIPLOMACY," ETC.

WHEN the British colonies in North America published to the world their Declaration of Independence and appealed to the nations of Europe to recognize that independence there could be found in all the thirteen colonies only one man who, by diplomatic experience, was fitted to represent them abroad and bring about that much-desired recognition. That man was Dr. Benjamin Franklin. He possessed, besides, an additional qualification superior to all other Americans. Of all the insurgents he was the best and most favorably known on the continent of Europe.

Previous to their independence the British colonies could not maintain diplomatic representatives in the strict sense of that class. But for fifteen years anterior to 1776 Dr. Franklin had discharged quasi-diplomatic functions in London as the agent of the Colony of Pennsylvania, and later as the agent of other of the Colonies. In that capacity he had to bring into play the same qualities and to cultivate the same political and social influences as to-day fall to the lot of the

regularly accredited diplomatic representative.

During the discharge of his duties in England he developed the characteristics which gave him so much reputation in his later career in France—a conciliating temperament, a spirit of expediency, business capacity, ability to gain the friendship and confidence of men of influence and standing, great popularity in social circles, a favorite diner-out.

In his efforts to represent faithfully his constituents he labored to reconcile the differences between the mother country and the colonies. He went so far as to advise the latter to accept, temporarily at least, the Stamp Tax and the Colony of Massachusetts to pay for the tea destroyed in Boston Harbor. At the same time he was exerting to the utmost his abilities to bring about the repeal of the tax. Up to the last year of his residence in London he had hopes of preventing a rupture and constantly labored to that end. About this time he writes:

"I find myself suspected by my impartiality in England of being too much an American, and in America of being too much an Englishman."

He incurred great hostility in Government circles thru his zeal for the interests of Massachusetts, in the use he made of what are known as the "Hutchinson letters," and to this day even some American writers criticise what was termed, in England, his bad faith, and in America, his indiscretion. But the prevailing and better judgment is that he was guilty of neither offense, and that in the matter he pursued the same course which the most prudent diplomatist of the present day would take. This affair gave rise to the most critical and dramatic experience of his life, in his appearance before the Privy Council, when for an hour or more he stood on his feet before that body to receive the bitter abuse of the Attorney-General of England. His appearance was the more conspicuous because on that day he was dressed in "a new suit of spotted Manchester velvet," which, it will be seen, he donned again on another memorable occasion. In giving an account of the affair to his friend Dr. Priestly he said he "had never before been so sensible of the power of a good conscience." It proved the turning point in his career. It was the subject of Walpole's epigram:

The calm philosopher, without reply,  
Withdrew, and gave his country liberty.

The event of his agency service, which gave him the greatest political reputation in Europe, was his examination before the British Parliament, in connection with the consideration of the Stamp Act, and in which his ability to maintain his cause under adverse circumstances was conspicuous. Burke said of it that it reminded him of a master examined by a parcel of school boys.

Altho Franklin was merely the agent of a colony in London, the diplomats of that capital thought it worth while to cultivate his acquaintance. He reports that they treated him as one of their corps, inviting him to dine with them and introducing him to distinguished gentlemen of their countries. His acquaintance and friendship was especially cultivated by the French Ambassador, who was very inquisitive and interested in his affairs. He writes: "I fancy that intriguing nations would like very well to meddle on occasion, and blow up the coals between Britain and her colonies;

but," still a loyal subject, he adds, "I hope we shall give them no opportunity."

During his stay in England he made two visits to the Continent which proved of the greatest value to him and his country in later years. Clothed with letters from the French and other Ministers, he traveled thru the Netherlands and Germany, but devoted much of his absence to Paris. Writing from London after his first visit, he said: "The time I spent in Paris, in the inspiring conversation and agreeable society of so many ingenious and learned men, seems now like a pleasing dream"; and after his second visit: "I have just returned from France, where I find our dispute much attended to."

His relations with British statesmen, scientists, men of letters, and leaders in society were most extensive and intimate, and stood him in good stead in critical epochs of his Parisian service. He was a brilliant conversationalist and a welcome frequenter of the London clubs. After he had entered on his great social career in Paris, he wrote:

"Please present my best respects to our good old friends of the London Coffee-House. I often figure to myself the pleasure I should have in being once more seated among that honest, sensible, and intelligent society."

The experience before the Privy Council satisfied the American agent that his usefulness was ended in that capacity, and he prepared to return to Philadelphia, but not before he had heard Lord Chatham, in one of his notable orations in the House of Lords, pronounce him one "whom all Europe held in high estimation for his knowledge and wisdom." On sailing, apparently unconscious of the great work in store for him, he said he was "determined on returning to my little family, that I might enjoy the remainder of my life in quiet repose."

I pass over the important part he bore in the Continental Congress in the year and a half that he spent in America. Valuable as were his services here, his country was then in greater need of his presence in Europe. He was better known at that time on the Continent in science and letters than in statesmanship—as the flyer of the kite, as "Poor Richard" and the essayist; but public men knew of his career in England, and on

all sides a hearty welcome awaited him. On arrival in Paris he installed himself in the palace or "hotel" of a wealthy gentleman and friend of America at Passy, a suburb of the gay city. John Adams, when he arrived on the scene, told him the house and the establishment he maintained were too ostentatious for the representative of the young republic; but as it was to be rent free till independence was achieved Franklin thought well to remain in the historic house during his full term, and by his residence added to its renown. It became famous as the home of the American diplomat and philosopher, and was distinguished for its hospitality and good cheer. Social entertainment is not the supreme duty of diplomacy, but it holds an important place in that service, and it was not neglected by Franklin.

Immediately on his arrival he addressed himself to the study of the language of the country. When a young man he had acquired a reading knowledge of French, but now, at the age of seventy, he became fairly proficient in it for conversation and friendly and unofficial correspondence. He thus put himself in a position to make the most of the welcome that was extended to him in all circles of society. His example is a standing reproach to the many American diplomats of later years, who have been content to pass their term in the country to which they have been accredited without acquiring a knowledge of its language.

The negotiation of treaties is the highest function which a diplomatic representative is called upon to discharge, and the one which requires the greatest skill and circumspection on his part. It fell to the lot of Dr. Franklin during his residence in Paris to participate in the negotiation of treaties of the most momentous importance to his country and of the highest interest in international law. It is not possible within the limits of this paper to review in detail these negotiations, but three of them call for at least a passing notice.

The chief object for which Dr. Franklin was sent abroad was to secure the recognition of the independence of the revolted colonies thru the making of treaties of commerce; and he carried

with him to Paris the form of a commercial treaty carefully drawn for that purpose. On his arrival the French Government was not prepared for that step, and he and his colleagues of the commission spent more than a year of weary waiting and labor, till at last the triumph of arms made the work of diplomacy easy. Saratoga is reckoned by Creasy as one of the fifteen decisive battles of the world. Its effect was conclusive upon the French Court. After that event it was ready to enter into a treaty with the colonies, but it desired that it should be not only one of commerce, but of alliance.

While there was much sympathy in France for the rising republic, the motives which influenced the Court were purely practical. It saw the opportunity to cripple the power and growth of its rival and hereditary enemy and hoped for commercial advantages. Hence it sought for alliance. Franklin and his colleagues did not hesitate to exceed the instructions of Congress and make the independence of their country a certainty. It was not for them to consider the later consequences of the alliance; their immediate struggle was for independence.

It lowers the dignity of the negotiations somewhat when we learn that the only article which gave the negotiators any trouble was that providing for the export of molasses from the French West Indies to enable our New England forefathers to more freely manufacture rum. The signing of the French treaties was a memorable event for the embryo nation, but even more so for Franklin. He recorded that when he withdrew from his excoriation at the Privy Council in London: "I made no return of the injury by abusing my adversaries; but held a cool, sullen silence, reserving myself to some future opportunity." That opportunity had come. In signing the treaty of alliance he was giving Britain the most fatal blow she had ever received; and at the ceremony he appeared again in the suit of spotted Manchester velvet.

The circumstances attending the treaty with Great Britain of peace and independence is too familiar to call for recital here. Three of the first statesmen of America took part in its negotiation. It

was initiated by Franklin alone, and the terms as substantially concluded were early given by him to the British Government. Because of his illness the details and framing of the convention were attended to by Jay, and John Adams arrived in Paris only in time to participate in the closing discussion and to approve what Jay had done.

The result was not reached without some disagreement and friction among the American commissioners, and the

of the commissioners it was Franklin, and he only, who could appease their ally.

The treaty of amity and commerce with Prussia of 1785 was the last act of the Doctor before his return to America. It was only of special significance, because it was the most serious effort which up to that time had been made to alleviate the horrors of war by treaty stipulations, and it contained two advanced principles of international law—the abol-

BENJAMIN FRANKLIN.

friends of Adams and Franklin have disputed as to whom the greatest credit was due for the important achievement. A similar discussion occurred as to the relative merits of Monroe and Livingston respecting the Louisiana treaty; and the peace commissioners at Ghent, in 1814, especially Clay and J. Q. Adams, were far from harmonious. The better judgment of history is that to Franklin belongs the chief credit for the happy result of the negotiations. It was to him the British Cabinet looked for their initiation, and when the French Government became displeased with the action

of privateering and the exemption in war of private property at sea. They were so far in advance of public opinion that the treaty was allowed to lapse. The first was after three-quarters of a century incorporated into public law in the Rules of Paris of 1856, and the second is still a debatable question, but likely to be finally adopted at the next Conference of the Nations. They stand as a testimony to the prescience and philanthropy of their venerated advocate.

Treaty making, however, was not the only matter which demanded the time and talents of the American diplomat.

Prominent among his duties was the obtaining of money and war supplies for the struggling colonists. Those had mainly to come from or through the French Government. Before the recognition of independence in 1778 they were obtained in a surreptitious manner, but after that event the aid was openly rendered. Congress drew freely and without warning, and Franklin had to resort mainly to the generosity of the French Government to maintain his country's credit. It was in such work his genial manner and popularity with the French nation was of inestimable value. He borrowed money from the Government, and often had to borrow more to pay the interest on the former loan, so great was the financial straits of Congress. To his colleagues he wrote: "I have worried this friendly and generous Court with oft-repeated afterclap demands . . . and am ashamed to show my face to the Minister." Humorously he was accustomed to say the drafts of Congress were usually on the Bank of Hope.

He was not only the financial agent of his country in Paris, but its commercial agent, directing the sale of tobacco and other products sent on Congressional account. Also he was in charge of a naval establishment, fitting out and dispatching privateers, supervising the sale of their prizes, and negotiating the exchange of prisoners taken. Among the most annoying of his duties was the attention he had to give to officers and soldiers of fortune seeking for appointments in the American army.

These multifarious duties, largely foreign to diplomatic functions, would seem sufficient to tax to the utmost the skill and patience of any mortal; but, in addition, Franklin was subjected to the abuse, calumny, and interference of a number of agents—his countrymen—sent to Europe on various duties, and who congregated in Paris. Chief among these was Arthur Lee, who was associated with him on the Commission for the French treaties. Later came John Adams, who was sent to replace Deane on the same commission. Of him Dr. E. E. Hale wrote: "Mr. Adams's appearance anywhere generally added variety to the entertainment."

These two gentlemen conspired to se-

cure Franklin's removal by Congress from his post, on the ground of his subserviency to the French court; that he was careless and inefficient in his business methods; that he maintained in office dishonest agents, and had reached the age of senility. Worried by the attacks upon his character and his work and interference with his proper duties, Franklin himself asked to be relieved. But Congress knew too well the value of his services; and the combined efforts of his foes and himself only resulted in his permanent appointment as sole plenipotentiary at Paris, the recall of Lee, and the sending of Adams elsewhere.

Prominent among the characteristics which made Franklin the most useful and distinguished American diplomat ever sent abroad was his zeal to make himself agreeable to the court to which he was accredited. When Adams remonstrated against his complaisance, he replied: "It is my intention while I stay here to procure what advantage I can for our country by endeavoring to please this Court." Hence, said a French writer, "no one conceived it possible to refuse fleets and armies to the countrymen of Franklin."

His brilliant conversational powers largely contributed to his success. In humor, anecdotes, and apt sayings he has only been rivaled by Lincoln. But he was no orator. Adams contrasted their services in Congress: "I was active and alert in every branch . . . discussing and arguing on every question," while Franklin was seen "from day to day, sitting in silence, a greater part of the time fast asleep in his chair." Jefferson, writing of the same Congress, said: "I never heard him [Franklin] speak ten minutes at a time, nor to essay but the main point." Franklin confessed: "I was but a bad speaker; . . . yet I generally carried my points."

The fact that he generally carried his point led his enemies to charge him with cunning. Shelburne, the British Prime Minister, who knew him well, wrote to Oswald, his peace plenipotentiary, referring to this charge: "Dr. Franklin knows very well how to manage a cunning man; but when the Doctor converses or treats with a man of candor there is no man more candid than himself." It was the

worldly wisdom of "Poor Richard" applied to diplomacy.

As age and infirmity increased his official and social cares grew heavy upon him, and he repeatedly asked Congress to relieve him. At last, after nine years of service in the French mission, in the eightieth year of his age, his resignation was accepted, and he was followed by Thomas Jefferson. To the question so often addressed to him soon after his arrival, "It is you, sir, who replace Dr. Franklin?" Mr. Jefferson usually replied, "No man can replace him, sir. I am only his successor." And of him he wrote, in 1785, that "more respect and veneration attached to the character of Dr. Franklin in France than to that of any other person in the same country, foreign or native."

As the venerable servant of the new republic was borne to the coast by the Queen's litter, because of his suffering from gout and the gravel, to take ship for America, he wrote back to Paris: "I did my last public act in this country just before I set out [signing the treaty with Prussia]. I have continued to work till late in the day; 'tis time I should go home and go to bed."

A new day has dawned for him. At the end of a century and a quarter his fame shines with constantly increasing luster, his frailties are forgotten, and he is remembered only for the great services he rendered to his country and to the world. He stands out prominently in our history as the representative American diplomat.

WASHINGTON, D. C.

## Franklin as Philosopher and Moralist

BY EDWARD EVERETT HALE, D.D., LL.D.

THERE is a curious illustration of the change in the use of words in the older John Adams's estimate of Franklin. Adams did not like Franklin. In truth, he did not like many people of his own time. In one of his voyages from Europe in his diplomatic days they fell to talking on Franklin, and Adams said of him that Mr. Franklin was a philosopher, but he was not a statesman. Writing near the close of his life, he says, Mr. Franklin was not a philosopher, but he was something else.

I refer to this contrast, not to say that Mr. Adams had changed his mind, but to say that the word philosopher had one meaning in 1780 and another meaning in 1820. To be a philosopher, say in the time of the French Encyclopedia, was to be what we now call a "physicist," a student of what we used to call natural philosophy. To be a philosopher at the time of the Revolution, and before, was to be a student of electricity or chemistry, or even of the laws of agriculture. But the word "science" gradually took to itself the care of physical things, and within our own time the words "scientist" and "physicist" have been coined

to represent the men whom Dr. Johnson and the men of his time would have called philosophers.

I think this is worth saying, because when Franklin went to Europe with the fortunes of the new-born nation in his hand-bag he was known in Europe among people of distinction mostly as a successful student of "natural philosophy." He was the man who had drawn electricity from the clouds. He was the man who had smoothed the waves of the ocean, he was the man who had studied the Gulf Stream. He was a member of the Royal Society. On the Continent he had traveled from city to city and had made the personal acquaintance of the naturalists.

All the same, Franklin was far too great a man to devote himself simply and exclusively to smoke and dust and mud and other *things*. And Europe was beginning to find this out, somewhat, indeed, to its surprise. As early as 1732, when Franklin was but twenty-six years old, he had begun "Poor Richard's Almanach" in Philadelphia. In 1757 he brought together the proverbs which, year by year, had filled up the vacant

spaces in the calendar, and published them together. They were printed together on a large sheet of paper in England. Two translations were made in France. It was thus that it happened that when, at the end of 1776, Franklin arrived in France as the envoy of the new-born nation, well known already as a student of natural philosophy, he was very widely known also as "Poor Richard," as one who was interested in im-

especially in Dissenting circles. His books probably circulated as freely in Boston as in London.

Franklin says of himself that he owes to the public schools of Boston all the school instruction he ever received, using the word schools in the plural number. The two schools to which he refers are the Latin School, still existing, then kept by Nathaniel Williams, and the school for writing and arithmetic and

BENJAMIN FRANKLIN.

proving the manners, customs and morals of the people.

Franklin says of himself that, so far as he knows anything of his early experiences and resolutions, Defoe's "Essay on Projects" and Cotton Mather's "Essay to Do Good" perhaps gave him a "tone of thinking that had an influence on some of the principal future events of my life." Mather was the literary leader of the little Boston in which Franklin was born and grew up. Alas and alas! he made a mistake about witchcraft in his early life, and so, to the opinion of the modern Boston, he has been handed down as a fanatic and bigot, and not as one of the two men of that time who gave Franklin to the world.

Defoe himself was still well known,

other "English branches" kept by Brownell. At the Latin School he was taught the rudiments of Latin. In his discussions of education and instruction, which is a very different business from education, he steadily urges the importance of an English education. But in the first ten years of his life in Philadelphia he acquainted himself with French, Spanish, Italian and Latin. When he chooses he quotes Latin in his letters and essays, and while he urges the importance of a study of English language and literature as careful as the men of his time gave to Latin and Greek, he can hardly be said to discourage a study of the so-called classical languages, except when it stands in the way of the study of English.

The training of a printing office, such as he had from the time he was twelve years old, is the best possible training for what may be called the technicalities of English grammar and even of English style. The difference between the meaning of the words, for instance, is revealed to an apprentice who takes from their separate boxes the s, p, a, c, i, o, u and s which make up "spacious," when he sets up Addison's hymn. He inquires what is the difference between a "spacious firmament" and an "ethereal sky," and the "span-gled heavens" and a "shining frame." He asks himself what Mr. Addison meant when he used these phrases—or if, indeed, he meant anything at all. All the knots and entanglements which belong to commas, semi-colons and colons are revealed to this apprentice. And when Franklin "set up" in type his ballad of the "Light-House Keeper's Daughter" and "Black Beard" he was acquiring without knowing it some of those canons of common sense which ruled his own admirable style and appear in his working method of life.

His philosophy of life appears quite distinctly in his management of every social, moral and political question. And it is to be observed that, with more and more experience, he rated very highly the importance of the pen in public affairs. Say if you choose that this was an accident. It was a very fortunate accident for him and mankind that as a printer he soon learned to address his little public. If there was a nuisance to be redressed or an improvement to be made, here were the type, the ink and the paper by which he could interest his neighbors. He could, indeed, if nobody else could. With one printer, or perhaps two, in the little colony, if you happened to be the one printer, or one of the two, this power of the printer impressed you; and in Franklin's case he used his power. When he had anything to say, he said it; first, perhaps, to the Junto Club, and then to the little world of Pennsylvania.

For such a position the boy was well equipped, even in the two schools of Boston, and afterward, before he was of age, by his life in London and his work as a young man there. He was but nineteen years old when he returned from

London to Philadelphia. The next year he was ready with type, ink and press—equipped for the printer's career of less than thirty years which made him the first diplomatist of the world.

It is not difficult to trace in his common sense philosophy of life the happy lessons of the surroundings of youth and early manhood. Is there, perhaps a habit now, when men speak of Franklin's philosophy of daily life, to speak as if it were a stingy or narrow philosophy? "A penny saved is two pence earned," "Time is money," and such axioms of Poor Richard are cited as if Franklin had nothing better than parsimony to preach—and as if he did not know the difference between parsimony and economy. He did know very well. But he also knew how to hit a nail, if he had a nail to hit. And if he were making proverbs for a people whose special fault at the moment was that they were wasteful in drink or food or in dress, he told them so, without if or but. He was not afraid but that they would make quite enough of the necessary allowances for the stringent form of his epigrams.

He published the first number of "Poor Richard's Almanac" in 1732. In the daily pages of the almanac, which children in especial liked to study, in the vague directions to "expect foul weather about this time"—he found the space which should tell men that "God helps them that help themselves," "The sleeping fox catches no poultry," "Early to bed, early to rise," and he improved it.

Nearly a generation after, these words of good sense, real economy—yes, but real adventure as well—were brought together. They found friends in philanthropic circles in England and France. They were printed in Broad-sides with pictures, as instructions to men and women, "how to be healthy and wealthy and wise." The almanac attained immense popularity. Ten thousand copies were sold in a year when there were not 2,000,000 people in the colonies, of whom not half could read. Somebody has calculated that this corresponds to a sale of nearly 500,000 copies in the United States of today. He says somewhere that in France there was quite a habit among philanthropic people to give

BENJAMIN FRANKLIN.

the Broad-sides which printed the French version to peasant tenants, who posted them in sight of all who came into their cabins. It was so, as has been said, that when he made his long visit to France he was already known to the French people, not simply as a natural philosopher, but as a counsellor of manners, morals and, indeed, in life.

And to this hour it is that covert or open counsel for life which is shot in, more or less visibly, in the web of all which he writes, which gives the eternal interest, either to his letters or to his essays. One may refer to the boy who spent too much for his whistle as he refers to the lion of Æsop or the fox and the grapes.

It is quite idle to go into discussion as to the effect on his speculation of Locke or Malebranche or Descartes, or any other of the so-called philosophers in fashion in his time. The familiar statement that his is a common sense philosophy will hold. Whoever wants to trace it to its origin will do best by studying his matchless autobiography and the history of his after life, even affectionately.

Not but that he knew about Locke and Hobbes and Shaftsbury and Malebranche and Descartes and the "Essay on Man" as well as another knew them. But Franklin was pre-eminently a man

of his time from day to day. From the time of the pirate Black Beard till he presided over the Constitutional Convention, seventy years crowded as full as any years in history have been, he did the duties next his hand. For his neighbor or for his country there was every-day something to be done. In the tallow chandler's shop, at the Latin School, in learning to "cypher," in setting type, or in peddling ballads there was something to be done, probably something for other people. And afterward; Philadelphia needs a fire company, or it needs a public library, or it needs to have its streets paved. It is this thing today, it is that thing tomorrow. He has to teach Braddock about feeding troops, or he has to measure the temperature of the Gulf Stream. There is something to do and he does it.

Of such a life you find the reflection in his philosophy of life. I am apt to think that the very close resemblance between his written style and the all but matchless English of Defoe comes from the habit, which you may almost call a passion, of doing the thing which is to be done in as quick time as possible. I do not say that he learned it from Defoe's "Essay on Projects." But I think that the school in which Defoe and Franklin both lived tempered and modified the English style with which they wrote. Franklin was on the committee which drew the Declaration of Independence. He assented cordially, I suppose, to the draft made by Jefferson. But if he had it to write he would have never written "When in the course of human events it becomes necessary for one people to dissolve the political bands which have united it to another."

Some one has said that Franklin's essays are read as eagerly as they were ever read. I am not sure as to this, but I am sure that any one who knows him well is constantly reverting to them. It is indeed very curious to see how often his parables, or his proverbs, and his jokes fit in with the exigencies and speculations of today.

But let no one think that the advice which is given or the lesson which is taught is materialistic. Only yesterday some one said to me that you always found Franklin an apostle of hope, even

in the darkest hours, as men call them, of history. "Is it true that General Howe has taken Philadelphia, Dr. Franklin?" "No," said Franklin; "Philadelphia has taken General Howe," an epigram which proved perfectly true. That good-natured optimism runs all the way through. It gives light and life and heat to his famous Examination before the House of Commons. Perhaps it is worth while to say to young readers to-day that the only two men who comprehended in the least the physical greatness of America, when the treaty of Independence was made, were the optimists George Washington and Benjamin Franklin.

Franklin had an indifference, almost amusing, to the sectarian divisions of the Christian Church. In our day he would have had some amusing and fine parables in ridicule of its confederations. He grew up in a Puritan town, he lived half his life among Quakers; his near friends in England were Low Church Episcopalians, his near friends in France were Nothing-arians, who professed to be Roman Catholics. Well, it is perfectly true that he was such a Gallio that he "cared for none of these things"—that is, he did not care a snuff of a candle for the differences about which so-called Christians quarreled so cheerfully. He who knew everything else was so ridiculously ignorant about Ordination that when the American gentlemen were refused ordination in the Episcopal Church by the Archbishop of Canterbury, Franklin coolly asked them if he should not get some of his Roman Catholic friends to ordain them instead—as you might offer a friend Ayer's cherry pectoral for his cough because he had not Brown's troches at hand. And really, Franklin had no idea of the mountains he proposed to hew down by a note to some Catholic abbé. Because of this ever amusing indifference to sect there has grown up a doubt in extreme circles whether Franklin were what is called a religious man. But it is quite certain, nothing is more certain, that he recognized the Divine Providence, the being and love of God, the work and gospel of Jesus Christ, and the immortality of man, and that he was eager to take part as a Christian man in the best work of the

Christian Church. As late as 1765 George Whitefield wrote, "Our trusted friend Dr. Franklin has gained immortal honor."

When Franklin was more than seventy he joined with a "noble lord" in editing a revision of the book of Common Prayer. It would be worth while for some one to reprint this today. It omits the compulsory reading of the lessons from the Old Testament, but it retains the New Testament lessons; it retains the services for baptism, matrimony, and the communion. Indeed, it might happen that a British consul in some chapel outside the island might join in the service and not know but he was at home. In France they thought he was a Quaker, because he wore a Quaker coat buttoned up to the neck. I think Whitefield thought he was a Methodist, because he always came to hear him preach. As the anecdote above implies, he did not know the difference between an Episcopalian and a Roman Catholic; but all the same, he was one of the men who, as the English Prayer Book says in its grand way, "profess and call themselves Christians."

WASHINGTON, D. C.

BENJAMIN FRANKLIN.

# Franklin and Chatham

BY WORTHINGTON CHAUNCEY FORD

CHIEF OF THE DIVISION OF MANUSCRIPTS IN THE LIBRARY OF CONGRESS, AND AUTHOR OF  
"BENJAMIN FRANKLIN PAPERS."

FRANKLIN has left almost as full and satisfactory an account of his relations with the British administration in 1774 and 1775 as of his relations with the representatives of the king and proprietary in the colonial government of Pennsylvania. In both cases he was of the opposition, and in both cases his advice and opinion were sought by the heads of control. His common sense, his wide knowledge of men and affairs, and his habit of speculation, tempered by such rules as inductive science then afforded, give to his judgments a shrewd ripeness that either confounded or delighted his opponents. Once the royal Postmaster General in the colonies, once the agent in England of five of the colonies, and long trusted by ministerial agents, he occupied a peculiar position of influence and even authority in Great Britain as in America. The incident of sending the Hutchinson letters to Massachusetts Bay, which did so much to arouse the indignation and opposition of the colonies against the representative of the King, also tended to diminish Franklin's authority in England. Only on one side, however, for it stamped him as a colony man in the dispute, and he gained in America more than he lost in Great Britain. It was while under this cloud that he first came into personal relations with Lord Chatham.

In 1757 he had made several attempts to be introduced to Chatham, then Prime Minister, but found him either too great a man or too much occupied in affairs of greater moment than that represented by Franklin. The Minister's secretaries would consult Franklin, but the Minister himself, admired from a distance, was considered by Franklin as inaccessible. Seventeen years later the opportunity to meet came, and under conditions greatly flattering to the American. For Chatham had been more remote than ever. His pride, his sense of self-sufficiency and his power had long tended to make

him depend upon himself, and he had often embarrassed his followers by framing and submitting to Parliament measures on which he had neither consulted them nor given an intimation of his intention. His suffering from gout reacted on his temper, making him morose and gloomy, and he lived at Hayes almost in retirement, much feared by his enemies and an object of apprehension to his friends. The American troubles called him from this retirement and gave him the opportunity to crown his career by a noble appeal for the rights of men, oppressed by administrative wrongs; and to Franklin he turned for counsel.

The first Continental Congress closed its session in October, 1774. Before its proceedings could reach England the King dissolved Parliament, and by new elections obtained a body more subject to his control, and more easily turned against the prayers of the colonists. In August Franklin was told that Chatham wished to see him, and in company with Lord Stanhope he went to Hayes, where he was received "with an abundance of civility." In the general talk which took place between them there was little room for difference of opinion. Chatham encouraged the colonies to continue firm and united in defending by all peaceable and legal means their constitutional rights. He was the leader of the opposition in Parliament. Franklin chimed in with this opinion, and enlarged upon the late wrong politics which threatened the growth of the empire, and hoped that his lordship might unite with the other great and wise men of the British nation to rescue it out of the "mangling hands of the present set of blundering Ministers." He could give assurances that the colonists did not aim at independence. The two men parted with expressions of mutual esteem and with promises of future conferences.

The condition of English politics promised little benefit from an attempt

to stem the current setting against the interests of America. It required all the more courage in Chatham to risk his own popularity and power, and the interests of his party in undertaking to defend those interests. Lord Dartmouth, well informed as he was on colonial matters, was sounding Franklin on terms of conciliation, and even North did not con-

many and rejected by Parliament. The full grievances of the colonies had now been laid before the world in formal and official terms, and the full demands for remedy had been submitted. Franklin at once communicated them to Lord Chatham, whose opinion of their temper, moderation and wisdom is well known, treasonable as it must have appeared to

*The above Plan was offered by the Earl of Chatham to the House of Lords, on Wednesday Feb. 1. 1775, under the Title of A Provisional Act for Settling the Troubles of America, and for Asserting the Supreme Legislative Authority and Superintending Power of Great Britain over the Colonies — but being opposed by the Ministry it was rejected by a <sup>great</sup> Majority, the Numbers being, for rejecting 61 and for retaining 32; so it was not suffered to lie on the Table for further Consideration. Yet when it is considered, that in <sup>Ministerial Lords, with all the</sup> the Majority were all the <sup>Scottish</sup> Lords & the Bishops, who usually vote as the Minister bids them, the sense of that House, that is, the independent Part of it, does not seem to have been generally against the Bill.*

*B. F.*

Facsimile of Franklin's Note Transmitting a Copy of Chatham's Proposed Plan of Conciliation, Preserved in the Congressional Library.

sider it bad policy to learn what were Franklin's opinions on the rising controversy. Of ministerial policy there was little of a peaceful character, and concession was not to be admitted without some serious penalty for the misdeeds of the past. While thus groping for something definite the papers of the Congress were received, admired by

the ministry of that day. The Earl intimated when they met that possibly he might, if his health permitted, submit something to Parliament on the American troubles, on which he would wish to have previously the sentiments of Franklin. Fortunately his health did permit. On January 20th, 1775, he took Franklin to the House, where he made the motion

to withdraw the troops from Boston, which was promptly rejected. The appearance of the two men together gave rise to some speculation, as a knowledge of their meetings was confined to a very few. While Chatham merely criticised

ly upon the subject, and intended soon to lay before them the results, in a plan for healing the differences and restoring peace to the empire.

A few days after Franklin went to Hayes and learned that the plan had

the acts of the ministry, Franklin's influence could not be suspected or measured; and when the Ministers taunted Chatham with criticising their policy without offering something better, he replied that he had thought long and close-

been prepared and had been submitted to Lord Camden on some legal points. As soon as transcribed it would be shown to Franklin, and no other persons were to see it before it was submitted to Parliament. The plan was prepared in the

form of an act of Parliament, and was brought to Franklin's lodging by Chatham himself, who kept his equipage standing in the street before his door for more than two hours, thus giving rise again to much speculation on the relations between the two men.

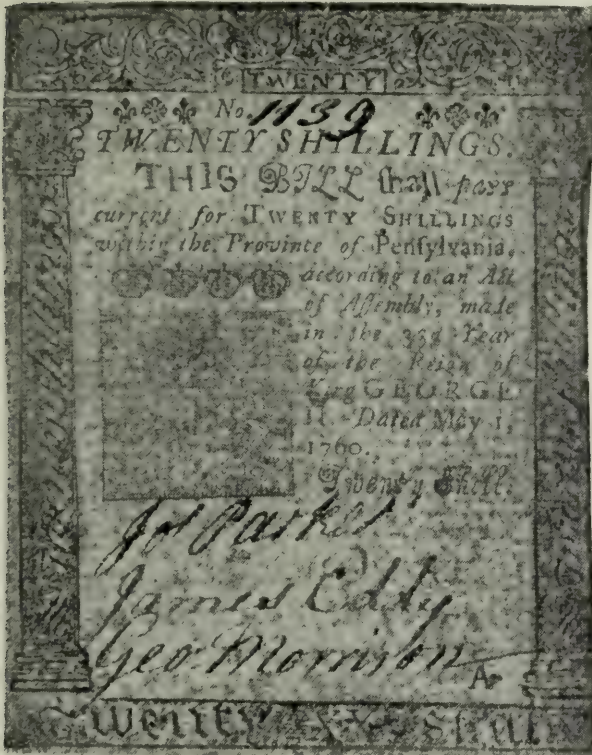

The plan was copied by Franklin, to be transmitted to Congress, and it is Franklin's note attached to this copy from which the reproduction is made. Its nature need not be described in this

To Thompson he wrote:

"Lord Chatham's bill, tho on so important a subject, and offered by so great a character, and supported by such able and learned speakers as Camden, etc., etc., was heard with as much contempt as they could have shown to a ballad offered by a drunken porter."

There is no evidence that Chatham and Franklin again met or communicated with one another.

No document could speak more eloquently of Franklin's position in England at the time. He represented an un-

A Colonial Bank Note, Printed by Benjamin Franklin. From Original in the Possession of W. G. Bowdoin

place, for it is, in itself, a paper of some notoriety, as well from the reputation of Chatham as from a belief widely entertained at the time, that Franklin was something more than an adviser, and was largely responsible for the document. Of that there is no evidence, and the secretive manner in which Chatham is known to have prepared his measures emphasizes Franklin's account of its production and the little part any other person could have had in it. Only a single word, "constitutions," after charters, was due to Franklin. The endorsement by Franklin shows the fate of the measure.

popular cause, and was called upon to defend the colonies when all the machinery of administration had been directed to obtain a complete denial of justice to their plans. Chatham, once the leading Commoner in England, now helpless in the Lords as an advocate of reconciliation, turned to the one man who could give advice and counsel moderate measures. The conferences between the two men were as dramatic in time as in matter, and fortunately Franklin has placed on record his part in them, of which this bill of concession and recognition forms an important tho melancholy part.

able for the issue, of a worthy governor hurt in his dearest interests, the fate of America in suspense; here is a man who, with the utmost insensibility of remorse, stands up and vows himself the author of all. I can compare it only to Zanga, in Dr. Young's 'Revenge'

"Know then 't was ——— I.

I forged the letters—I disposed the picture—I hated, I despised, and I destroy.'

I ask, my Lords, whether the revengeful temper attributed, by poetic fiction only, to the bloody African is not surpassed by the coolness and apathy of the wily American?"

The scene is dramatic in the extreme—the vociferous, malignant accuser, the lords gloating over their victim, nodding approval to the bully and breaking out into laughter when the slander was most virulent; and Franklin, all the while standing at one end of the room in the recess by the chimney, erect, motionless, with countenance, as an eye-witness described it, as unchangeable as if carved out of wood. He wore, we are told, a full dress suit of spotted Manchester velvet. On a memorable day, just four years later, when the treaty with France was to be signed, he took pains to appear in the same conspicuous garb—he was ever a humorist, this *wily American*! For the rest, the epigram of Horace Walpole is sufficiently well known:

Sarcastic Sawney, swol'n with spite and prate,  
On silent Franklin poured his venal hate.  
The calm philosopher, without reply,  
Withdrew, and gave his country liberty.

Franklin, I believe, never met Dr. Johnson; and this is a pity, for the clash between the dictator's burly insolence and Franklin's irresistible wit would have furnished an unforgettable pendant to the ignominy of the Cockpit. He was, however, brought face to face with the only other personality entirely of that age comparable to his own. In 1778 Voltaire, an old man tottering to the grave, revisited Paris to accept the homage of the city and to die. The American envoys were received in his chamber, and there the patriarch of the terrible new faith that was permeating society pronounced a solemn blessing upon the representative of the rising generation. "When I gave my benediction," he wrote a few days later, "to the grandson of the sage and illustrious Franklin, the most honorable man of America, I spoke only these words, *God and liberty*! All who were present shed tears." But the petted

spokesmen of the century were to meet on a more eminent stage and in a more noteworthy scene. At a public session of the Academy of Sciences the two "philosophers" sat together on the platform, the lodestone of all eyes. What happened can best be related in the words of John Adams, a curious and jealous observer:

Voltaire and Franklin were both present, and there presently arose a general cry that M. Voltaire and M. Franklin should be introduced to each other. This was done, and they bowed and spoke to each other. This was no satisfaction; there must be something more. Neither of our philosophers seemed to divine what was wished or expected. They, however, took each other by the hand; but this was not enough. The clamor continued until the exclamation came out, "*Il faut s'embrasser à la Française!*" The two aged actors upon this great theater of philosophy and frivolity then embraced each other by hugging one another in their arms and kissing each other's cheeks, and then the tumult subsided. And the cry immediately spread thruout the kingdom, and I suppose over all Europe, "*Qu' il était charmant de voir embrasser Solon et Sophocle!*"

*This great theater of philosophy and frivolity!* Dear sir, it is the world of the eighteenth century you are naming so petulantly, the stage on which you, too, are playing a lesser but no mean part. Nor would it be easy to find a tableau more strikingly significant of the powers that had already given freedom to America and were soon to set France and all Europe ablaze. It might seem as if the Dæmon of history had chosen Franklin to be the protagonist in the successive acts of that drama of mingled tragedy and comedy in which the people of the nations were shuffled about as pawns.

Other scenes might be quoted as minor episodes in that stupendous drama—the presentation of Franklin to his Majesty Louis XVI, wherein Franklin's wig was so comical a factor; the receipt of the news of Burgoyne's surrender; and long before these the interrogation of Franklin before the British Parliament. As the last and most beautiful scene we must pass on to another parliament which was sitting in a far less sumptuous hall. It was in September of 1787, and the Convention of the States at Philadelphia had, after long uncertainties, drafted the Constitution which was to justify and make perpetual the labors of which Franklin had borne so heavy a

share. The story is related by Madison, that while "the last members were signing, Dr. Franklin, looking toward the president's chair, at the back of which a rising sun happened to be painted, observed to a few members near him that painters had found it difficult to distinguish in their art a rising from a setting sun. 'I have,' he said, 'often and often, in the course of the session, and the vicissitudes of my hopes and fears as to its issue, looked at that behind the president, without being able to tell whether it was rising or setting; but now, at length, I have the happiness to know that it is a rising and not a setting sun.'" So it was the venerable man pronounced upon the work of his generation and saluted those who were about to take up the burden.

Franklin was not precisely a man of letters, yet his life is almost literature, and out of it might be made one of the great books. Not only do the salient events of his career take on a dramatic form that is already a kind of literary expression, but he goes further than that and meets the biographer half way, using language as one of his chief instruments of activity. How carefully he trained himself to this end every reader of the *Autobiography* knows. From childhood he was an eager and critical reader, and few pages of his memoirs are written with more warmth of recollection than those which tell of the books he contrived to buy, Bunyan's works first of all. He seems to think that the "Spectator" had the predominating influence on his style, and apparently he was still under sixteen when an odd volume of that work set him to studying seriously. His method was to read one of the essays and then after a number of days to rewrite it from a few written hints, striving to make his own language as correct and elegant as the original; or, again, he turned an essay into verse and back again into prose from memory. "I also," he adds, "sometimes jumbled my collection of hints into confusion, and after some weeks endeavored to reduce them into the best order before I began to form the full sentences and complete the paper. This was to teach me method in the arrangement of thoughts. By comparing my work afterward with the original I dis-

covered many faults and amended them; but I sometimes had the pleasure of fancying that, in certain particulars of small import, I had been lucky enough to improve the method or the language, and this encouraged me to think I might possibly in time come to be a tolerable English writer, of which I was extremely ambitious." His method—on the whole one of the best of disciplines, better, I think, than the system of themes now employed in our colleges—could scarcely have been anything for Franklin save a precocious discovery, altho it had, of course, been used long before his day. Cicero tells how the orator Crassus had begun to form himself on a plan not essentially different, but turned from this to the more approved exercise of converting the Greek writers into equivalent Latin. *Vertere Græca in Latinum verteres nostri oratores optimum judicabant*, said Quintilian; and Franklin's language would have gained in richness if he, too, had proceeded a step further and undergone the discipline of comparing his English with the classics.

As it is, he made himself one of the masters of that special style of the eighteenth century which concealed a good deal of art under apparent, even obtrusive, negligences. He professed to model himself on Addison, but his real affinity is more with Swift; or, rather, he lies between the two, with something harsher than the suave impertinence of Addison, yet without the terrible savagery of the Dean. In particular he affected Swift's two weapons of irony and the hoax, and, if he did not quite make literature with them, he at least made history, which his predecessor could not do. Sometimes he was content to borrow an invention bodily—"convey the wise it call"—as when he badgered a rival almanac maker by foretelling the date of his death and then calmly proving the truth of the prophecy out of the poor fellow's angry protestations. And entirely in the vein of Swift, if not so palpably stolen, are a number of his political pamphlets, notably, in the way of irony, the "Rules for Reducing a Great Empire to a Small One." As for his hoaxes they were innumerable and astonishingly effective. They all point back to the incorrigible Dean of St. Patrick's, altho one of the most famous

of them was probably suggested by Walpole's fictitious letter of Frederick the Great, which drove Rousseau one stage further into lunacy. To expose the hollowness of Great Britain's claim to absolute ownership of America because that country had been colonized by Englishmen, Franklin took advantage of the ancient German settlement of England and published a so-called "Edict of the King of Prussia." The result he tells in a letter to his son (October 6th, 1773):

What made it the more noticed here was that people reading it were, as the phrase is, *taken in*, till they had got half thru it, and imagined it a real edict, to which mistake I suppose the King of Prussia's *character* must have contributed. I was down at Lord Le Despencer's when the post brought that day's papers. Mr. Whitehead was there, too (Paul Whitehead, the author of "Manners"), who runs early thru all the papers, and tells the company what he finds remarkable. He had them in another room, and we were chatting in the breakfast parlor, when he came running in to us, out of breath, with the paper in his hand. "Here!" says he, "here's news for ye!" All stared, and I as much as anybody, and he went on to read it. When he had read two or three paragraphs, a gentleman present said, "Damn his impudence. I dare say we shall hear by next post that he is upon his march with one hundred thousand men to back this." Whitehead, who is very shrewd, soon after began to smoke it, and, looking in my face, said, "I'll be hanged if this is not some of your American jokes upon us!" The reading went on, and ended with abundance of laughing, and a general verdict that it was a fair hit; and the piece was cut out of the paper and preserved in my Lord's collection.

Other hoaxes were not so readily detected, and have even crept into sober history and criticism. There is the notorious "Speech of Polly Baker," which the Abbé Raynal quoted to illustrate a point of law in his "Histoire des Deux Indes," and which he refused to expunge when informed of its source. "Very well, doctor," said he with perfect nonchalance; "I had rather relate your stories than other men's truths." And there is the no less notorious proposal for a "New Version of the Bible," in which Franklin, under the plea of modernizing the text, altered the first six verses of Job into a satire on monarchical government. The solemn comment of Matthew Arnold on the passage is a delightful piece of unconscious humor:

I remember the relief with which, after long feeling the sway of Franklin's imperturbable common sense, I came upon a project of his for a new version of the Book of Job, to replace the old version, the style of which, says Franklin, has become obsolete and thence less agreeable. "I give," he continues, "a few verses, which may serve as a sample of the kind of version I would recommend." We all recollect the famous verse in our translation: "Then Satan answered the Lord, and said, Doth Job fear God for naught?" Franklin makes this: "Does your Majesty imagine that Job's good conduct is the effect of mere personal attachment and affection?" I well remember how, when first I read that, I drew a deep breath of relief, and said to myself, "After all, there is a stretch of humanity beyond Franklin's victorious good sense."

Alas for the proud wit of man! These stumblings of a great critic may be a lesson in humility for us, the children of a later day. And after all, to use his own phrase, it was only a slight misplacement of sarcasm; he did not mean Franklin's merry skit, but was speaking, prophetically, of that less humorous production, the American Revised Version.

Later in life, especially during his stay in Paris, Franklin's satire became even mellowed, and he took up again a form of writing in which he had early excelled. This was the "Bagatelle," as he called it, the little apologue written in the lightest vein, yet containing often the very heart of his genial philosophy. Such were the "Epitaph on Miss Shipley's Squirrel," "The Ephemera," "The Whistle," "The Handsome and Deformed Leg," and the "Dialogue Between Franklin and the Gout," to name no others. How neatly turned they all are, how wise and gracious and tender; they show how much was lost to pure literature by the exigencies of a busy life. I cannot pass on without quoting the least of these, the letter to a young friend "On the Loss of Her American Squirrel." It belongs with that long list of poems and epitaphs, half playful and half pathetic, on the pets of dear women, beginning with Lesbia's sparrow:

I lament with you most sincerely the unfortunate end of poor Mungo. Few squirrels were better accomplished, for he had a good education, traveled far, and seen much of the world. As he had the honor of being, for his virtues, your favorite, he should not go, like common Skuggs, without an elegy or an epitaph. Let us give him one in the monumental style and measure, which, being neither

prose, nor verse, is perhaps the properest for grief; since to use common language would look as if we were not affected, and to make rhymes would seem trifling in sorrow.

#### EPITAPH.

Alas! poor Mungo!  
Happy wert thou, hadst thou known  
Thy own felicity.  
Remote from the fierce bald eagle,  
Tyrant of thy native woods,  
Thou hadst naught to fear from his piercing  
talons,  
Nor from the murdering gun  
Of the thoughtless sportsman.

Safe in thy wired castle,  
Grimalkin never could annoy thee.  
Daily wert thou fed with the choicest viands,  
By the fair hand of an indulgent mistress;  
But, discontented,  
Thou wouldst have more freedom.  
Too soon, alas! didst thou obtain it;  
And wandering,

Thou art **fallen** by the fangs of wanton, cruel  
Ranger!

Learn hence,  
Ye who blindly seek more liberty,  
Whether subjects, sons, squirrels or daughters,  
That apparent restraint may be real protection,  
Yielding peace and plenty  
With security.

You see, my dear miss, how much more decent and proper this broken style is than if we were to say by way of epitaph—

Here Skugg  
Lies snug  
As a bug  
In a rug.

And yet, perhaps, there are people in the world of so little feeling as to think that this would be a good enough epitaph for poor Mungo.

So it is that speech and action blend together inextricably to form this fascinating literary figure. He moves thru the whole length of the eighteenth century, serene and self-possessed, a philosopher and statesman yet a fellow of infinite jest, a shrewd economist yet capable of the tenderest generosity. There was a large admixture of earth in the image, no doubt. His wit was often coarse, if not obscene, and, as his latest editor observes, leaves a long "smudgy trail" behind it. Not a little that he wrote and that still exists in manuscript is too rank to be printed. One might wish all this away, and yet I do not know; somehow the thought of that big animal body completes our impression of the overflowing bountifulness of his nature. If wishing were effective I would choose rather that he had not made of

his Autobiography so singular a document in petty prudence and economy. Nothing in that record is more typical than the remark on his habit of bringing home the paper he purchased thru the streets on a wheelbarrow—"to show," he adds, "that I was not above my business." And for economy, one remembers his visit to the old lady in London who lived as a religious recluse, and his comment: "She looked pale, but was never sick; and I give it as another instance on how small an income life and health may be supported." Possibly the character of his memoirs would have changed if he had continued them into his later years; but I am inclined rather to think that the discrepancy between the breadth of his interests and the narrowness of his professed ideals would have become still more evident by such an extension. The truth is they only exaggerate a real deficiency in his character; there was, after all, a stretch of humanity beyond Franklin's victorious good sense.

We feel this primarily in his religious convictions; it is pressed upon us by contrast with the only other American who was intellectually his peer, Jonathan Edwards. The world in which Franklin moved lay beneath a clear, white light, without shadow of concealment, with nothing to cloud the sincerity and keenness of his vision; but far beyond, in the dim penumbra, loomed that other world of his contemporary—a region into whose treacherous obscurities those must venture who seek the comforts and sweet ecstasies of faith, and who find these at times, and at times, also, drink in only strange exhalations of deceit and vapors of spiritual pride. As often as Franklin's path approached that misty gateway he drew back as from a bottomless pit. Like other men of his century, he had built up for himself his own private religion, from which the vague inherited emotions of the past were to be utterly excluded. The little book that contains his formulated creed and liturgy may still be read, an extraordinary document in the history of deism. The remarkable point in it is the frankly pagan way in which he relegates the Infinite God to realms beyond our concern, and selects for worship "that particular wise and

good God who is the author and owner of our system." Even more remarkable is the "*great and extensive project*," divulged in the Autobiography, of creating thruout the world a kind of religious Freemasonry, to be initiated into his own doctrines and to be called *The Society of the Free and Easy*—"free, as being by the general practice and habit of the virtues, free from the dominion of vice; and particularly by the practice of industry and frugality, free from debt, which exposes a man to confinement, and a species of slavery to his creditors." Who can read this without recalling Lamb's panegyric of the *great race* of borrowers and fearing that he has "fallen into the society of *lenders* and *little men*"?

The same practical views of religion may be traced thru many of Franklin's familiar letters. Sometimes they combine with his humor to form a kind of benevolent worldly wisdom, as in this letter to his sister Jane, with its mock exegesis of some religious verses written long ago by an uncle:

In a little book he sent her called "None But Christ," he wrote an acrostic on her name, which for namesake's sake, as well as the good advice it contains, I transcribe and send you, viz.:

"Illuminated from on high,  
And shining brightly in your sphere,  
Ne'er faint, but keep a steady eye,  
Expecting endless pleasures there.

"Flee vice as you'd a serpent flee;  
Raise *faith* and *hope* three stories higher,  
And let Christ's endless love to thee  
Ne'er cease to make thy love aspire.

Kindness of heart by words express,  
Let your obedience be sincere,  
In prayer and praise your God address,  
Nor cease, till he can cease to hear."

You are to understand, then, that *faith*, *hope*, and *charity* have been called the three steps of Jacob's ladder, reaching from earth to heaven; our author calls them *stories*, likening religion to a building, and these are the three stories of the Christian edifice. Thus improvement in religion is called *building up* and *edification*. *Faith* is then the ground floor, *hope* is up one pair of stairs. My dear beloved Jenny, don't delight so much to dwell in those lower rooms, but get as fast as you can into the garret, for in truth the best room in the house is *charity*. For my part, I wish the house was turned upside down; 'tis so difficult (when one is fat) to go up stairs; and not only so, but I imagine *hope* and *faith* may be more firmly built upon *charity* than *charity* upon *faith* and *hope*. However that may be, I think it the better reading to say—

"Raise faith and hope one story higher."

Correct it boldly, and I'll support alteration; for, when you are up two stories already, if you raise your building three stories higher you will make five in all, which is two more than there should be, you expose your upper rooms more to the winds and storms; and, besides, I am afraid the foundation will hardly bear them, unless, indeed, you build with such light stuff as straw and stubble, and that, you know, won't stand fire.

In the end one feels that both in his strength and his limitations, in the versatility and efficiency of his intellect as in the lack of the deeper qualities of the imagination, he was the typical American. If his broad common sense excluded that thin vein of mysticism which is one of the paradoxes of our national character, he represented the powers that have prevailed and are still shaping us to what end we do not see.

NEW YORK CITY.

## Franklin as a Printer

BY ALBERT HENRY SMYTH

EDITOR OF "THE WRITINGS OF BENJAMIN FRANKLIN."

WHEN Franklin wrote his will he began with the words, "I, Benjamin Franklin, *printer*." Thruout his life he was chiefly interested in the art of printing, and his dearest friends and most intimate companions were members of that craft. He was learned in paper, types and ink. He

printed his bagatelles upon his private press at Passy with types cast by his household servants. He was proud of the glossy blackness of his ink, and he furnished Pierres (Imp<sup>r</sup> Ord<sup>re</sup> du Roi) with the special paper upon which he printed his *Manuel d'Épictète en Grec*. His most esteemed correspondent in

England was William Strahan, the King's printer, and among the chief of his French intimates was Fournier the younger, the celebrated printer and type founder at Paris in the second half of the eighteenth century.

It was, he says, his bookish inclination that determined his father to make him a printer, tho he had already one son of that profession. He was but twelve years old when he signed the indentures that bound him to his brother, James Franklin. He was to serve as an apprentice till he was twenty-one years of age, only he was to be allowed journeyman's wages during the last year. His brother began in 1721 to print the *New England Courant*, the fourth newspaper that appeared in America. It was for this paper that Benjamin Franklin wrote the Dogood papers. He commenced his literary career with the first of these anonymous articles, stealthily written and timidly thrust under the door of his brother's printing office. American literature may almost be said to date from these anonymous productions of an ambitious lad of sixteen.

The *Courant* was conducted in such a reckless manner that the Boston Council declared that the tendency of the paper was to mock religion and to disturb the peace and good order of the province. James Franklin was therefore forbidden "to print or publish the *New England Courant* or any other pamphlet or paper of the like nature, except it be first supervised by the secretary of the province."

To circumvent the Council and to avoid "carrying the manuscripts and public news to be supervised by the secretary," it was determined at a meeting of the "Couranteers," as the contributors to the *Courant* were called, that James Franklin should appear to abandon the publication and that Benjamin Franklin should appear as the sole publisher. His apprenticeship indentures were canceled and new indentures were signed and concealed. His editorial preface appeared February 11th, 1723, and it was stated that the *Courant* was "printed and sold by Benjamin Franklin in Queen street, where advertisements are taken in." The style of the youthful publisher's introductory preface showed that the

*Courant* had sustained no loss by its change of management. He wrote:

"Long has the Press groaned in bringing forth an hateful, but numerous Brood of Party Pamphlets, malicious Scribbles, and Billingsgate Ribaldry. The Rancour and bitterness it has unhappily infused into Men's minds and to what a Degree it has sowed and leaven'd the Tempers of Persons formerly esteemed some of the most sweet and affable, is too well known here, to need further Proof or Representation of the Matter.

"No generous and impartial Person then can blame the present Undertaking, which is designed purely for the Diversion and Merriment of the Reader. Pieces of Pleasancy and Mirth have a secret Charm in them to allay the Heats and Tumours of our Spirits, and to make a Man forget his restless Resentments. They have a strange Power to tune the harsh Disorders of the Soul, and reduce us to a serene and placid State of Mind."

Few stories in literary history are more widely known or more frequently repeated than that which relates to Franklin's quarrel with his brother and his subsequent flight to New York and Philadelphia. Every one has read in the "Autobiography" how he was nearly drowned in New York Bay; how he walked from Perth Amboy to Burlington, fifty miles, thru ever-during rain; how he took boat at Burlington on an October evening, and landed at the foot of Market street in Philadelphia on the following Sunday morning; how he walked the quiet streets, a ridiculous figure, munching his roll; how he found shelter the first night in the strange city at the Crooked Billet in Water street. He had offered his services in New York to old William Bradford, who had been the first printer in Pennsylvania, but removed from thence upon the quarrel of George Keith. "My son at Philadelphia," said Bradford, "has lately lost his principal hand, Aquila Rose, by death; if you go thither I believe he may employ you." Andrew Bradford received him civilly, gave him a breakfast and referred him to another printer named Keimer, whom Franklin found in a printing house consisting of an old shattered press and one small, worn out font of English, composing elegiac verses on Aquila Rose, "composing them in the types directly out of his head."

Franklin worked for Keimer and for Bradford in Philadelphia and for Palmer and for Watts in London, when he went

thither a victim of the pitiful tricks of Governor Keith. When Keimer sold his printing house and removed to Barbados his newspaper passed into Franklin's hands, and with No. 40 (October 2d, 1729), the *Pennsylvania Gazette* began a new existence. It became the leading newspaper of the day, with a large circulation and advertising patronage. Franklin was the sole editor and proprietor for nearly twenty years, and for eighteen more he was jointly so with David Hall, who had been recommended to him by William Strahan. His printing house was the source of all his wealth, accumulated by industry and frugality, for his political services were an expense to him, and he declined to secure patents for his inventions or copyrights for his publications, saying "That as we enjoy great advantages from the inventions of others we should be glad of an opportunity to serve others by an invention of ours; and this we should do freely and generously." Le Roy said to him, "Like Charles XII and other conquerors, you only seize empires to give them to others."

Two productions of Franklin's press can never be forgotten. First in fame is "Poor Richard's Almanac," begun in 1732 and continued for a quarter of a century. It contained much delightful and memorable writing and has had extraordinary and almost unexampled popularity. "Father Abraham's Speech to the American People at an Auction," which appeared in Poor Richard for 1758, was reprinted as "The Way to Wealth," was copied into all the newspapers of the continent and was circulated in Great Britain as a broadside. Paul Leicester Ford said of it:

"Seventy editions of it have been printed in English, fifty-six in French, eleven in German and nine in Italian. It has been translated into Spanish, Danish, Swedish, Welsh, Polish, Gaelic, Russian, Bohemian, Dutch, Catalan, Chinese, modern Greek and Phonetic writing. It has been printed at least four hundred times, and is today as popular as ever!"

The other noteworthy product of Franklin's press was an edition of "Cato Major," translated by James Logan. [M. T. Cicero's "Cato Major," or his Discourse of Old Age: with Explanatory Notes. Philadelphia: Printed and sold by B. Franklin, 1744.] Frank-

lin's preface to this beautifully printed volume concluded with this statement:

"I shall add to these few lines my hearty wish that this first translation of a classic in this western world may be followed with many others performed with equal judgment and success; and be a happy omen, that Philadelphia shall become the seat of the American muses."

It was not the first American translation of a classic, but it was the first made *and published* in America.

In Franklin's vast correspondence with men of note everywhere over the world there are many letters of interest addressed to and received from type founders and printers. He early recognized the genius of Baskerville, and subscribed to his editions of Milton and Virgil. Prejudices existed against Baskerville's work which Franklin labored to combat. A gentleman told him that Baskerville would be a means of blinding all the readers in the nation, for the strokes of his letters, being too thin and narrow, hurt the eye, and he could never read a line of them without pain. "I thought," said Franklin, "you were going to complain of the gloss of the paper, some object to." "No, no," was the reply. "I have heard that mentioned, but it is not that; it is in the form and cut of the letters themselves; they have not that height and thickness of the stroke which make the common printing so much the more comfortable to the eye." How he tried this *connoisseur's* judgment Franklin amusingly told in a letter to Baskerville in 1760:

"Yesterday he called to visit me, when, mischievously bent to try his judgment, I stepped into my closet, tore off the top of Mr. Caslon's specimen, and produced it to him as yours, brought with me from Birmingham, saying I had been examining it, since he spoke to me, and could not for my life perceive the disproportion he mentioned, desiring him to point it out to me. He readily undertook it, and went over the several fonts, showing me everywhere what he thought instances of that disproportion, and declared that he could not then read the specimen without feeling very strongly the pain he had mentioned to me. I spared him that time the confusion of being told that these were the types he had been reading all his life with so much ease to his eyes, the types his adored Newton is printed with, on which he has pored not a little; nay, the very types his own book is printed with (for he is himself an author), and yet never discovered this painful disproportion in them till he thought they were yours."

Thus at a time when Baskerville could not, in his own words, "get even bread" by his art, and when he was unable to get from the London booksellers a single job, Franklin had testified to the superiority of his types over those of Caslon, "the English Elzevir." They were purchased four years after Baskerville's death by a literary society in Paris, and were used in printing Beaumarchais's edition of Voltaire.

Early in life Franklin corresponded with Cadwallader Colden concerning a proposal of the latter which had some resemblance to the early attempts at stereotype printing. In France forty years later we find him instructing the celebrated Didot, and giving him his first notions of stereotyping. It was always the paramount interest of his life. Only three months before his death he wrote at great length to Noah Webster acknowledging the receipt of a copy of "Dissertations on the English Language," and taking occasion to criticise the methods of latter-day publishers. He lamented that the method in vogue between the Restoration and the accession of George II. of beginning all substantives with a capital had, by the fancy of printers, been laid aside, from an idea that suppressing the capitals shows the character to greater advantage, "those letters prominent above the line disturbing its even, regular appearance." Among other "improvements *backward*" he mentioned the "modern fancy that gray printing is more beautiful than black; hence the English new books are printed in so dim a character as to be read with difficulty by old eyes, unless in a very strong light and with good glasses." He censured the printers who used the "short round s instead of the long one, which formerly served well to distinguish a word readily by its varied appearance." "Certainly," he said, "the omitting this prominent letter makes the line appear more even, but renders it less immediately legible; as the paring all men's noses might smooth and level their faces, but would render their physiognomies less distinguishable." He was convinced that it was an error to place the "point called an interrogation" at the end of a question, "so that the reader does not discover it till he finds

he has wrongly modulated his voice, and is therefore obliged to begin again the sentence." The Spanish printers, he observed, placed an interrogation at the beginning as well as at the end of a question. Upon these matters he had positive opinions, and when he sent Woodfall a contribution for his paper he begged him to take care that the compositor observed strictly "the Italicking, Capitalling and Pointing." Failure to observe such directions when his "Edict of the King of Prussia" was reprinted in the London *Chronicle* caused him to write regretfully to his son:

"Printing such a piece all in one even small character seems to me like repeating one of Whitefield's sermons in the monotony of a school boy."

It is a fact I fancy little known that Franklin encouraged the establishment of the *Times*. John Walter was deeply interested in the *logographic* method of printing, or printing with words entire instead of single letters. At great expense and with much enthusiasm and labor he brought the process to completion, and solicited the favor and the judgment of Franklin. He wrote to him (May, 1784):

"You will excuse my being very minute in description of the arrangement, on which the facility of the work depends, because I mean to offer a font of it to the Court of France, as I have already to that of Russia, by the Ambassador of that Court, who did me the honor to view it with the Duke of Richmond on Saturday last. Thus far I may venture to inform you that the whole English language (except technical and obsolete words) are comprised in eight cases of 3 feet 3 inches by 1 foot 7 inches each, which takes up an extent of only 6 feet 6 inches, because two pair cases are in front and one pair on either side, making a triangular box, so that the compositor, by the method of placing, has no more than 4½ feet to range in. One case contains all particles, pronouns and auxiliary verbs, likewise words of all figures; six cases contain the rest of the language as simple words, with and without the concluding letters where they admit of a compound, and one case has every termination, so that, for instance, if the word *converse* is wanted, *convers* admits of *ation*, *ing*, *ed*, *ible*, etc. etc."

Franklin approved the ingenuity of the reduction of the number of pieces by the roots of words and their different terminations. He liked much also "the idea of cementing the letters instead of casting words of syllables, which I formerly attempted, and succeeded in having invented a mold and method by which I could in a few

minutes form a matrix and adjust it, of any word in any font at pleasure, and proceed to cast from it."

In consequence of Franklin's encouragement John Walter proceeded with his herculean task. He printed logographically an octavo edition of "Robinson Crusoe" and another of "Butler's Analogy," and at Franklin's suggestion founded a newspaper to be printed by the new method. It is a singular episode of history that "the Thunderer" should thus have originated from the suggestion of the chief of political insurgents.

Nor is this all. In a hitherto unpublished letter to Franklin (July 18th, 1789), John Walter made the following interesting and remarkable disclosure:

"This undertaking has been most perilous both to my fortune and sensibility. It happens in the course of human events that you, tho innocently, have been the cause of this undertaking being on the decline. I have sent you a brief relation of many circumstances which have attended it, but how will you be astonished when I relate that from some authority I understand you were a stumbling block from the name of whom Majesty shrunk—certain it is the King was pleased with the plan, that his librarian appeared to forward it, that he promised to get the King's name to the head of my subscription, and after I had sent him a list of the subscribers he shrunk back and from the civility of a courtier he dwindled down to the rudeness of a sycophant. All the applications I have made to the Treasury during five years, tho flattering, are so much time spent in vain."

One of the seemingly indestructible misconceptions concerning Franklin is the very prevalent notion that the famous letter written by him to William Strahan:

"You are a member of Parliament and one of that majority which has doomed my country to destruction. You have begun to burn our towns and murder our people. Look upon your hands; they are stained with the blood of your relations. You and I were long friends; you are now my enemy, and I am, yours, B. Franklin,"

was seriously meant and actually sent. It was merely a *jeu d'esprit*, without any serious intention. No estrangement ever took place between these two friends, who grew old together in undiminished loyalty and affection. They lived to the end without a moment of coldness or fretfulness. After the war was over Franklin wrote to Strahan—"Dear Straney," as he called him—

"I remember your observing once to me as we sat together in the House of Commons, that no two journeymen printers, within your knowledge, had met with such success in the world as ourselves. You were then at the head of your profession, and soon afterwards became a member of Parliament. I was an agent for a few provinces, and now act for them all. But we have risen by different modes. I, as a republican printer, always liked a form well *planed down*; being averse to those *overbearing* letters that hold their heads so *high* as to hinder their neighbors from appearing. You, as a monarchist, chose to work upon *crown* paper, and found it profitable; while I worked upon *pro patria* (often, indeed, called *foolscap*), with no less advantage. Both our *heaps* hold out very well, and we seem likely to make a pretty good day's work of it. With regard to public affairs (to continue in the same style), it seems to me that the compositors in your chapel do not *cast off their copy* well, nor perfectly understand *imposing*; their *forms*, too, are continually pestered by the *outs* and *doubles*, that are not easy to be corrected. And I think they were wrong in laying aside some *faces*, and particularly certain *head-pieces*, that would have been both useful and ornamental. But, courage! The business *may* still flourish with good management, and the master become as rich as any of the company."

The world is coming in these days, two hundred years after the birth of this great and extraordinary versatile character, to recognize that Benjamin Franklin was, all things considered, the largest all-around man that has yet been produced upon this continent. He may be studied in countless ways, but above all as the philosopher, the politician and the printer. Proud of his success in a worthy calling, he did much to improve the art of typography upon both sides of the sea. He had printing houses in five different colonies, and he advised with unerring wisdom the younger members of the craft. He foresaw that "the rapid growth and extension of the English language in America must become greatly advantageous to the booksellers and holders of copyrights in England." The vast audience that was assembling in America for English authors was clearly in his eye. Even as a printer working at the press he heard the tread of the coming generations and saw in prophetic vision the swift expansion of the English race and the marvelous extension of the English language in the New World for whose welfare he planned so wisely.

# Literature

## Sidney Lanier

THE biography of Sidney Lanier, by Professor Mims\*, deserves and is receiving a warm welcome. Since Lanier's too early death many loving memorials and reminiscences of him have appeared; volumes of his writing, in both prose and verse, have been widely read; and so pathetic was his story and so premature his taking off that his life and genius have become popular themes for lectures and magazine articles. His name, known but to a select few in 1881, when the pen dropped from his hand, is now as familiar a word as that of Holmes, nearly as well known in the four quarters of the United States as that of Lowell or Longfellow, and his writings have found appreciative readers in France as well as Great Britain. It was time for an authoritative life of the poet to appear.

Professor Mims has purposely written more particularly of Lanier's early life, including the war period and the years before the call of music and the humanities drew him from Georgia. This was well done, for Lanier's later life in Baltimore is better known; but the author's avowed reason is "to avoid a misconception that Lanier was a detached figure." If such a misconception exists its vogue must be slight, for it is as an exponent of the New South that he is generally known and appreciated.

The story of Lanier's life is here told simply and sympathetically, and, so far as possible, by quotations from his own letters or from the writings of those who knew him intimately. The first third of the book takes him through his storm and stress period, out of the law office and into the serenity that accompanied his settled devotion to art. The second portion deals with his musical and literary career and his work as teacher and lecturer, all in Baltimore; while the closing pages describe the New South, Lanier's characteristics and ideas, the last months of his life, with a final chapter giving the author's estimate of his achievement as critic and poet.

\*SIDNEY LANIER. By Edwin Mims. Boston: Houghton, Mifflin & Co. \$1.50.

The chapter on the New South brings out Lanier's constant interest in Southern affairs and notes certain of his striking qualities—lack of prejudice, inexhaustible energy, alertness and modernness of mind, ability to find joy in constructive work and adoption of the national idea—as "the elements that have made possible a New South." In this connection Mr. Mims pays a warm tribute to such Southern leaders as Morgan, Lamar, Bishop Haygood, and Dr. Curry, and gives an interesting account of the literary awakening of the South, its short lived magazines, its many writers and their warm welcome by Northern publishers and readers; and he recognizes that *THE INDEPENDENT* "is especially connected with the rising fame of Lanier." This is but just, for, of the eighty-seven numbers included in the volume of his poems, seventeen, a fifth of the whole, were first published in *THE INDEPENDENT*, five of them—including "Clover," "The Crystal" and "A Ballad of Trees" and "The Master"—before his death. It was at the home of its editor and with his assistance that Mrs. Lanier compiled the volume which was prefaced by the memorial written by the editor, Dr. Ward; and, as a forerunner of this edition of the poems, the *Century* published, in April, 1884, an article on Sidney Lanier, with portraits, also written by Dr. Ward. *Lippincott's Magazine* published nearly as many of the poems, but *THE INDEPENDENT* takes pride in having introduced Lanier more particularly to Northern readers.

The biographer, in his final critical chapter, grants unhesitatingly that Lanier had limitations as a writer and as a critic of literature. As a writer he had not time enough to revise his work; the pressure upon him was too constant for him to "labor, at leisure, in art"; and, despite his insatiable appetite for learning, his period of study was too short for him to become a great critic. With carefully balanced judgment Professor Mims refrains from indiscriminate praise as he discusses "The Science of English Verse" and other prose works by Lanier, and he

points out the tendency to fancies and conceits in his verse. But he acknowledges that there are moods when the imperfection of Lanier pleases more than the perfection of Poe. Nor is this to be wondered at. Lanier was pre-eminently a teacher, as was Emerson. He was a poet to whom moral beauty was of primary importance. Nobility and purity of thought mark all his work. Like the Great Teacher, he was possessed with a passion for humanity, and no highly finished poem by Poe, with all his faultlessness of technic, could give an uplift of soul like that produced by this suggestion or unfinished sketch for a poem left by Lanier:

"I made me a song of Serenade,  
And I stole in the night, in the night,  
To the window of the World, where Man slept  
light,  
And I sang.  
O my Love, my Love, my Fellow Man,  
My love."

It is this divine quality that has won for the poet love and praises that are deemed excessive by those who put form before substance.

### The Romance of Immunity

Professor Metchnikoff's last book,\* in which he discussed the question of enabling man to get rid of most of the miseries which at present afflict human life and live to a much riper old age than at present without the necessary concomitance of disease which now, as in the old time, is so likely to characterize the years of human life beyond the psalmist's limit, attracted widespread attention. While the present volume is much more technical and intended especially for medical readers, it will be popular, too, for it contains important details in the history and development of the most interesting chapter in modern pathology. Lord Lister did not hesitate to state that "the story of phagocytosis, Professor Metchnikoff's great theory of immunity, is the romance of modern medicine."

Most people now know something at least of this brilliant theory. According to it, whenever microbes attempt to enter the body by some wonderful system

of conveying information thru the blood stream, a very large number of white blood cells gather at the threatening point of invasion in order to prevent the enemies from obtaining an entrance. The white cells have a distinct activity of their own which enables them to penetrate the blood vessel walls and arrange themselves almost as would columns of soldiers where the danger is greatest. Whenever they can get near enough to a microbe they englobe him and proceed to digest him. Not infrequently during this operation they are themselves killed by the poisons contained within the body of a microbe. There are millions more of white cells to take the place of each dead one, however, and the dead ones are thrown off in the shape of pus cells, carrying with them whatever of harm there might be in the toxic properties of the dead microbe they have digested.

Immunity is the most interesting feature of pathology. Why is it that after one attack of most infectious fevers the individual is not likely to suffer from a subsequent attack? Why does the susceptibility, for instance, to such a disease as whooping cough, which exists in nearly all the human race, if they are exposed to it, at once disappear after the individual has gone through an attack of the affection? Formerly there used to be a question of the possible exhaustion of some substance within the body which formed soil of susceptibility. Later came the thought of the acquisition of some new property of resistance by the tissues. Now there is practically universal agreement in the doctrine that after the white cells of the blood, the phagocytes of Metchnikoff's theory, have once overcome a bacterial enemy, almost without exception they are able entirely to repel the attacks of that particular enemy so completely in the future that the body suffers not the slightest harm from it. This may seem a peculiar and special process for body cells to go thru, but as a matter of fact investigations in many lines, when seen by the light of the phagocytic theory, become clearer than before, and show that this process of growing accustomed to harmful agents is by no means confined to the white blood cells, but is shared to some extent at least by all the cells of the body, even

\*IMMUNITY IN INFECTIVE DISEASES. By *Elie Metchnikoff*, Professor at the Pasteur Institute, Paris. Translated from the French, by *Francis G. Binnie*. New York: The Macmillan Co. \$1.25.

by those of the central nervous system, and, surprising tho it may be, by such brain cells as subtend many of our highest sensory impressions so close to intellectual operations that it is hard for us to appreciate the distinction between them. Professor Metchnikoff, with his usual suggestive force, has brought this out in an interesting passage:

"In the study of the action of the nervous system one frequently has occasion to observe instances of adaptation. Similar facts are known to every one as an experience of daily life. We can become habituated more or less easily to all kinds of violent sensations. Light and very intense noises which, at first, excite exaggerated reflex actions are ultimately perceived without setting up the least movement. Even in the psychical sphere habit dulls painful feelings, and it is very probable that a whole gamut of adaptation, starting from unicellular organisms which accustom themselves to live in an unsuitable medium, up to cultured human beings who habituate themselves to a disbelief in human justice, will be found to rest upon one and the same fundamental property of living matter."

The solidarity of cell function thus pointed out is only another proof of how well founded in the nature of things is this theory of phagocytosis, so romantically impossible at first sight, so commonplace universal when further study has revealed its true significance. It has taken just twenty-one years to bring out its value, and the author may well be congratulated on the sturdy majority of his offspring.

**Fair Margaret.** By F. Marion Crawford. New York: The Macmillan Company. \$1.50.

In *Fair Margaret* Mr. Crawford has drawn a new character—that of a *prima donna* who eats with her fingers in private and enchants the public with her poetic presentment of the rôle of Juliet. She is a flesh-and-blood woman, with a superabundance of flesh, indeed; and her veins do not run ink, as do those of many paper characters in Mr. Crawford's novels. Fair Margaret herself is much more of a shadow lady than Madame Bonanni, altho she, too, is full of the love of life, thus meeting the requirement of genuine art. "The really great artists have always been tremendously vital creatures," and Margaret's superabundant vitality takes the dangerous form of flirting with a Greek finan-

cier with a semi-barbarous heart and an astonishing luster about everything he wore, even his almond-shaped eyes, bright almost to vulgarity, when she is really in love with another man, the unacknowledged son of Madame Bonanni. *Fair Margaret* at once challenges comparison with George Moore's "Evelyn Innes," and there is more than a fanciful likeness between the two women, great singers as they both are, and with cold hearts which make them fickle in love, but constant to their career, as lyric artists. Margaret is a better woman than Evelyn, but she is not so interesting a psychological—or should one say pathological?—study as Mr. Moore's perplexed and perplexing compound of opera singer and *devotée*. The dialog has more than Mr. Crawford's customary vivacity, and there is here and there a touch of tentative cynicism:

"at luncheon, . . . they were all saying their second best things, because each one was afraid that if he said his very best before dinner one of the others would steal it."

but the lasting impression left upon the memory is the imposing figure of the big, often faulty, but endearingly human mother, Madame Bonanni. Leopold, King of the Belgians, makes a very unexpected appearance at the very end, which gives promise of sequel.

**The Flight of Georgiana.** By Robert Neilson Stephens. Boston: L. C. Page & Co. \$1.50.

Charles Stuart was responsible for many romances during his lifetime, and apparently he has his followers still among romance writers, who are not willing for his responsibility to end, but call it back in endless historical novels, in which he is the hero or the hero's idol. Men nickname a leader they love, and the far-away, echoing strains of Jacobite songs prove that "Charlie was their darling" then, as he is now, of the historical novelists. The taste for a periwigged and powdered fiction is not abnormal. It is as natural as the "dressing up" of children in imaginative play, a form of dramatic instinct which dies hard in many people and survives in most novel readers. *The Flight of Georgiana* is dated in 1746, just after the disastrous defeat of the Jacobites at Culloden Moor, and

its hero and the friend of the hero are making their way as best they may thru England in order to reach France; how they were detained by the way, and the adventures that befel, the story tells. There is some pretty, tho not bloody, sword-play, plenty of action, a psychological experiment with a young lover, where he is given the choice between immediate freedom and safety, if he will promise never to see the lady of his heart again, or surrender to the king's officers at the end of a week with her, and the imminent prospect of being hanged as a traitor as soon as arrested. "Which will he choose, fair ladies?" And the novel ends with a wild flight on horseback across England to the desired port for departure to France, the fugitives hotly followed by men as determined as they, and the breathless reader who has accompanied countless heroes and heroines in such mad adventures, in numberless novels, will count this last elopement not the least exciting of the reckless series; and when he grows weary of travel and and sits down by the fireside to rest and watch an agile spider spinning a fantastically involved web across a "Golden Bowl" in the corner it will be pleasant to remember these vicarious perils and adventures he has passed.

**Captains All.** By W. W. Jacobs. New York: Charles Scribner's Sons. \$1.50.

Mr. Jacobs's people are a perennial delight. They may not live outside the covers of *Captains All*, but we are thankful to find them so vividly alive in this 'longshore book-country of retired boat-swains and seafaring folk. Everybody who reads at all should become acquainted with Mr. George Benn and his Machiavellian scheme for gaining unto himself a wife; and the ancient man who desperately loved a white cat; and Mr. Burge, reformed burglar; and many other good men and true, who have been born in Mr. Jacobs's fertile brain, and figure in his incomparable stories, and are endlessly entertaining characters to know; tho "it's human nature to grumble, and I s'pose they keep on grumbling and sticking to it because there ain't much else they can do," may be as true of critics as of "sailormen," we have no inclination to grumble at *Cap-*

*tains All* or any other of Mr. Jacobs's fantastic fiction, but are thankful for it and chuckle delightedly as we read.

**The Great Word.** By Hamilton Wright Mabie. New York: Dodd, Mead & Co. \$1.00.

In a series of twenty-one chapters, Mr. Hamilton Wright Mabie has given us a study of love. Perhaps the keynote of the volume is best given in his own words: "For there is no word for infinity and immortality in any language, divine or human, save the word love; for nothing save love has compass enough to hold and to express the life of the gods." Tracing the birth of love, in a mystical manner, as emanating from the interchange of looks between a god and a goddess, he describes its nature, its attributes and its working in language often eloquent and beautiful with the beauty of the colorist. But he finally leads up to the Christian ideal. The question which arises in the mind, after reading the volume and seeing where the study of love leads, is, whether or not there is something incongruous in starting from a pagan idea and landing in Christianity. It is difficult to imagine ideas more dissimilar than those of Chapter II., on "The Birth of Love," and of Chapter XXI., on "The Highest Service of Love." Granted that the mystic paganism is poetical imagination, and such as no one can fail to see the beauty of, it jars, like a string out of tune, with such a note as "Christ was not only the revelation but the veiling of the Father," following on the accepted theme, "God Is Love." We find no fault with the logic of Mr. Mabie, nor with the enthusiasm of his treatment, but we cannot help pointing out the incongruity of the elements he attempts to combine in a unity.

**Glimpses of the Ages;** or the "Superior" and the "Inferior" races, so called, discussed in the light of science and history. By Theophilus E. Samuel Scholes, M. D. 12mo., pp. xvii:409. John Long, London.

Dr. Scholes appears to have drawn his inspiration for this book from his experience as a medical missionary in Africa. His purpose is to show by science and history that it is an error to predicate natural superiority to the

white race as against the colored races, and particularly the negro. He antagonizes such a discredited and almost forgotten work as that of Glidden's "Types of Mankind" and some later authorities, especially Dr. Carl Vogt and Prof. A. H. Keane. He gathers a large amount of facts and arguments; and the conclusion one is inclined to draw is that his position is correct, but that the defense is confused and lacks clearness and conclusiveness. We do not doubt that there may be as much material for development in the negro brain as in any other, and certainly the physical type is strong and developed enough, while the native civilization of African tribes has been quite as marked as that of European races before Roman civilization lifted them up against their will. But we find in Dr. Scholes's volume material for an effective argument rather than the argument itself.

### Literary Notes

GROUND has been broken at 311 to 319 West Forty-third street for the new twelve story publishing house of Charles and Arthur H. Scribner. The building will have a frontage of 125 feet, and will cost \$300,000.

....The University Press, of Sewanee, Tenn., issues a *de luxe* edition of Milton's "Ode on the Nativity," consisting of 250 copies, for \$2 apiece. A special edition of ten copies on Japanese paper, hand illuminated, will sell for \$10.

....David L. Dodge's pamphlet, "War Inconsistent With the Religion of Jesus Christ," which was first published in 1812 and led to the formation of the New York Peace Society, is now republished with a historical introduction by Edwin D. Mead. (Ginn & Co., Boston. 50 cents.)

The fifth volume of Mr. Rhodes's "History of the United States" has a very careful review in the "Proceedings" of the Massachusetts Historical Society, by its president, Charles Francis Adams. In it he discusses, with much historical insight, the reasons why, against all apparent reason and prophecy, the Confederate States failed in the War of the Rebellion. He says it was not lack of courage or numbers, but from the fact that the blockade made it impossible to supply the army with food and munitions. The soldiers melted away at last, because they could not be fed and armed. With this must be considered the two colossal blunders of the Southern leaders in imagining that Northerners could not fight and that lack of cotton would compel Europe to aid the Confederacy. Mr. Adams also treats with great severity the military failure of General

Butler, in command of the army of the James, in April, 1864, when he failed ignominiously to support the advance of Grant on the Potomac.

### Pebbles

HARD TO BE IDENTIFIED.

A stranger came into an Augusta bank the other day and presented a check for which he wanted the equivalent in cash.

"Have to be identified," said the clerk.

The stranger took a bunch of letters from his pocket all addressed to the same name as that on the check.

The clerk shook his head.

The man thought a minute and pulled out his watch, which bore the name on its inside cover.

Clerk hardly glanced at it.

The man dug into his pockets and found one of those "If-I-should-die-tonight-please-notify-my-wife" cards, and called the clerk's attention to the description, which fitted to a T.

But the clerk was still obdurate.

"Those things don't prove anything," he said. "We've got to have the word of a man that we know."

"But, man, I've given you an identification that would convict me of murder in any court in the land."

"That's probably very true," responded the clerk, patiently, "but in matters connected with the bank we have to be more careful."—*Pittsburg Index*.

FAMILIAR LINES.

(Arranged so that the little ones can always remember them.)

The boy stood on the burning deck,

His fleece was white as snow;

He stuck a feather in his hat,

John Anderson, my Jo!

"Come back, come back!" he cried in grief,

From India's coral strands,

The frost is on the pumpkin and

The village smithy stands.

Am I a soldier of the cross

From many a boundless plain?

Should auld acquaintance be forgot

Where saints immortal reign?

Ye banks and braes o' bonny Doon

Across the sands o' Dee,

Can you forget that night in June—

My country, 'tis of thee!

Of all sad words of tongue or pen,

We're saddest when we sing,

To beard the lion in his den—

To set before the king.

Hark! from the tombs a doleful sound,

And Phœbus 'gins arise;

All mimsy were the borogroves

To mansions in the skies

—*Cleveland Leader*.

## The Vitality of Democracy

It is possibly true, as two or three prominent writers have recently affirmed, with some show of statistical foundation for their assertions, that a major part of the wealth of the United States is now owned by a small minority of our population of 85,000,000 or 90,000,000 persons. There is some truth mixed with levity in the Wall Street jest that it is no longer the man who is worth a million dollars or more, but only the man whose annual income is a million dollars or more, who is ranked as a millionaire.

Facts like these—assuming their substantial truth—reveal a vast change in American social conditions since the early days of the Republic, when John Hancock, the richest man in New England, left an estate of possibly \$300,000, and George Washington, reputed to be the richest man in America, could possibly have inventoried his total wealth at three-quarters of a million.

That the growing disparity of economic conditions in America threatens the stability of republican institutions we have too often affirmed to need to dwell on that point now. In the long run republicanism proves to be a reality or a name according to the degree of equality persisting in the population. Political equality and equality before the law are the essence of republicanism, and these two kinds of equality can be maintained only if there is a great deal of approximate equality in educational opportunity, and, back of that, in economic opportunity. While universal suffrage might exist in a population 90 per cent. of which could neither read nor write, and 10 per cent. of which was well educated and clever, the illiterate voters would only record the preferences of the literate. In like manner, in a population of which 90 per cent. had no possible means or opportunity of livelihood not under the control of a favored 10 per cent., the 90 per cent. would vote as they were told to vote, until they got up a revolution that transferred the ownership of eco-

nomic opportunities from the few to the many.

Notwithstanding these indubitable truths, the wide awake social observer has only to look about him today to see multiplying signs of the marvelous vitality of democracy. The great corporations, controlled as they are by a mere handful of multi-millionaires, are day by day increasing their grip upon every industrial and commercial opportunity and narrowing the circle of the powerful few that substantially own and control. Yet, at the same time, their position, their very hold on life, is threatened today by mighty democratic forces that may yet become a tidal wave of leveling destruction. The volume of democratic feeling is hourly growing, and the activity of reforming groups of every conceivable designation and description is inspiring.

One of the evidences is afforded by the widespread interest in municipal problems. It is about ten years now since the revolt of intelligent and conscientious men against the debauchery of city government took shape in a movement that has become a strong organization of forces which came together almost hopelessly in the annual "Conferences on Good City Government." It is hardly too much to claim that the uprising against the political bosses last November was largely a product of this ten years of hard work for municipal reform.

Another evidence is afforded by the capitulation of railway interests and the United States Senate to President Roosevelt and his demand for "rate" legislation. It is on all hands conceded that the public is determined to make the railways fairly and honestly serve the public interest; and that if rebates, discriminations and other abuses cannot be stopped thru government control, they will be stopped sooner or later thru government ownership.

No open minded man could have heard the discussions of railway rate legislation and of municipal ownership at the meeting of the Economic and Political Science Associations at Balti-

more the other day without being deeply impressed by a change that has come over the minds of both academic students and practical men within a very few years. The bugaboo of socialism was not once raised. The discussion adhered to practical considerations thruout, and the impression left upon the large audience undoubtedly was that the American people are moving rapidly in the direction of a firm and authoritative control, by whatever means prove to be workable, over all public service utilities.

But it is not only in the rising tide of popular conviction in support of honest and efficient city government, demanding an end of corporation control over legislation thru boss and machine rule, and asserting popular control over public utilities, that the vitality of democracy is being revealed. Perhaps even more significantly is it disclosed in the new spirit and the enthusiastic effort that are being manifested in all organized activity in behalf of the poor, the suffering, the defective and the delinquent.

When, less than a generation ago, the demand for a more scientific and a more businesslike way of dealing with the problems of private charity began to make itself felt there was a great deal of opposition, based upon an assumption that cold blooded methods would destroy all warm human interest on the part of the well to do in their relations to the poor. It is safe to say that never, since the beginning of the Christian era, has there been so much of freshness, of spontaneity, of genuine democratic feeling, as there is today, in all the voluntary movements looking toward the diminution of poverty, vice and crime.

The social settlement may justly claim a large share of the credit for this new and thoroly democratic spirit in humanitarian work. There are today a thousand centers of neighborly work, of charity organization, of municipal reform, of socialistic agitation, of popular education, each of which is instinct with vital democratic feeling, each of which is seeking to correlate and organize all the forces of democracy and of human betterment. Within the next fifteen or twenty years we shall see some interesting results of the quiet but effective influence that they are now bringing to bear.

## University Football Injuries

WHENEVER it has been urged that the number of fatal injuries that occur every year on the football field is an indication that the game as played is unfit for our stage of civilization, it has always been suggested in reply that the fatalities did not occur at the large universities where the men were in proper condition for the game, but always at the minor colleges where men had not been properly trained. The general impression produced by this response has been that the injuries received by the members of the large university football squads were so trivial as scarcely to deserve consideration. It was supposed that the men were occasionally laid up for a few days, but that was about all. A few have been too close to the actual conditions of things to be led into any such false notion. We have known of young men every year who have required months to recuperate from football injuries received only in practice. The fact that Harvard's football captain could not play in the star game of last year because of a hemorrhage within his skull also somewhat jarred the foundation of the legend with regard to the comparative innocuousness of university football.

Now, however, we have presented in the *Boston Medical and Surgical Journal* for January 4th, 1906, definite evidence as to the seriousness of the accidents which occur even at a large university like Harvard. Dr. Edward H. Nichols and Dr. Homer B. Smith, who have had medical and surgical charge of the football squad of Harvard during the past season, give the records of their work in an article on "The Physical Aspect of American Football." It is no wonder that they declare as one of their conclusions that constant medical supervision of the game is a necessity and not a luxury, and that the constant attendance of two trained surgeons is required for this purpose. They report the more or less serious injuries as numbering altogether 145. Among these the most trivial are cuts which, twelve in number, required stitches. There were six ruptured muscles, two dislocations of the shoulder, five fractured ribs, ten dislocations of the semi-lunar cartilage of the

knee, an accident which is likely to be followed by considerable disability extending over a long period, sometimes for many years. The nose was broken seven times and the rim of the pelvis, the large, heavy bone, one of the heaviest in the body, in which as in a basin, many of the abdominal viscera rest, was broken four times. The acromial end of the clavicle was dislocated eleven times. Many of these injuries it may be said, certainly all the fractures and dislocations, are likely to be sources of trouble with advancing years.

This is already a sufficiently startling catalog, and there are other serious injuries mentioned; and some of the accidents involving especially the central nervous system we have thought worth while to leave for special consideration. There were bad strains of the back in nine cases. These are much more serious than the name might seem to indicate, since, as the Harvard surgeons state, they often lead to very marked disability for a considerable length of time. There is more than suspicion that in some of these cases, at least, it is not alone the muscles of the back that suffer, but the spinal column is affected and even the spinal cord is injured to some extent. In one case there was an actual fracture of the second cervical vertebra, which is, of course, an extremely serious accident, because of the danger to the cord. In one case there was a hemorrhage from the middle meningeal artery, with serious disturbance of the brain. In nineteen cases there was concussion of the brain. This means that men were injured so badly about the head that for a time they either lost consciousness or were beside themselves and did not know what they were doing.

This portion of the report is so important as a reflection on the results that may follow from a sport that we quote it as it is given:

"Cases of concussion were frequent, both during practice and games. In fact, but two [!] games were played during the entire season in which a case of concussion of the brain did not occur. There were several noticeable features in these cases. Frequently, the fact that a man has received a serious head injury was noticed by the surgeon from the side lines before it was recognized by the players. This was due to the fact that a player might, apparently, automatically run thru a con-

siderable series of plays before his mates noticed that he was mentally irresponsible. The mental state of the players who had concussion was variable, some being highly excitable and hysterical, others merely confused, and in a few cases, knocked completely unconscious. In every case there was a certain loss of memory, both previous and subsequent to the injury."

As the authors note, no physician is in a position to state at the present time with any certainty whether there may not be subsequent effects from concussion of the brain. Most of the nervous diseases that begin in later life have an origin that is shrouded in mystery. It has become the custom in recent years to attribute their causation, in some degree at least, to disease incidents and accidents of early life. Children's convulsions are now considered to be much more serious events than they used to be, because of the fear of subsequent nervous degeneration with serious developments in later life. Whether injuries to the head and the back involving the brain and the spinal cord may not have a like effect, physicians are not sure; but certainly in taking a history of any serious nervous ailment such accidents would be set down as of the gravest import.

It is no wonder, then, that in their conclusion the Harvard surgeons should announce that the number, severity and permanency of the injuries received in football are very much greater than generally is credited or believed; that the number of injuries is inherent to the game itself, is not due to close competition, since the proportion is about the same in games and in practice; that a large percentage of the injuries is unavoidable and incomparably greater in football than in any other of the major sports, and that finally the percentage of injury is much too great for any mere sport. If to this be added their opinion that the game as now played does not develop the best type of men physically, because too great prominence is given to weight without attention to corresponding nervous energy, and that the greater number of the injuries come in the "pile" and not in the open plays, it is evident that the game, if continued, must be so modified as to diminish very greatly the number of injuries or else the university

authorities of this country will stamp themselves as being overruled by their students, who are largely influenced by gate money and other unworthy considerations into permitting a phase of barbarism that must be intolerable to any really cultured community.

## Going, Going, Gone

WE are sorry to lose him, but we cannot help it—he is gone. So is the nineteenth century. We move on with the twentieth century, and must try to keep a little ahead of its years. This subscriber is gone. He likes THE INDEPENDENT, is sorry to lose it, but he can no longer endure our simplified spelling. The fact that the National Educational Association approves it and prints its publications in it, that the scientific men as well as the philologists approve and practise it, does not concern him—he does not like it; and he says:

Why on earth do you single out a dozen or so of good, honest English words and make orthographical monstrosities out of them? Honestly, every time I come across “thru,” “thoroly,” “thoro” and “tho,” et al., they stick in my intellectual throat, and throw me off the track when I am trying to follow you through an interesting editorial as completely as an iron bar on a rail would a locomotive.”

That is, simply, “I do not like you, Dr. Fell.” He adds that it “might easily provoke a reformed swearer to return to his sinful habit,” for he cannot endure “those absurd, ridiculous, temper provoking spellings,” which “are not authorized by either of our two standard American dictionaries.” Oh, yes, they are! *Tho*, *thru* and *thruout*, which most raise his bile, are in the “Standard Dictionary” and equally in the “Century,” on the authority of the recommendations of the Philological Society.

We do not like to say it—for we hope it is not true, tho it looks like it—that he cares more for selfishly humoring his old-fashioned sentiment than he does for the comfort and education of his children. If it were not for our atrocious way of spelling words a child might learn to read and spell in three months, instead of not learning in three years. That is why so many of our children are backward. We are looking to the future, and he is looking to the past. We want

improvement, and he is satisfied with things as they are. We are reformers, but not radicals. We will help the simplified spelling as far as we can, and wish we could go farther. Even our correspondent accepts Webster’s reformed spellings, such as *labor* for *labour*; but how his father hated it, as he hates *tho* and *thoro*! We have the future with us, for we have the scholars and the teachers; and we have the overwhelming majority of our readers, whose reason approves us, even when their old habit is momentarily startled.

Now that we are on this matter of spelling we may add that many of the younger generation have always been skeptical of the accuracy of their fathers’ memories when they boasted of the superiority of the educational methods of the good old times when most of the work was concentrated upon the three R’s instead of being scattered, as it is now, over many other letters of the alphabet. Still, it is not becoming in a son to challenge the old gentleman’s memory, and very difficult to prove him wrong. Consequently the reactionary members of school boards could without fear of effectual contradiction denounce the “fads and frills” of modern educators on the ground that they interfered with a thoro drill in such essential studies as arithmetic and spelling. Now, however, we have some direct evidence on the question which is strongly in favor of the modern methods. In a garret in Springfield, Massachusetts, a book of examination papers of 1846 was found, and the same questions and spelling tests were given to pupils of the same average age, with the following results:

|                                    | 1846. | 1905 |
|------------------------------------|-------|------|
| Number of pupils.....              | 85    | 245  |
| Spelling, per cent. correct.....   | 40.6  | 51.2 |
| Arithmetic, per cent. correct..... | 29.4  | 65.5 |

The pupils of 1846 had the advantage in several respects. The examination questions were doubtless more nearly allied to their class work. They were all children of English speaking homes. They devoted a third more time to their studies, for the school year was then forty-four weeks, with an aggregate of 1,340 working hours, while it is now forty weeks, comprising about 1,000

hours. And they studied little besides reading, writing, arithmetic, geography and spelling. Nevertheless, the pupils of the present day did better in spelling and much better in arithmetic than those of sixty years ago.

### How We Got Into It.

It is as hard for a nation as for an individual to keep to the resolutions of youth. We started out in life with the good intention of avoiding entangling alliances with European nations, yet now we find ourselves in the midst of a wire-pulling entanglement, with some of the wires pretty highly charged with electricity. It is hard to see how we can get thru the Algeciras Conference without offending either France or Germany. As the time of convening draws near, the Conference does not appear to exert the pacifying influence that was expected of it. There are rumors of troops massed on both sides of the Franco-German frontier, and the newspaper strategists are busy contriving and publishing plans for the triple campaign, for it is generally assumed that Great Britain will actively take the side of France in case of a war with Germany over the Moroccan question. All Europe is nervous, and the news that Germany has ordered 20,000 freight cars for the transportation of troops, to be delivered about the time when the Conference will adjourn, causes the same apprehension as when a man puts his hand to his hip pocket in the South. Both Germany and Great Britain will be represented at Algeciras by fleets as well as diplomats. Even the movements of Admiral Sigsbee's Mediterranean Squadron of cruisers is supposed to have something to do with the case.

However absurd may be the idea that America is sufficiently concerned to use the big stick in this crisis, still our country has been drawn into the Moroccan imbroglio by a curious chain of circumstances, beginning over a hundred years ago, when the United States refused to comply with the custom of European nations to pay tribute to the Barbary States to secure immunity from Mediterranean pirates, and enforced the refusals by the bombardment of Tripoli. So Morocco was really brought into in-

ternational politics by the United States. Last spring, when Kaiser Wilhelm suddenly decided that Germany had important interests in Morocco, he based his right of intervention with the plans of France for its pacific penetration on the ground that the reform of Morocco was in the hands of the Powers who participated in the Conference of Madrid in 1880, and France was forced to comply with his demand that these Powers be again convened. Now, the United States was a participant in this, because our Consul General of Morocco had taken part in the Conference of Tangier the previous year, and, indeed, had been one of the foremost protestants against the abusive treatment of the Jews, which was the immediate cause of the Conference.

Morocco had a double portion of Jews, some who came there from Palestine as early, they claim, as the time of Solomon, and some who took refuge there when they were expelled from Spain in the memorable year of 1492. They were still subject to the indignities and restrictions of the Middle Ages. The wearing of the gabardine was compulsory, they had to go barefoot in the streets, and they could not live in two-story houses. They were fined, taxed and plundered right and left, and murdered with impunity. "Anybody may kill seven Jews without being punished," ran a Moroccan proverb.

About the particular incident that brought international indignation to a focus there are two versions. One is that a respectable Jew, aged seventy years, a French citizen from Algiers, was attacked by a mob in Fez, who drenched him with kerosene and burned him alive amid shouts of joy. The other story is that he was not aged, nor respectable, nor a French citizen; that he was justifiably shot for insulting a Moorish woman on the street. It does not matter, anyway. The maltreatment of the Jews and other disorders were undeniable, and quite justified our Consul at Tangier in making a vigorous protest. He informed the Sultan that there was great indignation in the United States and elsewhere over the treatment of the Jews in Morocco, and that the representatives of other nations had received instructions to inquire into the condition of the Jews

and to consult as to measures to ameliorate it. He demanded the punishment of the perpetrators of the outrage and warned the Sultan that

"it is indisputably requisite that the Israelites of Morocco should be protected by the local authorities, otherwise it will not be long before they will all be protected by foreign nations."

The conference of Tangier in 1879 was participated in by the representatives of nine Powers and five more by proxy. At the ensuing conference of Madrid, which met May 19th, 1880, the following nations were represented: France, Germany, Austria-Hungary, Belgium, Spain, United States, Great Britain, Italy, Morocco, Holland, Portugal and Norway and Sweden. The delegate of England was Lord Sackville-West, best known in this country because of the conspicuous part he took in the Cleveland campaign of 1888. The United States was represented by General Lucius Fairchild. From the minutes of the Conference it appears that he took no active part in the proceedings except to insist upon the American theory that a naturalized citizen could return to his native land without forfeiting the protection of his adopted country. He also is recorded to have declined to sign the convention until it should have been approved by his Government, and since his name finally appears on the protocol it is to be presumed that it was approved by our Government.

The Convention of Madrid, which was signed on July 3d, 1880, demanded of the Sultan of Morocco the protection of the consuls, their households, interpreters, etc.; provided that all foreigners could hold property in Morocco if purchased with the consent of the Government, and claimed limited naturalization rights and equal justice without regard to race or creed. The most important provision in its bearing upon the present situation is that all the Powers represented at Madrid shall have the treatment of the most favored nation. If this clause is insisted upon it would effectually prevent France from carrying out her plan to make a Tunis out of Tangier.

Washington despatches state that our representatives at the coming Conference of Algeciras, Ambassador White, of Italy, and Minister Gummere, of Mo-

rocco, will go uninstructed. It is to be hoped that this is not true, for it is a difficult situation at the best and needs careful preliminary consideration of all the exigencies. Both parties claim the support of the United States; Germany, because, like her, America wants equal trade privileges, and France, because we made no objection to the Anglo-French agreement of April 8th, 1904, giving France a practical protectorate over Morocco. In fact we gave this a tacit recognition immediately after by asking the aid of France in securing Ion Perdicaris from the hands of Raisuli. Doubtless we shall try to act as peacemaker, but a peacemaker between two combatants is likely to get some of the blows.

## Hibernating

THERE is more hibernating in the world than is commonly estimated. In the winter we sleep, on an average, two hours longer than in the summer—in summer we are up at 4 or 5 o'clock and not in bed until 9 or after; in winter we are drowsy at 8, in bed at 9, and do not rise until 7 or 8 in the morning. This is the reckoning for average people. It does not take into account those abnormal folk, who, living in cities, turn night into day. These are rarely awake, in all their faculties, until near dinner time, at 7 o'clock, and from that time until midnight or after—about eight hours out of the twenty-four; the eight hours that most fade the flesh, dim the eye and undo the nerves. Living in the dark is bad for either animal life or vegetable life.

Some races have a larger capacity for hibernating than others. The genuine negro grows drowsy as the frosty days come on. He is broken all up, so far as steady work is concerned, when the first snow clouds begin to shake out their contents. It is difficult to keep him in the husking field after November 1st. You can see that he is actually hibernating, by the far away look of his eyes and by the lack of life in his step.

It is not the cold weather that regulates us in this drift toward longer sleep and deeper. Sitting under the pines and magnolias of Florida, we do not escape the hibernating tendency. It is in the blood. Everything must do its work

under the law of periodicity. The natives of the South, however, have lost the knack, or, rather, have readjusted it, so that they grow sleepy in summer. This is the result of having no winter. It is not the heat that overcomes them; it is only the fact that all living things must have their rest period, and summer is the most convenient in that climate. This is true also of Southern trees—but instead of hibernating they estivate. Every tree and shrub throbs with life for a season and then its energies relax. Only in the tropics no tree drops its leaves all at once, as they do at the North.

We are likely to follow the books, and speak of hibernating as belonging only to bears, hedgehogs, and a few other creatures. But study your barnyard animals, and you will learn better. As soon as the ground ceases to furnish succulent food the cattle stand around the gates or the outbuildings, or nibble slowly at the big stacks. In the middle of the day they separate, and stroll leisurely about the big pasture. They move so slowly, however, that you may take an easy photograph of the whole herd. There is but one wideawake creature about the barns. The rooster crows across the frosty morn as the day star begins to pale into the yellow light of a lazy sun; yet the hen finds nothing interesting in the fields, but snugs herself under the lee of some hedge, or spends two-thirds of each day on her roost.

This same law of hibernating covers the vegetable world. The butternut and the ash get tired early in September, and the American elms and soft maples go to sleep a little later. The sugar maples, magnolias and persimmons drop their leaves in early October. The European trees, ashes and maples and elms and oaks, bring along their old European instincts, and stay green till November. Apple trees cannot rest until their fruit is picked; then at once they grow desperately somnolent. It makes one laugh to see their drooping eyelids. Soon the whole vegetable world is hibernating. In the spring it will wake up sometimes before the snow is gone. Hyacinths and crocus come crawling up out of their earth bed, rubbing their eyes, and not quite wideawake when they first get above ground.

This business of hibernating should be reckoned upon in our study of humanity, and in our methods of education. It is a bad thing to turn night into day, and just as bad to turn winter into summer. There should be a spirit of rest and recuperation thru all the winter months, in household and in school. Homely games are now in order—something that will not tax the brain, and will rather foster sleep than prevent it. Our fathers understood this matter when they sat around the big fireplaces, eating apples and nuts, and getting into bed soon after the chickens and the crows.

All mankind is divided into two parts: those who work right on when they talk, and those who, when they talk, stand still—holding hoe in hand, or plowing with the tongue only. It is an aggravating brood, this last, but quite too numerous to cope with—spoiled by education or bad habits. If you try to argue with them, or to drive or to urge, they only stand the longer, or get angry. Your wisest plan is to get out of the way, until their mechanism gets into working order, and their attention is once more fixed on the weeds. The worst samples of this sort stop when they think, and with chin on the hoe handle, ruminate their cogitations. These people have had their hibernating instinct so disturbed that they really are never quite awake. They are about equally valuable in summer and in winter.

Not enough has been made of hibernation. It is a part of the rhythm of life. Sleep is not yet understood. It has a recuperative power that, rightly understood, will give maximum power to all living creatures. The origin of life is still a mystery, but we know that to sustain it is to lift from death into activity. Better be at full exercise of our faculties part of the time than at partial exercise all of the time. That each day must be divided between activity and a semblance of death we recognize, but we have somehow overlooked the fact that the larger periods are governed by the same law.

As the short days come on look at your house plants. They are willing and preparing to go to sleep. A few of them are strangers to our climate, and prefer to sleep thru the summer rather than the winter, such as the calla lily. If they

have not had their sleep they will not blossom, and if robbed of sleep too long they will die. Most of the roses have only one eye open in the winter. If you compel these drowsy ones to keep on absorbing the heat and moisture they will spindle their shoots, fade out their green, and their sickness will poison the atmosphere. Your hyacinth must be left five or six weeks in the dark, and then, being brought to the light, it will burst out into bloom and perfume. The trouble with most house plants is that they are never allowed their sleep; they are fagged, tired, devitalized and in bad health. They are unfit companions, especially in your sleeping room. This life business is a marvelous thing. We look out over the fields, where only a few days ago there was abounding life—apples loading the boughs and leaves pulsating with vitality—but now all is rest and sleep.

"The fields are still, where late the wheat and corn

Laughed in the gladness of the summer noon,  
And waved saluting banners to the morn  
And whispered softly in a twilight croon."

But the buds are already formed for another year's unfolding. "Sleep, Death's twin brother," is, after all, not Death. Hibernation is a function of life. All that is going on during this rest period we do not understand, but it is essential to health and continued activity.

#### Protest of the Chamber of Commerce

Some time ago, the New York Chamber of Commerce instructed its Committee on Insurance to report as to the need of additional legislation for the regulation of life insurance companies and kindred organizations that are custodians of large trust funds. This action was suggested, of course, by the results of the recent investigation. A report was made last week, at a regular meeting of the Chamber, by the Committee's chairman, Mr. Anton A. Raven, whose signature was accompanied by those of his associates, Messrs. Robert C. Ogden, Charles F. Brooker and Elijah R. Kennedy. Mr. McCall, who has retired from the presidency of the New York Life Insurance Company, is a member of this Committee, but he took no part in preparing the report, and for obvious reasons his name

is not attached to it. Pointing out that the business of life insurance (being "a combination of finance, economics and ethics") should certainly call forth an ideal type of business ability and strict integrity, the Committee says:

"The fundamental cause of the maladministration of the companies named has evidently been the lost ideal and the forgotten ethical conception of the sacred trust involved in the administration of life insurance funds."

Extravagance has so reduced the dividends that they have become "quite trifling and almost farcical in amount," altho the magnitude of the business should have increased them:

"The investigation has revealed a spirit of sordid commercialism, which has become rife in our rapidly growing country, entering into many of our activities, and has clouded the judgment of those who have been the custodians of large and important trusts, causing them to depart from the well-trodden paths of rectitude and high honor which have heretofore characterized our merchants and bankers. The very atmosphere of our commercial life has become impregnated with an undue desire for wealth and power. To attain these ends, apparently no means have been left unemployd. Attempts have often been made to influence legislators, and large sums of money have been used to that end. This has not been unattended with the betrayal for personal gain or advantage of the high trusts which have been committed to them."

Reforms are suggested with respect to deferred premiums and to the giving of rebates on large policies, but in view of the fact that new laws will soon be passed in response to the investigating committee's report, Mr. Raven and his associates do not think it necessary for the Chamber to recommend any special enactment. They do insist, however, upon the salutary effect of publicity as to all the affairs of life insurance companies. Restrictive legislation cannot ensure honesty of administration, but publicity gives to officers and directors a realizing sense of their obligations. There should be a semi-annual examination of all appropriations of funds. The Chamber unanimously adopted this report, with an accompanying resolution declaring that "in the interests of pure commercial life," it entered "its solemn protest against the practices which have resulted in thus tarnishing the good name of our financial institutions and of bringing reproach upon our commercial community." This action is in full accord with the past

utterances of the Chamber, which may fairly be called the most eminent and influential organization of its kind in the world. Among its members are many whose intimate business and social relations with the offending life insurance officers and directors (some of whom are also members) would naturally tend to restrain them from joining in the denunciations of this report and this resolution, but personal considerations were set aside "in the interests of pure commercial life" and for the public good.

#### Homicides and Lynchings

The record of homicides the past year is alarmingly large, 9,212 reported by telegraph in this country, which is doubtless less than the real number. We kill more people by violence, in proportion to our population, than any other so-called civilized country in the world. Italy comes next to us, and the bad pre-eminence of the two countries is due to the fact that Italians carry knives, while Americans carry pistols. And let it be considered that killing is not seriously punished by our courts, only one legal hanging to sixty-four homicides. As they are not punished, naturally the number of homicides increases, 730 more reported by the *Chicago Tribune* than in 1904. It is, however, a satisfaction to learn that the number of lynchings is less than last year, sixty-six in all, of which only one, in Nevada, was in a Northern State, so that we may say that lynch law is practically extinct in the North. Of the sixty-five lynchings in the South, the State of Vardaman—we mean Mississippi—boasts twenty lynchings, all of negroes, of which two were for criminal assaults and three for attempted assaults. Six of the twenty lynched were taken from the custody of officers, and one had been convicted and sentenced. There is great complaint in Mississippi of the difficulty of getting negro labor, and it is not strange. Governor Vardaman stands a fair chance now to be elected to the Senate, where he would be a worthy representative of the lynching State. He says in his last message that the negroes are growing worse and worse as the result of education. The *Columbia*, S. C.

*State* ridicules him, and says that in South Carolina housekeepers will trust none but literate servants. There are three of the former slave States in which there were no lynchings—Delaware, Maryland and West Virginia; but Virginia, North Carolina, Missouri and Florida are discredited with but one each. Only one white man was lynched in the whole country.

#### A Damaged Squadron

It is certainly an astonishing fact that Prince Battenberg's squadron of six cruisers could leave the harbor of New York at a speed of eighteen knots with vessels at the usual 400 yards distance apart, and our own crack squadron of battleships found it impracticable to keep in the main channel at a speed of twelve knots. To the naval officers the waterway into New York Harbor is or ought to be as well known as Broadway. Everybody who goes into and out of the port on an ocean steamer can see for himself the buoys marking the route just as plainly as trees on each side of a country lane. The day was clear and perfect, the wind nothing unusual, and yet Rear Admiral Evans led his ships in such a way that the "Kentucky," immediately astern of him and bound, both by custom and, as it happened, by direct signal to follow him, ran into the mud on the east side of the road. The "Kearsarge," in endeavoring to avoid the "Kentucky," likewise went aground, and the "Alabama," seeing this, tried to go to westward of the "Kearsarge" and struck the "Kentucky," fortunately without causing very serious injury. This is disgraceful. The responsibility is wholly on Rear Admiral Evans—unless he can show that the "Kentucky" was, at the time of grounding, unavoidably out of her proper position. This is not very likely, as he has recently been peremptorily suspending captains by signal from the flagship for deviating from their proper places. The captain of the "Kentucky" had only just taken charge, and it is his first battleship command. The latter is also true of the captains of the "Alabama" and "Kearsarge." But the subordinate officers of all three ships

have been attached to them for ample time to have become proficient in their management, altho after the persistent neglect of drill last summer in order to keep the squadron loafing in Bar Harbor, Newport, Watch Hill and Narragansett, with repeated compulsory attendance of all officers in full uniform at dinners and other entertainments, given by stock brokers and others, the degree of that proficiency just now is not altogether as certain as could be wished. The present performance on its face is humiliating to the country. Admiral Evans should be put on his defense—and no scapegoat substituted.

#### Railroad Combinations

The Great Northern and Northern Pacific roads were not the only parallel and naturally competing lines that were united by combination agreement in violation of law. We do not understand that the decision in the memorable Northern Securities case has made one a competitor of the other or ended that union. Attorney-General Moody is asked by a resolution introduced in the House to say whether the law is not violated by the Pennsylvania road's control of certain parallel lines. It may be that it is, but we cannot see what good could be accomplished by an attempt to dissolve this combination by prosecution. The association would be continued by some form of community of interest.

The President's message to Congress on the Canal welcomes investigation of conditions, as we were sure he would. We have allowed Mr. Bigelow to indicate some points which investigation should take. The President has the merit of standing by his friends as long and as far as he can, and he does it in this message by expressing his disbelief in the charges of inefficiency that were made. What he says of "irresponsible investigators of a sensational habit of mind, incapable of observing or repeating with accuracy what they see, and desirous of obtaining notoriety by widespread slander," certainly does not apply to Mr. Bigelow.

District Attorney Jerome explained in the recent municipal campaign that his action as to any violation of the laws by the life insurance officers must be deferred until after the close of the investigation. All the evidence is in. Has he found in his study of it anything to warrant the prosecution of anybody? Among the officers and the lobbyists is there any one who should be held to answer on a criminal charge? Undoubtedly, in due time, Mr. Jerome will either procure the indictment of one or more of these persons or explain to the public that none of them is guilty of an indictable offense.

Morales is no longer President of Santo Domingo, but his successor and the present Government support the pending treaty and desire that the collection and distribution of revenues under the temporary agreement shall be continued. Nearly \$1,000,000 has already been set apart for the payment of the external debt. The good effect of the agreement can easily be seen. Blunders at the beginning of the negotiations should not now cause our Senate to reject the treaty that would give this commendable agreement legal force.

If there must be restraining orders from the courts in labor controversies the defendants should have an opportunity to be heard before the orders are issued. They will be so treated hereafter by Judge Quarles, of the District Court, in Wisconsin, who will decline to grant such an order upon the testimony of the applicant alone. His practice will thus be in accord with a recommendation in the President's recent annual message.

Mr. Carnegie gave ten million dollars to pension superannuated professors of colleges and universities, denominational institutions being specifically excluded. Now he has thought better of his plan and has given five millions more for the benefit of colleges under religious control. Here is not only generosity, but the ability to take a second thought and a better one.

## Alexander Ector Orr

THE election of Alexander E. Orr to the presidency of the New York Life Insurance Company is an event which certainly has given great pleasure and assurance to the entire financial world. He was born in Strabane, County Tyrone, Ireland, on March 2, 1831. He visited the United States in 1850 and settled permanently in New York city a year later.

About thirty years ago Mr. Orr was an active partner of the great produce firm of David Dows & Co. Even at that period of his life he had developed such capacity in affairs of business that he was generally recognized as one of the most promising men in that field. He received a flattering indorsement from those associated with him on the Produce Exchange by his election as president of

that important institution, which office he held for years, being several times re-elected.

The house of David Dows & Co., in its day, was probably the most important of the sort in the United States. Mr. Dows, upon his death, left a very large estate, and, as an evidence of confidence and esteem, made Mr. Orr his executor.

When Samuel J. Tilden's library trust was created Mr. Orr became one of the trustees, which place he still retains. Ten years ago Mr. Orr was made president of the Chamber of Commerce, one of the most honorable positions a business man can hold in the city of New York. His elevation to this commanding place was a striking evidence of the confidence reposed in him by the merchants of New York, and testified to their appreciation of his high character and ability.

His activities in various directions have been very great, and he has been identified with many important business and philanthropic as well as civic enterprises. He continues a member of the Produce Exchange and was a member of its Building Committee in charge of the structure now occupied by the exchange. He has always had a deep interest in chemical matters and is a member of the Nu Sigma Nu College Fraternity, the Deutsche Chemische Gesellschaft and of the American Chemical Society.

In 1890 he was a special agent in the United States Census. He was a student at the Universities of Berlin and Heidelberg (1897-1898), and in 1904 he was a member of the International Jury of Awards at the St. Louis Purchase Exposition held at St. Louis, Mo.

By his indefatigable efforts as President of the Rapid Transit Commission the great enterprise which that Commission had in hand for the public was brought to a successful completion and the Subway was converted from a dream into a real and very useful as well as an

indispensable thing, used daily by thousands of persons, and now at a time when the eyes of the whole country are focused upon the legislative investigations of the insurance companies, Mr. Orr is called upon to take the presidency of one of the most important life companies in the world. The policy holders are thus given assurance that the affairs of that company will henceforth be ably, honestly and economically administered.

Mr. Orr is connected with some of the most important financial institutions in the city—trust companies, banks, etc.—and his views on all matters of finance and business are sought after and respected. He is a man of commanding presence and of earnest and amiable disposition. He is popular with his friends and is feared by those who are disposed to conduct business on other than conservative lines. We may rest assured that he will tolerate no irregular methods.

Mr. Orr does not pretend to be an insurance expert, but has undoubtedly been elected to the position he now holds as President of the New York Life Insurance Company because of his well established reputation as a brilliant minded, alert, able business man, whose record is without stain, and whose integrity is beyond all question.

The great insurance companies have assets amply sufficient to enable them to meet every obligation and free the policy holders from any possibility of fear as to their security.

Mr. Orr's management will be conservative and judicious. He will be assisted by a corps of unrivalled experts, public confidence cannot fail to be absolutely restored, and the future success of the company abundantly assured.

Mr. Orr resides in Brooklyn, in the Columbia Heights district. He is not much of a clubman, but he has membership in the Century Association, the Hamilton Club, of Brooklyn, the Atlantic Yacht and the Riding and Driving Club of Brooklyn.

## Mr. Schiff's Warning

MR. JACOB H. SCHIFF rarely addresses the public. When this eminent banker does speak, and with the emphasis which he used before the Chamber of Commerce on the 4th inst., his remarks inevitably excite wide discussion. The stringency in the New York money market during the past sixty days (with rates on call loans rising at times above 100 per cent.) had been, he said, a disgrace to any civilized country. It had been caused by the lack of elasticity in our circulating medium. If sufficient elasticity should not be imparted to the currency, there would eventually be here a panic compared with which "the three which have preceded it would only be child's play." Secretary Shaw's remedy, the issue of emergency notes under a heavy tax, he did not regard with favor. He preferred an increase of circulation secured by legitimate commercial paper that might be based on deposits with clearing houses.

The stringency to which Mr. Schiff referred, and which was experienced by persons engaged in stock speculation rather than by commercial borrowers, was due largely to our general extraordinary prosperity. Our crops had been enormous; currency for the moving of them was drained from New York at a time when the country's industrial activity was greater than ever before. Money was needed for our increasing manufactures and for the enlargement of producing plants to meet greater demands already foreseen. At the same time exceptional activity abroad had increased money rates at all the foreign banking centers. Under these conditions great speculative operations, relying upon the support of loans, were in progress on the New York Exchange. Those who engaged in these operations paid the high rate, and it is proof of the extraordinary strength of the general situation that the market continued to rise in spite of such a handicap.

Our circulation had been increased by more than \$100,000,000 in twelve months, but it was not elastic. There is too much in dull times and not enough

in times of activity. Its volume does not automatically expand and contract with the periodical fluctuations of demand. Our currency system is a patchwork, but it is impossible at present to procure from Congress the legislation needed for a thoro reconstruction of it. Congress declines to remove even the minor defects. Elasticity would in some measure be promoted by the repeal of the restriction which prevents the retirement of more than \$3,000,000 in any month. When such an improvement is proposed it speedily becomes connected in Congress with other projects, as to which no agreement can be reached. We should like to see Secretary Shaw's plan for taxed emergency currency offered by itself in Congress and carried to a vote.

That plan is not approved by Mr. Schiff. With all due deference to his opinion, we think it ought to be tested in this country. An almost identical method has been tested in Germany with very satisfactory results. The record of the beneficent expansion and contraction of the volume of the Imperial Bank's emergency circulation in the troubled year of 1900 is very interesting evidence of elasticity. Thoro reconstruction of our currency system cannot now be had. We should be glad to see our banks permitted by law to issue the taxed notes. If they had had such permission three months ago we should now know to what extent they would make use of it in time of stress, and whether the good effect of it in Germany could be repeated here.

The Title Guarantee & Trust Company, of which C. H. Kelsey is president, will receive from the stockholders of the Corn Products Company their shares, issuing for them certificates of deposit exchangeable for stock of the new Corn Products Refining Company, on the basis of three for two. Among those who have agreed to deposit shares are C. H. Matthiessen, Norman B. Ream, William W. Heaton, Joy Morton and J. B. Greenhut. The new company will own the old one, together with the New York Glucose Company, the Warner Sugar Refining Company and the St. Louis Syrup and Preserving Company.

No. 2981

## Survey of the World

### The Panama Canal

The Senate has authorized its Committee on Inter-oceanic Canals to make a thoro investigation of all matters relating to the Panama Canal, the government of the Zone and the management of the Panama Railroad Company. Secretary Taft has made a brief statement before the committee; the next witness will be Chief Engineer Stevens. Action upon the nominations of members of the Commission has been deferred. It is reported that the nomination of Mr. Bishop is opposed by a majority of the committee.—President Roosevelt asked Secretary Taft for a report upon Mr. Poultney Bigelow's article in THE INDEPENDENT concerning the administration of affairs in the Canal Zone. The Secretary's long reply, with accompanying papers, fills a pamphlet of 69 pages. Colon, he asserts, is a much healthier city than Panama, altho it is situated on land only a little above the level of the sea. The problem of draining it is one of great difficulty. Uncertainty as to final canal plans has prevented for the present any radical destruction of buildings, and the Commission felt justified in first making water supply and sewerage systems at Panama. Governor Magoon cables that Colon's streets are "in splendid condition," enumerating those recently raised and rebuilt, and saying the work will be completed in April. For one block the main drainage canal is finished. Model quarters for negro laborers, with concrete floors and shower baths, are approaching completion. Of the long awning and gutter mentioned by Mr. Bigelow he says that the gutter is a part of the new drainage

system, and that the awning was to enable men to work in storms and to protect fresh concrete from heavy rains. He does not remember promising that Colon should have a water supply on any named date, but he asserts that it now has a supply, drawn from reservoirs designed for the use of Colon and Cristobal and finished a few weeks ago. There will be permanent water mains for all the principal streets by April 15th, and the permanent reservoir will have a capacity of 500,000,000 gallons. Rents may be too high, because the houses were built on short ground leases; a new plan for long leases will permit the erection of better structures. There has been elaborate and most careful preparation for the receipt and preservation of meats and other kinds of food, and for the sale of them at reasonable prices. He denies that the laborers were misled as to wages; it was widely advertised that the pay would be 10 cents an hour in gold, for an eight-hour day, and that diligent application might increase the rate to 13 cents. He denies that prejudice against negroes is shown by the railroad managers, or that negroes are leaving the Zone because of bad treatment. Before the holidays many went home for a visit, as has been their custom. An official report and the statements of the French Consul are cited to disprove the assertions about the harsh treatment of a shipload of negroes who declined to be vaccinated. The Secretary denies that the administration of justice is unjust and oppressive to negroes. He gives the names of the judges and their qualifications, saying it would be difficult to select a better court for the work it has to do. He denies emphatic-

ally that officials and subordinates have been appointed thru political influence, saying that such influence has been excluded by obedience to the civil service law. It is untrue, he says, that the construction of buildings has been delayed by red tape. That new hotel near Panama, alleged to have been built in a swamp, is on high ground, he says, with good drainage, and is not deserted, but full of lodgers. As for the dredges said to be working at Culebra to only 20 per cent. of their capacity, he says that no dredges are used there. The machines are steam shovels, whose full capacity is not required for the work of making roads, in which they are engaged. Sewers were made at Panama because the treaty called for them. He denies that the sewerage system was improperly constructed or is a failure. The charge that quarantine regulations are so enforced that they unnecessarily interfere with commerce is, he says, utterly unfounded. A strict enforcement of them has been needed, and thus the Zone is being rapidly freed of the danger of yellow fever and other infectious diseases. Subordinate officers have been directed, he says, to buy supplies where they were cheapest. Being Americans, and familiar with the American market, it is natural that they should procure the bulk of them from this country. This relates to the charge concerning the purchase of surgical instruments. The statement as to the importation of negro women from Martinique for immoral purposes is, he says, wholly false. [He has since shown, in an addition to this report, that under the instructions of Mr. Stevens there were brought from Martinique 283 women, all of whom, he asserts, had husbands or other natural protectors in the Zone.] Mr. Bigelow, he says, was on the Isthmus only twenty-eight hours, arriving at 10 a. m., November 30th, and departing at 2 p. m. on the following day. As for the two witnesses named by Mr. Bigelow, the Secretary asserts that one of them, Mr. Tracy Robinson, who owns real estate in Colon, was offended because the Government spent money upon public improvements in Panama instead of in his city, and because the enforcement of necessary sanitary rules put him to

some inconvenience. Mr. Robinson had applied for some office yielding a salary of not less than \$5,000. When the office of mayor of Cristobal was offered to him, at \$1,800, he declined it with indignation. He afterward applied unsuccessfully for the office of superintendent of schools. The other witness, Mr. John Lundie, is chief engineer of an ice-making and electric-lighting company, who objected to the construction of ice-making and electric-lighting plants by the Commission. Chief Engineer Stevens says that Lundie was appointed a consulting engineer by Chief Engineer Wallace, and dismissed by Chairman Shonts; that he persistently sought appointment as a member of the Board of Advisory Engineers, and, having failed, sent to the President an insolent letter, in which he called Chairman Shonts a coarse, incompetent and unprincipled jackass. Mr. Bigelow is criticised for his "willingness to draw his facts from such a fountain of manifest malice, injured vanity and disappointed ambition," and for avoiding the officials responsible for the work on the Isthmus.—Testifying before one of the House committees on the 15th, Secretary Taft and Engineer Stevens asserted that the congestion of freight on the Panama Railroad, and the delay in canal work caused by this congestion, were due to the Southern Pacific Railway Company, which controls the Pacific Mail Steamship Company. Freight has been allowed to accumulate at the Panama terminal, the steamships neglecting or refusing to take it away, since the monopolizing compact with the railroad company was abrogated by the Government.

#### Commissioners From China

An Imperial Chinese Commission, sixty-two persons in all, arrived at San Francisco on the 12th, and was welcomed there by Prof. J. W. Jenks, of Cornell University (representing the State Department), General Sumner, General Funston, and prominent merchants of the city. At the head of the Commission are General Tuan Fang, Viceroy of Fukien and Chenkiang, and Tai Hung Tzeu. The first of these, an

eminent scholar and collector of Chinese antiquities, was recently Governor of Huan, and at the time of the Boxer rebellion was Governor of Shensi. The second, also a scholar, and formerly chief examiner for the civil service, is Assistant Secretary of the Chinese Treasury. This Commission's purpose is to study American political, military, naval, educational and industrial methods. Moving across the continent, it will remain for three days in Chicago and for one day in Pittsburg. On February 2d the party will be entertained at a banquet in New York. The leaders of the Commission explain that its purpose is in no sense political, and that it will not interest itself in the question of Chinese immigration. —In a message to his Government, the Chinese Minister at Washington says that satisfactory legislation on the exclusion question is not to be expected, owing to the influence here of the labor class, although a majority in our Congress favor greater liberality.

#### Philippine Tariff in the House

During the debate in the House, last week, upon the Philippine Tariff bill it became known that the number of Republicans (commonly called insurgents) opposing the measure had become so large that the fate of it was in doubt. These insurgents (representing domestic sugar and tobacco interests) had made common cause with those opposing the Statehood bill, or that part of it which unites Arizona and New Mexico in one State, relying, of course, upon the assistance of the Democratic minority. On the 11th, however, the Democratic leader, Mr. Williams, practically pledged this minority to the support of the Tariff bill, upon the ground that the bill was in accord with Democratic doctrine and a long step toward that free trade with the islands which his party desired. But it was thought that a few Southern members would not follow him, and it was expected that the Democrats would aid the insurgents with respect to important amendments—one, for the removal of the differential duty on refined sugar, and another declaring it to be the intention of the United States to give the Fili-

pinos independence in 1909. Mr. Grosvenor warned the insurgents that a repeal of the differential would bankrupt all the beet sugar factories. At the end of the week Mr. Babcock, of Wisconsin, leader of the insurgents, asserted that their agreement had been signed by more than fifty Republicans. Efforts to reduce the number of these were made by President Roosevelt and Speaker Cannon. Several members from the Northwest were invited to talk with the President at the White House. The subsequent remarks of some of them, as reported by the press, showed that they resented any interference with their independent action. Mr. Babcock was reproved by the Speaker, and their friendly relations became strained. In the course of the debate Mr. McCall, of Massachusetts, urged his party to undertake now a general revision of the tariff, predicting that a failure to do this would cause a Democratic victory and a Democratic revision. He introduced a resolution authorizing the President to negotiate with European Powers for a neutralization of the Philippine Islands and the maintenance of their independence under international protection. Mr. Longworth, who visited the islands with the Taft party and is soon to be the President's son-in-law, spoke in support of the bill, but expressed a very unfavorable opinion of the Filipinos. He could not believe there was any "brilliant future" for them, and he found nothing noble in their character except their love of family and home. The average Filipino could form no conception of the dignity of labor. He was shiftless, worthless, untrustworthy and helpless. On this account he needed help from the States. Mr. Longworth would not have our Government hold the islands a moment longer than was absolutely necessary after the disclosure of their people's capacity to govern themselves.—Mr. Bryan has been made a Datto, or chief, by the Moros of Mindanao. From the widow and son of the late Datto Ali, an irreconcilable insurgent or outlaw recently killed by the Army, he has received the dead chieftain's bolos and spears. In his tour of the Southern islands he is accompanied by a former chief of the Hong Kong insurgent junta.

### Washington Topics

On March 1st the new German tariff will go into effect, and German duties on imports from this country will be largely increased, unless by a treaty of reciprocity we take advantage of the lower rates now granted by treaty to seven European nations. Our exports to Germany amount to about \$200,000,000. Secretary Root has given up all hope of reaching an agreement by treaty, for the Senate's approval of a treaty of reciprocity cannot be obtained. The Republican leaders in the Senate and the House have now decided, it is understood, to pass before March 1st, if possible, a bill empowering the President to increase the Dingley duties by 25 per cent. on all imports from countries that discriminate against us in their tariff laws. Such a measure will excite protracted debate in the Senate, if not in the House, and the discussion of it may interfere with other projected legislation.—The Consular Reform bill, supported by Secretary Root, has been reported by the Senate Committee on Foreign Relations, which has omitted the important provisions for the examination of applicants and for the restriction of appointments to the lowest grade. Appointments will be made as at present.—Representative Jesse Overstreet, of Indiana, will resign the office of Secretary of the Republican Congressional Committee, and may retire from Congress, because the President rejected the man he recommended for the office of surveyor of the port of Indianapolis, saying he had promised the place to Senator Beveridge. The latter's former law partner, Leopold G. Rothschild, was appointed. For years the office has been assigned to the local Representative, and the Senator has named the Postmaster. This time, Senator Beveridge takes both. Representative Denby complains about a similar transfer of patronage to Senator Alger, in Detroit. On the other hand, it is reported that Senator Warner is disappointed because his choice of a man for the post office at Columbia, Mo., was set aside and the place was given to a brother of Senator Elkins. Representative Babcock, leader of the beet-sugar insurgents, will give up the chairmanship of the Republican Congressional Committee. The bitterness of some of the

insurgent opponents of the Philippine Tariff and Statehood bills appears to be due to loss of patronage as well as to the attempts of the President to convert them.—The President has asked Secretary Shaw to remain at the head of the Treasury Department until March 4th, 1907, and the latter has consented to do so. He was intending to retire a few weeks hence.

### New York Politics and Legislation

At Albany, the report of the Armstrong Insurance Committee has not been submitted. No further official inquiry appears to be expected. Mr. Hughes, the committee's counsel, is going to Europe. Governor Higgins, who for a long time last year was unwilling that there should be a legislative investigation of the insurance companies, has now undertaken to prevent any investigation of the conduct of the Insurance Superintendent (Mr. Hendricks), the Banking Superintendent (Mr. Kilburn), or the Railroad Commission. It was the purpose of certain members of the Legislature to call for such an inquiry, this action having been suggested by the insurance disclosures. The Governor argues, in a long written statement, that the investigation of the conduct of executive public officers is not a proper function of the Legislature. Following the election of Speaker Wadsworth, the committees of the House have been reorganized, and several of the leaders who represented the former power of ex-Governor Odell have been deposed. The Speaker and his father were present at a conference in the White House on the 13th, together with Secretary Root, Postmaster General Cortelyou and other New Yorkers in Washington. The subject of discussion was the chairmanship of the New York Republican Committee. Ex-Governor Odell is to be deposed. The President's active interest in the politics of the State continues to be a prominent topic in the press. A bill forbidding corporations to contribute to campaign funds, which has been introduced at Albany at the suggestion of the Governor, provides that a domestic corporation so offending shall forfeit its charter.

**Morales Leaves  
Santo Domingo**

Gen. Carlos F. Morales sought refuge at the American Legation in Santo Domingo City on the 11th. He was crippled by a broken ankle, and it is said that he had not been more than a dozen miles from the capital since his hasty departure. He offered to resign the presidency upon condition that he should be permitted to leave the island. Acting President Caceres accepted this offer, Congress by unanimous vote accepted the resignation, and Morales sailed on the 12th for Porto Rico on the United States gunboat "Dubuque." He has no money, and says he hopes to obtain employment in Panama. The insurrection appears to be at an end. General Jimenez (formerly President) is in Porto Rico, where he has resided for the last two years. He says he has no political interest in Santo Domingo and does not intend to return to the island. Caceres now controls the entire country, the insurgents in the province of Monte Cristi having given up the fight. Caceres supports the treaty now pending at Washington and also the temporary agreement now in force. It is not expected that the treaty will be ratified by our Senate. Morales now says that the salvation of Santo Domingo depends entirely upon the ratification of it.

**Cuba and  
Porto Rico**

An apparently trustworthy report from Havana says that the commercial treaty with Great Britain, negotiated some months ago by the Palma Government and now pending in the Senate, will not be taken up for action, but will be permitted to die in committee. This treaty is not acceptable to our Government, and by some persons in Washington the opinion has been expressed that ratification of it would shorten the life of our treaty of reciprocity with Cuba.—The heavy and continuous rains of December have very seriously affected the tobacco crop, causing the loss of more than half of it in the Vuelta Abajo and Partido districts.—Havana's little epidemic of yellow fever appears to be at an end. There have been sixty-nine cases with twenty-three deaths.—The Countess of Buena Vista sued General Brooke for damages, because he,

while in command at Havana, abolished her family's hereditary and profitable monopoly of the slaughter of beef cattle there. Judge Holt, of the District Court at New York has dismissed the suit, holding that she has no remedy at law as against General Brooke, but expressing the opinion that she has a just claim for damages against the United States or Cuba under the obligations which they have assumed by treaties.—Mayor Todd, of San Juan, Porto Rico, has arrived in Washington, coming as the representative of the League of Porto Rican Municipalities, which asks for an elected Senate of fourteen members.—It is predicted that the agricultural industries of Porto Rico will soon be affected by a strike involving nearly all of the 70,000 men employed in the production of sugar.

**Liberal Victory  
in England**

The parliamentary elections so far almost without exception show crushing defeats for the Unionist and Conservative candidates and indicate that the new Liberal Cabinet will have an overwhelming majority, sufficient to enable Sir Campbell-Bannerman to do without the Irish vote. If the present rate keeps up, the Unionists will not have more than 120 seats out of 670. The composition of the new Parliament as it stands now is as follows: Liberals 120, Unionists 32, Laborites 18, Nationalists 13, Socialists 1. This represents a ministerial gain of 64. In 21 London districts which were thought by the Unionists to be perfectly safe, as they always had been, they only saved five seats. The ex-Premier, Arthur J. Balfour, ran in the Eastern Division of Manchester, which in the election of 1900 gave him a majority of 2,453. This time he was defeated by a majority of 1,980, altho the opposing Liberal candidate, T. G. Horridge, was a comparatively unknown man who never ran for Parliament before. The Unionists are now trying to find a safe seat for Mr. Balfour. Other members of his Cabinet have suffered a like fate. Gerald Balfour, who was president of the Local Government Board in the Balfour Cabinet, was defeated at Leeds by a majority of 1,069, and W. H. Long, formerly Chief Secretary for Ireland,

lost his seat for South Bristol. Of the new Cabinet, Sir Campbell-Bannerman, the Premier; Herbert J. Gladstone, Secretary for Home Affairs; Augustine Birrell, President of the Board of Education; James Bryce, Chief Secretary for Ireland, and Sir J. Lawton Walton, Attorney General, have been elected. Sir Gilbert Parker, the Canadian novelist, saved his seat by 800 votes, altho he is a Unionist. The campaign has been exceedingly bitter. Mr. Balfour, at Manchester, and Mr. Chamberlain, at Derby, were howled down by the crowd when they attempted to address public meetings. The result must be taken as an emphatic decision in favor of a continuance of free trade. The Unionists tried to frighten the voters by assuring them that the election of the Liberals meant the granting of home rule to Ireland, but apparently this had little effect. A new factor of importance is the labor vote, which in districts where there was no distinctive labor candidate, was cast for the Liberal member. The Labor members will constitute an independent faction in the new Parliament, under the leadership of James Kier Hardie, and will be in a position to exert great pressure upon the Ministry. The Socialists, who are furious at John Burns for accepting a position in the Government at a high salary, ran in many places independent tickets. In the district of South Westham, London, a unique campaign for the Socialist candidate, W. Thorne, was conducted by the Countess of Warwick, and he was elected by the enormous majority of 5,225. The district gave in the last election a Conservative majority of 2,176.

#### The Conference of Algeciras

By being chosen as the place of the Moroccan Conference the old Spanish town of Algeciras has suddenly become the center of international interest, as Portsmouth was a few months ago. The presence of the distinguished representatives of all the great Powers, with their numerous retinues, will strain the hospitality of the town, but the Spanish Government is doing its best to give the delegates a proper reception and to make them comfortable. The first to arrive was Sir Arthur Nicolson, the head of the British delegation, who is lodged

in the Governor's Palace at Gibraltar, just across the bay. As was quite appropriate, the greatest excitement was created on the quays and streets by the arrival of the representative of the country that is being quarreled over, Mohammed el Torres, the Moroccan Minister of Foreign Affairs, who was accompanied by a suite of sixty-one persons, picturesque in their flowing white robes and red and white turbans. They were taken in the royal Spanish coaches to the villa prepared for them. The arrangements are in charge of the Duke of Almodar, the Spanish Minister of Foreign Affairs and representative at the Conference. Mr. Henry White, American Ambassador to Italy and the senior member of the American delegation, was received on his arrival by Admiral Sigsbee on board the "Brooklyn." Admiral Sigsbee was on board the battleship "Maine" when she was blown up in Havana harbor and this is the first time he has visited Spanish waters since. Great Britain has twenty-one warships in the harbor and France has three. The German representatives at the Conference are Herr von Radowitz and Count von Tattenbach. The latter was the German commissioner who was sent to Fez immediately after the visit of the Kaiser's yacht to Tangier, and checked the growing influence of the French at the Moroccan court by assuring the Sultan of the support of Germany and other nations in resisting French aggression. The public utterances of the newspapers and prominent men of Germany have of late had a very pacific tone, which has contributed to allay popular disquiet, but so far as known there is no modification of the irreconcilable attitude of France and Germany over the points at issue. The Paris papers are taking great delight in showing the inconsistency of Germany's present contention with her position at the Madrid Conference of 1880, when she supported France and acknowledged the special interests of France in Morocco. The following despatch, sent by the French Ambassador at Berlin to his Government just before the Madrid Conference, seems to be conclusive on this point:

"Prince Bismarck has specially requested me to declare that, Germany having no interests

in Morocco, the instructions to his delegate will be to be guided in his attitude by that of his French colleague. Orders in this sense are about to be sent to M. de Solm."

Germany now holds that her interests in Morocco are so vital that she is willing to risk a European war to defend them. In addition to the proposal of France to undertake the policing of the whole of Morocco and that of Germany that order should be maintained by an international police force, as is now done in Macedonia, it is reported that the Italian delegate will bring forward an-

it will be still more difficult to get all the commercial nations to agree on schedules and rates. For the defense of the coast towns against the bandits who have been making kidnapping raids it is proposed to build chains of blockhouses around them and to take away the arms of all natives passing in, to be returned to them when they go away. The principal trade routes will be protected by military posts at regular intervals. Both the German and the French party claim the support of the United States in the

The City of Algeciras, Where the Moroccan Conference is Now Being Held.

other plan—that of a geographical division of responsibility, Spain to have the controlling influence on the Mediterranean shores, Germany on the Atlantic coast, France on the Algerian frontier, and Italy to have charge of the international police at Tangier. Other questions to be considered by the conference are the establishment of a State Bank for Morocco, the collection of taxes and the revision of the tariff, all of which are likely to cause a great deal of discussion. The Moroccan Government has no funds for carrying out any of the proposed reforms in administration, and is too weak to collect even the present taxes, while the customs are held as security for the French loan. It is hard enough to arrange a tariff to satisfy the various interests in a single country, and

Algeciras Conference. Senator Spooner, in a reply to Senator Bacon's speech against participation in the Conference, made the statement, presumably on the authority of the President, that the American delegates were not to vote on any question, but merely to attend in order to see that the interests of the United States were not neglected.

#### Protestant Problem in France

The separation of State and Church in France has brought into the foreground a number of serious problems for the two Protestant churches of the country, the Lutheran and the Reformed. Especially is this the case for the latter, where the production of a schism between the advanced and

the conservative sections seemed unavoidable. In fact, not a small section of this church actually favored a division between "the right" and "the left," thinking that it would be impossible for these to co-operate on the basis of independence of the State. The more earnest friends of church union, however, managed to have a special synodical convention called at Rheims as early as last May, in which seemingly a *modus vivendi* was effected. It, however, soon appeared that this compromise satisfied neither party. To the credit of the more liberal section of the church it must be said that these then took steps independently to avoid a rupture within the church when the break with the State comes. A free convention of liberal Reformed pastors and laymen was held recently in Montpellier, in which a formal invitation was extended to the conservatives to come to an understanding with the liberals. The latter openly insist upon the principle of "the gospel and liberty of theological thought," as fundamental to the life of Protestantism. At the same time they demand that, in the near future, a general conference of church authorities be held, in order to decide upon the future organization of the Reformed Church of France, but along the lines that will not demand absolute adherence to the strict letter of the confessions, but will give elbow room for the more liberally inclined, within the limitations that recognize "in God and in the communion with Jesus Christ the forgiveness of sins and the power of morality, comfort in suffering and the hope of eternity." A prominent conservative German church paper thinks that "the orthodox sections of the Reformed Church in France will need much wisdom from above to come to the correct conclusion in these extremely difficult matters."

#### Conditions in Russia

Reports from Russia indicate that the Government is gaining ground in all parts, altho it will be a long and difficult task to reconquer the territory now in revolt. In the Caucasus most of the cities have been retaken, including Novorossysk, which was for three weeks in control of

the revolutionists. The Caucasian railroads are also now in the hands of the authorities, but in the mountainous districts are altogether independent and the troops are not sufficient to reduce them to submission. The insurgent government of Kutais has interdicted taxes and is levying its own import duties. In Tiflis and Elizabethpol there has been much fighting between the Armenians and Mohammedans, in which several hundred persons have been killed. In the Baltic Provinces the course of the revolution was strikingly like that in France in 1793. The clergy were forbidden to preach or expelled, Socialist orators took their places in the pulpits, and marriages were celebrated under the red flag. For traveling thru the country passports, printed in Lettish and Hebrew and signed by the insurgent leaders, are necessary. In the neighborhood of Libau twenty-seven castles have been pillaged and the total damage is estimated at \$3,000,000. Many of these old German manors contained priceless collections of books and art treasures. The Government is regaining the control of the Siberian Railroad, which has been in the hands of the striking employees and the mutinous soldiers for some time. Loyal troops returning from Manchuria have now been stationed at Irkutsk, Omsk and other cities, and the road and telegraph lines are in running order. Irkutsk was found to be without any government, for the Vice Governor, the Chief of Police and other officials had all been killed or wounded. Now that the Government is getting the upper hand it shows a pronounced reactionary tendency. The assembling of the Duma has been postponed till April, and Count Witte now states that the Duma will be immediately dissolved if it interferes with the fundamental laws of the empire and the maintenance of the autocracy. The budget statement for 1906, altho it endeavors to gloss over the real conditions, shows that Russia is very much crippled financially. The gold reserve, of which Russian financiers have been so proud, has been heavily drawn upon, and it will be necessary to borrow \$240,500,000 to make the receipts and expenditures balance. The total cost of the war appears as \$1,050,000,000.

# The Church in Social Service

## A Study of Denominations in New York City

BY THE REV. W. D. P. BLISS

[The following article is the result of an original and comprehensive investigation into some of the economic aspects of the Christian Church that have been the subject of much criticism of late years. Dr. Bliss has investigated only the churches of this city but it is probable that the problems he here discusses are typical of the problems of most of the other churches of the land. This article will be followed by a second and concluding paper, and the two, we believe, will form a very important contribution to the subject. Mr. Bliss is now rector of an Episcopal Church on Long Island, and is the author of the admirable "Encyclopedia of Social Reform," and various other books and essays of a radical nature.—EDITOR.]

HE who studies the churches of New York city from the standpoint of social reform will find the situation at once less sensational and more hopeless than probably he will have been led to expect. According to a view quite ordinarily held among reformers, the church is an organization mainly devoted to the worship of the Golden Calf, her members largely either mammon worshippers or hypocrites or both, her clergy professional posers, whose words are for sale and whose slightest tendencies to free speech are muzzled by the millionaire bondholder who looms large in the front pew. Such is the church according to the Socialist orator and the radical pamphleteer. Such is not the church as she really is, not the church as we have found her after a study continued now for many months or even years, and pursued through all branches and denominations of churches, Christian or otherwise. The reality is far different, but also, we think, far more serious, far more sobering, than if the ordinary view were true. If it were true things might be changed. If the church were only given to mammon worship, her members only hypocrites, the free speech of her clergy only bound with a golden chain, this might be broken.

Some brave preacher, some bold iconoclast, might throw down the Golden Calf, drive out the hypocrites, snap once for all the chain of money, make the church strong and true and beautiful as in the glow of her early youth. He who attempts that today will find the task far different and far more difficult, if not impossible. What is the difficulty we shall see better after we have taken up, one by one, the different churches or leading denominations and seen the condition in each.

We will commence with the Church of Rome, for this is at once the largest, in some ways at least, the strongest and wealthiest, and often considered the most successful and the most hopeful of all the religious bodies in New York. We will confine ourselves, for the sake of convenience, to Manhattan and the Bronx, but the case will not be found materially different in Brooklyn, in Richmond or in Queens.

There are in Manhattan and the Bronx 114 Roman Catholic churches, more than of any other one religious body, except the Jews, and attended by some million parishioners (1,200,000 in the archdiocese, which includes several up-river counties). This means an average of nearly 9,000 to a parish, which

certainly seems to indicate strength and growth and prosperity. Roman Catholics, as is well known, go to church. Her early masses, her solemn feast days, her days of requisition—even her days of devotion for men alone—show what a hold the Church of Rome still possesses upon her children. One Roman Catholic Church has an early mass at 2 a. m. for the convenience of printers and typesetters. A Protestant Church tried to duplicate this and failed. Rome, to an extent, has the mass and the masses.

Rome is not, however, poor in New York. According to the "Brooklyn Eagle Almanac" the 114 Roman Catholic parishes have a total property, including parsonages, hospitals, etc., of \$29,896,100. It is probably much more, for in 1903, according to the *City Record*, the Roman Catholic exemptions for Manhattan and the Bronx was \$39,215,450, with a valuation of over \$41,000,000. On this there rests an indebtedness of some \$6,000,000, leaving some \$35,000,000 clear, a property in the main well placed, for Rome is well known to have a genius for real estate and to have read deep into the gospel of the corner lot.

This vast property has been obtained, little by little, in the main, by small gifts. Each poorest Roman Catholic is trained—nay, even compelled to give. There is probably more equality and universality of giving in the Church of Rome than in any other communion. Rome is certainly democratic so far as getting goes. She gets from all. Among these 114 churches there is not one so largely built by an individual or by a family that it is commonly identified with any one name. At New Rochelle there is a Roman Catholic Church, frequently spoken of as the Iselin Church, but this is outside of the city limits. Catholic churches, too, are parochially democratic. Each parish supports itself. The weaker parishes are not, as a rule, aided by the richer. There are no Roman Catholic missions in New York city as there are in the Protestant Episcopal and some other churches. Rome in all this seems a church of the people, for the people, and in giving, at least, supported by the people.

But is she therefore truly a people's church? Is she or can she be counted for reform? Is she for the man against the dollar, the people against their oppressors, liberty against monopoly, plutocracy, plunder? Never and not for one moment. Rome can not be. In all these 114 churches we have been able to learn of but one Roman Catholic priest who has any reputation for saying aught, doing aught, or caring aught, for the people's social coma. Upon Father Ducey alone seems to have fallen, in any measure, the mantle of Dr. McGlynn. A church which succeeded finally in silencing a Father McGlynn has not encouraged or allowed others to follow his example. Even Father Ducey shows more what can not be done within the Church of Rome than what can. Democracy of the real kind can not be. With a so-called political Democracy—that is, well, Tammany—Rome is sometimes in suspiciously close affiliation. Tammany's district leaders and ward heelers, undoubtedly under directions from the Wigwam, ever stand in with the Catholic priests within their districts, and often ostentatiously give to the parish church, but this is politics, neither democracy nor religion. The truth is that Rome's democracy is like Tammany's—equality under a boss. This always has been so and always must be so while she remains Roman. Rome can take money from everybody. She can even, in a sense, make everybody equal—under her priests, but here her democracy ends. Does she or can she allow the people any voice in the spending of their moneys, in the organization of their parishes, in the choosing of their spiritual lords, in the ordering of the Church at large? Never! Rome's democracy ends with the getting of the money.

Instead, as a rule, she stands in with the money lords. One of her prominent archbishops is so hated for standing in with a great railroad magnate that he cannot be invited to a parish fair in his own diocese. We doubt if there is any religious communion which makes her spiritual favors so dependent upon money as does the Church of Rome. Her masses for the dead, her dispensations from the marriage vow, the right of burial in her cathedrals, even the giv-

ing of her sacraments, and pews within her churches, are all for money. She supports her priests and builds her churches by lottery tickets and gambling at parish fairs, as few Protestant churches would dream of doing, and often in violation of the civil law. Such are well proven facts. We are not faulting her parish priests and devoted nuns. These are usually faithful, honest, sacrificing—if not always of the highest education, nor using the most modern methods. Rome is usually a few centuries behind even in her charities and institutions, but her clergy and, above all, her Sisters of Charity, are usually, we think, faithful and hard working fathers and mothers of the poor. Only their hands are tied, and they have to work in a narrow groove. Said a Roman Catholic priest to me: "The priests are all busy administering the sacraments, teaching the commandments, and not doing anything to see that the commandments are observed." Statistics bear this out. Of the 34,014 persons of foreign birth held for trial or convicted in the magisterial courts of New York city in 1904, 10,130 were born in Ireland and 5,273 in Italy, or, taken together, 45 per cent. of the whole number, while England, Scotland and Germany together furnished only 17 per cent. It is Rome's constituents who largely fill our police courts, our prisons and our reformatories. Such a Church can do little for social reform. As a matter of fact, she does nothing. In Europe, in Belgium, in Austria, in Germany, she is essaying a sort of paternal and ecclesiastical church socialism to try to retain her hold on the working classes, so many of whom Socialism, truly democratic, is taking from her. In New York she does not even attempt this. The only Roman Catholic priests who have declared out and out for Socialism have left the Church. Rome in America is with the railroad king, the real estate owner, the wealthy convert. Consequently she is not growing. Her apparent growth is because of a large Roman Catholic immigration, all of which she does not retain. Losing ground in practically every European country, thousands of her children are coming to this country, and naturally she keeps some. But accord-

ing to the careful investigations of the New York Federation of Churches, Roman Catholic parishioners formed 26.7 per cent. of the population of Manhattan in 1902 and 26.5 per cent. in 1903. According to the "Eagle Almanac," in 1905 it was only 19.7. To put it bluntly, the world has found Rome out and few workers for the future will look to her for help.

When we come to the Protestant Episcopal Church we come to conditions very different. Here is the one Church in New York city that is growing—gaining rapidly on the population, a Church full of every kind of good works, a Church almost alone in the city somewhat famous for free speech. Is there here any more hope for social reform? We fear that there is not.

It would seem, however, at first sight that there was. Not a few, and among them some of the most prominent, Episcopal clergymen in New York city speak often for reform. They denounce the rule of money and warn fashionable congregations against the dangers of fashion, of social corruption and of civic shame. When they come to positive reforms the number who speak out is less and their advocacy of them is neither very radical nor very strenuous, but it is perhaps more so than in all the other religious bodies put together. The Protestant Episcopal Church may even be called the Church of Free Speech, so far as the clergy are concerned. Let there be called in the city, for any department of reform, be it a church and stage guild, an association in the interests of labor, a public ownership meeting or any kind of factory or civic reform, and of the few clergymen present a full half will be of the Protestant Episcopal Church. Bishop Potter is the one bishop in New York city whose presence is enthusiastically desired and cheered at labor banquets and at reform meetings. The Protestant Episcopal Church is the one organization that has developed a Church Association for the Advancement of the Interests of Labor, an Actors' Church Alliance and a Christian Social Union.

On another line, this Church is doing probably more than all other churches put together. This is in institutional

work and philanthropic activities. By count the other day in the settlements and charitable organizations of the United States, with New York as no exception, out of 1,000 workers the Protestant Episcopal Church was found to have produced some 21 per cent. of the communicants—far more than any other church. Of the fourteen leading institutional churches in New York city fully seven, and those seven among the largest, are Protestant Episcopalian. The great work and the varied work done at St. Bartholomew's, in many languages and in almost every practicable line of effort, with an annual expenditure of some \$200,000, is well known. The institutional activities of St. George's, spending \$44,000 per year; of Trinity Parish, of Grace Church, of St. Chrysostom's, of Calvary, of Ascension, of St. Michael's, of the Church of the Holy Communion, are only less extensive. The Protestant Episcopal Church in New York city seems the Church of Free Speech and of Good Works. Can usefulness go further? But is there not another side? Is the Protestant Episcopal Church ruled by money? We fear, if the truth were known, it would be found that there is no other church organization in the city so much under the power of money. We do not mean under the direct dictation of millionaires; we mean something more serious. There are in Manhattan and the Bronx seventy-three parishes and twenty-two missions or chapels of the Protestant Episcopal Church. Different from the Roman Catholic parishes among the poor, these missions or chapels are not self-sustaining, but largely maintained by wealthy foster parishes. Trinity Church maintains eight churches or chapels, tho two of these are themselves wealthy and practically independent. Most of the larger Episcopal parishes maintain at least one mission. More, perhaps, than in any other church communion, the money of the Protestant Episcopal Church comes in large, uncertain sums from the wealthy and in very small amounts from the poor. She is distinctively the church of wealth. Measured by her total church properties, the Protestant Episcopal Church stands second in New York city, credited by the "Eagle Almanac" with \$24,531,800 in

1905. But this leaves out many wealthy parishes—St. Bartholomew's, for example. The *City Record* list for 1903 puts the Protestant Episcopal exemptions in Manhattan at \$46,508,150, altho this includes Columbia University, whose president must always be Episcopalian, but which can scarcely truly be called denominational. Upon this vast property, too, there rests scarcely any indebtedness, making the Protestant Episcopal Church in the total value of her properties second only to Rome, and in proportion to the number of her independent parishes vastly wealthier than the Roman Catholic parishes. But it is when we come to her communicants that we realize what the Protestant Episcopal Church in New York city really is. Her communicants number in Manhattan and the Bronx 68,989—far more than any other Protestant communion and only exceeded by the Roman. Among these, of course, especially in her missions and chapels, are many thousands and hundreds of thousands of people either poor or of very moderate means. Yet remember, that the missions or chapels are largely supported by the wealthier parishes, and when we come to these, while accurate figures are impossible, the preponderance of this influence of wealth is almost overwhelming. It is estimated that of the seventy-five men in New York city who are not only millionaires, but multi-millionaires, most of them the wealthiest men in the United States, at least 40 or over 50 per cent. are communicants (most of them) or pew holders in Protestant Episcopal churches. Take a few instances: In one parish, St. Thomas' alone, are at least seven multi-millionaires. St. Bartholomew's has the vast Vanderbilt wealth and many of the Vanderbilt connections. Trinity Church is the parish of the Astors. St. George's has J. P. Morgan, R. Fulton Cutting and Charles M. Schwab. Grace Church has E. H. Harriman, the Rhinelanders, the Wolff estate. St. James', St. Mark's, Christ Church, Ascension, the Incarnation and other parishes each have families among the leaders in wealth, in fashion and in social distinction. Ought not the Protestant Episcopal Church in New York to do something in the way of charity? The "Eagle Almanac" states

that the Protestant Episcopal churches in Manhattan and the Bronx raise \$1,786,589 a year. It is doubtless very much more than this, but there are probably a dozen single communicants in the Protestant Episcopal Church who could raise this amount each year and yet scarcely feel it.

Now, the rectors of these multi-millionaires are not muzzled by these parishioners. We have spoken of the free speech of the Protestant Episcopal pulpit. It is true, especially in some of the wealthier parishes. But how about action? Does the Protestant Episcopal Church as a body do aught for reform outside of charity? Its charities we have seen to be largely dependent on those men of means. Outside of charity, realize the situation. Does a progressive judge in New York city write a book on public ownership, he finds that the people's rights to the streets are being surrendered in virtual perpetuity to a great private corporation over which an eminent Protestant Episcopalian presides as president. He tells us that other rights are being surrendered, and at a Public Ownership meeting it is openly charged that nineteen public franchises of colossal value are being given away by a commission over which another eminent Protestant Episcopalian presides as president. He finds that another great franchise is granted to a colossal railroad over which another man, identified with the Protestant Episcopal Church, presides as president. The chief rival, if it be a rival, of this railroad may almost be called a Protestant Episcopal railroad. When it comes to banking and insurance, the control of the banks and insurance companies of the United States are said to be divided between an eminent Baptist and still another eminent Protestant Episcopalian. Is it a question of land, the one colossal landlord of New York city is a family, also Protestant Episcopal, and identified with it is a great land corporation, under the name of a Protestant Episcopal church. When insurance companies are flayed before the public, every other prominent culprit is a Protestant Episcopalian. Is it this church to which the people are to look for help in the battle with Consolidated Gas, Consolidated Transit, and the land monop-

oly, the greatest robbery of them all? Again we say these multi-millionaires do not muzzle the mouths of their rectors. Why should they? Shares vote, not voices.

And do these gentlemen of money not influence the action of the Church? The typical Protestant Episcopal millionaire is not an inactive churchman. He is often very active and considers himself a true and logical churchman. One of them has his private chaplain; another his private chapel. Any number of them are wardens or vestrymen or delegates to conventions from leading or from minor Episcopal parishes. The total wealth and monetary influence of the lay delegates to the convention of the Protestant Episcopal Diocese of New York no man can measure, and no man can sit in that convention without realizing that literally money talks.

These men largely rule in the national councils of the Church. The wealthy Eastern dioceses have a partiality for millionaire lay deputies. New York, entitled to four lay deputies, sends three millionaires. Long Island, out of four, sends two millionaires. Massachusetts, out of four deputies, chooses two millionaires. Western Massachusetts, out of four, sends three millionaires. Pittsburg sends two; Pennsylvania sends two out of five (one being a substitute). One of these distinguished churchmen—J. P. Morgan—we name him because he perhaps represents the millionaire churchman at his best—is in the habit at each Convention of hiring and furnishing a regal house, which the bishops are wont to call the Syndicate House, chartering an especial train and conveying and entertaining some of the distinguished bishops and lay deputies of the Convention as his private guests. Naturally his voice is said to carry far in the august councils of the Church. At a recent Protestant Episcopal Triennial Convention the proprietor of the hotel which daily entertained most of the guests—the Syndicate guests excepted—declared that he had entertained many conventions of many different kinds—insurance men, theatrical men, railroad men, politicians of every party—but that he had never entertained any set of men who spent so much money, or whose wives,

when present, flashed so many jewels as these distinguished representatives of the Church and the Galilean Carpenter.

Verily there are two sides to the reform tendencies of the Protestant Episcopal Church. When Bishop Potter was elected to his episcopate, a prominent presbyter sent to him as a suggestion for his episcopal seal the design of a man trying to ride four horses at once, each horse going in a different direction. We think the good bishop holds his seat with an ability and a dexterity unequalled by any ecclesiastic in New York, but the task is not easy. Free speech in the pulpits makes it, however, easier and is harmless. A prominent New York rector once said to the writer: "When I talk theological heresy, my people like it; when I talk sociological heresy, the people say, 'The old man is at it again.'" There is a good deal of sociological heresy talked in Protestant Episcopal clerical circles in New York city, but the church of the Vanderbilts, of J. P. Morgan, of the Astors, is not going to declare today or tomorrow or the day after for any very radical or practical social reform.

We pass to the Lutheran Church. Here, you say, is a great Church of the people, a free Church, a growing Church, a Church not ruled by wealth. But does it, therefore, or will it, therefore, do anything for economic or social reform? He who thinks this is doomed to as bitter disappointment as in either of the communions we have already considered.

The Lutheran Church stands third in Greater New York in the number of communicants, tho in Manhattan she has fewer than the Presbyterian Church. In Manhattan and the Bronx she is credited, in all her branches, by the "Eagle Almanac," with 19,811 communicants. She is, too, a growing Church. The Protestant Episcopal Church is said by the New York Federation to have grown on Manhattan Island more than all other religious bodies combined, but consolidated Lutheranism comes next, and in percentage of increase Lutheranism recently has grown faster than the Protestant Episcopal Church. There are forty-nine Lutheran churches in New York city of one kind or another with a church property of upward of \$3,000,-

000. These forty-nine parishes or churches are practically each self-supporting and economically independent. There is little indebtedness and less endowment. Coming to her parishioners there are few men of what might be called great wealth and none who rank among the wealthiest of the country. Said a Lutheran pastor: "When a Lutheran does become wealthy he becomes a Protestant Episcopalian." The Lutheran Church in New York city has made her growth mainly by the faithful confirming and instructing in the Bible of the boys and girls in her parishes. This is her main work and her main reliance. Here surely, you say then, is an admirable Church. The Lutheran communicants are mainly of the lower middle class, with not a few that are among the very poor. Yet who ever heard of a Lutheran clergyman in New York city saying anything or doing anything or, seemingly at least, caring anything for social or economic reform? As a Lutheran clergyman said to the writer, the only reform on which the Lutheran Church is radical—we pricked up our ears—is in *not* opposing the saloon, as such, but only its abuses. Evidently economic and social reforms in New York city will not be much advanced by the Church of Luther.

Why? It is the typical Church of the lower bourgeoisie and its faith is typically bourgeoisie. We have spoken of consolidated Lutheranism, but there is no such thing. There are in the United States at least twenty-three absolutely independent and ecclesiastically distinct Lutheran denominations. Most of these are represented in New York city and absolutely distinct. There are, in the first place, German Lutherans, Danish Lutherans, Finnish Lutherans, Finnish Apostolic Lutherans, Norwegian Lutherans and Icelandic Lutherans. Then there are Buffalo Lutherans, Texas Lutherans, Missouri Lutherans, Iowa Lutherans and Hauge's Lutherans. There is the Missouri Synod, the English Missouri Synod and the New York Missouri Synod. All these are absolutely distinct, and we know not how many of them are in New York. This in itself spells economic and social weakness. But what may be called the Lutheran economic or

social theory is the main source of its failure in this respect. The Lutheran churches believe in the State; they believe in what they call the Christian State; they have generally derived from German sources the old Germanic conception of the paternal Christian State. Consequently, the State being considered a Christian body, they leave to it the formation and execution of all social and economic reforms. This is the State's duty. The Christian clergyman need not concern himself about it. If it is not done it is not the clergyman's fault, but the State's. The clergyman's duty is to baptize, to marry, to bury, to administer occasional sacraments, and, above all, to confirm and instruct the young. This theory, born under the old State paternalism of the German Empire, the Lutheran clergyman applies to a New York city ruled by Tammany and a New York State ruled by the lobby at Albany. Verily, the forces of corruption and monopoly have nothing to fear from the Lutheran clergymen of New York city.

Next to the Lutherans in Greater New York in the number of communicants and before them in Manhattan and the Bronx comes the Presbyterian Church. In the wealth of its communicants and the social standing of its families it resembles, tho at a considerable remove, the Protestant Episcopal Church. It is like the Protestant Episcopal Church, but without the free speech of her clergy, nor showing nearly so great an activity, at least so far as the Church goes, in charitable and institutional work. There are fifty-three Presbyterian churches in Manhattan and the Bronx and eleven chapels or missions, like those of the Protestant Episcopal Church, largely supported by wealthy parent churches. The Presbyterian Church has some 30,000 communicants, with a church property valued at over \$10,000,000. Her money is raised, as again in the Episcopal Church, from the wealthy few, and the moderate many or poor, tho the wealthy are not so wealthy nor the poor so numerous as in the Church to which we have compared her. Two of the great institutional churches of the city are Presbyterian, tho others are doing some institutional work. Outside of Dr. Parkhurst's reform efforts, none of the Pres-

byterian pastors have come to the front in reform effort, tho there seems to be a little group of men around Union Theological Seminary progressive in almost every line. It is a significant fact that two sons of the leading Presbyterian divines of a generation ago have left the Presbyterian fold to develop radical economic views, one entering the Protestant Episcopal Church. A valiant Presbyterian clergyman in Chicago, the Rev. Charles Stelzle, has galvanized the Presbyterian Home Missionary Society into creating a labor department and has induced several Presbyterian clergymen to register themselves as fraternal delegates to labor unions, so that even the Presbyterian Church in New York is coquetting with the Central Labor Union in this direction. But both parties seem very coquettish about it, and the alliance, to say the least, is not firm. Certainly the Presbyterian Church in New York gives no promise of setting the world on fire in economic reform. It is engaged in struggling to add to its members enough to balance those who die.

Next in New York city, in point of numbers, come the Methodist, Baptist, Reformed and Congregational bodies. The Methodist Episcopal Church has sixty-three churches and chapels and 19,420 communicants, with church properties of some \$6,000,000. But of the Methodist Episcopal Church and social and economic reform nearly nothing can be said. The two do not go together. A few Methodist clergymen would like to "do something for the workingman," but do not know what to do. Evangelicalism has seemed to quench the social gospel of the evangels.

The fifty-two Baptist churches in Manhattan and the Bronx, with their 19,738 members and their property valued at \$6,000,000, present almost the one sensational instance in New York city of a denomination largely ruled by one wealthy man. The well known Bible class in this denomination, led by Mr. J. D. Rockefeller, Jr., shows what money can do, and Amity Church, in this same denomination, shows what devotion cannot do. The Bible class, aided by perhaps \$1,000,000,000 worth of advertising, is known thru the United States. At Amity Church one of the purest, bravest souls in New

York city preaches to but a handful. Mr. John D. Rockefeller agrees to double each year the amounts raised by the Baptist City Mission and the New York State Baptist Convention. The result is that it is more than whispered that if any Baptist city missionary or State preacher pleases Mr. Rockefeller he remains; if he does not, he goes. However it be with his money, the Church of Mr. Rockefeller certainly has a taint in the eyes of the world.

The Reformed Church, commonly known as the Dutch Reformed Church in New York city, is, of course, the oldest religious body in Manhattan and heir therefore to large social prestige and endowments of great value. Its twenty-nine churches and chapels, with 11,526 communicants, have property valued at \$4,600,000. The property of the Collegiate Church alone is estimated at \$1,500,000. Perhaps more than any other communion in New York city, with the single exception of Trinity Parish, with its \$9,000,000, it draws its resources, not from the present, but from the past. The policy of Peter Stuyvesant and of the clergy of New Amsterdam, who held that "faith and the flag go together," gave the Church of Holland a virtual monopoly of religion in old Manhattan, and the bequest of John Harpendinck in

1723 largely created the Collegiate Church's wealth on which she lives to-day. In the Reformed Church are many earnest and active men. One of the most active and useful laymen in New York city, he who is doing more, we were going to say, than all others put together, in drawing the denominations together for practical work, the secretary of the New York Federation of Churches, belongs to this communion. But a church with so much of its economic treasure in the past cannot be expected to have a very advanced economic faith, and the Reformed churches do not belie this expectation. They stand with most of the other churches of New York city for some charity, a dignified, esthetic religious life and some individual Christian activities.

Of the remaining Christian denominations we cannot and need not speak. Among them all is scarce one clergyman in the city, with the possible exception of one or two Congregational clergymen in minor positions, who is known to have said aught or done aught for any radical reform. In these denominations, as in the Churches we have studied, we have the spectacle of a Church without a prophet, and the people languish, tho, as we shall see later, they do not mourn.

AMITYVILLE, LONG ISLAND.

## Tuskegee

BY LESLIE PINCKNEY HILL.

WHEREFORE this busy labor without rest?  
 Is it an idle dream to which we cling,  
 Here where a thousand dusky toilers sing  
 Unto the world their hope? "Build we our best  
 By hand and thought," they cry, "altho unblessed."  
 So the great engines throb and anvils ring,  
 And so the thought is wedded to the thing;  
 But what shall be the end, and what the test?  
 Dear God, we dare not answer, we can see  
 Not many steps ahead, but this we know—  
 If all our toilsome building is in vain,  
 Availing not to set our manhood free,  
 If envious hate roots out the seed we sow,  
 The South will wear eternally a stain.

TUSKEGEE, ALA.

# “The Revolutionary Way”

[The following article is written by a gentleman who is now acting as our special correspondent in Russia, and in whom we have the greatest confidence. The article itself shows that no one could have better facilities for getting at the heart of the revolutionary movement than he. When we announce his name, as we hope to do after he has left Russia, our readers will recognize in him an old friend. Our correspondent will follow this article by others, as the occasion demands.—EDITOR.]

“Come immediately to ——— Street, House 16, Apartment 10; you can be of service. I shall wait for you until 6 o'clock. MARIE N.”

THESE few scratched lines in French were left at my door in St. Petersburg at 4 o'clock on December 21st, the first day of the all-Russian general strike.

Leaving word with my American friend that I had no idea when I could return, I called the *isvostchik* to be found at the hotel door and drove off at top speed to the given number. I supposed this Marie N. to be the Madame N. who had introduced me the day before to Maxim Gorki and who had offered to open the way into the inmost revolutionary sanctuaries. Some fifty-five or sixty years of age, she was nevertheless the liveliest and most “American” of all the revolutionists I had met. I had tried to reach Gorki for several days. Two excellent introductions I had brought from revolutionists in Paris and Warsaw. Half sick and exhausted with overwork, he was avoiding some of his best friends. I was even able to arrange an audience with Count Witte before I could reach him. But Madame N. arranged the matter in an hour.

The wife of a former Minister, I believe (perhaps it was a general), she had devoted many years of her life to the education of the city workmen, exhausting a large fortune in the work. When I found her she was living in a garret room and had only tea and rather stale biscuits to offer as refreshment. An enthusiastic but also level-headed woman, she is the only person I have found who is in equally good relations with the revolutionists of all three groups—the Social Democrats, the Social Revolutionists and the Union of Unions, the principal organizations of the working people, the peasants and the professional classes. Thru Madame N. I thought, as we flew along the Nevski, perhaps I am at last to meet the executive of the Council of

Labor Deputies, the most talked of and the most powerful of all the revolutionary committees of Russia.

It had been no difficult matter to get into touch with the managers of the Social Democratic and Social Revolutionary parties or with the executive of the Union of Unions of all Russia. The preparations for the general strike were discussed for weeks quite openly in the newspapers representing these organizations, the murder of General Sakarow was publicly condoned, and even the proposed armed uprising was coolly discussed in the Socialist organs. The Council of Labor Deputies, unlike the Social Democrats and Social Revolutionists, is not a political party; and, unlike the Union of Unions or the Central Bureau of Labor Unions, it is not a professional organization. This is the body organized by the now famous Krustaloff and a little band of skilled workmen which undertook to give a sort of provisional government to the workmen of St. Petersburg after the manifesto of October 17th and the first general strike. It had quite openly furthered the strike of the Post and Telegraphs, made a crime against the State by the Czar's ukase; it had openly prepared for the present general strike and had sent its emissaries to organize similar bodies all over Russia.

It had also been easy enough to attend meetings of this body until the wholesale arrest of all its members a week before, and a second wholesale arrest on the day before the proclamation of the strike. I wanted to visit its sessions in person, because I wanted to know, first, how far the movement had been disorganized by the wholesale arrests, and, second, whether it was really a workers' movement or one promoted by the conventional “handful of agitators.” Finally, I wanted to know how hot-headed or how cool and far-reaching were its plans.

I arrived after a few minutes at No.

to and hurried, as is usual in visiting revolutionary committees, to the top floor. I was not disappointed.

Madame N. was not there, but I saw several familiar faces and was shown into the room where the Executive Committee was holding its session. It was at once evident that only a few at most of the leaders of the movement had been captured. While several groups were busying themselves in various parts of the large room the chairman walked up and down with me to explain why they had wanted to see me at such a moment.

"Well, here you are," he said; "you see they have not got us all. You have here the Executive Committee of the Labor Deputies."

"Of St. Petersburg?" I asked. "No," he answered, impatiently; "of all Russia—railroads, telegraphs and all. Now you can understand that we can't have a troop of correspondents running after us here. The Government has returned to its old methods and is arresting everybody it can lay its hands on. You know the correspondents. Can't you arrange that one of them should come to us for the news and then give it to the rest?"

I anticipated and found no difficulty in fulfilling his request. In return I was invited the same evening to attend a fuller meeting of the Labor Deputies.

My first question was already partly answered. The movement had not been disorganized by the wholesale arrests of the police. At the evening meeting I expected to find an answer to the second question, "Was a general strike in St. Petersburg an artificial manifestation promoted by a handful of agitators, or a genuine movement of the majority of the St. Petersburg workmen?" Already I knew that the workmen of the Putiloff Works had in a large meeting expressed their confidence in the Labor Deputies. I knew, too, that the Central Bureau of the Labor Unions had made a similar declaration. The question was, "Was the strike timely at this moment when the new organization of the clerks, street railways and electric lighting plants and others had been disorganized by the arrests?" Certainly the official newspaper of the Council had adopted no uncertain tone in replying to this question.

"We know," the Council's journal had said the day before, "that the reigning house of Romanoff is still strong enough to do violence against isolated individuals. It is another question whether it is in a position to save its throne."

The revolution has again entered into the thickest conspirative stage. Driving to the evening meeting we dismissed our sleigh several blocks away. I arrived to find, again on the top floor, some sixty or seventy deputies crowded around a table in the space of an ordinary dining-room. Sitting next to one of the secretaries, who spoke French, I was able to follow fairly closely the meeting.

Thirty-five of the deputies represented the seven "*rayons*" into which St. Petersburg has been divided for the purposes of their organization. These deputies were, apparently, without a single exception, working men. Some fifteen special delegates represented nearly as many prominent railway lines. About ten delegates, without a vote, were admitted from various revolutionary organizations. Most of the latter were "intellectuals." They took a prominent part in the meeting, but occupied altogether a decidedly subordinate position to the workmen.

I did not remain thruout the whole meeting, but in the few hours that I was there I listened to the reports of all the deputies and a number of the delegates. There was no exception to the enthusiasm shown by the very first speaker. Nearly all the factories had struck. The only important exception came out a few days later. Each speaker told in the concrete way natural to working men of incidents of the strike. There was much more laughter than heated talk. There is no question that the strike had in one way or another taken hold of a vast mass of the St. Petersburg workmen. Only the new organizations, such as those of the clerks, street railway men and electric lighting men, had failed. But there was none of the spirit of a life and death struggle. In talking with some of the deputies I learned that it was not expected that an armed demonstration could be made in the central districts. The necessity of protecting the Government officials, the higher aristocracy, the wealthy shops and banks and the Govern-

ment Treasury in this central district had forced the Government to concentrate there the larger part of the army of fifty to a hundred thousand men quartered in and about St. Petersburg in these revolutionary times.

What, then, was the purpose of the St. Petersburg strike? Armed demonstrations in the suburbs, if they could be carried out, would have only a secondary influence on public opinion. Even the peaceful strike had little opportunity of invading the center of the city.

It was doubtless the feeling of most of the deputies present that a part of the army would come over to their cause. Several of the speakers spoke of the fraternizing of the troops with the strikers. One described the marching out of the workmen from his factory with red flags flying and the singing of the "Marseillaise."

"We soon passed a sotnia of Cossacks," he said. "They took it all good naturedly and asked us what we were singing. We shouted back, 'We are teaching you a new song.'"

Teaching the army a new song—that was the idea of the workers. The army has learned this new song in many parts of Russia, and it may learn it, they think, in St. Petersburg. Another deputy spoke of the refusal of a group of Cossacks to charge. The chairman of the Executive Committee of the Deputies himself (an "intellectual") seemed to believe enthusiastically in the idea of an immediate armed uprising, but his view was not shared by the Social Revolutionaries nor even by all his brother Social Democrats. Why, then, the strike?

The truth is the fight had been forced, according to the confession of the deputies themselves.

As long as we had the power to give or not to give battle, says their official organ, we have always postponed the moment of the beginning of the fight in order to get ourselves more ready, but now the Government forces us to fight. The enemy's army is moving its whole front against us, and no moment of hesitation is any longer possible.

If, then, the strike has not invaded the heart of St. Petersburg, if it has not made an impression on the Government, the wealthy classes and the foreigners in

the center of the city, if it has not even drawn a single regiment into the revolutionary ranks, has it failed? To answer this question one must understand very broadly the latest policy of the revolutionists. The following editorial from *The Beginning*, the organ of the Social Democrats, at once answers this question and makes a bold forecast of the immediate future. Remember, it was written on the 30th of November, Russian style, a week before the outbreak of the strike:

"The counter-revolutionary movement must lead sooner or later to a military dictatorship. What will be the reply of the people to this final step of the Government? A political strike, but one which will have little resemblance to the former political strikes. This next strike will be *very similar* to a revolutionary insurrection."

The writer in no case suggests that it will be nothing less than an insurrection:

"It cannot be otherwise. What is the spirit of the various social interests and classes at the present moment? *The Government* has understood that constitutional phrases and partial reforms are not leading to order; to establish order it must use the armed fist. On the other side, *the classes which are opposed to the Government* have radically changed their views as to the pacific and not bloody strike method. The Liberals know now that the insurrection of an armed people is the only means of freeing our country."

We shall explain hereafter what is the exact position of the Liberals, but let us quote at once this editor's remarkable prediction of Moscow barricades and Kharkoff mutinies:

"Under these conditions the general strike leads toward popular insurrection. What will be the picture of that insurrection? The cities will remain without connection with one another. The Government, which will have concentrated all its forces in the capital, will try to crush the riots in the streets of St. Petersburg, but it will have already become powerless to crush the revolution in the provinces. We must remember that the working people are tired of striking when the strikes are followed by counter-revolution, when black hundreds are then everywhere organized, and when, in the meanwhile, the soldiers are in a state of revolutionary fever and the country is up in arms. So, under these conditions, the passive strike necessarily transformed itself into an insurrection. The Government will be conquered in the provinces, which will not need to wait for the capitulation of the enemy. The capital will give the battle cry of the revolution, but it will only terminate it by a final blow after the insurrection will have triumphed in the provinces."

# Penalizing Marriage and Child-Bearing

BY ELSIE CLEWS PARSONS

[Mrs. Parsons has recently been a lecturer at Barnard College in Sociology, and has always taken a great interest in theoretical and practical social questions. She has translated Tarde's "Laws of Imitation," and has written somewhat extensively on philanthropic topics. She is the daughter of Henry Clews, the well-known New York banker, and the wife of Congressman Herbert Parsons, who has just been elected Chairman of the County Committee of the Republican Party in this city.—EDITOR.]

Much of the painful friction of transition that is one of the costs of progress is due to the attempt to suppress instead of to adapt new social tendencies.

Rarely have we a better illustration of this waste of effort than the opposition prevailing in some quarters to the economic employment of women, particularly married women. The judicially discredited decree of the New York Board of Education that no married woman should be eligible to teach in the public schools of the city was a striking epitome of this opposition. Had this archaic regulation become permanent, what would have been its effect? The teaching force would either have been composed of young, inexperienced and constantly changing teachers, or a body of celibates, analogous to the cloistered teachers of the Middle Ages, would have been formed. The disadvantages to school work attendant upon the first outcome are too obvious to need comment. Those attendant upon the second outcome ought to be, but apparently are not, equally obvious.

In the first place, pedagogy cannot afford to entirely overlook the experiences of maternity. All teachers do not need to be parents, but parental experience in pedagogy is a valuable asset. In the second place, no community can afford to segregate any number of healthy women as non-child bearers. Francis Galton has pointed out that the sacerdotal celibacy of the Middle Ages was one of the causes of their darkness. The race was thereby bred from inferior rather than superior stock. Our teachers, like the medieval monks and nuns, ought to and do belong to a superior stock; and to penalize marriage and

child-bearing for them is a crime against eugenics.

Is it not utter folly to harangue against race-suicide and yet to place women in a position where they must choose between celibacy, or childlessness and idleness or wasteful activity? We are not undertaking at present to justify women's wish to work. The belief that they will become more contented, attractive and competent wives and mothers, less prone to divorce and voluntary childlessness, if they are at the same time economic producers, is another story. That they have decided to work is a condition, not a theory. It cannot be faced with any archaism about what the leisure class woman ought not to do, nor can it be intelligently met with the fanciful assertion that woman's work is at home. This idea is a mere Rip Van Winkleism. The housework of fifty years ago is being constantly cut down, and the principle of division of labor which rules modern industry is coming to be more and more recognized as applicable to housekeeping. So that if a married woman wants to work at all, she must either be her own maid-of-all-work or she must find non-domestic employment. It is impossible to believe that any group of men will assert that all women, irrespective of training or abilities, shall become house servants.

Failure to think through the subject of the productive activity of married women is more serious than any small check it may entail upon the employment of women in any given place. The deadwood of an outgrown point of view chokes progress by hindering the emphasis of public discussion from falling fruitfully. In the present connection

progress depends upon a study by the whole community of the conditions under which women can work best. The emphasis of this study should fall:

(1) On how *all* girls may be educated with a view to making them producers *under conditions most conducive to health*.

(2) On what work women can best do which will admit of an average intermission of two months at childbirth.

(3) On what changes in popular sentiment are desirable to make child-bearing more compatible from a merely social point of view with productive activity.

Only the third point appears to need amplification. In the first place, do we not find here one argument among many for lifting the taboo on knowledge of sex in education. The fundamental relations between the sexes in and out of marriage and the physical aspects of maternity—moral, too, for that matter—are so carefully concealed from young people, particularly from girls, that their conceptions are necessarily hazy, or where they hear, as they often do, discussions of mere social conventions between the sexes, for example, superficial. The subjects of marriage and child-bearing have, therefore, little chance to take their rightful place in the girl's rational scheme of life. Too often the unformulated sense of sex hostility which seems to be a physiological character of adolescence combines with the entirely natural inference that marriage is incompatible with the development of what the girl conceives to be her whole personality, to turn her away for too long a time, or even altogether, from marriage and maternity.

An esthetic sense which falsely expresses itself as repugnance to marriage and child-bearing because of their physical characters is a not uncommon trait of American girls. This, too, is largely due to the same lack of educational frankness we have referred to. It is due, too, to another form of sex taboo, which requires a woman for some months before her child is born to live in retirement. She is particularly bound, "for the sake of decency," to avoid gatherings of young people. This taboo is both hurtful to the pride and a serious handicap to the productive activity of child-bearing women. It may lengthen the

period of her incapacity to work from a natural period of one or two to a conventional period of six or eight months.

There is a like altho much slighter taboo upon lactation. Moderate work is not injurious to suckling; but the nursing mother cannot perform this function well if she is under the strain of accommodating her nursing to her work. Her work must be accommodated to her nursing, and this means that provision must be made for nursing at convenient times and places in connection with her work. This provision will never be made as long as a lactation taboo persists.

The knowledge of the terms of susceptibility and exemption is important to working women. Here again women are handicapped by educational inadequacies and by taboo in general upon knowledge of this matter. The idea is still deep-rooted among us that women must bear children because they can't help themselves. Unfortunately, they do help themselves, and in ways very injurious both to themselves and to others. Not to mention grosser methods, we know that it is not at all uncommon for women to continue to nurse a child long after the proper time for weaning. Unwilling mothers do not make the best mothers. The accidental child is apt to be a forlorn little creature. Far better race-suicide than an only child custom or a flourishing system of foundling asylums. I believe, however, that direct instruction will be much more of a check upon than an encouragement of race-suicide. It lowers the cost of children, so to speak, and generally, if only from the point of view of the children's health and robustness, adds to their value.

To sum up in conclusion, women are going to work, and they are not going to limit their work to house service. Let us cease to attempt to make marriage and child-bearing a check upon their work, thereby strengthening tendencies toward celibacy and race-suicide. In ways which we have not gone into here, the consuming and non-producing woman is also, because of her unproductivity, prone to celibacy and race-suicide. Let us rather adjust work and marriage and child-bearing to a minimum of incompatibility by lifting inherited taboos on education in sex-facts.

# Long Nights

BY E. P. POWELL

AUTHOR OF "THE COUNTRY HOME," "OLD FARM DAYS," ETC.

THERE is scarcely a peep o' day between sunrise and sunset. The sun threatens to go below the wooded edge of the south at 4 o'clock. It did not look down into our valley this morning until nearly 8 o'clock. That is to give us but one-third of the twenty-four honest hours, leaving sixteen to darkness. When it is cloudy we get only six hours, or one-fourth of a day. It is curious that only one minute off per day, since July, should have left us so little of the superb sunlight of mid-summer. I shall never quite like these winter days, because there is so little of them. I am no owl, to blink at the sun and go abroad at midnight.

This does not hinder making the most of a short day. I get up at 6 or 7 and make the best of it. Daily I am grateful that the greasy candle of my boyhood is displaced by electric candles. An all over bath every winter morning, taken before a glowing grate, or by the side of a radiator, is not only a luxury, but a necessary tonic. Rub hard with a friction towel until the heart is relieved and the circulation fine. Then for an outing, while the air is pure. The winds howl like a pack of wolves, and seem to have everything in their possession. Doctors may say what they please about breathing thru the nose; I will not—not when I know that the air is clean. It may be all right in the smudgy air of the city, but out here, on these hill tops, I will open my mouth and let in full drafts of ozone and oxygen. It is a draft that tingles all thru me and murders the bacteria by the million. Then I go back with a feeling of triumph, having slain my enemies and having a sensation of being wholesome.

If the sun comes up clear it is a good thing to stand or sit awhile in the sun-bath window—unless, indeed, you have waited for the sun to rise, and can sit here without clothes. Anyway, the first thing in the morning is to bathe in three things—water, air and sunshine. You

should come out of it as red as a lobster. This is the boy of it; the way to keep young. What is the use of growing old? It is nonsense to expect to be worn out at seventy—or, indeed, at any other age. Not one in a thousand wears out. The rest eat out, or whine out, or die from being just clogged and congested. Did you ever look into a congested city street? Well, the air gets horribly bad—it is a case of poisoning; and not much different is it with a human body, overloaded with bad material.

How can seventy decent years wear out such an organism as Nature has given to man? I have no faith that one need be old too easily or so early. I can heartily sympathize with the boy of twenty, or even fifteen. I will not say so much for the youngsters before adolescence. I think I have lost out of my repertoire what were sensations at ten or twelve—only I remember that I planned my country home along about that time. Down in there somewhere I was getting out of the shell. The natal cord was not yet cut. It was my father and my mother that were still working and thinking and feeling in me; fortunately they were wise and wholesome, and fortunately they did not turn me over to be made a symposium of street boys—nor even of peripatetic preachers and teachers. I was full of their life, and their lore, at twelve—just there being taught to face the world and be myself. From that point there grew up a single self fellowship. I am still fifteen, but I am also seventy. Why not? Let us not throw away our years as fast as they are once lived.

I said that some folks eat out their lives. Two meals a day are enough at any season; certainly during these six hour days. One should not make his internal organs work harder and longer than the external. When we let up on our arms and legs, why not also on our stomachs? The digestion is a mill that grinds on, night and day, often doing

the work of the teeth as well. Protest after protest is sent up to the brain; then follows a strike (we call it a stroke); enfeeblement and dissolution.

Two meals a day; and the first should be according to the season, at 10 o'clock if convenient; if not at 12. If you form this resolution, keep out of sight of the breakfast table for a few weeks; after that you will not care for it. But by all means begin your first meal with fruit. In my study you shall have just now apples, selecting from Northern Spys, McIntosh Red, Princess Louise or Walter Pease; and of pears you may have a Lawrence, sweet as honey, or an Anjou, lusciously juicy; and there are baskets of grapes and persimmons. Now, with a stomach that has been thoroughly rested, you shall know the joys of feasting. The odors come upstairs of corn bread (to be eaten with home made maple syrup); of sweet potatoes, roasted with their natural sugar; of tomato soup, and pumpkin pudding—or it may be a steamed Indian pudding. There are no greasy compounds to spoil the fragrance. Half a meal of fruit and half a meal from the garden and the farmer's field make a tidy whole. If the table be overloaded, that is no reason why we should overload the stomach. Instead of a whole slice of pudding take half a slice. As for meat, after fifty, the less of it the better—only I still accept gratefully that less of it, especially if it be lamb.

As one grows riper—not older—he is privileged in certain ways. Has he not had experience, and why should he not occasionally make it known? Among these rights I count as very wise that of telling of some of the good old days, and good old ways. This comes to a grumble only when there has been too much progress and too few privileges. Primitive life is certainly better for a few things. The old-time big brick ovens gave a sweeter bread and better chicken pies, while everything was "done to a T," better than any range on earth can do it these days. Nor do I hold it quite a sin to tell my wife of the marvelous skill of my mother as a cook. Bless my soul! In those days there were no recipe books, and, indeed, no need of any. Every one who undertook to manage a household was herself a cookbook.

She did not measure and weigh, but took just enough of spices and sugar and butter, by instinct.

All the before-noon I give to literary work. The brain may have the blood without any battle with the stomach. Page after page slips off the typewriter. The stenographer looks around, sighing, to see if we are not nearly finished. Well, well! Is he still not near the end? Will he run on forever? Half an hour before dinner we throw up our hands and shout. The blood may once more gallop through the veins, and then go back to the stomach in happy expectation. We run out of doors, and are boys in the fields, romping with the collies, or possibly throwing a few balls of snow. We feed the cow; talk with the horse; count the new eggs, and then meet the mail carrier.

After dinner, and such a forenoon, one has earned a rest. No hard brain work should ever be done in the p. m. of the day. Everybody is, or ought to be, young in the morning; but after dinner let him slow up. A Morris chair or a hammock swung in a sunny window, I do not know which is best. This is the time to learn why novels are written. One need not stuff his soul with even the best of them; but let them throw an idyllic atmosphere of imagination around his siesta. A good novel can carry you out of your study and your work world, can give you social life without wearying you, and then if you fall asleep who is offended?

Sleep is a new life—another world. Any one that sleeps well lives two collateral existences. Old age should always have enough of it; at least an old age that works enough. An after-dinner nap suits both my collie and myself; and when we wake up from it we do not undertake to live the morning over again, but just to have an afternoon of it. At this time of the year we walk some, we play some, and we skim the newspapers. From three until five visitors are welcome—especially college boys, who want a little help with their essays or debates. It is a grand thing to keep in full sympathy with the lads. There is nothing in the world so fine as a young fellow, who does not know a bit what he is going to do in the world, only he

means to do his best. Then there are the fellows who are only getting ready to do their second best, or their third best—and these I have no time for.

A friend of sixty-five years writes that he has been broken down these eight years past. What nonsense for a decently-made-up man to talk. He was cut out for one hundred years easily; and they should have been brimful of good, sweet life thoughts and activities! I have watched, and am convinced that this breaking down is, in almost all cases, a matter of bad habits and broken laws. Let him have these college boys around him; or let him enter into the fullest good will and sympathy with his own lads, and he will not grow old. Froebel taught us how to make one out of play and work; we may also make a oneness out of youth and old age. We begin this business of growing old by the time we are fifteen. Boys are made to associate with dictionaries and grammars instead of men. What they want is not Greek roots out of the "Iliad," but Homer himself. That will give them a more vital imagination, and sweeter juices in their veins. Among the religious teachers Jesus is always the youth; fresh as a spring day, as strong as he is beautiful—and with a dash of human feeling at every point. The Bible itself is worthless but for the fine fellows in it. Moses may have made mistakes in history; he made none in his manhood. David and Saul had vitality to defy two thousand years. I think that is what Jesus meant when he said he came that we might have more *life*.

However, one grows old faster in the winter than in the summer, no matter how wisely he may live. We must learn to migrate like the birds. In Florida we lie under the pines in January, listening to the bees and watching the cardinal birds. I never heard anything finer than a chorus of blackbirds—500 red winged choristers—in the tops of my pines. What perfect time they keep! No other

bird has gone beyond the solo and the fugue. Off with your coats at midday! Think of planting potatoes while you at the North are sawing ice for storage, and of pulling carrots and beets in February—at the same time smelling this year's orange blossoms and picking last year's fruit. Ah, well, the time is coming when you will flock away like the robins; will farm it for five months in Florida, and then seven months in New England, or New York, or the Northwest.

These long nights are naturally pessimistic. We are children of the sun—Incas in thought, in love, in poetry, in joy, and in life. But when we get the day squeezed into seven or eight cloudy hours, we become mentally spindling, like potato vines that grow in the dark, or like short-stemmed dandelions that squint out from under a hedge in December. If the season should some way get fixed, and the days stay short all the year round, we would rewrite all our literature—even our Bible. Heaven would be the hot place of our hope; and Sheol would be covered with ice, with the thermometer down to zero—a slippery place, where one would find it as difficult to keep his physical nature erect as his moral.

Our Christmas is only a readjusted winter holiday, originally intended to relieve the gloom and tedium of long nights. It has become a sort of natural evolution, a supplementary Providence. It is, as we have it, a marvelous provision to keep up our spirits. The Christ idea fitted well to the natural key of the old time festival. It is now the breath of Hope, the light of Faith, the joyousness of Love, filling our homes and our souls, just when the sun has most deserted us; and when the fingers of darkness get at our very marrow. It is now that we are most children, and most feel what it is to have "Our Father" over us and above us, with a pledge of his strength and his love.

CLINTON, N. Y.

# Southern Representation in Congress

BY SYDNEY J. BOWIE

[Mr. Bowie is one of the youngest members of Congress, being but forty years old, and is already recognized as a leader in the counsels of Southern Democracy. We are glad to have him state the case, in its most favorable form, for the stringent provisions intended to reduce the negro vote. The present session of Congress, with its recurring proposals to reduce Southern representation, gives timeliness to this discussion.—EDITOR.]

TO my mind there are two unanswerable reasons why the States of the South ought not to be punished for having reformed the suffrage. Before undertaking to set forth these reasons and arguments in support thereof, it would be well to clear the question of certain popular fallacies and misapprehensions.

To begin with, the whole South has not undertaken to deal with the subject at all. Only six States have taken any steps whatever toward a regulation of the suffrage. These States in the order in which they acted are, Mississippi, South Carolina, Louisiana, North Carolina, Alabama and Virginia. There are differences in detail in each of them, but in only two of these States, to wit: Louisiana and North Carolina, was the so-called grandfather clause adopted, and even in these two States the clause itself expired by limitation in Louisiana more than five years ago, and will expire by limitation in North Carolina within less than three years, to wit, January 1st, 1908.

The number of white persons admitted to suffrage under the so-called grandfather clause in each of the States is a purely negligible quantity, practically not ten per cent. of the whole, and as the number can never be increased, and must from year to year be steadily diminished by death or removal or other causes named in the Constitution, it is quite apparent that the attention directed to this clause has been another instance of making a mountain out of a molehill. The question of real and vital concern is as to the permanent plan now in force, and which must continue so long as the present constitutions last.

The permanent plan in all of these States is in essential features the same, such differences as exist relating merely

to detail. Being most familiar with the Constitution in Alabama, I would condense the provisions of the permanent plan in that State by saying that all persons, white or black, if they have paid their poll-tax and have the required residence qualification, and freedom from conviction of infamous crimes, can vote, if they possess either of the following qualifications: (a) If they can read and write any article of the Constitution in the English language, and have been engaged in some useful trade, occupation or calling for the better part of twelve months next preceding the offer to register. (b) Any person who owns three hundred dollars worth of real, or personal property, or forty acres of land, or the husband of any woman who owns such property, provided the taxes thereon have been paid.

It is to be observed that the voter in order to register is not required to possess both of these qualifications, but may possess either. For instance, if he possesses the educational qualification it is immaterial whether or not he possesses the property qualification; or if he possesses the property qualification it is immaterial whether he possesses the educational qualification. In this respect the constitutions in the South are more liberal to the white and colored voter than the constitutions of several of the Northern States, which might be named.

The right of a person entitled to register and vote under the permanent provision of our Constitution is jealously guarded and protected. It is not dependent, as has been assumed by many, on the caprice or arbitrary discretion of the registrars. The right is firmly planted in the Constitution, and no registrar can lawfully refuse the right to any person, white or black, entitled thereto.

But peradventure lest some registrars might act arbitrarily, both the Constitution of the State and the act of the Legislature passed in pursuance thereof, grants to the applicant the right of a prompt appeal to the courts for the ascertainment and vindication of his privilege of the suffrage, and the provision is further made that on this appeal to the courts the applicant shall not be required to give security for cost. Even the manner of taking the appeal is simple. The applicant is merely required within thirty days after a denial of his right to register to file a petition in the circuit or city court of the county in which he resides, asking that the question of his qualifications for suffrage be inquired into and determined. This constitutes an appeal which the applicant can prosecute to the Supreme Court of the State, if necessary. If registration is granted it relates back to the time of the application as well as for the future, it being permanent as long as the voter maintains his residence and does not become disqualified for some constitutional reason.

That all negroes are not disfranchised in the South, is proven by the fact that of the fifteen Southern States all negroes can vote in nine of them, and in six Southern States all negroes can vote who possess either of the qualifications in the permanent plan above stated; in fact, nearly one hundred thousand negroes are already registered in the six Southern States above mentioned, and this, probably, could be extended to several hundred thousand if the negro would only pay his poll-tax, a provision rigidly enforced upon the whites as well as upon the blacks. For example there are nearly one hundred thousand negroes in Alabama possessing either the property or educational qualifications for suffrage, but most of these negroes are subject to a poll-tax of one dollar and fifty cents per annum. Out of about one hundred thousand negroes subject to the poll-tax in Alabama in 1903, only 1,250 paid it. The payment of the poll-tax is voluntary except that it is a condition of suffrage. Out of an equal number of whites subject to the poll-tax in Alabama, 89,452 paid it. These facts absolutely disprove the statement that

the negro as such is disfranchised in the South, or any part thereof.

I will now state two objections to the reduction of representation: First, I contend that the suffrage has not been denied or abridged in any State in the South within the meaning of the Fourteenth Amendment, and, therefore, that Congress is without jurisdiction to order a reduction of representation. Secondly, I contend that even if it should be admitted that suffrage has been denied or abridged in the South, yet the right to reduce representation is discretionary with Congress, and under the facts and circumstances hereafter alluded to Congress would not be warranted in exercising this discretion in that manner. I will consider these questions in their order:

First, has the suffrage been denied or abridged within the meaning of the Fourteenth Amendment? The strongest answer to this question in the negative, which can be offered, is that of Hon. Thomas M. Cooley, a life-long Republican, a distinguished judge and one of the greatest writers on Constitutional law that this country has produced. Judge Cooley, in his work entitled "The General Principles of Constitutional Law in the United States of America," published in 1898, at a time when probably a dozen States in the Union had educational qualifications of suffrage, uses this language:

"To require the payment of a capitation tax is no denial of suffrage; it is demanding only the preliminary performance of public duty, and may be classed as may also presence at the polls with registration or the observance of any other preliminary to insure fairness and protect against fraud. Nor can it be said that to require ability to read is any denial of suffrage. To refuse to receive one's vote because he was born in some particular country rather than elsewhere, or because of his color, or because of any natural quality or peculiarity which it would be impossible for him to overcome, is plainly a denial of suffrage. But ability to read is something within the power of every man; it is not difficult to attain it, and is no hardship to require it. On the contrary, the requirement only by indirection compels one to appropriate a personal benefit he might otherwise neglect. It denies to no man the suffrage, but the privilege is freely tendered to all, subject only to a condition that is beneficial in its performance and light in its burden."

The Constitution requires a new apportionment every ten years. The men

who framed the Fourteenth Amendment were to a large extent members of the Congress which reapportioned representation after the census of 1870. Several States, notably Massachusetts, had even then adopted educational qualifications of suffrage, but there was not the slightest suggestion that this State which had taken this step in pursuance of a sound public policy to regulate and improve suffrage should be penalized for doing so. As a consequence no notice was taken of the existence of this qualification of suffrage and the apportionment in Massachusetts was based upon population, just as it was in all of the other States. Identically the same condition arose in 1880 and 1890. No suggestion from any source was heard that these States in the North which had made an effort to elevate and improve the suffrage should be punished on account thereof. The first hint of such construction of the Fourteenth Amendment was heard when the States of the South, borrowing courage from the action of their Northern sisters, undertook in the decade between 1890 and 1900 to inaugurate a great, necessary and wholesome reform in the South within their own border. The necessity for such a reform in the South was confessedly more apparent and pressing than it had ever been in any State of the North. The quantity of illiteracy, both white and black, was far greater and all the conditions far more imperatively demanded reformatory action in the South than in any section of the country. Only after the South had undertaken to enter upon a reform which every true statesman who undertook the trouble to investigate the matter at all knew to be necessary, was the suggestion ever heard that the Constitution of the United States put the improvement and elevation of the suffrage under a ban by the imposition of a drastic penalty!

In 1900, it looked for a time as if the question would be serious, but Mr. McKinley, one of the wisest and most far-seeing statesmen who ever occupied the Presidential chair, made short work of the matter in an authorized statement in which he declared his opposition to the proposal, and consequently, in 1900, Congress, in pursuance of the wishes and

advice of Mr. McKinley, again by its action held that the Fourteenth Amendment did not apply to any regulation of the suffrage such as had been adopted by any State in the Union. We have, therefore, the contemporaneous construction of the framers of the Fourteenth Amendment, backed by the subsequent action of Congress, to the effect that the educational qualifications for suffrage did not come within the meaning of that amendment.

But again, the second section of the Fourteenth Amendment at most merely grants to Congress the authority to reduce representation if it sees proper. It is like any other grant of power; for instance, Congress can pass or not, as it pleases, a bankrupt bill; it can declare war or not, as it pleases. It is guided in all these express grants of power by the sole inquiry as to whether or not in its opinion such legislation is desirable.

Ought Congress to impose a penalty on a State for having improved the suffrage? Is it good policy for the law-making body to punish the right and reward the wrong? The questions seem to answer themselves.

The conditions in the South were peculiar. Reconstruction, forced upon us after the war, when we were helpless, inflicted far more injury than the war itself. Conditions had reached an intolerable stage which required imperatively that some remedy should be had.

The people of the South, or rather of the negro-congested States of the South, in the decade between 1890 and 1900 found themselves in an attitude where every consideration of public policy and future welfare demanded a change. They found in the second section of the first article of the Constitution which their forefathers had helped to frame and make good that the right of suffrage was exclusively left with the State, and that during all the years the only change that had been made was in the provisions of the Fifteenth Amendment, that suffrage could not be denied or abridged on account of race, color or previous condition of servitude. Within these limitations they had ample and full power to regulate and reform the suffrage. Other States had done so without penalty or complaint, why not they?

During the period of reconstruction we saw public debts piled up, taxes becoming confiscatory, values declining, business stagnant and uncertain, justice denied or for sale and a proud country paralyzed. In the period since reconstruction we have seen the schoolhouse upon every hill, progress unapproached in the history of the country, the population increasing at a more rapid rate, relatively, than the North in the decade from 1890 to 1900 for the first time since the first census was taken in 1790. We have seen the white people of the South expend 140 million dollars for the education of the negro and continue its expenditure at the rate of \$6,500,000 dollars per annum. We have seen illiteracy decline among the negro population in the South at a greater rate than among the negroes of the North. We have seen it decline from 1870 from 86 per cent. to 49 per cent. in 1900, and the ratio of decline in the present decade will be even more marked. We have seen the railway mileage increased from 20,000 to over 60,000 in twenty years, the spindles in the cotton mills, and the tons of coal mined have increased over 1,000 per cent.

during the same periods. The banking capital of the South has increased over 100 per cent. in four years. Do not all these facts taken together demonstrate that the fathers left the suffrage problem in the right hands when they left it with the States to settle for themselves? And is it right or just now to say to the people of the South, "You may not regulate or reform your suffrage, however imperative, except upon penalty even though for forty years your sisters of the North have exercised the same privilege without complaint?" Will the people of the great North, when all the facts are laid before them, permit Congress to construe a constitutional amendment one way in the North and another way in the South, or will they do more, permit Congress to say to the States which have elevated and improved the suffrage "You shall be punished therefor," and to the States which have debauched and degraded it as it has been in many, "You shall be rewarded?" Does the Fourteenth Amendment really mean to prohibit a just and fair regulation of the suffrage under penalty? I cannot think so.

ANNISTON, ALA.

## The Trouble at the Naval Academy

BY PARK BENJAMIN

AUTHOR OF "THE HISTORY OF THE UNITED STATES NAVAL ACADEMY," AND GRADUATE OF THE CLASS OF 1867.

FOUR things may confidently be asserted.

I. Hazing at the Naval Academy is not traditional in any form.

II. The causes of the present trouble are plain.

III. So are the remedies.

IV. The *morale* of the Navy as a whole is not impaired.

This looks somewhat dogmatic. Wherefore an intimate knowledge of the service and its school for over forty years is offered as apology—if not as justification—together with that which follows:

### I.

Not only has hazing never been traditional at the Naval Academy, never otherwise than, as now, occasional and with obvious cause—but, during the first quarter century of the life of the institution it was non-existent and ridiculed. This because it was then looked upon as a West Point practice. The Naval Academy was not founded until nearly fifty years after the Military Academy. It was not then organized as a military school at all, nor would the Navy of 1845 ever have permitted it so to be born. Our Navy then was composed

wholly of sailors, and "a messmate before a shipmate, a shipmate before a stranger, a stranger before a dog, but a dog before a 'sojer'" shows its ancient (and happily long since altered) appreciation of the sister service. It was enough to know that "hazing"—a word not even used at Annapolis—was a habit of the "army people," to make the midshipmen leave it severely alone.

More than this, they did exactly the opposite—deliberately, I have always thought, and for the very sake of contrariety. The old hands of the 'fifties, especially those who came back to the Academy for a second term after an intervening cruise, instead of tormenting the youngsters, patronized them. And long after the regular classes had been established and the Naval School had become almost as military as West Point itself, the custom of an upper class man selecting and defending "his plebe" still remained.

The midshipmen of those days were not angelic beyond the generality of youths of their age. They punched one another's heads, boy fashion, as circumstances demanded, and occasionally "devililled" an over-conceited plebe—not because of his plebeness, be it observed, but because of his conceit. No corrective much worse than making him chant the praises of himself as printed in his home newspaper was applied, and no harm—in fact, a rather salutary lesson—resulted.

But, in 1871, we were blessed with demagogues in Congress who, by way of showing a lofty republican contempt for "naval aristocracy," sent a lot of boys of more or less doubtful antecedents to the school. Then for the first time in its history, vicious hazing ensued. Eleven culprits were summarily dismissed. The evil nevertheless continued and, in June, 1874, Congress enacted a drastic law which made every form of plebe bedevilment, whether harmful or not, an offense to be dealt with by drumhead court martial, and provided that upon an adverse verdict the recommendation of dismissal by the superintendent should be final and carry with it perpetual incapacity for reinstatement. That law has been in force ever since.

In spite of it hazing recurred almost

immediately and then the scenes now in daily progress at Annapolis were first enacted. Courts martial then, exactly as now, were the order of the day. Eminent "counsel for the defense," as now, from all parts of the land were brought to the Academy. The victims then, as now, refused to remember who their persecutors were—swore, as now, that they "did not see anybody" haze them. When they were dismissed they were again and again reinstated.

Nine or ten years later (1887), the hazing law got a paralyzing setback. Captain Sampson (afterwards Rear Admiral), then Superintendent, condemned a batch of offenders to immediate dismissal. The President substituted a brief term of seclusion on the prison ship, tacitly refusing to recognize the mandate of the statute, because it made the Superintendent the final arbiter and deprived the Executive of the pardoning power. After that the law naturally lost force.

Hazing, however, declined and practically (indeed, in any injurious form, wholly) disappeared. When the disclosures of the practice at West Point, a few years ago, astonished the country it was assumed to exist also, though hidden, at Annapolis. The Board of Visitors of 1901, whose President was Rear Admiral Stephen B. Luce, one of the most famous disciplinarians in the Navy and a former commandant of midshipmen, was thereupon directed by the Executive to institute a rigid inquisition. We did. We found hazing non-existent. We said so publicly. Having been a member of that Board I am glad to be able to offer this reassurance to those who have lately been insisting that the so-called "Code" of fist-duelling and plebe-baiting is both ancient and typical of the esoteric practices of the Navy. It is neither. It was developed mainly by its present practitioners within the last five years.

## II.

The immediate causes of the existing outbreak may be briefly summarized as follows:

1. The sudden increase in number of the students, who now aggregate 881. Until the recent change in the appointing law they seldom exceeded 300.

2. The increase in their age. Thirty years ago the average age at entrance was about sixteen years, and graduation at eighteen years was not uncommon. Now, the average entrance age is eighteen years and four months, and the average of the whole student body is twenty years.

3. The building revolution. The former housing is being completely replaced by a group of ten million dollar, very artistic—but singularly unsuitable buildings. The midshipmen have been living in make-shift wooden affairs, and naturally in more or less confusion.

4. Permitting these boys to take pledges or make "promises" not to haze, or in other words not to disobey a law. It brought the law into discredit since it led to the inference that a "promise" to obey was prerequisite to obedience.

5. Recognizing combinations among them by conferences with "Class Presidents" and other representatives, who should never have been permitted to exist as such. That tended to undermine one of the oldest regulations of the school: "All combinations under any pretext whatever are strictly prohibited." If combination is countenanced for one purpose in any organization under strict discipline, it is very apt to come into surreptitious existence for other purposes. Hence the ridiculously solemn arrangements for fights under the "Code."

6. Handing over the direct administration of the discipline of the Academy to the senior class in greater degree than ever before.

7. Creating in the older students an exaggerated sense of self-importance by causing some of them to ape high official rank. Cadet commanders and cadet lieutenant commanders need only the addition of cadet commodores and cadet admirals to complete their inflated absurdity.

8. Exalting athletic games to such an inordinate degree that the question may well be asked whether we are paying to educate naval officers or football players. The public contests before great throngs, the transportation of the whole student body to distant places in the very middle of the scholastic year are demoralizing, time-wasting and plainly

detrimental to the efficiency of the school.

9. The courses of study, which require revision. They are overcrowded, not up to the times and distinctly promotive of intellectual indigestion.

10. The recent reinstatements of three students convicted of hazing and duly expelled. And this not by the usual backstairs influence, but publicly by Congress on Executive recommendation and in the teeth of the protests of the Academy officials.

11. A peculiarly weak and inefficient administration of the office of Superintendent by a former incumbent, which even the known abilities of his successor, whose term has just ended, could not fully offset. No position, unless it be that of Chief of the Bureau of Navigation—the Adjutant General's office of the Navy Department—requires administrative talent of a higher order. Whenever this has failed in the Superintendent, trouble has surely followed in the Academy; just as similar lack of it in the most important of the naval bureaus has as certainly always impaired the efficiency of the Navy.

Add all these together—a great crowd of boys of all ages from sixteen to twenty-four, coming from all ranks and conditions of life, housed in more or less disorder, treated as mature minds to be convinced rather than as immature intelligences to be compelled, left to infer that obedience to law and discipline is open to debate, given absurd positions and a degree of authority over one another far beyond their years, led to believe that gladiatorial triumphs outweigh professional study as preparation for their future career, a weak administration—is it any wonder, with the hazing law not merely flouted as it was twenty years ago—but, in the recent instance, by both Executive and Congress practically set aside—that these boys disregard the obligations of their official oaths, slight both law and discipline and evolve "codes of honor" which do not prevent their lying pitifully on the witness stand or seeking to evade culpability by wretched quibbling over the name they give to their offense? The "honor system," which meant simply truth and candor in all circumstances,

was once the pride of the Naval Academy. If it has broken down at last, if, as Admiral Dewey recently affirmed, these young men must now be "watched," the country, in view of all the foregoing, may perhaps see where the responsibility rightly belongs.

### III.

When the Merriwether court martial uncovered the present state of affairs it made clear once more the futility of the existing hazing law. That measure in reality troubles the careless boy less than it does the Congressman, who appoints him, in the majority of instances in return for political value had and received. If his appointee is dismissed, the constituent parent at once questions the reality of the Congressman's influence and demands that he "make good." The harried legislator in turn harries the Navy Department, and the rest anybody can foresee with the practical assurance that the last interest to be considered by the soliciting parties will be that of the Academy and the people.

In place of the penalty of dismissal, disrating might well be substituted. A boy on entering the Naval Academy contracts to remain in the Navy for eight years. This should be given the force of an enlistment. If by hazing the student proves his unfitness for continued education to command, his naval instruction should be devoted to teaching him to obey, and his transference to the obeying and non-command class should logically follow. In other words, he should be reduced to the rating of an apprentice sent to the training station at Newport, Norfolk or San Francisco, and kept there until his behavior warrants replacing him in his former position. An aggravated offense, such as hazing by a senior classman, might carry with it service as ordinary seaman in a distant squadron for such term as the executive might impose.

It is extremely doubtful if the first inflection of the penalty would ever need repetition. It is not a new one. Naval officers and midshipmen were reduced to the ranks during the Civil War, and even now the captain of a great battleship who leaves his command without authority may be compelled to don the blue shirt and serve as a 'foremast hand.

The true preventive of hazing, however, lies less in punishments than in the improvement of the conditions already indicated. It has lately been officially recognized that there is nothing in the training of a naval officer which especially fits him to be the head of this great educational institution. The Superintendent, who has just taken office, for example, was selected, despite the fact that he had never had any experience in any capacity whatever at the Naval Academy, saving his curtailed study there as a midshipman at the beginning of the Civil War. This emphasizes the fact that the Superintendent should have the benefit of the best attainable advice, and this can be realized by properly organizing and empowering the Board of Visitors. That body is yearly appointed by the President and the presiding officers of Congress. It is now seldom other than a mere junketing party. It gazes perfunctorily at what little it is permitted to see, especially "exhibition drills," draws pay and traveling expenses (the last most interesting to members from California), passes resolutions which are duly pigeon-holed, and clears out. A new crowd turns up on the following year and repeats the comedy.

The Board, at least in part, should be a continuing body from year to year and made up of individuals familiar with educational problems, with the Navy and with the Academy itself. Its committees should be empowered to visit the school, with full inquisitory right, at any time. By the aid of the advice and recommendations of these men the Secretary of the Navy also could discriminate and act on behalf of the Academy far more intelligently than is now possible amid the multifarious duties imposed upon him.

### IV.

The attitude of the commissioned officers of the Navy toward the recent developments at the Naval Academy is one of entire disapproval—not unmixed with surprise; for to most of them the revelations are new. They cannot express themselves publicly upon this subject, nor indeed upon any other involving the conduct of naval affairs, for the simple reason that there still lingers a paragraph of the Navy Regulations which

forbids to the people the right to hear their own servants concerning their own business about which their said servants know more than anybody else. In the benighted British Navy officers are actually urged to talk, to explain, to criti-

cise, to condemn, even in Parliament itself. The enforced silence in our service results in endless public misconception, never better illustrated than under the present conditions.

NEW YORK CITY.

## Post Tenebras Lux

BY GERTRUDE HUNTINGTON McGIFERT

AFFRIGHTED down Death's realms I fled  
By star-spurned whirling ways that led  
Past yawning gates—the gates of Hell—  
Past splendid shriveling worlds that fell  
In that swift judgment night of gloom—  
That night when rushing doom met doom.  
With Love and Hate in endless chase,  
Despairing, helpless in the race,  
With whitened lips that might not pray,  
I reached out hands that might not stay  
O'er seething gulfs and plunging spheres  
For vanishing wraiths of long lost years,  
For phantom blooms on rocks of fate  
That slipped my fingers—late, too late!  
On o'er the winds I rode, I fled  
Past solitudes of arid dread,  
Furrowed with vengeance, black with fears,  
And sown with human blood and tears;  
On past the fathomless, starless shade  
Where shivering fugitives hid and prayed;  
Past limitless void and cycles of pain—  
I caught a moment—then on again  
Thru drifts of flame from caverns of sin—  
Red were the beckoning hands within;  
On dizzily, madly on and on,  
And no place in Chaos to rest upon!  
I heard the wails of the Lost apart—  
Their burning tears dripped thru my heart.  
I heard wild laughter startle the deep,  
Heard mocking malice its revels keep.

I heard far death-bells echoing blow,  
Heavily freighted with mortal woe.  
On, ever on, in awe and wonder,  
Amid the shattering, rocking thunder;  
Amid the lightnings sharp and red,  
As if 'twere vacancies that bled;  
On past the whirlwinds of Destiny,  
Into the calm of Eternity.  
Escaped far spent from Death's abyss,  
I wearily crept to the threshold of Bliss.

Far off and away a rack of cloud  
Hid Earth and Hell in a ghostly shroud.  
At bay at last I lifted my eyes,  
And lo! the Throne in Paradise!  
Apart from space, all face to face,  
My soul and God in that holy place!  
Long time we gazed—I knew at last  
I was satisfied. Heart-thirst was past,  
And gnawing hunger and groping sight.  
Then the spark that had lighted me thru the  
night  
Flashed back, nor feared God's challenging  
eyes.

"Art come unsullied thru earth and skies,  
O little Soul?" "I make no plea—  
I only know it is Home with Thee."  
"Hast thou no fear 'midst the undefiled?"  
"Thou art my Father—I am Thy Child."  
Long time we gazed—and then—God smiled.

# Comments by Our Readers

[We publish this week a few extracts from letters commenting upon articles and editorials which have recently appeared in our columns. We are always glad to know what our readers think of what we say and publish, altho we cannot give as much space to their letters as they deserve.—EDITOR.]

## Art and the Picture

"An *attempted decoration* which can be carried about like a saucepan"; "something supposed to be a complete production in itself"; "detachable decoration." With these and like characterizations of the picture Miss Martha Bensley has in the columns of THE INDEPENDENT wielded her besom in an effort to sweep from the walls of our houses "this destructive and disfiguring parasite."

"The picture," she asserts, "is not the highest form of art; is not, indeed, art at all."

Together with these definitions and the following fulmination against pictorial expression, it would be entertaining, if not instructive, to have learned the writer's notion of what art is.

The picture is one of a half dozen means of art expression, and stands absolutely on its own basis. It has nothing whatsoever to do with the wall. It is not created for the wall, but rather the wall and roof for it. This form of art expression finds its place quite as well on a chair or an easel as on the wall. Having possessed it, we guard it that we may enjoy it, for from it the spirit of one man speaks to another thru the sign language of nature.

But when rightly understood the sign language of the picture becomes interesting to the owner thru intelligibility. Beyond its subjective, constructive and æsthetic meaning he feels a beauty and harmony in its color. It rests him. If he knows music he discovers the relativity existing between these two phases of art, each established upon the same principles. He knows architecture and finds the æsthetics of this and graphic art to be identical. The idea dignifies the picture to his mind. To use it as something subservient to architecture would be to degrade an object of equal grade. The picture by first intention has no more to do with the decoration of a house than any other object produced by the emotional impulse and the creative touch of man. Just here honors are absolutely even. The picture is not evolved to adorn architecture any more than architecture is created to protect the picture; yet each serves the other in this way. "I feel," said a distinguished critic, speaking of the masterpiece of a great American painter, "that I would like to see a temple erected over it."

But to rest the case in proof that the picture is art and is produced as something unique and not as dependent, let me meet Miss Bensley squarely on her assertion that the picture hung on the wall cannot be decorative, and that in ridding the wall of pictures we thereby "clear our vision in the matter of what is and what

is not beautiful, helping us to take another step toward that civilization which is simplicity." I beg to assert that before an impartial jury of architects, decorators and cultured householders I should be willing to risk a judgment upon the superiority of framed pictures as the sole decoration of the walls of a room, and I would risk a dozen arrangements and combinations of framed pictures against as many combinations of brocades and panelings and mural paintings.

Under these conditions it would be necessary to have only that ordinary latitude of selection comprehensible to the average buyer of pictures. This would be regulative of color harmony, compelling critical juxtaposition of the pictures of a single group that no one should be injured by a neighbor, and would also demand some attention to the framing of the pictures.

A view of any one of the regally furnished galleries of New York, London or Paris, their walls heavy with costliest draperies, before a rehanging takes place, and afterward when, with trained judgment, the panels thereof have been hung with pictures of harmonious tone, each rightly spaced, would satisfy the average mind upon this point.

Let one with no thought or care for pictorial art, but affected only by harmonious environment, enter a room hung with pictures thus disposed, whose frames, in their beautiful and chaste designs, are kept in proper reserve, the design of the whole suggesting variety in unity, the highest test of both decorative and pictorial art, tho he may not stop to look at a single subject, the sense of tonality, of splendor of color, of forcible chiaroscuro, will leave an impression of sumptuous environment above comparison with line and space decoration.

The reason is at hand. You cannot have art without the man. "Art is nature with the man added," and the appraisalment of any art product is on the basis of the man-worth that inheres.

The assumption that the wall must be felt architecturally is without warrant of any respected precedent. The wall is distinctly an element of limitation, and, from this point of view, rather to be silenced than evoked. To forget its existence is to expand our area. The labor of the decorator calls attention to what were better forgotten.

HENRY L. POORE.  
PHILADELPHIA, Pa.

All who have an appreciation of art and are disappointed in not finding better expressions of it in homes, must agree with Miss Bensley

in her revolt against collecting upon walls an unrelated, inharmonious number of miscellaneous pictures.

However cordially we may sympathize with this iconoclastic attitude, we need not, therefore, lose our power of discrimination and condemn equally all pictures, as she does.

With her main contention, that the room should have harmonious unity, there can be no disagreement. Socrates expressed the same when he said: "The artist brings all things into order, making one part to harmonize and accord with another, until he has constructed a regular and systematic whole; this is true of all artists." But before we condemn, as she does, all pictures as "not indeed being art at all," but rather "knives which cut off the appreciation of art," we must agree as to what art is, and the relation of pictures to art and their function. In art, whether the particular form be literature, music, architecture, painting or whatsoever, there is, as Mr. Fenellosa says, "a formal beauty which inheres in the manner of expression and not in the eternal thing which is expressed. The idea in art does not conceive of subjects at all, but the pure form or language of their expression." Therefore, when one objects to putting different pictures in the same room simply because the stories they tell are inharmonious, she is asking something other of pictures than is claimed by the world's greatest masters. The harmony between them should inhere in the "form and language of their expression." They should be chosen for certain rooms and definite places in these rooms, not primarily because of their story, but because their size, the composition of color masses and *notan* (dark and light), and the masterful treatment of line in them appeal to the visual senses as fitting for that particular place.

This is Raphael's idea: "The work of art," he says, "is important in proportion to the number and variety of elements which are reconciled and united in its idea." So the home decorator should look upon walls as the artist does upon a canvas or an architect upon a building. After carefully studying the given lights and spaces, she should choose either a mural painting or other appropriate wall covering, with or without pictures, and with such tapestries, book cases, tables and so forth as are needed. If this is properly done, altho there may be forty different and individually complete and detachable things in the room, she will succeed in giving to the beholder the impression of complete unity and ideal simplicity. Whether the home decorator chooses for her pictures the portrayal of a beloved member of the family or Judas himself, a burning slave ship or a Venetian sunset, a courtesan or a man with a hoe, a willow tree in a country field or a London bridge on a foggy morning, matters little; for here again, not the idea or the subject portrayed determines its place, but rather its appropriate size and proportions, its color, *notan* and line. Why, night and day, even heaven and hell, might be side by side on a wall, and yet be so treated as in no way to mar the harmonious unity of the room.

ANNA GAUSMAN NOYES.

## The Kongo Investigation

In a recent issue of THE INDEPENDENT Mr. Antisdell drew an extremely dark picture of conditions prevailing in the Kongo Free State, but it appears from the context that he has heard only what may be called "the evidence for the prosecution" and has formed a hasty judgment without waiting to hear the whole case.

This report has now been issued, and the eminent jurists on whose judgment Mr. Antisdell relies have not concurred in his views.

The Commissioners spent five months in the Kongo and examined hundreds of witnesses. Special attention was given to the evidence of natives, and in some cases whole villages made long journeys to tell the story of their lives to "the great judges from Europe."

The sittings of the Commission were open to the public. Everybody present had the right to propose questions to the witnesses and to make comments on the testimony, and a number of missionaries who had been severe critics of the administration were on hand to aid in bringing the truth to light. The Commissioners heard the worst that was to be heard.

Most of the criticism of the Kongo Free State has centered about the question of taxation. Every male native is compelled to pay a tax in labor, or in other words, to work for forty hours a month; but he does not work gratuitously—he receives a wage. The adversaries of the Kongo say that this system is unjustifiable and that compulsory labor is practical slavery. The Commissioners, however, do not take that view of it. They find that the system is both expedient and salutary. It is quite true that many natives have complained about it, but it is very hard, in any country, to invent a tax that will receive general applause or will win a double encore from the populace. If left to his own devices the native will do nothing, and the chances of civilizing Central Africa with 30,000,000 natives sitting round in idleness are not very brilliant.

The Commissioners do not fail to point out mistakes that have been made. In some cases villages near the State Posts have borne more than their share of the burden of taxation, while the more remote tribes have gone comparatively scot-free, and the period of forty hours is not always scrupulously reckoned.

The State has tried the experiment of leaving the tax collection for different districts largely in the hands of commercial companies, but the plan was unsatisfactory, and, consequently, in 1903, a decree was issued, placing the tax levy under the immediate supervision of Government officials. This law has produced good results in the districts where it has been tried, and the Commissioners recommend that, with a few additions, it be immediately put in effect throughout the whole land.

The Commissioners remark that the Kongo Government might have abolished the labor tax entirely and avoided all the consequent criticism by a simple expedient. The State might have solved the difficulty by following the example of many colonial governments and by admitting alcohol within its boundaries. The natives will always work for whisky. No

doubt "trade alcohol" combined with a tropical climate will put him out of business in a few years, but in the meantime he works for it willingly enough, and his Government avoids the difficulty of trying to enforce a labor tax. But the Kongo State did not think the easiest way the best, and resisted the temptation to introduce whisky. "We consider," says the report, "that the interdiction of alcohol and the suppression of slavery constitute the crowning glory of the Kongo Free State."

The Commissioners unhesitatingly condemn the "sentry system" as practiced by some of the commercial companies, and advise that it be abandoned at once, but they find there is no truth in the stories of amputation of hands as a punishment for refusal to gather rubber. It is an ancient native custom (scarcely yet eradicated) to cut off the hand of a dead enemy as a trophy—a custom like scalping among the American Indians—and it sometimes happens that a native cuts off the hand of a fallen foe under the supposition that he is dead. It is difficult to suppress the custom. Officers in the American Army know how hard it used to be to restrain the Indians under their command from scalping. Some of the missionaries brought before the Commission several mutilated natives, who upon examination proved to have been victims of an unfortunate accident of this kind. Says the report: "It seems that mutilations have never had the character of torture inflicted voluntarily or knowingly." The Commissioners add:

"One point is beyond doubt. No white man has ever inflicted such mutilations, nor caused such mutilations to be inflicted, upon a living native as a punishment for non-payment of taxes, nor for any other cause."

The report commends the judges for their uprightness and devotion, censures some of the commercial companies, shows that depopulation is due chiefly to epidemic, praises military service as a factor tending to education and civilization, and goes into many things which cannot be considered here for lack of space.

The general conclusion of the Commissioners is that, altho many improvements can be made, and should be made, in the interest of the Government as well as of the native, yet, taking it as a whole, the Kongo administration is a piece of machinery that works remarkably well and that has produced marvelous results in the short period since it was started. The State has broken the record for rapidity in civilizing the lowest grade native humanity.

JAMES GUSTAVUS WHITELEY,  
Consul-General of the Kongo Free State.  
BALTIMORE, Md.

## Shall the Professor "Stay Put"

In a late number of *THE INDEPENDENT*, "A College Professor's Wife" tells a story the truth of whose details must have touched a responsive chord in the breasts of many of her sisters. Her picture has the merit of a good sermon; each of us is sure that she "meant me." But with her conclusion that the ideal

professor ought philosophically to accept the uncomfortable conditions which she describes, the present writer does not find herself in accord.

Out west of the Mississippi River and not far from the Missouri is a little college town whose "university" is the center of the community life. Surrounding the town on all sides are ranches and farms; beyond these lie the prairies stretching to the unbroken circle of the horizon. In the town itself conditions are not unlike those in which "A College Professor's Wife" lives.

Here the professors carry a "double schedule." The salaries are small; expenses in general correspond to those given by "A College Professor's Wife." We are almost all of us "hewers of wood and drawers of water." In winter the husband cares for the fires, splits the wood, clears off the snow, in order that money may be saved to pay the insurance premiums which fall due in the summer. In the summer we care for our gardens, adopt a vegetarian diet and forego a summer migration in order that the money may be saved for the fuel bill which falls due in early winter. Like the Puritans, who planted corn in summer that they might have food for the winter, and dug clams in summer to save using the fresh corn, we work during the summer that we may live during the winter, and work during the winter that we may live thru the summer. And so we exist from year to year.

Here, too, we faculty folk are expected to contribute to student organizations, to entertain classes, clubs and individuals. The occasional semi-distinguished guest is quartered upon the professor whose subject is most nearly related to the stranger's specialty. The lecturer on radium dines with the professor of physics—and the *Frau Professorin* cooks the modest roast; the writer of verse or fiction goes to the house of the professor of English. The baccalaureate speaker and commencement orator are honored above the common run by being entertained by the president—and Madame President bakes the cake.

But in our ranks of overcrowded, poorly paid professors, they do not keep off the rust. In nine out of ten cases the same courses of study are offered unchanged year after year, for the simple reason that lack of time and meagerness of resources prevent anything else. Our faculty men seldom come in contact with better trained minds than their own, for there is no money for travel and we are in far Cathay. Even in the rare instances when a man has managed to save enough money for a year of study at one of the larger universities, his departure is not looked upon with favor, and leave of absence is not infrequently refused. The attitude of the trustees seems to be: "If you know enough to teach your present subjects, you don't need leave of absence for study. If you do need further study, then you don't know enough to teach and we'd better get some one else." One can understand that to a new man coming in from a college where self development, scholarship and originality are the basis of work, this situation seems odd. Yet it is common enough in the smaller colleges west of the Mississippi. Is it

surprising that the professors who remain long have somewhat lax ideals of scholarship, that their views are narrow, that ultimately the intellectual standards and opinions, the educational methods of the incoming younger men seem to them incompatible with the needs of the community? Is it surprising that the younger men pass on?

ANOTHER COLLEGE PROFESSOR'S WIFE.

## A Defense of the Army

[The following letter was called out by the statement in *THE INDEPENDENT*, in connection with the fatal fight at the Annapolis Naval Academy, in which it was stated that "the tendency of absolute authority is to foster callousness and a tyrannous habit, as well as self-indulgence and laziness."—EDITOR.]

I heard an officer say the other day he wondered why he had not chosen some light and profitable employment, such as breaking stone, instead of the army, where the demands on brain and muscle were so unceasing for return so small.

Such a thing as absolute authority is unknown and unheard of in our army, where direct and unescapable responsibility for everything is fixed, and where on every side an officer is hedged in by rules and regulations governing his conduct and decisions; and the words "accountable" and "responsible" are tacked on in some fashion to every position or trust he assumes or accepts. "Callousness and tyrannous habit" also seem peculiar epithets to apply to the men whom I know and live among—patient and gentle and approachable always, carrying the personal and individual cares of the men whom they command as their own, never too tired or busy to hear a grievance and redress it, never too poor to relieve some hard luck case, personally inspecting the food, clothing and sanitary conditions of their men daily, fathering the young and inexperienced, working with all the ability they possess so that some faithful old soldier shall get his deserts—advancement perhaps, or a pension, or sheer justice in the time of misfortune.

The officer's life is hardly one of "self indulgence and laziness." Each recruit, before he approximates a soldier or satisfies the ideal of his officers, is given three years of individual care and attention, and is instructed personally, not only in professional and technical knowledge, but in all the other things that go to make a clean, healthful, industrious, resourceful man.

Two hours in the saddle at mounted drill, two hours at officers' school, a whole afternoon issuing clothing and paper work, an hour every day instructing troop non-commissioned officers, whole days spent from five a. m. to sunset out on the range (why was it that our army was able to shoot with such deadly result at Santiago?), after dinner at night out come the books and next day's studies are prepared, and duties anticipated, so that they be well done.

Besides the routine work, which provides for every hour, there are other things continually coming up for which time must be made.

Certainly "laziness" cannot be laid at our doors, and as for "self indulgence," when not otherwise engaged, perhaps army officers do indulge, but I challenge any one to pick thirty men who, for physique and ruddy health, plain living and high thinking, can stand comparison with our command here. And remember this is the normal average officer, under the usual conditions which govern most of his forty years of service.

For fifty years the army officer has been the only friend the Indian has had—ask the Indian.

The army officers alone have raised their voices against the lying, cheating contractors and agents, and have moved high heaven to have the plainest justice done the red man, whom we fought and subdued, but at whose degradation and dishonorable treatment our stomachs have turned.

Ask the pioneers of the West what they owe to the army, ask the railroads what they owe, ask the ranches and cattlemen, the decent, law-abiding ones, what the blue uniform stands for! Words fail me! While a few cases of authority abused were being exploited during our occupation of Cuba and the Philippines, what were the majority of our officers doing? I will tell you. Adapting themselves tactfully and quietly to strange and difficult conditions and situations, making friends of enemies, showing mercy and courtesy to a people without an understanding of either, collecting large sums of money at custom ports, expending large sums wisely and judiciously, and establishing everywhere on the islands a government of honesty and decency undreamed of by the inhabitants, and more than all, going with their wives and children into the native homes, and by hospitality accepted and returned teaching the fraternity of nations and the brotherhood of men—yes! teaching it so graciously and thoroly that even yet, in the inland towns of Cuba and the Philippines, the American people are loved and honored, tho the civil government is undoing their good work as fast as it can.

Then, for sheer honesty I can imagine no man in the world so absolutely honest as the army officer. Every year huge contracts are given for food, ordnance supplies, clothes, equipment of every sort, and, as even the little army children know, it is a continual battle waged between the business men and the army officers; on the one side to cheat and make money out of the Government, and on the other to see that the contracts are faithfully and honestly filled.

A profession may be judged, as an individual, by its ideals, and what, may I ask, are the ideals of those professions which are so ethically superior to the soldier's? The soldier has only "duty, honor, country."

The shocking occurrence of recent date at Annapolis is deplored by every decent man everywhere, in the service and out, equally, I feel sure, but that the root of the trouble lay in the military training and ethics is quite the opposite from the truth.

Lieut. I. B. GODSON, U. S. A.  
FORT ROBINSON, Neb.

## English Football

I have read with interest Mr. John Morgan's article on English football. From the year 1882 to 1896 I was one of the most ardent supporters of English Rugby that you could find anywhere in the North of England (my home). I can assure you that Mr. Morgan's statements are based on actual facts, and he has in no way exaggerated the situation. Like Mr. Morgan, I have had equal opportunity to compare the two systems of football as played in England and the United States, and unhesitatingly aver that the English system, on all counts, and by far the most interesting, scientific and spectacular. Rugby football, played properly, is the finest game in the world; of course, I think a lot of Association, too, but I was chiefly a Rugby enthusiast. You can't, however, take to a new style all at once, and time is required to develop interest and understand the fine points. I believe that if two good English Rugby clubs could come over here from England—say such clubs as Newport (Wales) and Broughton Rangers (Manchester)—to give exhibitions, I am sure some of the misconceptions (and there are many, judging from the comments made by American critics) would be cleared up, and the game as played here now would as a result receive its death-knell, as in my opinion it richly deserves, being totally unworthy of the support and encouragement of such an advanced and up to date nation as the United States of America. In conclusion, I trust that this matter may be fully investigated before changes are decided upon. Nothing but good will, good fellowship and a desire to get our games placed upon a manly, scientific basis is the writer's motive in sending this letter, and he hopes it is taken in just that spirit.

DAVID HUDDLESTON.

## Race Integrity

THE INDEPENDENT in a recent issue quotes with approval Dr. Bradford's exclamation of "Shame! shame! shame!" because the negroes of Atlanta are not allowed to occupy the same waiting room at the railway station that is used by white travelers. And it is averred editorially that this "is a part of the system which requires separate cars on the railroads and separate seats on the trolleys and separate schools, and its purpose is to humiliate the negroes and teach them that they are an inferior, outcast race, out of which they cannot be allowed to rise."

I hail from a locality where conditions are more favorable for the negroes than anywhere else in the South. Oklahoma is governed by Republican Federal appointees who come chiefly from the North. They can never hope to carry local elections without negro votes, so there are strong reasons for not "humiliating the negroes," as it is alleged is generally done in the South.

If the gentlemen who object so strenuously to separate waiting rooms for negroes had

passed the long hours of a winter night in an Oklahoma station, as I have done; if he had seen the depot filled with burly negro loungers, seen them crowd white women from the stove, and fill the fetid air with ceaseless babel of "wha! wha! whas!" they would find some reason for separate waiting rooms. Nor is this an isolated case. In any part of the Territory where you find a considerable negro population the same state of affairs exists.

We do have separate schools and the law is defended by all classes of our population. In the city where I have lived for the past four years we have white schools, colored schools and Indian schools. Just why it should "humiliate the negroes" to attend their school and not humiliate the whites or Indians to go to theirs is hard to understand. Why should it teach the negroes "that they are an inferior, outcast race, out of which they cannot be allowed to rise" because they are sent to colored schools? The buildings are comfortable and well equipped. In some of the Territorial towns there are commodious brick and stone structures set apart for the negroes.

Then, again, why should the negroes wish to rise out of their race? Is there not sufficient room for them to develop within their own race environment? The fact of the matter is, hide it as you will, the negroes are ashamed that their skins are black. Those who encourage them in struggling for a seat beside the Caucasian in the depot or the school-room do not help the negro in gaining self-respect. I have been about a good many Indian schools, and have yet to hear an Indian complain because the school was exclusively for his own race. Indians are proud of their race and their color. It is difficult to see just why, but these are the facts.

Negroes, on the other hand, with rare exceptions, in their heart of hearts despise their color—or rather the lack of it. Until this spirit is really and truly weeded out of their hearts they will be an "outcast race," because they count themselves as such. It seems to me the fact that they enter the Atlanta station at a separate door, instead of causing bitterness of spirit, should be a matter of race pride. They should aim to keep their section of the station the most orderly and cleanly. Accommodations for the blacks will keep pace with their capacity to pay for them.

Separate waiting rooms and separate cars are as certain to come in Oklahoma as have separate schools. And they will come at the behest of Northern Republicans just as much as Southern Democrats.

Near my homestead there is a colored farmer who has attained considerable means. The friendly advice and good offices of his white neighbors have aided him materially in gaining his competency. No one begrudges him his success. He has white tenants, men of thrift, who lease his farm. We don't humiliate him and he is no outcast, but if he had children he would send them to the colored school, and that is where they belong.

## The Letters of Henrik Ibsen

IBSEN is a writer who has been continually striving to estimate himself. He has had to be withheld by his publisher many times, during the course of his life, in his attempt to trace his progression, and to state the particular atmosphere or spiritual stage which gave birth to his separate plays. *The Letters of Henrik Ibsen*\* contain much of this personal interest. In the midst of trivial details and an unnecessary amount of emphasis upon money matters which might have easily been eliminated we are able to gather data for an excellent portrait of an indomitable figure. Ibsen was hardly what one might call a brilliant letter writer, nor can one detect in his correspondence much critical illumination. Out of a volume of nearly five hundred pages only a small part is of value, and that is imbedded in mere letter conversation.

Beginning as early as 1849, the correspondence stretches over a period including the year 1900—a comprehensive field—the active life of Henrik Ibsen. But there are unfortunate gaps between the 238 letters, due partly to the editors' inability to secure material, and also, probably, to Ibsen's neglect in answering letters from month to month. Tho the style in which this collection is written shows by its unevenness that the statements were penned with no thought of future publication, yet there is a *naïveté*, a sincerity, a directness about Ibsen that gives a peculiar charm to the book. Some of it is as concise and simple as the dialog which stamps his dramas—sweetness of temperament, firmness of will, fire of anger—all these are shown in flashes—a picture of unswerving determination, of steady advance, of willing isolation from his country, the better to view it, the freer to express his opinions regarding it.

*The Letters of Henrik Ibsen* are suggestive in their future possibilities. As a pioneer volume they deserve to be owned; they show sides to his nature

that indicate his trueness as a friend and his close scrutiny as a thinker. He is shy to trust his opinions to letters; he is continually hinting at conversations for future meetings.

But perhaps the most interesting phase of the letters is Ibsen's isolation, which kept him a voluntary exile from his own land for so many years and severed him intellectually from his family. He once wrote:

"People believe that I have changed my views in the course of time. This is a great mistake. My development has, as a matter of fact, been absolutely consistent. I myself can distinctly follow and indicate the thread of its whole course—the unity of my ideas and their gradual development."

Ibsen left Norway in 1864. Except on small visits, during which time he felt the oppressiveness of provincialism settling upon him, his spiritual growth was subject to broader influences; from a Scandinavian he became a Teuton. Still, he never ceased to hope for that Scandinavianism which would weld three countries into one nationality in spirit, willing to face the future. Ibsen calls Munich his spiritual home. His letters reveal the gradual hold Germany took upon him. But wherever he was—Rome, Dresden or Munich—his clear understanding of the social situation at home remained undiminished.

*The Letters of Henrik Ibsen* are an invaluable outline. They trace the spread of his dramas from country to country, and the advance of his ideas, the acceptance of his opinions. Unfortunately, they only indicate his friends, tho Ibsen is keen to recognize in his letters to them those traits that are the determining elements in their work or in their lives. Ibsen is generous and open minded. His correspondence does not reveal any jealousy; there is sometimes bitterness, not over injustice done to himself, but to those around him. There is much quaint humor in his remarks regarding the opposition to his plays, as there is an equal amount of inspiration to be had from the way in which he regards his work as having been laid out for him to do by God.

\*THE LETTERS OF HENRIK IBSEN. Translated by J. N. Laurvik and Mary Morison. New York: Fox, Duffield & Co. \$2.50.

Despite all their unsatisfactory omissions, these letters form a notable volume. The translators have written an introduction which gathers the correspondence together in such a manner as to group the letters in their proper relation to Ibsen's development. The playwright has practically closed his career. Since his epilogue, *When We Dead Awake*, Henrik Ibsen has been in a peculiar position, almost unique, in that it has been possible for him to read tentative estimates of his real life work; it has been possible for him to see his theories and his dramatic principles enter the stream and infuse something of permanent value into contemporary literature.

## The Dissociation of a Personality

A PLAY is now running in New York in which one actor takes seven different parts. We are reminded of this by Dr. Prince's study of a case of multiple personality,\* for the book reads like a novel in which all the characters occupy the same body. It has also the interest of a detective story, for it gives a graphic account of Dr. Prince's search for "The Real Miss Beauchamp" among the several personalities who struggled with each other for the control of the body and brain of one of his patients. Many such cases of Box and Cox brains have recently been studied, among which one recalls most readily M. Flournoy's lady from Mars, Dr. Hodgson's and Professor James's Brown-Bourne and Dr. Janet's Léontine-Léonora, but the family group called Miss Beauchamp differs from these in consisting of more numerous and better defined individuals. Dr. Prince starts in with four persons which he designates BI, BII, BIII, BIV, but he has to subdivide by the use of other symbols like BIa and BIVc, and finally to tail off like an algebraic formula into "..... etc."

Three of the Miss Beauchamps have uncommon literary skill and power of expression, so we get well acquainted with them in the course of the book. They differ decidedly in tastes, morals, habits of dress and manner of conversa-

tion. BI is devout, self-distrustful, studious, submissive and morbidly conscientious. BIV is obstinant, selfish, inclined to be fast, and dislikes reading. BIII, better known as Sally, is Poe's "Imp of the Perverse," a tricky sprite of the subconscious, petulant, childish and mischievous. Poor Sally, she is the most interesting of the family, and we feel a touch of regret when in the interests of harmony she has to be "squeezed out" and sent "back to where she came from," a phrase of hers which raises all sorts of fantastic thoughts in the reader's mind. She did not disappear, however, before she had written an autobiography in which she claims a continuous personal existence from childhood in the subliminal depths of Miss Beauchamp's mind.

The quarrels of this unhappy family are narrated at great length and with much repetition by Dr. Prince, of the departments of nervous diseases of Tufts College and the Boston Hospital, who, with the late Dr. Hodgson, of the Society for Physical Research, had charge of the case. The three personalities, as they alternately gained control, would play tricks upon each other of an amusing or spiteful nature, and since each had a more or less complete amnesia for what happened in the reign of the other, it resulted in very embarrassing situations. The haughty BIV awoke to find herself, not a student in a Boston College, but a waitress in a New Haven restaurant. The devout BI discovers that she has a cigarette in her mouth. She destroys Sally's letter because they reveal her secrets, and she gets from Sally a few days later a box of live spiders of which she is mortally afraid. This is followed by this threatening note from Sally to her mental colleague:

"I have such good news for you, my dearest. Just fancy. Z. knows where there is a whole colony of lovely, cool, green snakes—little, slippery, sliddery ones, you know—and I am going to get them to amuse you at night and keep you from dreaming of your dear—. Aren't you glad? But I know you are not the least little bit grateful—but you will be before we have finished our course together. It is good for you, you know; you must always remember that, dear."

As a *modus vivendi* they arrange a compromise by agreeing to divide time and spending money between them and to help each other out by recalling to mind

\*THE DISSOCIATION OF A PERSONALITY. A Biographical Study in Abnormal Psychology. By Morton Prince. New York: Longmans, Green & Co. \$2.80.

in an emergency the events that happen during another's regime. Finally Dr. Prince, by the use of hypnosis, constructs a single normal personality with a complete memory by effecting a fusion of III and BIV and the elimination of Sally. This humorous, pathetic and tragic story is written with the vivacity of a romance and apparently without sacrificing scientific accuracy. But the reader will question whether the rare power that the author manifests for seizing and defining mental and moral characteristics may not have had something to do in differentiating and developing these diverse personalities in the plastic and unstable young woman who has for seven years been under his tutelage.

However, it has always been recognized that such internal conflicts exist in a lesser degree in every one. Plato's white and black chariot horses of the mind, Paul's spiritual and carnal natures warring against one another, Stevenson's Dr. Jekyll and Mr. Hyde, and Hugo's "*Je sens deux hommes en moi*," all refer to the phenomena which now are being scientifically studied in Europe and this country. The results already obtained can be seen to have an important bearing upon our philosophy, theology and ethics, which are still based upon a traditional theory of personality which modern experimental psychology shows to be crude and inadequate. Light is beginning to be thrown upon such mysteries as mental healing, conversion, demoniacal possession and speaking with tongues. Thru such studies as this, the eccentricities of fanaticism and of ascetic and esthetic religiosity are becoming understood.

### Sedgwick's History of Italy

IN his brief preface Mr. Sedgwick says:

"This volume is a mere sketch in outline; it makes no pretense to original investigation, or even to an extended examination of the voluminous literature which deals with every part of its subject."

Such a frank admission necessarily disarms a reviewer, because on whichever side he may find shortcomings, he will be met by the author's warning that

he must not expect much. Nevertheless, a book is to be judged for what it is, in the light of its author's purpose; and this book, judged on these terms, may be said to fulfill its mission fairly well.

Mr. Sedgwick has produced an intelligible story of the most intricate events. For over a thousand years—from the fall of the Roman Empire to the Reformation—much of the business of Christendom was transacted in Italy; and yet the Italians never succeeded in forming a nation. Mr. Sedgwick begins with the invasion of the barbarians, and shows that until the rise of the Roman Church there was no stable element round which to group the kaleidoscopic changes. The great conflict between the Papacy and the Empire naturally fills a third of his space, and he seems, on the whole, to treat each side fairly. In fact, a determination to be fair pervades the work, altho sometimes we suspect that it springs either from indifference or from failure to see the magnitude of the issues.

After describing the transition from medieval to Renaissance conditions Mr. Sedgwick devotes several interesting chapters to the Renaissance itself. The final centuries he apportions somewhat unsystematically, giving less attention to the Risorgimento than it deserves. In justice we must say, however, that he succeeds thruout in detaching a clear and continuous narrative from the confused mass of material he has had to deal with. Original interpretations he does not offer us, nor even the best epitome of the generally accepted views; but he enlivens his pages with many apt selections from sources and with clever digressions of his own.

He writes after the manner of the literary amateur rather than of the historian; and whenever he can he introduces literary bits. An historian would never have allotted in a book of this size nearly twenty pages to extracts from Montaigne's *Journal*, not because that is not one of the most delightful records of travel in existence, or because it does not set before us picture after picture of the actual life of the Italians in 1580, but because a real historian would have put the pith of the Montaigne excerpts in five pages. So, too, the quotations from

\*A SHORT HISTORY OF ITALY (476-1900). By Henry Dwight Sedgwick. Boston: Houghton, Mifflin & Co. \$2.00.

Byron hardly compensate for the number of facts which might have been substituted for them. It practises like these which occasionally lead one to feel that Mr. Sedgwick is to be regarded as a compiler of a superior sort, and not as an historian.

He has another very trying habit of throwing in irrelevant bits of information about places, persons or works of art—such bits as the late Augustus Hare showered upon his personally conducted parties, as an enthusiastic traveler embalms in his diary of his first Italian tour.

Yet in spite of obvious shortcomings, Mr. Sedgwick is to be congratulated on having escaped any serious blunders. He has the knack of stating even controversial matters so discreetly that partisans cannot take exceptions to them, nor can their general accuracy be impugned. This is all the more remarkable in view of the great variety of subjects which he takes up, including the most ticklish subject of all—religion. In order to make his work as useful as possible he has included in his survey not merely political history, but manners and customs, architecture, sculpture and painting, music and literature. Whatever may be the value of his opinion of any particular individual, the inclusion of this collateral matter adds to the serviceableness of the book for the general reader. Mr. Sedgwick writes as a literary man, steeped in good reading, and he is seldom dull; but for one of his kind he is distressingly capricious in taste. He surprises us now by some platitude and now by some extravagant figure. What shall we say, what *can* we say, to a writer who informs us that “under Honorius the Papacy lay like a cherry between an upper and lower jaw, which watered to close and crush it”? Such lapses are frequent enough to suggest a serious limitation in taste.

Nevertheless, after making all necessary deductions, we conclude by recommending the book to the public for which it was written. It has no competitors in English. Travelers, who desire a summary of the history of medieval and modern Italy, will find it especially useful.

**The Princess Priscilla's Fortnight.** By the author of “Elizabeth and Her German Garden.” New York: Charles Scribner's Sons. \$1.50.

Ladies have been running away (in literature) ever since the cave-men began to tell stories; but it has been left for Elizabeth of the German Garden to invent a princess who runs away from a desirable suitor with an aged *Hofbibliotheker* and hides in a secluded English village in Somersetshire. The cottage the princess had set her unsophisticated heart upon was to be ancient and much thatched and latticed and rose-overgrown; it was to be “the smallest of laborer's cottages.” Yet tho so small and so ancient it was to have several bath-rooms, one for Priscilla, one for Herr Fritzing and one for the maid, Annalise, who, eventually, proves to be the *deus ex machina* of this veracious tale. Of course, a young princess, who has been fed on theories and has nursed her soul with dreams, is not going to live in a little country village without trying some social experiments and burning her royal fingers in the process. A young woman whose sole idea of doing good is to give lavishly without discrimination is pretty sure to demoralize whatever political economy she finds in the way of her impulsive benevolence. A theft and a murder, not to mention some broken hearts, are laid at her door for her to acknowledge. We are not at all astonished to find the fair fugitive in the course of her flight folding her hands with the following sincere player: “Lieber Gott, don't let me deteriorate too much! Please keep me from wanting to box people's ears”; for people were rude and not at all considerate of the feelings of the orphan niece of a queer old German master of languages; indeed, one bold young man does get his ears boxed before the book ends, but we are inclined to think Priscilla was forgiven for that. *The Princess Priscilla's Fortnight* is quaint and sweet as its heroine. We have learned to expect vivacity as one of the annual products grown in a certain German garden, and it does not fail this year. A gentle cynicism, which we fancy a little mellowed, and a style a little riper than in the earlier books, leave a pleasant

fragrance in the memory, when the strange experience ends, precisely as it should.

✱

**Handbook of United States Political History.** By Malcolm Townsend. Boston: Lothrop, Lee & Shepard Co. \$1.50.

The design of this book is notably good. The attempt is made to arrange chronologically, and when possible to tabulate, all the facts and dates of American political history from the time of the first visit of the Norseman (985) to the present. The arrangement is excellent, and the quantity of detail assembled and classified is remarkable. The isolated fact which lingers tantalizingly just outside one's recollection, and for which one would have to search, often vainly, thru many volumes, is placed here where it may be lighted upon by turning a page. But unfortunately sufficient care has not been taken on the score of accuracy. Slip after slip occurs, for which there is no reasonable excuse. To take just a few instances that appear in a cursory reading: The honor of discovering the Mississippi, given to "Francis" Garay (p. 2), is generally discredited. On page 5 Plymouth is said to have been "the first permanent settlement in New England," and on page 6 Salem appears as "the first permanent town in Massachusetts." This is either a contradiction, or one or the other assertion is a very unfortunate expression. On page 7 Sault Ste. Marie appears as the first permanent settlement in Michigan, and on page 9 the honor is given to Detroit. The statement (p. 139) that the House of Representatives have the "exclusive right . . . of impeaching officials" is an unfortunate use of terms, unless the dual sense of the word "impeach" is mentioned. The various references to Burrites, Martling Men, Bucktails, and other groups in the early political history of the Republic are nearly all unsatisfactory. The Agrarians (p. 150) were a faction independent of the Equal Rights men of 1835, and polled 116 votes in the city election of October, 1830. The full name of the Tammany Society is wrongly given on page 190. The County Democracy was founded in 1880, and not in 1871. The Half Breeds (p. 170)

were not a "faction of the Stalwarts," but a faction of the Republican party, opposed to the Stalwarts. The derivation of the word "Hunker" (p. 171) is almost certainly wrong. It was in 1887, not 1886 (p. 182), that the split occurred in the Syracuse convention between the Single-Taxers and the Socialists; nor did the Socialists "withdraw." They were expelled. Indeed, all the references under the various headings, "Social Democracy," "Socialistic Labor," "Labor," and kindred titles reveal a carelessness, and even flippancy, of treatment and an ignorance of the subjects which are deplorable. All this part of the book should be thoroly revised, that the volume may take its place as an indispensable handbook.

✱

**Essays in Application.** By Henry Van Dyke. New York: Charles Scribner's Sons. \$1.50.

These twelve essays are striking specimens of the versatility of Prof. Henry Van Dyke, dealing, as they do, with subjects as far apart as "The Flood of Books" and "Property and Theft." To say anything about the language and literary style would be superfluous, but one cannot fail to be impressed with that quality in them which is indicated in their title, "Essays in Application." Professor Van Dyke certainly does apply the principles he holds to the practice of the world around, and not seldom points out some sore which needs remedial treatment. Every essay has some instances of this, but the most striking are perhaps to be found in "Publicomania" and "The Flood of Books," in which patent defects in our practice are dealt with very trenchantly. The strongest essay, the one which above all the others deserves to be read, marked and digested, is "Ruling Classes in a Democracy." This, combined with "The Heritage of American Ideals," presents such pictures of the present and future as cannot fail to inspire all who have the good of their country at heart. Every essay, however, is valuable, combining suggestion, application and criticism, and the volume will be given no unworthy place among the literature of essays as well as among the works of the author.

## Literary Notes

...."Ready Money," by George H. Knox, contains receipts for a successful business life. "Bits of Eloquence" from American speakers are quoted in the latter part of the volume for further inspiration. (Personal Help Publishing Company, Des Moines, Ia. \$1.68.)

....*The Shield*, the quarterly magazine of the Theta Delta Chi, devotes its September issue to the late John Hay, who was a member of this fraternity. One of the biographical sketches is by William L. Stone, his roommate in college.

....The biography of John Fletcher Hurst, by Albert Osborn, gives a very interesting narrative of the busy and useful life of the great Methodist bishop in all his multifarious activities as preacher, theologian, historian, traveler and educator. (Eaton & Mains, New York. \$2.00.)

...."The Little Weather Folk," No. 1 of Tales of Ye Toys, issues from the Valhall Press, of Brooklyn. The text is by Mary Adelaide McTighe, and describes a toy barometer in which the pleasant weather is indicated by the figure of a woman and inclement weather by the figure of a man, made in Switzerland.

## Pebbles

[Once a year, according to our invariable custom, we cull a few "little Willie" poems from the college funny papers. This brand of humor (!) shows no signs of abating.—EDITOR.]

WILLIE fell in the molasses  
Barrel in the shed;  
"Now I'll lick you, Willie,"  
His angry mother said.

—*Vassar Miscellany*.

Herbert on his little engine  
Soldered up the safety valve.  
\* \* \* \* \*

Sister blew her week's allowance  
Buying him carbolic salve.

—*Cornell Widow*.

Johnny ate a tablet,  
The family doctor gave;  
Now he's got a big one,  
On his little grave.

—*The University of Michigan Wrinkle*.

Loud the baby screamed, and louder;  
Johnny fed it insect powder.  
Answering, scolded, with a shrug,  
"Little sister acted bug."

—*Princeton Tiger*.

Georgie with his father's gun  
Shot his sister just for fun.  
Sister tumbled on the floor;  
Maybe Georgie didn't roar!

—*University of Pennsylvania Punch Bowl*.

Willie put acid in mother's tea.  
Mother didn't drink it—see!

Stung!  
—*Yale Record*.

Here lies Willie, four years old,  
Taken back to heaven's fold,  
Just because he thought that he  
Wouldn't find it hard to see  
Which was stronger, Willie Whacker  
Or a giant cannon-cracker.  
—*University of Pennsylvania Punch Bowl*.

Little Johnnie put his gun,  
Just behind his nurse's ear;  
Pulled the trigger, just for fun;  
Strange that nursie didn't hear!  
—*Princeton Tiger*.

Willie, with the carving knife,  
Took his sister Mary's life;  
"Now, you've done it!" papa said,  
"Mary's skull has nicked the blade."  
—*Princeton Tiger*.

Little Willie, cutest lad,  
Chloroformed his aged dad;  
He's the smartest little man  
So quick to grasp at Osler's plan.  
—*Amherst Student*.

Tommy greased the stairs with soap;  
Father struck the slimy slope;  
Ma said: "My! ain't Tom got tact?  
I always looked so well in black."  
—*Cornell Widow*.

Sister Jane sat with a caller  
Who was trying to enthrall her.  
Willy with the incandescent  
(Willy's scientist incessant)  
Turned the light on (on the quiet).  
Said, "I only wished to try it,  
And I think from that commotion,  
I have proved that light is motion."  
—*Harvard Lampoon*.

Willie and two other brats  
Licked up all the rough-on-rats.  
Papa said, when mamma cried,  
"Don't you care, they'll die outside."  
—*University of California Pelican*.

Willie rolled the loaded dice;  
Won fourteen times by this device.  
Now there's crêpe on father's door,  
And little Willie is no more.  
—*Leland Stanford, Jr., Chapparral*.

Willie tied the baby's ear  
Firmly to the chandelier;  
Baby chuckled, full of glee,  
'Twas his ear of corn, you see.  
—*Princeton Tiger*.

Tommy, who was only eight,  
Toasted sister in the greight.  
Said mother, when she saw the sight,  
"I must say, it's hardly right."  
—*Harvard Lampoon*.

Willie fetched his grandpa, kind,  
(Chloroform he couldn't find)  
Blew him up with dynamite—  
Willie was an Oslerite.  
—*Princeton Tiger*.

# Editorials

THE semi-annual index of THE INDEPENDENT for the last six months of 1905 is now ready, and will be sent free to any subscriber who will notify us he wants a copy. Of course, those who return us the twenty-six issues of the magazine will have the index bound in the volume.

## Poultney Bigelow and Secretary Taft

WHEN the Canal Commission, in general terms which engineers would use and understand, described the horribly unhealthy conditions on the Isthmus, it was calmly received; but when Mr. Poultney Bigelow, as a journalist and with a journalist's graphic powers, and with pictures accompanying, told in THE INDEPENDENT how ten thousand laborers had been taken to that pest hole at Colon, and many of them settled in cabins on stilts in the swamp, it made a sensation, and presto! the President bade Secretary Taft make an investigation, and the Senate publishes Mr. Bigelow's article (with the pictures, we hope) and Secretary Taft's severe reply. The article has called attention to conditions that sadly need to be improved.

But first a word as to THE INDEPENDENT's position in the matter. Some Washington papers have represented that THE INDEPENDENT has a private grudge against President Roosevelt on account of his dismissal of Mr. Herbert W. Bowen, late Minister to Venezuela, which it is paying off in this way. It is a fact that we do believe that the President's support of Mr. Loomis, who was proved to have used his official position for pecuniary profit, was a grave mistake, and that Mr. Bowen's only so called offense was in aiding the exposure of wrong which he was desired to conceal. But the fact of Mr. Bowen's family relation to THE INDEPENDENT was a special reason why it was our duty to avoid any expression which might seem to imply consequent ill will to one whose purpose and ability we admire, and whose general policy we approve. Accordingly, we

have taken no part in the criticisms which are rife in Washington, and which affect the tone of the Senate and the newspaper correspondents, that the President is assuming a more magisterial attitude, as if he were an irresponsible ruler; for we like a masterful man, and do not believe that it is his purpose to transcend the prerogatives of his office; while he is a man who believes, as we do, in doing things that need doing and will be for the benefit of the country. So it is untrue that we engaged Mr. Bigelow to attack the management of affairs in the Isthmus. Mr. Bigelow has for years been devoted to the study of colonial conditions, and is a university lecturer on that subject. He has the means and leisure for travel, and he has very carefully studied the conditions of coolies of various races in Asia, Africa, the Pacific islands and in the West Indies. He had written for THE INDEPENDENT for several years on these and other subjects, and when he told us that he intended to make another visit to South and Central America, and asked us if we would like to hear from him, we said "Yes." We had no special thought of Panama, and we did not have the existing conditions there in mind. In fact, the article on Panama was first offered to another journal and for some reason declined. We believed it was a statement of conditions such as a very competent and unprejudiced observer would discover, and one phase of the truth, and we thought it our duty to print it, for we are not estopped from telling the truth, so long as no malice is involved.

Mr. Bigelow does not ask us to make any defense of him. He goes this week to Washington to give his testimony to the Senate Committee. We have, however, a few more words to say on the matter.

First, as to conditions at Colon. They are as represented. That is not denied. The sanitary improvements made are mainly at Panama, on the Pacific side, while the laborers come to Colon, on the Atlantic side, where the conditions are as described and pictured, confessedly bad, but will doubtless be improved.

As to the dissatisfaction of the laborers at their treatment, we put confidence in Mr. Bigelow's report. We do not believe that the desire to return home for a Christmas vacation explains the exodus.

As to the red tape conditions spoken of by Mr. Bigelow, it is perfectly well known that that is the reason why the late Chief Engineer John F. Wallace resigned. He could not endure them. He was severely condemned by the President for leaving, but he would not stand for restrictions which he believed would ruin his reputation as an engineer. He says:

"The experience of the past year will have been wasted unless the controlling authorities at Washington are able to break away from the moss-covered traditions of Government control, applying ordinary and common sense methods to the accomplishment of the work."

What so distinguished an engineer as Mr. Wallace found when acting as Chief Engineer, Mr. Bigelow was able to learn in two days.

But he was there "only two days," cried Senator Lodge, interrupting Senator Simmons, the moment he mentioned Mr. Bigelow's name in the Senate, and that is the burden of Mr. Taft's reply, and of the echoing press, "less than two days." It is true that he was there only the major parts of two days and the intervening night, and that was long enough. The pictures he took speak for themselves, and they required but about a thirtieth of a second each; and some of them were unprintable because the filthy conditions were too offensive for publication. In two days he could inspect conditions that were visible to eye and nose, and the rest of the time was ample to talk with intelligent men, negro workmen as well as residents, and the two whose names he mentioned as witnesses, Mr. Tracy Robinson and Mr. John Lundie, are most competent and responsible men. They may have been in part mistaken, and Mr. Bigelow, who does not pretend to be an engineer may have called a steam shovel a dredge, or made other fractional errors, but those are venial and unimportant lapses.

On later information, Mr. Taft corrects his former statement that no women were brought at government expense. He now admits that about 300 were sent from Martinique, but he declares, on

the authority of the labor agent, that they were the wives or daughters or sisters of laborers and had "natural protectors," and were not sent for immoral purposes. Naturally the labor agent says so, and as naturally Mr. Taft accepts the defense. Governor Magoon, however, was much troubled over the matter, and figures were sent him to show that the women were properly employed as wives, servants or laundresses. But the clergymen on the Isthmus see the contrary, and it is a matter of note that the women, of whom 1,500 applied, were brought from French Martinique, while the large majority of the workmen are English-speaking negroes from Jamaica and other British islands. If any of these women should be arrested as prostitutes, they will be easily protected, as an order has been promulgated, since their arrival, that if any woman arrested marries before trial, she shall be released. That defense would be easy and inexpensive.

Doubtless Mr. Bigelow was in error on some points, and it is not our wish to defend his errors. We are glad that Mr. Taft and Mr. Stevens, the chief engineer, are able to correct him in part, and to show that conditions will improve. They must. We do, however, venture to remark the extraordinary passion of their reply.

We have not the slightest question of the absolute and earnest desire of the President and the Secretary of War that the canal shall be dug as speedily and as honestly as possible. That is beyond question. What we do much question is the method by which it is being done. The greatest engineering feat of our generation, or any other, was the building of the New York subway. A competent board of engineers laid it out, and then contracted to have it built. We can do the same at Panama, under any conditions of labor or sanitation, or protection of workmen that government may impose. Perhaps something of that sort should be done. We do not want the work to drag on for twenty years at enormous expense.

And now comes a telegraphic despatch from Panama:

"A comprehensive system of drainage will be installed at Colon. Some work has already been started looking to the drainage of the swamps of that city," etc.

That is good. The New York *Herald* had declared "the condition of this city of 10,000 inhabitants a disgrace to civilization."

### The Founder of a Great University

To the ordinary newspaper reading public, the late President Harper was chiefly known as the man who got \$14,000,000 out of Rockefeller. In educational circles the wonder was not that he got so much money, but that he got so much out of his money. The University of Chicago, as it stands, is his monument. We might even say, without being accused of rhetorical extravagance, that it is himself, for it is true to a very unusual degree that the institution is the embodiment of his personality. It is his genius as an organizer which created in less than fifteen years a university ranking in equipment and scholarship as one of the five greatest in the United States. This was accomplished by the exercise of the same kind of ability that is required to make a man successful as a leader of armies, or manager of large business enterprises, the ability to master details and to manage men. He had the two essentials to the accomplishment of great things, a creative imagination and a determined will. He could conceive a plan and then work for it without losing sight of it. He was not one of those who catch a glimpse of a distant mountain peak and start for it, but get lost in the intervening valleys and the windings of the road.

It was because he was both daring and practical that he met with so favorable a reception from capitalists, who knew well what such a combination could do. Against wheedling they are immune and they are necessarily indurated against an appeal to their sympathies. President Harper presented to them, not a great need, but a great opportunity. He proved to them that he could make an efficient use of their money for the benefit of the world. As Mr. Rockefeller said: "He showed me how I could make the best investment of my life, and I invested." The late Charles T. Yerkes was not especially interested in astronomy, and, as he said, if President Harper had asked him to buy an ordinary

telescope he would have refused. But when Dr. Harper told him he had a chance to buy the 40-inch objective, the largest lens in the world, he said: "Go ahead with it and send me the bill. But be sure to have the biggest and the best."

In 1889 Dr. Harper received his first donation of \$600,000, sufficient if economically used to endow a small college. Dr. Harper did not use it economically. He started a \$50,000,000 university with it. The plans for all the buildings on the campus were drawn before one of them was built, just as a new town is laid out upon the bare prairie, with all its streets named and its public buildings located. It is the Western way, the way of men who have great faith in the future, and great confidence in themselves. All of the departments of the university and its professional and technical schools were outlined in the first program, but none of them were established until a sufficient endowment and the right men were obtained to enable them to start even with the best in the country.

A young institution naturally begins with undistinguished instructors on small salaries. President Harper began by getting the best men he could find and paying them larger salaries than they could get elsewhere. Most college presidents build up from the bottom, gradually adding higher courses as needed. President Harper made the graduate department the strongest at the beginning. In selecting his professors he considered chiefly their proved ability to conduct research, and each one of these men brought with him a train of advanced students. As a consequence the University of Chicago has in the past seven years granted more Ph.D. degrees than any other university except Yale, and yet the requirements in studies, examinations and theses have been, in most of its departments, as high as they are anywhere.

After the duty of discovery comes the duty of diffusion of knowledge among men. The traditional method was by lectures to students in the class room.

President Harper, recognized that this limitation was antiquated. He was an educational expansionist. He established a "University Press," and made the publishing of journals and books an integral part of the university work. "University

extension," in his hands assumed dignity and importance, instead of being, as it was in some places, a mere philanthropic pastime. He selected the best lecturers in this country and England, and sent them with traveling libraries thru the country from New York to California. Last year over 200 courses of six lectures each were given, a revival in an improved form of the old lyceum system. He developed the correspondence method of instruction, and proved that the old fashioned universities were wrong in neglecting and despising it.

He effected a veritable revolution in higher education by establishing a summer quarter of equal rank with the rest of the terms, thus eliminating the shocking waste of a long vacation and breaking up the lock step of the class systems. Energetic students were enabled to do four years' work in three, and, since teachers for the summer quarter were drawn from the best universities in Europe and America, it introduced the system of mobility of professors and students, such as prevailed in Germany, and was much needed in this country. Thousands of teachers and preachers have by this means been brought to Chicago for the renovation of their ideas, and thru them the university has produced an immeasurable but very noticeable elevation of the intellectual life of the West and South. Last year 4,557 persons did work in residence at the university, a number only exceeded by Harvard and Columbia.

Since President Harper manifested so much originality and independence, it is a pity that, in order to make just estimate of his work, we are compelled to note the two conspicuous instances where he chose to follow the example of Eastern institutions when a better way was open to him; that is, in adopting a scholastic ritualism and in limiting co-education. These innovations caused the alienation or loss of some of the strongest members of his faculty and of much popular sympathy in the West. As a matter of fact, both these attempts to force medieval customs upon the youthful university have practically failed. The sexes are separated only in a few of the lower classes, and even the most urgent of presidential notes usually fails to induce more than a minority of the faculty

to appear in cap and gown in the processions and recessions of state occasions. Doubtless Dr. Harper thought it politic to seem to conform to the customs of Eastern universities in these two practically unimportant respects, but it was a concession unworthy of him and probably will be repudiated by his successor.

Who will be his successor? Many names are suggested, but the logical candidate is President E. Benjamin Andrews, of the University of Nebraska. He is a Baptist, and it is unfortunately a requisite that the president shall always be a member of that denomination. He has proved himself an able administrator, both in the universities of Brown and Nebraska, and in the still more difficult position of Superintendent of the Public Schools of Chicago, which he did much to rescue from graft and corruption. He has no repugnance against taking money from Rockefeller, as is shown by the building which he obtained from him, in spite of the opposition of the Nebraska Populists. He is democratic in his educational principles, radical in his sociology, and has shown himself so fearless and frank in his public speeches that he will never be suspected of truckling to capitalism.

### Sources of Public Revenue

WITH the assembling of the State legislatures, and the new year revision of assessment rolls and budgets, the annual exhibition of American ignorance on the subject of public revenues opens as usual.

On the basis of an analysis of books, magazines and newspapers read by the American people, and a comparison thereof with the reading of the English, the French and the German public, we have been compelled, from time to time, in these columns, to acknowledge the humiliating truth that Americans are, all in all, an ignorant people. An analysis of our system of taxation would, we suppose, compel us to acknowledge the essential truth of the assertion, made the other day in Congress, that we are the smartest fools on earth. For smart and clever we must be to maintain our prosperity as an aggregation of individuals, and our solvency as States and municipal

corporations, under our appallingly foolish, not to say immoral, plans of taxation.

Leaving out of consideration at this time the wastes and wrongs involved in our present plan of Federal revenue, let us consider for a moment the State and local taxes. Taking the country thru, we still derive our local revenues, in the main, from real estate and personal property. As these terms are understood by legislatures, interpreted by the courts and exploited by assessors, they are Hibernian.

For by "personal property" as a subject of taxation the American people mean such property other than real estate as its owners do not happen to conceal or to lie about; and as practically all business men have become adepts in the arts of concealment and conscientious lying on the subject of taxable property, "personalty" practically means the small accumulations of that member of society whom Prof. William G. Sumner called "the forgotten man"—or woman. The widow and the orphan exploited by the insurance companies are the victims also of the personal property tax.

The real estate tax, tho less obviously, is no less really a vast folly and wrong as it now exists and is understood. It is levied not upon the value of land apart from improvements, but rather upon improvements, including buildings themselves. Instead of taking that value which is created by the mere increase of population and of human activity in conjunction with the resources offered to man by nature, it strikes directly at individual enterprise, and makes men contribute to the public revenue, not in proportion to their enjoyment of natural resources and a limited area, but in proportion to their industry, their frugality and their contribution to human welfare. It puts a premium upon the clever appropriation of that wealth which man in his individual capacity does not create, and a penalty upon the economic virtues.

"The single tax" has become a shibboleth that repels many men of average good sense and honesty, but that fact ought not to blind us to great fundamental truths that the single tax advocates, in season and out of season, have forced upon our attention. Long before

Henry George wrote "Progress and Poverty" that eminently sane economist and publicist, John Stuart Mill, and that philosophical apostle of justice, Herbert Spencer, had shown with the utmost clearness that the increasing value of the earth's surface and of the mineral resources hidden beneath it is created, not by the individuals that may happen to appropriate this or that particular tract of land, but by society, and that it belongs *ab initio* to mankind collectively. And long before Mill or Spencer wrote, the common law had asserted and formulated the principle of eminent domain. Every intelligent man who has looked into the subject at all knows and admits that, whether or not other sources of public revenue may be held to be legitimate, this one, at any rate—the value of the earth's surface and of natural resources apart from improvements—is the pre-eminently legitimate source.

Waiving all question of "the single tax" as the best or the worst way of tapping this resource, the principle, at least, is unmistakable and impregnable. An increasing number of concrete things embody or represent this natural source of public revenue. The water fronts of navigable rivers, including all the dock and wharf space; the terminal facilities of railways; the strips of land occupied by railway trackage, including street railways and subways; the street trenches occupied by gas pipes and electric wires; mines, quarries and forests—all these are conspicuous and increasingly valuable parts of the earth's surface and its natural resources; and all men know that these, before other things, should be made sources of public revenue. To impose real estate taxes in the ordinary sense of the term, and personal property taxes, until these natural and pre-eminently rightful sources have been made to yield their full contribution, is to inflict deliberate injustice and to perpetrate economic barbarity.

Some progress is being made toward a recognition of sound justice and expediency in these matters. Slowly the public mind is becoming clear on the question of public ownership. Men who believe that the public operation of electric and steam railways would be unsatisfactory are learning to distinguish between pub-

lic operation of the lines themselves and public ownership of the values represented by the franchises. This is one of the most hopeful symptoms in the present social situation. With this clearing of the public mind will come presently a perception, now sadly lacking, of the great underlying principles that should govern the levying of public revenue.

## The Church Union in Canada

WE have previously mentioned the movement for the union in Canada of the Methodists, Presbyterians and Congregationalists. Now that we have the plan of union approved by their committees, and later to be acted upon, there is every reason why it should be carefully considered, with a view to possible unions in the United States. Certainly the spirit shown in the meeting was most admirable, and it would seem both surprising and gratifying that such success could be unanimously secured.

But let us study the plan of union.

First, the Name. "The United Church of Canada." It is an admirable name. As *The Christian Advocate* of this city says, the names *Presbyterian*, *Methodist* and *Congregational* are all undesirable, emphasizing the separateness of the denominations rather than their Christian faith.

Next, their Creed. They seemed to think it necessary to have a creed, inasmuch as the Methodists and Presbyterians had a creed which they would lose in coming into the new body, and they did not see how they could get along without one. The denominations in Canada are very conservative, and it is not strange that this creed should be very long and elaborate. It is based on the new creed of our Presbyterians, but is somewhat stiffened. There are nineteen articles, which include about three thousand words. As an illustration of its character we give Article Five "Of the Sin of Man":

"We believe that our first parents, being tempted, chose evil, and so fell away from God, and came under the power of sin, the penalty of which is eternal death; and we confess that by reason of this disobedience, we and all men are born with a sinful nature, that we have broken God's law, and that no man can be saved but by His grace."

Now this may or may not be true, and so with the rest of the three thousand words, but what is the use of it? Who knows that this creed is correct, which says that the Holy Spirit "proceeds from the Father and the Son"? That statement has already split the Church, and its metaphysics has no place in a creed. An attempt to unite the corresponding three denominations in this country on this creed would be a failure. We want no more long creeds, whose chief effect is to separate Christians. If Christians cannot be kept together by their common sympathy and their love for their Master, no creeds can keep them together, unless they are already prepared for an intellectual graveyard. You cannot make a creed for this generation that will fit the next. We believe differently from what our fathers believed, and our children will have to rewrite our catechisms. We have no particular quarrel with any one article in this long creed, but we have hardly patience to read it, for no church should be tied to its creed.

Next, Polity. It might be expected that this would be a fatal stumbling block, but it was not. There were not three forms of government represented in the committees, but practically only one; for the Canadian Methodists have no bishops, are not Episcopally governed, and the Congregationalists are a feeble folk, and their place was to yield. Accordingly, the scheme is substantially Presbyterian. There are three "governing bodies." Above all, the General Assembly, meeting once in two years, then next below it annual conferences (synods), and next district councils. The local churches may be organized as they please, but are "subject" to the district council, and this is "subordinate to" the annual conference; and this to the General Assembly; and each of these "governing bodies" elects the members of the one next above it. The General Assembly has "full power to legislate" with respect to "matters of doctrine, discipline, government and worship," subject to approval by a majority of the governing bodies below it. It is the "Supreme Court of Appeal for questions of law and also for questions of fact on matters under its immediate jurisdiction," "such matters of fact and law to be submitted

to a judicial committee for its consideration and report." This is stiff Presbyterianism and requires the preparation of a Book of Discipline to settle the procedure in case of trial for immorality or heresy. We can hardly imagine either Episcopalians on the one side, or Congregationalists or Baptists on the other, in this country accepting any such system of government any more than they could bind themselves by such an elaborate creed.

The question of Ministerial Settlements may have given some trouble. It was agreed that pastorates may last indefinitely, so long as the church and pastor are agreed; and, further, that the church has authority to seek and choose its own pastor. But there shall be settlement committees appointed annually which shall be empowered to fill any vacancy for the current year, after consultation with the congregation, and which shall make all other appointments after a minister has been united to a church. Then these committees will have final power over all appointments, which will really be a power of veto; but the policy will be to provide a pastorate without interruption for every church. This seems to be a happy mean between the Methodist and Presbyterian system.

On the whole, the union is a most happy one and most surprising. It was a magnificent illustration of Christian sympathy in a noble cause. The plan agreed upon would work in Canada, but would never work in the United States, as between the three denominations, for the conditions here are very different. We believe many unions here could be possible, but on a more flexible and simpler plan. That it should have been achieved on any plan is a magnificent success and a hopeful example.

## The Reform Movement in Pennsylvania

EXPERT engineers employed by Mayor Weaver reported that the taxpayers of Philadelphia had paid to ring contractors for the filtration works and the new boulevards \$6,000,000 more than a profit of 20 per cent. One of the first to be arrested, in the Mayor's war upon the

ring, was John W. Hill, the city's engineer in charge of work on the filtration beds. His trial was ended last week. He was the first of the accused men to come before a jury, and he was acquitted by order of the judge because intent to defraud had not been proved. Forgery and the fraudulent falsification of records were the offenses named in the indictment. But it was shown that in every instance his concessions to the ring contractors had been made with the approval and under the instructions of his superior officers, two Directors of Public Works, one following the other. Neither of these men has been indicted. The same is true of the leading favored ring contractors themselves.

There was a District Attorney who declined, at the beginning of the reform movement, to assist Mayor Weaver and his associates by taking the course which they believed he ought to pursue. He had been, and still was, counsel for the leading contractor and for the firm in which that contractor and the political boss were partners. After the November election, with its evidence of a popular revolution, this District Attorney came over to the support of the Mayor. He conducted the prosecution of this man Hill, and the reform newspapers say he did his whole duty. But neither the chief beneficiaries of the ring frauds nor the organizers of the ring's campaign for plunder have been indicted or arrested. Earnest prosecution of this agent, whose guilt was not proved, could not atone for the failure to proceed against the leaders of the ring at the time when they should have been attacked with all the weapons of the law. This should impress upon the minds of the people of Philadelphia the importance of having a District Attorney of the right kind.

Even if those who robbed the city are not to be punished, much good and enduring reform work has been done, and the Legislature now has an opportunity to do much more at its special session. The Governor, so suddenly converted, has recently added to the number of reform projects which the Legislature is asked to consider. Thus he makes amends for his former association with the Philadelphia boss and his approval

of the "ripper" bill, by which that boss sought to take away a great part of the Mayor's power.

Under his first proclamation, the program included the enactment of laws for personal registration of voters; the repeal of the "ripper" law, which he had approved; the safeguarding of State funds, heretofore deposited in favored banks for the benefit of politicians; a legislative reapportionment, and the abolition of fees for the office of Insurance Commissioner, which was until recently held by the Philadelphia boss. To these he has now added legislation for uniform primaries, a merit system for the civil service of the State, and laws requiring sworn statements as to political campaign expenditures and designating the uses to which campaign funds may be applied. All this is a result of the uprising in Philadelphia, and the Legislature must at least place itself on record with respect to his propositions. Unfortunately, it is not a Legislature elected in November last, when the revolt of the people against jobbery and corruption in both city and State was shown at the polls.

#### More Venezuela

It is the general suspicion of the German Emperor that is probably the origin of the report that he is backing up Venezuela to resist the demands of France. The further statements coming from Paris, Caracas and Washington are to the effect that Minister Russell is unpopular in Venezuela; that France is severing relations with that country, and that the United States is pressing the Crichtfield claim and has an understanding with France. A dispatch to the New York *Times* a few days ago reported President Castro as saying in a late speech that France and the United States had been secretly working against him, but would never succeed. Previous cablegrams informed us that Minister Russell had accompanied the representatives of the Bermudez Asphalt Company to the President's palace to aid in making an "amicable settlement," but that the \$20,000 a year offered by the asphalt company was regarded by Castro as an indication that the asphalt company was taking on the airs of a victor instead of showing

the manners of one conquered. All these diplomatic troubles call to mind the blunder made when our Government reversed its policy with Castro as to arbitration. Minister Bowen presented to Castro a proposition to arbitrate all of Venezuela's foreign disputes, and Castro received it with favor, and President Roosevelt and Secretary Hay authorized Mr. Bowen to enter into an agreement of that sort and promised to send on the basis of a protocol covering all disputes with all nations. But when the protocol came, signed by Mr. Loomis and drawn up by the lawyer of the Bermudez Asphalt Company, it was confined to disputes with the United States only, and had been drawn up with conditions intended to prevent its acceptance, since the asphalt company desired no honest arbitration, but delay and force at last. Judge Calhoun's report shows that it would stand no chance before arbitrators. That ended the effort to arbitrate, and now Venezuela is at odds with several countries, and the United States does not know what to do. We are reaping the fruits of the blunder made when Mr. Loomis reversed Mr. Hay's work. We would do well to go back to Mr. Hay's plan. It might be again accepted by Castro, and it would help us in other disputes in South America, and save the use of the "big stick."

#### District Attorney Jerome's Intentions

A New York newspaper that has been continually prod-  
ding District Attorney Jerome now asserts that he has decided to prosecute several persons whose shortcomings were disclosed by the recent life insurance investigation. When one carefully studies the offenses in question by the light of the New York Penal Code some of them appear to be covered by the statutory definitions of extortion, perjury, forgery and larceny. If Mr. Jerome has decided to ask for indictments we shall soon know what his views of the subject are. It may be remembered that on October 31st he said:

"I have felt all along in regard to these insurance matters that crimes had been committed and that the persons guilty of these crimes must be prosecuted; and it is my intention to prosecute to the bitter end every

person against whom it is possible to obtain evidence showing the commission of a criminal offense."

George Foster  
Peabody's Platform

Mr. Peabody is a railroad man, and a capitalist, and a philanthropist, and a Democrat. The four designations can belong to this one man. He has written a remarkable letter to the *Brooklyn Eagle*, in which he propounds his view of what should be the policy of an honest man in public affairs. As a Democrat he believes our high protective tariff is maintained, as it was created, to tax the many for the advantage of the few. It is not so very many years since the question of tariff was one on which Republicans might differ. A large element of Democrats helped create the Republican party; and the necessity of war revenue and taxes made the Republican party take up the old Whig doctrine of a protective tariff, not at all to the pleasure of some sturdy Republicans of the older sort. But Mr. Peabody's principal point is that the public ought to own all public utilities, such as gas and water systems, streets, and whatever runs over them or under them, and equally all railroads, which, like other corporate property, are likely to escape their fair share of taxation. Mr. Peabody puts his argument very clearly and, we believe, conclusively. In these matters he charges the Democratic party with insincerity in carrying out its principles; and he is right. To many an active politician a platform is for pretense and show and not for service and control. They need the lesson of the negro porter who required the passengers to go inside the car. "But is not this platform to stand on?" asked the man. "No, sah!" was the answer; "this platform is not to stand on, but to go in on!"

Pistols

A man carries a pistol for but one purpose, to take life. A man does not go hunting with one, nor does he carry a pistol for the opportunity it gives him to make a noise, at least not in the pistol-carrying section. There is legislation against it, but the law is a farce, as executed. At least that is the statement

of the Dallas (Texas) *Morning News*, one of the principal journals of a State where the pistol is much in evidence. It says:

"It is distinctly a weapon made and used for the destruction of human life. Yet men are guilty of carrying pistols in every part of the State, and when accidentally one of the criminals is brought before the courts he pleads guilty, pays a fine and the fee of the prosecuting attorney, who has compromised the case by permitting the criminal to plead guilty and submit to a fine only, and that is the end of the matter. In the prosecution of cases in the way they are conducted the prosecution appears to be based on pushing the defendant to the point where he will pay money, a part of which the officers get. The cases are not prosecuted with the view of putting an end to the crime, or the defendants would go to jail, where they ought to be. Now and then one reads of a negro being convicted for pistol-carrying and being placed in jail, but if there has been a single case of a white man being placed in jail for carrying deadly weapons, State press has not read of it."

The British  
Elections

The defeat is a rout. No one would believe it at first, but the overthrow of the late Conservative government is utterly overwhelming. The new ministry has such a majority at the polls as Mr. Roosevelt had in this country. It gives them an uncomfortably solid control of the House of Commons, with no effective and sobering minority. The *London Times* tells us that the result is due to the labor vote, now unexpectedly massed and solid. The explanation is but partial. Naturally the Laborites, as they are now called, elected their own men where they could, and helped the Liberals at other times, but there are other reasons for the Tory defeat. Great Britain does not want a tariff on food; it likes its free trade. Then the school question has solidified all Dissenters, who are more than half of the Protestant people. The mismanagement of the war in South Africa, with importation of coolies, is another cause of offense. Under all is the conviction that the Conservatives and the House of Lords stand for class privilege against manhood rights; and, with popular suffrage, the common people begin to learn that they have the right to rule. John Burns says he sees no justification for government by hereditary right, and that includes the privileges of

the Crown. The overwhelming defeat of Mr. Balfour, in a supposed safe constituency, is sensational, and Gerald Balfour fell with him. It will now be humiliating for the late Prime Minister to seek another safe seat.

How much justification there may be for the charges that Speaker Cannon has attempted to coerce Congressmen by threatening to hold up appropriations in their districts or to prevent appointments to office of their friends if they do not vote for the Statehood bill we do not know. This we know, that to make such threats is as bad as either bribery or blackmail. Indeed, it is of the essence of these crimes, for it would offer a consideration for a vote, and a threat for the refusal of the vote. We are glad to see that a somewhat similar charge made against the President is denied with authority. As the evidence is developed it seems less clear that New Mexico and Arizona should be united in one State; not because the people of New Mexico are "greasers," but because the two Territories are separated by a mountain chain and have quite different interests. They can wait.

There is a gradual democratization of bishops, if we can believe what the Anglican Bishop of Norwich said in a late address. He was the first bishop of the diocese, he said, who did not keep a carriage and a horse; and his humble way of going about in a tramcar or afoot reminded him of a rhyme retailed to him by Bishop Stubbs, which runs as follows:

"The Bishops once, in days of yore,  
Would drive about in coach and four;  
And when their lordships dropped their wigs  
They drove about in simple gigs;  
But now so handy we have got,  
That if you want us on the spot,  
Just drop a penny in the slot."

We have in this country a goodly number of bishops who, like St. Paul, walk about their business, altho some of them dress famously.

That war tends, in some aspects, to race decadence President Jordan has well shown in our issue of December 21. But, as a correspondent points out, there

is another side to it. In a state where war is normal and constant the strong are likely to survive and the weak to perish. Fitting naturally with this condition is the institution of polygamy, as the males are reduced in number, but not the females. The natural consequence is to increase the number of the strong both relatively and absolutely, and in such a state of society this would be a factor in the improvement of the race. Thus war and polygamy went together, and biologically they are both out of place now.

Some weeks ago the Burlington railroad company was indicted for giving rebates to the great United States Steel Corporation. Now, the New York Central and Delaware & Hudson companies have been indicted for granting similar favors to the General Electric Company. In each of these cases there may have been extenuating circumstances. But there is abundance of evidence that great industrial combinations have in the past been fattened and enabled to crush competitors by means of rebate favors unlawfully obtained from railroads. Most people will infer from these recent discoveries that the same methods are still used. The Interstate Commerce Commission should be empowered to make frequent and searching examination of railway accounts.

The President and the majority leaders are quite right in their desire to pass the Philippine bill. It is most regrettable that our selfish sugar men and tobacco men should try to prevent the full development of the Philippine commerce and agriculture, and that they should try to make a deal with the opponents of the Statehood bill, which has no sort of relation to the Philippines bill. Such a combine is unusual. It is a trust in restraint of trade, forbidden in ethics if not in law.

That exclusion with violence, of a woman from the White House is one of those cases in which the wrong is less than the injury done. Some violence was necessary to remove her, but, apparently, the violence exceeded the need. Her garments were torn as she was dragged to

the police station. There she was not put in a cell, but kindly cared for by the matron and given a cup of coffee. She is now reported seriously ill as the result of her experience. By all accounts, the attendants deserved to be reprimanded for their roughness, but instead they have been defended, which is characteristic, but unfortunate. Sympathy will go to the woman in such a case, and popular feeling may be more seriously affected by it than by an error on some more serious subject.

This is the language which the Pope used in his late address to his Cardinals about France: "The law now promulgated," he says of the separation of Church and State, was "in defiance of every rule of justice," and by it the Pope is "bitterly affected"; which illustrates the inability of good men to recognize their blessings. This abolition of the Concordat is the greatest blessing the Catholic Church of France has received for a hundred years. A succeeding Pope will see the mercy in disguise and change his view, just as now the Pope proposes, they say, to take a certain subvention of \$40,000 a year from the Italian Government, which his predecessors have refused since Victor Emanuel.

A man died the other day in Columbia, S. C., to whose merit *The State* of that city gives a laudatory editorial. He belonged to a race which is now said to hold more than half the farming land of the State. He was a barber, thrifty, honest, useful, a friend of everybody, who "commanded and received the respect of all men that knew him," "accumulating his money, living honestly, uprightly" and "as a gentleman"; "quiet, dignified, gracious," "refined in his bearing, polite always to others," and able with his financial success to retire from his business. Doubtless such a man was encouraged to vote, and was, perhaps, made an alderman, but our authority, which gives him cordial praise, does not mention it.

A denominational college must have a denominational president, but if a university or college claims to be administered undenominationally, it is ab-

surd at the same time to limit its president or trustees to a single denomination. The case of Chicago University is in point. At present the choice of a successor to President Harper seems to be limited to two or three good men, when the wide world should be open to their consideration.

This is the inscription, from his own words, put on the monument erected at Worcester in honor of Senator Hoar:

"I have no faith in fatalism, in destiny, in blind force. I believe in God, the living God. I believe in the American people, a brave and free people, who do not bow the neck or bend the knee to any other, and who desire no other to bow the neck or bend the knee to them. I believe that a republic is better than an empire. I believe, finally, whatever clouds may darken the horizon, that the world is growing better; that today is better than yesterday, and that tomorrow will be better than today."

That is a sound American sentiment. Senator Hoar was a healthy-souled man, and no fretful pessimist.

We shall take liberty to wait for the evidence that Japan is treating Korea with insolence, and equally that China is extending her anti-foreign feeling so as to include Japan. Korea's rulers may have to suffer humiliation, but that cannot be helped. Korea has had no government that deserved respect. It must come under Japanese tutelage, and we believe it will be fairly governed and developed for the interests of Korea as well as of Japan.

An addition of \$480,000,000 to the taxable valuation of real estate in New York city increases the city's debt margin by \$48,000,000, and permits it to borrow something more than \$100,000,000. It will now be possible, therefore, for the city itself to build one or two of the new subways. Nothing but the offer of completely satisfactory terms by the new combination of existing railway companies, or by other bidders, should prevent it from doing so.

If we are to have a maximum and a minimum tariff, the maximum rates should be those of the Dingley law now in force, and not rates 25 per cent. above them.

# Insurance

## Senator Dryden's Bill

SENATOR DRYDEN, the president of the Prudential Life Insurance Company, of Newark, N. J., has introduced into Congress his bill for the Federal control of insurance, upon which he has been working for the past year. The bill contains fifty separate provisions, and publicity is said to be its keynote. In Senator Dryden's words, it is aimed:

"To inaugurate a new era in American insurance, materially enhancing the value and security of every insurance contract, reduce the opportunity for wrongdoing and mismanagement to a minimum, and make the American insurance policy the safest, cheapest and best in the world.

"It follows in broad outlines my bill of the last session, but with very important modifications and additions, which, I believe, meet all reasonable demands for an effective, uniform and economical method of government control of insurance interests."

An Insurance Bureau is to be created in the Department of Commerce and Labor, under the direction of a Controller of Insurance, and all corporations engaged in interstate insurance business, except fraternal societies or organizations carried on for the sole benefit of members and not for profit, will be included within the provisions of the bill. The Controller is required to establish rules and regulations and reasonable fees for conducting the business of insurance, and the penalty for failure to transmit any report on the part of an insurance company will be punished by a fine of \$100 for each day of delay, and the Controller will have full powers, personally or by expert examiners, to get at all the facts of any and every company. Says Senator Dryden:

"By this bill the business of insurance is made a national interest, and national laws are hereafter to govern insurance contracts and the conduct or management of the insurance corporations. In addition thereto the companies will be subject to supervision and regulation by the government of the State, Territory or district of incorporation or origin. The needless, expensive and dangerous method of oversupervision, overlegislation and overtaxation by some fifty State or Territorial governments will come to an end.

"The Controller of Insurance will be a responsible officer, appointed by the President, specifically charged with the duty and clothed with ample power to properly and securely safeguard the interests of the policyholders and of the public generally."

If this statement of Senator Dryden means that the control of insurance by the separate States and Territories will not be curtailed in any respect by this additional Federal supervision, we hope the bill will pass; but if the control of insurance is to be taken from the States and lodged in Washington, there are many serious dangers in the scheme, which we have already outlined.

## Timothy L. Woodruff

EX-LIEUTENANT GOVERNOR TIMOTHY L. WOODRUFF was elected president of the Provident Life Assurance Society on January 4th. This came about thru the purchase by Mr. Woodruff from former President E. W. Scott of a controlling interest in this company. A thoro reorganization of the Provident Savings Life is now in prospect. The State Insurance Department has been requested to make an examination, and an independent audit has been undertaken by expert accountants employed by Mr. Woodruff. Mr. Woodruff's stock has been trustee, with the company as beneficiary. The company's interest under the trusteeship will extend to any dividends that may be declared upon its stock. Mr. Woodruff will receive no salary as president in the meantime. It has also been stipulated that at no time in the future shall the president's salary, plus the salary of the chairman of the board of directors, an office now held by Mr. Scott, sometime president, exceed the sum of \$36,000, which was formerly paid to the company's president. Mr. Woodruff has been a director of the Provident Savings Life for four years, but has not hitherto been active in its affairs. The company is now occupying offices on four floors of the New York Life Building, at 346 Broadway.

Capt. Jack Conway, of the Salvage Corps of the city of Cincinnati, attributes the reduction in the number of fires in that city during 1905 by more than 200 over the record for 1904 to the cleaning up of rubbish in cellars and under benches. In this simple matter of precaution there is perhaps a lesson for New York and some other cities.

# Financial

## Irving National Bank

OWING to the retirement on account of ill health of Charles H. Fancher, Samuel S. Conover was last week elected president of the Irving National Bank. Mr. Conover was born in 1869. When fifteen years old he entered the New York Mercantile Exchange. He was next in the service of the Southern Pacific Railroad for two years, and in 1891 entered the employ of the Fourth National Bank, where he remained for ten years. He was secretary to J. Edward Simmons, the president, and James G. Cannon, the vice-president, and had the opportunity of gaining invaluable banking experience. In 1902 Mr. Conover became vice-president of the Irving Bank, and during the past two years, on account of Mr. Fancher's illness has been the acting president. Mr. Conover is a trustee of the Irving Savings Institution and a member of the Chamber of Commerce. Besides Vice President Charles F. Matlage, Charles L. Farrell, well known as the vice president of the Fort Dearborn National Bank, Chicago, was last week elected vice president and will assume his duties at once. The retiring president Mr. Fancher has been elected chairman of the board of directors, and Ben F. Werner who entered the bank in 1873, will continue as cashier. The new directors, in addition to Vice President Farrell, include Charles H. Dale, president of the Rubber Goods Manufacturing Company; William F. Burrows, vice president Libby, McNeill & Libby; Robert B. Armstrong, president of the Casualty Company of Amer-

ica, and formerly Assistant Secretary of the Treasury of the United States, and Charles R. Hannan, the Boston banker. The Irving National Bank was organized in 1851, and has a capital of \$1,000,000 and a surplus of \$1,000,000. Its total resources, as shown in the last published statement, are over ten and one-quarter million dollars.

✱

....The new officers of the Merchants' Exchange Bank are Joseph Thomson,

vice president, and E. V. Gambier, cashier. Phineas C. Lounsbury has been re-elected president. The new directors are Sylvester G. Whiton, Kimball C. Atwood, J. Walter Earle and Lucius H. Biglow, Jr.

....We have received a copy of the Van Norden Trust Company's Bulletin, containing an excellent article on "The Examination of Trust Companies," by Mr. Willis S. Paine, recently president of the Consolidated National Bank and formerly Superintendent of the Banking Department of this State.

Mr. Paine was one

of the examiners who made the first official examination of New York trust companies, thirty-one years ago.

....During 1905 the number of national banks in Boston was reduced by four. There are now 28. Three years ago there were 38, and in 1899 there were 57. Consolidation has been the chief cause of the decrease.

....Dividends announced:

Louisville & Nashville R. R., semi-annual, 3 per cent., payable February 9th.

Phenix Ins. Co., Brooklyn, 20 per cent.—5 per cent. quarterly, January, April 1st, July 1st and October 1st.

Samuel S. Conover.

## Survey of the World

### National Topics

Senator Tillman, of South Carolina, made an extremely bitter attack upon the President in the Senate on the 17th, beginning with criticism of his policy concerning Santo Domingo and then taking up the recent forcible removal of Mrs. Minor Morris from the White House. The galleries were full, and among the visitors were women who wept while the Senator set forth his views of the treatment of Mrs. Morris. Some tears were shed by the Senator himself. He has not visited the White House since his invitation to the dinner given to Prince Henry of Prussia was revoked, after he had come to blows in the Senate with Senator McLaurin. In the course of his attack upon Mr. Roosevelt he spoke of many things, even going back to the war with Spain. Reference was made to the alleged attempt of Mr. Roosevelt to control and shape the reports of newspaper correspondents by threats. The Senate listened with surprise and disapproval. Mr. Hale interrupted Mr. Tillman, saying that, while he hoped he should never figure as a general apologist for the President, the Senator was making most serious and defamatory charges against the Chief Executive of the nation, and doing it without producing proof. Mr. Tillman, he added, ought not to discharge his personal feeling before the Senate. Denying that he had defamed the President, Mr. Tillman offered to produce witnesses (in support of his account of the treatment of Mrs. Morris) if a resolution for an investigation should be introduced. He then decided to introduce such a resolution. Senator Daniel (Democrat) sorrowfully appealed to him, urging him to cease his attacks upon the

President's management of his own household. But the Senator continued for some time. On the following day his resolution for an investigation was tabled, upon Mr. Daniel's motion, by a vote of 54 to 8.—In the New York Senate, on the 16th, Mr. Brackett (Republican) asked again for the passage of his resolution requesting United States Senator Depew to resign, and spoke earnestly in support of the request, reviewing the history of the Senator's connection with life insurance affairs, and asserting that he was "an integral part of the most colossal scheme of public plunder ever invented by the mind of man." He also said that the Senator was part of "a system of political debauchery whereby trust funds were employed in corrupting the franchise." Mr. Depew was defended by several Senators, one of whom, Mr. Malby, said that the Senator was "already wounded, and under the laws of war was entitled to the hospital and the nurse rather than to the knife of the assassin." The Democrats took no part in the discussion, saying that they would not assist the Republicans in "washing their dirty linen." Nor did they vote upon the resolution, which was defeated, 34 to 1, the solitary affirmative vote being that of Mr. Brackett.—Discussion of the Statehood bill, upon which the House at Washington is soon to vote, has been marked by much bitter controversy. A considerable number of "insurgent" Republicans stand with the Democrats against that part of the bill which admits Arizona and New Mexico as one State. The Republican leaders intend to bring in a rule forbidding amendments, and their opponents will strive to prevent the adoption of this rule, in order that

the way may be cleared for a rejection of the clauses relating to Arizona and New Mexico. The insurgents themselves claim to have 64 Republican votes, or enough to make a majority when joined to those of all the Democrats. A vote upon the rule will be taken before the end of this week. It is alleged by some supporters of the bill that the influence of wealthy owners of great mines in Arizona is being used improperly in support of the insurgent movement, because, it is said, the mine property is now assessed for taxation at very low valuations, and because it will be less difficult to control the Government of a Territory than that of the proposed State. Reports have been in circulation that the President, in his talks with insurgent members, has spoken of lobby influences opposing the bill in its present form. These reports, which excited much comment, have been authoritatively denied.

—Explaining the needs of the consular service to a House committee a few days ago, Secretary Root said that many consulates were in a defective condition, one cause of this being that "consulates are regarded here not as places in which active and efficient work is to be done, but as places in which to shelve estimable and elderly gentlemen whose friends find it necessary to take care of them in some way." The President was expected to appoint "to important consulates important men from the different States." Young men appointed could be examined, but "eminent citizens" resented such procedure. He pointed out that in the bill sent to the Senate, the provisions confining appointments to the lower grades, "so that we could catch fellows young," and filling upper grades by promotion only, had been stricken out by the Senate committee. The reciprocity bureau in his Department would not be permanent, he thought, because "the making of a system of reciprocity treaties" did not appear "to have the elements of eternal life."—Joseph H. Choate, formerly Ambassador to Great Britain; Horace Porter, formerly Ambassador to France, and Judge Rose, of Little Rock, Ark., formerly president of the American Bar Association, have been chosen to represent the United States at the coming peace conference at The Hague.

#### The Panama Canal Inquiry

It has practically been decided by the Commission that the greater part of the canal work shall be done by contract. This was made known by Chairman Shonts on the 20th, in an address at Cincinnati. Probably the work will be mapped out in sections two or three miles long, and bids for these sections will be invited.—Chief Engineer Stevens, testifying before the Senate committee, last week, said that there was no difficulty about obtaining negro laborers from the West Indies, but they were unsatisfactory, their effectiveness being only about twenty-five per cent. of the effectiveness of average ordinary labor in the States. He thought Chinese should be used, and that the application of the eight-hour law and the Chinese Exclusion law to the Canal Zone should be prevented by legislation. Mr. Stevens was followed by Mr. Poultney Bigelow, who was examined as to the sources of the statements made in his recent article. He explained that he had visited more than a hundred unsanitary shacks or shanties in or near Colon and had talked about the situation with hundreds of persons before going to the Isthmus and since his return. He refused to name those who had given him information confidentially, saying that he should decline if the committee should "put him on bread and water" or "even condemn him to Colon." He made an exception, however, in mentioning John R. Freeman, of Providence, as one of the prominent engineers who had declined an offer of employment at Colon from the Government. [Mr. Freeman has since said that Mr. Bigelow was in error about this.] Two or three executive sessions of the committee were held for a consideration of Mr. Bigelow's contumacy, after the law under which he might be punished had been read to him. As he still refused to give the names that were desired, Senators Hopkins, Knox, and Morgan urged that the record be certified to the Senate for action. They were opposed by Senators Gorman and Simmons, who argued that it would be unwise so to proceed at the very beginning of the investigation, as such severity might prevent some other persons from testifying. It was also said

that the committee might not be sustained, as the witness was not under subpoena, but had come in answer to a letter. Therefore the resolution designed to procure the punishment of Mr. Bigelow was withdrawn.—In his address at Cincinnati, Chairman Shonts gave high praise to Secretary Taft, and said that a lock canal could be finished in nine years. A considerable part of his address was devoted to Mr. Bigelow, whom he called an "irresponsible scandal-monger of surprising mendacity." He would express no opinion as to the time that would be required for the construction of a sea-level canal. The Commission, he said, invited investigation and asked for it as a right.

#### **Trial of the Beef Trust**

At the beginning of the trial of the indicted beef companies and their officers, in Chicago, last week, arguments were made in support of the defendants' pleas for immunity. Their counsel related in detail a conversation alleged to have taken place on April 13, 1904, between Commissioner Garfield and representatives of the companies, asserting that the Commissioner then promised that if they would give him the information he desired it would not be used to their disadvantage, and under no circumstances would be used in prosecuting them. The defendants will undertake to show, it is said, that the conversation was taken down by a concealed stenographer. On the 22d, defendants' counsel read the following passage from a letter written by President Roosevelt to Attorney-General Moody in relation to the Atchison railroad rebate case, asserting that it supported the packers' contention that the information obtained by Commissioner Garfield's Department was used by the Department of Justice to secure the indictments:

"With my approval, the Department of Justice, with the assistance of the Department of Commerce and Labor, has for some months been endeavoring to find out whether or not they can obtain legal evidence of willful and deliberate violations of the injunction. If the Grand Jury now sitting in Chicago finds an indictment against any individual connected with the packing corporations, it will be because in their judgment such legal advice of the violation of the injunction has been laid before them."

Dispatches from Washington say that the Attorney-General will go to Chicago and take charge of the prosecution; also that it is expected by some in official circles that the defendants' plea for immunity will be sustained.

#### **Tariff on Philippine Products**

In the House, on the 16th, the bill relating to tariff duties on imports from the Philippines was passed by a vote of 258 to 72, 57 "insurgent" Republicans being associated with 15 Democrats in the negative. Several proposed amendments were rejected. Only two other Republicans voted with Mr. McCall for an amendment declaring it to be the settled policy of the United States to grant independence to the Filipinos as soon as they should be capable of self-government. By large majorities the House refused to make the duties on sugar and tobacco 60 per cent. of the Dingley rates (instead of 25 per cent.), to limit the quantity of sugar or tobacco that could be imported at the proposed rates, to make all imports from the islands free of duty, or to reduce the existing differential protective duty on refined sugar. When this reduction was proposed by the Democrats, all the insurgent Republicans returned to their party and opposed it. Whereupon the Democrats remarked that an attack upon the Sugar Trust always caused Republican factions to unite in defense of that corporation. At the end, nearly all the Democrats voted for the bill, on the ground that it was a long step toward free trade. By joining the insurgent beet sugar and tobacco Republicans in the negative they could have defeated it. The bill, as passed, admits all products of the islands free of duty except sugar, tobacco and rice, upon which the duties are to be 25 per cent. (they are now 75 per cent.) of the Dingley rates. It also provides that even these three products shall be free of duty after April 11th, 1909, when the trade clauses of the treaty with Spain will expire. The fate of the bill in the Senate cannot now be foreseen. In the course of the debate, Mr. Steenerson, of Minnesota, denied that the President had said to him, as currently reported, that he would not have appointed his candidate to an office in Minnesota if he had

known that the Congressman was opposing the Philippine and the Statehood bills.

#### Chicago's Street Railways

Mayor Dunne's latest proposition for the municipal ownership of Chicago's street railways was unexpectedly approved by the Council on the 18th inst., the vote being 37 to 28. Up to that time the Council's votes had been more than two to one against all of the Mayor's plans, and in public addresses he had said that he could no longer hope for the Council's approval of any one of his municipal ownership projects. For months a Council committee had been considering a plan for extending the companies' franchises for twenty years upon conditions that would give the city about \$46,000,000 for the privileges and would require the companies to spend about as much in improvements. A majority of the committee had reported this plan, but on the 15th it was rejected by the company controlling all the South Side lines, altho the other companies were inclined to accept it. There seem to be three groups in the Council, one composed of the earnest advocates of municipal ownership, another consisting of those who support the franchise-extension plan mentioned above, and a third party of about fifteen members who hold the balance of power and are called "free lances" or "gray wolves." On the 18th these "free lances" joined the municipal ownership men in supporting the Mayor's plan for the issue of \$75,000,000 of Mueller law certificates to be used in acquiring the existing railways. The leaders of this group, who have repeatedly been denounced by the Municipal Voters' League, were foremost in the debate. The committee's minority report (for the \$75,000,000 in certificates) was substituted for the report of the majority. At the election in April next, the ordinance providing for this issue of certificates will be laid before the people for approval or rejection by a majority vote. At the same time (owing to the passage of another ordinance by the Council on the 18th), the people will vote upon the question whether the city shall operate (as well as purchase and

own) the railways. This requires a majority of three-fifths. It is asserted by the committee's counsel that the issue of certificates as proposed would be illegal; the Mayor's counsel holds a contrary opinion. The Mayor is quoted as saying he desires it to be known that there was no agreement between the municipal ownership men and the free lance group. Newspapers that oppose the Mayor's plans say that certain members, having failed to commend themselves to the companies by support of the franchise-extension plan, decided to turn about and show that they held the balance of power. On the other hand, it is asserted that the members in question were actuated by the purest motives.

#### The Philippine Islands

Governor - General Luke E. Wright, who is now in this country, has been appointed Ambassador to Japan, to succeed Minister Griscom, appointed Ambassador to Brazil. Governor Wright's successor will be Judge Henry C. Ide, now the senior member of the Philippine Commission, who has been in the Islands for six years and has asked that his resignation shall take effect in June next. Owing to his excellent service the President thinks he is entitled to the dignity and honor of the office of Governor-General until that time. It is announced that upon his retirement in June Gen. James F. Smith, now the junior member of the Commission, will be appointed in his place. He has already been nominated to be Vice-Governor. Judge Ide, a native of Vermont, was one of the American Commissioners at Samoa, and afterward was Chief Justice of the Samoan Islands for several years. A Philippine Commissioner's salary is \$15,500, that of the Governor-General is \$20,500, and our Minister to Japan has received \$12,000. The rank of our representative in Japan having been raised to that of an Ambassador, Secretary Root, it is said, will ask Congress to increase the salary of the post to \$17,500. —On leaving the Islands for India, by way of Borneo, Mr. Bryan said that his visit had been very interesting and instructive. He had collected much information, which he hoped to use for the

benefit of the American people and the Filipinos. He had been impressed by the readiness with which the young learned to use the English language. His views as to the independence of the Islands had not been changed.—Mr. Culberson introduced in the Senate a resolution inquiring whether any member of the Commission or any officer of the army had become the owner of land, or of options on land, in the Philippines. Secretary Taft sends in reply the statements of Governor Wright and the American Commissioners (Ide, Worcester, Smith and Forbes), each of whom says that he neither owns land nor is interested in options. The Secretary points out that it is difficult to get reports from 3,000 army officers, but all of them have been forbidden to use their positions for private gain.—A bill introduced by Mr. Clark, of Wyoming, and said to have the support of Admiral Dewey, appropriates \$50,000 to Edmund C. André, Belgian consul at Manila in 1898. It is said that Mr. André was very useful in arranging for the surrender of Manila after a comparatively bloodless engagement which would save the honor of the Spanish commander.—Bids for railways in the Islands have again been received. Speyer & Co. offer to construct in Luzon about 200 miles of road, without bond guarantee, and 160 miles, with guarantee. A syndicate, including Cornelius Vanderbilt and J. G. White & Co., proposes to construct, with guarantee, about 300 miles in the islands of Panay, Negros and Cebu. These offers involve an expenditure of about \$30,000,000.

#### Latin America

The Franco-Venezuela dispute still remains at a deadlock. President Castro refuses to apologize for expelling M. Taigny, the French chargé, from Venezuelan soil, while France is apparently sounding the United States before taking definite action. All sorts of rumors are afloat in Washington and Paris, and it seems to be the belief that the Administration will raise no obstacle if France should take any coercive measures short of infringing upon the Monroe Doctrine. It is rumored from Paris that a naval demonstration will shortly take place in Ven-

ezuelan waters.—In Ecuador a small revolution occurred last week. The trouble broke out in a place called Riobamba, but the nature of the revolution is not stated in the dispatches. The revolution is said to be in favor of General Alfaro, a former President of the Republic, who occupied Quito, the capital of the Republic, after a serious fight in which 200 people were killed. A junta of notable persons met in the Government Palace the same afternoon, and formed a new government.—Rumors of a revolution have also found their way to this country from Panama. It is said that relations between the Amador Administration and the Liberal party are strained, but what principle is involved is not known. Of course, no serious disturbances can occur on the isthmus where the United States is in complete charge.—Colombia is now undergoing reconstruction, and the situation is more hopeful than it has been for many years. President Reyes is a strong character and a man of travel and wide culture. He has so dominated the National Assembly that it has extended his term of office to ten years.—In Santiago, Chili, a serious riot broke out last week, in which ten persons were killed and many hundreds wounded. The rioting originated after a meeting called to petition the government to abolish the import tax on Argentina cattle. Finally the troops charged the people and put down the trouble.—A revolution, also, has broken out in Rio de Janeiro against the Brazilian Government. It is both military and naval. It is said the entire garrison of the capital has rebelled and the squadron in the harbor sides with the revolutionists. Hundreds of persons have been killed. The Brazilian turret ship "Aquidaban" was blown up Monday of this week and the vessel sank a short distance south of Rio de Janeiro. It was apparently an accident.

#### The Liberal Majority Grows

As the parliamentary elections continue, the Liberal landslide assumes greater proportions than the party on either side dared to predict a few weeks ago. Already the Liberals have a clear majority in Parliament over all other parties combined of 29, and with

the Labor and Nationalist members, a majority of 271 over the Conservative Unionists. The 505 members of the House of Commons chosen at the time we go to press are divided as follows: Unionists, 117; Liberals, 267; Laborites, 42; Nationalists, 79. In marked contrast with the ignominious defeat of ex-Premier Balfour, is the triumph of Mr. Chamberlain and his colleagues in the city of Birmingham, which returned all seven Unionist representatives with unusual majorities. Mr. Chamberlain himself received 7,173 votes, while his opponent, R. L. Outhwaite, the candidate of the combined Liberals and Laborites, polled only 2,094. In the last election Mr. Chamberlain's seat was not contested, but in the preceding contest his majority was 4,278. This is taken to prove that Mr. Balfour would have been more successful if he had adopted and openly advocated a definite protectionist policy like Mr. Chamberlain, instead of evading and temporizing in order to hold his office a few months longer. Mr. Balfour may yet be returned to Parliament in some bye-election or by the resignation of some member of his party in a safe Conservative district, but he will have lost his prestige, and Mr. Chamberlain will probably be leader of the Opposition. In Battersea, John Burns, the labor member of the new cabinet, was elected by an increased majority notwithstanding that the Conservatives and Socialists made strenuous efforts to defeat him. In the last Parliament there were only seven Labor members. In the new Parliament there may be as many as 50, not counting Liberals elected on a fusion ticket. They will maintain a distinct party organization in the House, ready to join with any faction to secure their own ends. The Nationalists hope by their aid to obtain Home Rule for Ireland in a few years, on the comprehensive plan of devolution, creating local legislative bodies not only in Ireland, but also in Scotland, Wales and North and South England. The first effort of the Laborites will be to secure the overthrow of the Taff Vale Railway decision of the Law Lords, which made the officers of unions financially responsible for the acts of the unions. The number of votes cast thruout the United

Kingdom is greater than ever before. The Unionist vote is almost as large as in 1900, so the Liberal and Labor victories are due to new voters. Owing to the way the districts are divided, however, the number of candidates gained by a party does not indicate the popular vote. On the contrary, the Unionist candidates have polled more votes so far than the Liberals, notwithstanding their loss in Parliamentary representation. A new feature in the election is the extensive use of automobiles to bring voters to the polls.

**Fallières Elected President of France** On January 17 the National Assembly met in the Hall of Congress in the Royal Palace at Versailles to elect a successor to President

M. Fallières, President-Elect of the French Republic.

Emile Loubet, and on the first ballot elected M. Clément Armand Fallières. The National Assembly, which elects the President of the Republic, consists of 300 Senators and 591 Deputies, but on this occasion only 849 were present, making the number necessary to a choice 425. M. Fallières, as President of the Senate, presided over the joint assembly. No debate is allowed and the members come

forward as their names are called in alphabetical order and deposit secret ballots. M. Dubost, Vice-President of the Senate, announced the result: M. Fallières, 449; M. Paul Doumer, President of the Chamber of Deputies, 371; scattering, 28. M. Fallières then made a speech in which he thanked the Assembly for their confidence and announced his intention to follow in the footsteps of President Loubet. "If, like him, I accomplish my seven years' mandate, I will, like him, descend unostentatiously and noiselessly from power." The election of M. Fallières insures the continuance of the same foreign and domestic policy that France is now following, and he is obviously chosen, not on account of any remarkable personal ability, but rather for the lack of it. His rival, M. Doumer, is a man of much more force and independence of character, but was not considered so "safe." M. Fallières has occupied public office in France for thirty years, and has always shown tact and sound judgment. No scandal has attached to his name, even the Panama affair, which carried down so many political reputations, left him unstained. As he is somewhat fond of show and Mme. Fallières is a salon leader, he will make the Elysée Palace a social center and will take naturally to the spectacular functions, such as the entertainment of royal visitors, which now forms so important a part of the duties of a French President. His grandfather was a blacksmith and had his forge against the cathedral wall in the village of Mézin, Department of Lot-et-Garonne. His father was a magistrate's clerk. He was born in Mézin in 1841, and was educated at Angoulême and Bordeaux. He studied law in Paris and was admitted to the bar at Nérac, of which city he became Mayor at the age of thirty. He was elected Deputy from Nérac in 1876. Two years later he became Minister of the Interior under Duclerc, and succeeded him for a month as Premier. Since 1890 he has been in the Senate and President of it for the last seven years.

#### German Election Laws

The rapid increase in the Socialistic vote in Germany has caused such alarm among the conservative class-

es that a movement is under way to revise the election laws in order to restrict the suffrage. In the city of Hamburg this has already been done, and was the cause of a general strike on January 17th, followed by some rioting in the evening. A barricade was erected in the street, and in the attack upon it some twenty policemen were wounded. A mob of young hoodlums took advantage of the occasion to break windows and loot stores. Meetings and demonstrations in favor of universal suffrage were planned in Berlin and other cities by the Socialists, to be held on January 21st, the anniversary of the "Bloody Sunday" of St. Petersburg, but they were suppressed by the police. The reactionary action was taken in Hamburg because it was feared that the Socialists would, by 1910, get 40 members in the *Bürgerschaft*, or popular house, and could block any change in the electoral system, since two-thirds majority is required for such a constitutional change. At present the Socialists have only 13 representatives, owing to the complex system of voting. In the election for the Reichstag, in which the voting is direct, secret and universal, the Social Democrats cast 100,000 votes as against 60,000 by other parties, and send three representatives to the Reichstag, including Herr Bebel. Under the new law of Hamburg, half of the *Bürgerschaft* is to be elected by the notables and the owners of real estate, and of the other half 48 are to be elected by citizens who pay an income tax on incomes of over \$625, 8 by county parishes, and 24 by citizens paying taxes on incomes less than \$625. The present law in Prussia is still worse. The Social Democrats have not been able to elect a single member to the Prussian Chamber, altho they outnumber all of the other parties.

#### The Moroccan Conference

The International Conference on the condition of Morocco, meeting in Algeciras, began its business on January 16th by electing as President the representative of Spain, the Duke of Almodovar, upon the nomination of Herr von Radowitz, the German Ambassador to Spain. M. Revoil, the head of the

French delegation, proposed that the Conference base its proposed reforms upon the triple principles of the integrity of the Empire of Morocco, the sovereignty of the Sultan and the maintenance of the open door. This was seconded by Herr von Radowitz and carried unanimously. The first subject taken up was that of the contraband trade in arms, upon which the brigandage of the country is dependent. The smuggling of rifles and ammunition is very profitable, and many officials prominent in the Sultan's court are implicated in it, including it is said, the son of Mohammed el Torres, the Moroccan delegate to the Conference. There was a surprising unanimity in the Conference over this question, and the five articles presented by a special committee were adopted without opposition. Germany agreed with the proposal to entrust France and Spain with the suppression of contraband trade along their respective frontiers. The Moroccan customs authorities are to maintain a patrol along the coast to prevent the importation of arms. The question of who shall control the customs, like other vexed questions, was postponed to a later date. The next subject to be discussed will be the establishment of a bank and measures for the increase in the revenue. The business of the Conference is much expedited by the practice of holding informal secret sessions for the free interchange of views without record upon the minutes. Mohamed el Torres expressed in a long speech in Arabic before the Conference the desire of his master, the Sultan, to have the assistance of other nations in the improvement of Morocco. In an interview with a correspondent, he suggested that it might be well for the Powers to hold a conference also on the internal condition of Russia.

#### A Constitutional Government for Persia

A report comes from St. Petersburg that a thousand merchants and priests of Teheran left the capital as a protest against the administration of the Shah, and assembled in the village of Shah-Abdul-Azim, a few miles south of Teheran. In order to avoid a revolution or civil war, the

Shah has called a representative assembly, to be elected by the mullahs, merchants and land owners. The Shah will preside over this assembly, which will be called the House of Justice, and will possess legislative and administrative powers. A proclamation of equality before the law will be issued. The causes of the movement are not clear, but it is apparently a result of an anti-foreign crusade.

#### Pekin Renovated

A despatch reports that the Chinese Government proposes to put Chinese police at the entrance of the Legation Area in Peking, but the Legations replied that they were able to do their own policing. That so-called Legation Area has been much enlarged since the Boxer uprising, and now is about a mile square. It is quite a separate foreign city, with fine streets, electric lights, telephones and all modern improvements. The legation buildings, the new hotels and the private dwellings are stately and impressive, and carry the impression that the foreigners are there to stay, and will be able to defend themselves in a future emergency. The missionary buildings, schools and hospitals, with their enlarged compounds, are the best and most complete plants in the Empire. Peking, says a long resident in China, does not look like the same city it was five years ago. The two main streets are graded, macadamized and planted with trees thruout their entire length. The cross streets between the two great thoroughfares are macadamized and would do credit to any American city, and the streets are actually lighted. Telephones have been introduced and other modern improvements are following after. Dr. Hykes, who represents the American Bible Society, declares that a wonderful spirit of patriotism and progress has been developed, under the motto, "China for the Chinese," which is purchasing, or canceling, railroad and other concessions to foreigners, and replacing the old literary examinations with those based on modern ideas; and the remarkable thing is that the Empress Dowager helps this progress. His only fear is that China will move too fast for her own good, attempting to do in twenty years what has taken Japan fifty years.

NICHOLAS LONGWORTH

ALICE ROOSEVELT

ROOKWOOD, THE LONGWORTH HOME

From Photographs, Copyrighted, 1906, by Brown Bros., N. Y.

The marriage of Congressman Nicholas Longworth and Miss Alice Roosevelt, the President's eldest daughter, will take place on Saturday, February 17th. We present our readers with the most recent pictures of Mr. Longworth and Miss Roosevelt, and their future home in Cincinnati, Ohio.

# The Social Revolution in Russia

[This article was sent us from St. Petersburg at Christmas by our special correspondent in Russia, the same writer whose article, "The Revolutionary Way," appeared in last week's issue.—EDITOR.]

ON the morning when Moscow was first being covered with barricades, I talked with a member of the Cabinet. He spoke in a kindly and sympathetic way of what he called the misled ideas of the working men about revolution. The first fruitless effort to erect a barricade which would stand had been made the day before. "You see the troops had to come and shoot them down," he said.

He also was disposed to take the prevailing view that the St. Petersburg strike was failing and must fail on account of the lack of means on the part of the workingmen to carry on the struggle. He seemed not to be aware that the St. Petersburg strike was at that moment keeping from Moscow much needed reinforcements for fear of a general uprising here, and that it was encouraging a rapidly increasing number of railway men to leave their positions. In all that he said he assumed that the working people were acting *alone*, that is, without the support of other classes, and *without a plan*. He was also of the opinion that the strike had been forced among the working men by the fear of a small minority, which it would seem from the above was not the case.

The working people are not alone in the present revolutionary movement. The leaders of the Socialist party and of the workingmen's deputies, as well as the Jewish Bund, recognize that they need and can rely upon the help of a large proportion of the professional classes, the so-called "intellectuals."

Professor Melukoff, known in America from his lectures and his book on the present "Russian Crisis," formerly president of the Union of Unions, now leader of the Constitutional Democrats, and editor of their organ, speaks of himself as a revolutionist, calls attention to the position of his party in favor of the general strike, and gives friendly counsel to the other revolutionary parties. His only criticism of the strike at this

moment is not that it is unjustified, but that in his opinion it is premature, and on this account may become disorganized in itself and also lose the support of the "neutral classes." Let us see, however, whether this is actually the case, whether the great professional classes are not largely and openly on the side of the revolutionists, even at the present moment.

Some two weeks ago at any rate, Count Witte was of this opinion. The revolutionists, he said, are the only party that knows what it wants. He confessed that public opinion was against him. That he was right, a few quotations from the press will show. One of the last articles of the *Russ*, perhaps the most read of all Russian papers, and patronized chiefly by the middle classes, was entitled, "What Is Needed for Success," the success in question being that of the general strike. What is needed, in the opinion of the *Russ* is the wide sympathy of society, not only the passive but the active sympathy.

"Our society is very disposed to political sleep. It needs to be wakened up, to be brought into agitation so that it also may take a part in the struggle for freedom."

It advocates a new series of meetings everywhere, in which should be explained the lying and destructive policy of the Government, by which the latter is trying, by force and by all means within its power, to squeeze Russia once more into the hateful confines of the old *régime*.

The Union of Unions takes an even more definite position. It is this organization that decided a few weeks ago to assess its members one day's earnings for the support of the general strike. This is the organization also which, upon the arrest of the workingmen's deputies, decided openly to take the "revolutionary way." It is composed of unions of all the professions, some of them in existence several years—for example, the Engineers', the Lawyers', the Doctors', the Journalists', and even the Authors', the Artists' and Actors'. Very important also

are the Professors' Union, the School Teachers' Union, the Railway Union and the Peasants' Union, all of which are members. The Union of Hebrews is also part of the organization, as well as the Union for the Advancement of the Interests of Women. The former union alone, I was told by one of the most prominent Jewish editors in Russia, has more than 50,000 members in some 150 local organizations. Having met with absolute and complete failure in its efforts to bring the real instigators of the "pogroms" to justice, and seeing no promise of satisfactory results in any of the twenty-six governments where these horrible butcheries took place, the Hebrew Union has also decided to arm its members and to take the "revolutionary way."

I talked with a celebrated St. Petersburg lawyer, one of the best in Russia, who is employed by the Union of Hebrews to endeavor to trace the origin of the massacres. He explained in a long conversation the utter futility for him and his hundred assistants all over Russia of accomplishing anything under the present autocratic and bureaucratic *régime*. He believes that in every one of the twenty-six governments involved the Governors either actively encouraged or passively tolerated the preparations for the "pogroms." Two he says have been changed to other governments; none have been removed.

Prince Eristoff is one of the most active spirits in the Union of Unions. I had a brief conversation with him a few days before his arrest. He spoke of the Union of Unions as having the function during the present struggle of bringing the organized assistance of the professional classes to the working people. He said there was scarcely a town of any importance in Russia where the Union did not have its representative. Here is its declaration on the eve of the present strike:

"The Government has committed many new crimes. It has arrested the Central Bureau of the Union of Peasants, of the Union of the Post and Telegraph, also the Council of Deputies of the Workingmen. It has closed the progressive newspapers and proclaimed laws that destroy civil liberty. The Government is threatening the rights *which the people obtained for themselves by struggle*, and which it confirmed by the Manifesto of October 17th,

Russian style. The liberty of the people is in danger.

"The Central Bureau and Committee of the Union of Unions, declaring a common cause with the Council of Workingmen's Deputies in its struggle against the Government calls upon all citizens to defend their rights. The Government invites us to a struggle; then let us struggle. The form of this struggle does not depend at all upon us. It depends upon the actions of the Government, which, by its invasions, is trying to destroy the organization of the working people, of the peasants and of the revolutionary professional classes. By its efforts it is compelling the revolutionary movement to take an elementary road. If the Government keeps the power in its hands it threatens innumerable misfortunes and bloodshed. The Central Bureau and Committee of the Union of Unions invites all the Unions which compose it to commence a mobilization of their forces to be ready every moment to take part in the general political strike as soon as it shall be proclaimed." The Union then demands the abdication of "the provocative Government" and the immediate convocation of a constitutional assembly."

The Union of Unions is making good its promise to aid in the general strike. It was largely responsible for the 26,000 rubles gathered in the first few days in St. Petersburg. It was also responsible for numerous meetings, by which it forced the Government again to resume the policy of wholesale arrests, with all the resulting hatred and bitterness that results when the persons arrested, like the members of the professional classes, play an important *rôle* in the community and have large circles of friends and dependents. Finally, officially or unofficially, the Union of Unions is represented in the new Fighting Organization that has been formed among the revolutionary organizations. The lawyer, the doctor, the engineer and the journalist are available for many kinds of revolutionary work. It is safe to say that the professional classes, not to speak of the business community proper, is thoroly permeated with the revolutionary spirit and to a large degree organized for revolutionary activity. The working people, then, can depend upon the support of the largest and most valuable section of the middle class. The revolution is being developed neither by a handful of agitators nor by a mass of uneducated or half educated workmen; the Socialist parties are not acting alone!

Nor is the movement without a plan. There are deep and widespread differ-

ences between the Social Democrats, the Social Revolutionists and the Union of Unions, but these differences are without influence on account of one great salient fact. Each has an overwhelming and unrivaled influence in a different class of the population, as far as revolutionary organization is concerned. Of one hundred members of the Council of Labor Deputies, sixty-five, it was said, were Social Democrats; the last executive consisted of three members of this party. They are unrivaled among the workingmen of the cities as a revolutionary influence. Among the peasants the Social Revolutionists have pretty much their own way. Until recently the other Socialist party had no hope of persuading the peasants to revolutionary action. Among the professional classes it is only the young students for the most part who are active in the Socialist parties. The radical element among the older men is to be found almost entirely in the Union of Unions, or recently in the Radical party, which is, perhaps, the most accurate political expression of this Union.

The revolutionary army is divided into three independent corps, but there is no fundamental conflict in their action. It is, then, possible to frame together the revolutionary program, accepting the ideas of each party in its favorite field. Not only this, but the two Socialist parties have now joined in a common program and tactics, and the Union of Unions is lending its active support. As auxiliaries unwilling to lend active assistance, but giving a moral support which is very valuable at the present time, is the independent press and the Constitutional Democratic party of Menukoff and Struve and the Zemstvos.

"Without the moral support of society," said Witte, in his interview with Mr. Dillon, "anarchy (read revolution) will continue, until finally the nation demands its suppression by force, and it is possible that then the principles of the Czar's manifesto will be suspended."

Is it not also possible that the nation may finally demand the suppression of the Government by force, and that the principles of the Czar's manifesto, instead of being suspended, may be carried out of their logical conclusion? The position of the press—the *Russ*, *The News*

*of the Bourse* and *Nasha Jisn*, as well as the Constitutional Democrats—leads to the latter rather than to Mr. Witte's conclusion. It is only a few months since the Zemstvos decided that none of their members should participate in the Government and since the Osvobojdienia (Liberty party) was organizing the army officers for revolt.

"The heavy sacrifices" of which Witte confesses the revolutionists are capable are now being offered for the advancement of the revolutionary movement. The revolutionary party does not expect to win without the loss of many battles and many men, but it knows that the victories of the Government are dearly bought, and it also knows that it has become stronger with each defeat. What, then, do the revolutionists expect from the present desperate conflict?

First of all, they hope, by creating riots and insurrection all over Russia at one moment, by tying up the railroads and impeding the telegraph, to allow the revolution time in such places where it is stronger than the Government or where the troops are disaffected, to gain the upper hand.

Second, by encouraging revolt in the army it hopes to rob the Government of a few more regiments, at least. A large proportion of the revolutionists are constantly sanguine that the whole army will come over in a very short period. This hope seems by no means to be borne out by the facts.

Thirdly, by occupying the troops in the cities, the revolutionists hope to give the peasants a free hand. The destruction of the landlords' houses already amounts to many millions of dollars a day, according to the calculation of a leading Russian economist. It shows no signs of relaxing.

Fourth, the revolutionary committees have also been under a constant pressure from the Baltic provinces, Poland and the Caucasus, to make a diversion in favor of their movements for liberty and autonomy. The effect of the general strike in all three sections has been instantaneous.

Fifth, the attack on the Russian finances. With every move on the part of the revolutionists, the government's expenses increase, income decreases and credit is

destroyed. I hope later to make an estimate thru interviews with persons best informed concerning the extent of this movement. The destruction of the nation's credit is apparent to the whole world thru the failure of the government to make new loans, and the fall in price of bonds. The exhaustion of the gold supply is a matter more mysterious and less understood. It is enough to say that the gold is flowing away from the government coffers thru several channels at the rate of millions a day. Can it be a question of many weeks or months before it is exhausted, and the currency of the nation is on a paper basis?

But a military dictatorship or a revolution are not the only alternatives for the nation. What does Count Witte mean when he says that "the nation may demand the extermination of the revolution by force?" He certainly knows that a large part of the revolutionists will not lay down their arms without a conflict. What does he mean?

The answer is found in the permission which has been granted by his government to the landlords to hire men to defend their property. It is shown by the arming of the Union of Russian Men under Prince Sharabatoff by the Governor General of Moscow. It is shown

by the Governor General's order creating automatically a thousand Czars at the time of the general strike. The policy is summed up by the Conservative journal, the *Svet*, which advises its readers "to help themselves." *The government is not relying then entirely on its army; it also feels the necessity of declaring a civil war.*

With the barricades at Moscow has come another ukase, establishing liberty for the Russian people. The complete indifference with which the ukase is received, would indicate that the large masses of the population have lost interest in what the government does or does not do. That the political revolution (the movement against the government) is drawing to an end, and that a social revolution—directed against such large social classes as those of the bureaucrats, nobility and landlords, has begun.

If the classes attacked by the social revolution are powerless before it, the revolution will continue, but if with the aid of even a fraction of the army of the peasantry and of the unemployed workmen of the cities succeed in defending themselves, there is no question that we shall have one of the bloodiest civil wars of history.

ST. PETERSBURG, RUSSIA.

## Song

BY LOUISE DUNHAM GOLDSBERRY

THE soul of the man who loves  
Is the soul of the woman beloved;  
The glimmer of grasses in dew-time,  
Is the light of her eyes loving-lighted;  
The singing of leaves in the tree-tops,  
The sighings of dusk when day passes  
And stars from night's peaks beckon stilly—  
What is it that beats in his pulses  
But the voice of the woman beloved  
In the heart of the lover still flowing  
With infinite ebbings and echoes  
And silences sweeter than sounds are.  
And all the glow of earth's fullness,  
The face that is fairer than beauty:  
And the crooning wind in the open seems  
The voice of motherhood heard in dreams.

And the woman—to what shall I liken  
The heart of a woman beloved?  
The heart of the nooning; the midnight;  
With its utterless wealth—and unfathomed  
Depths of tender endurance.  
Waiting within the white threshold  
Of life at the bloom and the day-rise.  
The hand of its lord at the lintel;  
A priestess song-shod and glowing,  
Waiting with aloes and incense  
The kiss that shall kindle the altar;  
Lifting aloft at the fountain  
Pitcher brimming love's waters.  
And the tread of the sun-made shadows  
seems  
The footfall of children heard in dreams.

WASHINGTON, D. C.

# The Position of Japan in the Household of Powers

BY COUNT OKUMA

[Count Okuma is the leader of the Progressive Party today and the leading statesman of Japan not in office. He has filled most of the important offices in the gift of His Majesty, including the Premiership. His most notable achievement was when, at the head of the Foreign Office a few years ago, he proved to the satisfaction of even his enemies that he is the most courageous of Japan's diplomatists as well as the ablest of Japan's statesmen of today.—EDITOR.]

A NATION is so like a man; a keen knowledge of his environment gives him many advantages of value, and in making clear her position in the family of Powers a nation receives many a priceless gift. This is a difficult thing to see, however. Always there is one good test. Let us ask in our particular case: Has Nippon a voice in the council chamber of the world powers on all the questions which are world-wide in significance and effect? If she has not such a voice, then she is not worthy the proud name of being a nation of the first rank. And I think we can find an answer to the question in the brief historical review of the growth of our nation.

In our national life of over twenty-five centuries, it is far, very far, from the truth that the genius of our land delighted in closing our doors against the foreign lands and people. Quite the contrary was the fact. Ours is the land distinguished with the ready grace in welcoming the civilizations of other lands, ever eager, indeed, for whatever flower of alien culture that we could graft upon our old institutions and admire them side by side with those that are native to the soil.

True, our country saw the wisdom of keeping her doors, for a stretch of years, under lock and key against some of our alien friends. For it, however, there is a reason—a good one, too.

Years and years ago, like Europe, our country saw the nightmare of a dark age. It was when the tumultuous disputes of swords were at their height that we were honored with the visits from our friends over seas. Ships of Spain and Portugal came to Satsuma; then to Bungo, then to the modest town of Hirado in the

province of Hizen. And the ships, the like of which we had never before seen, brought to us men whose complexions were quite as strange as the fashion of their ships. There was about these goodly visitors to our shores, however, something much more strange than either their complexions or their ships. They were missionaries. The most famous among them has left his name to history—St. Francis Xavier. With deep sincerity and quite eloquent enthusiasm these men scattered abroad the teachings of Christianity. The number of our people who inclined their ears to the teachings of their strange doctrines was many; it has been reported that the number of the converts to the new teaching reached in the flowery days of Christian missions to six millions. Not only in number could you read the success of the work of those missionaries, but also in the character of the people they gathered to their fold: Oda Nobunaga—the greatest general and statesman of the age and the Shogun of the day—was one of them.

The people of Nippon—as you can see from this simple incident—were by nature kindly to the reception of anything good that came from the outside; they hesitated but little in shifting from the old to the new, from what they had had, native to the soil, to something that came from abroad, even tho they knew not where. Our people have been happy in that they neither neglect an external stimulus nor fail to take from outside whatever that is good in advancing the civilization of their own country.

On the other hand, if they wake upon a fine morning and find themselves oppressed by an external pressure, the violence and strength of their resistance

seem to pass all human wonderments. History would, at any time, give you more than one instance of this. You might recall the tall flame of patriotic fire which covered the entire land at the very mention of the Mongol invasion in the olden days. In those days the affairs of the land were in a very sad state. Verily it was a house rising against itself; here an ambitious clan, all consumed with the fever for the love of its neighbor's domain, over there a clan of superb swordsmen and brilliant tacticians drunk with the wine of conquest and the lust for blood; a paradise of strife and very poor home for the angel of peace. Nevertheless, with the first note of the coming of the mongrel horde, the thousand factions in death grapple forgot all of a sudden their differences. Like one man, Nippon shook off the fear of a foreign invasion.

And this, perhaps, helps to explain in a measure the reason why we took to the closing of our doors against the foreign people so suddenly.

Now at first the coming of the Spaniards and Portuguese was welcomed with open arms and frank hearts. At first those missionaries were men of sincere zeal; they preached the gospel of truth; being good, they did a great deal of good to the country. When, however, the cult gained power in Nippon; when among its converts it numbered the Shogun and the leading generals and statesmen of the day, there came to the cause of Christian missions in Nippon an unhappy day which saw the birth, in the very bosom of the holy Church, of an unholy ambition. To come into the possession of a goodly land by a simple tying of politics and religion is not taking as great a trouble as a Power is usually called upon to take. The beau-

tiful simplicity of this method of conquest must doubtless have appealed to the sagacity of the governments of Spain and Portugal. They united them in a rough-handed knot. And in the very camp of Christian propaganda was conceived a bastard which threatened the very life of our state. This wild scheme of the foreigners did not escape the keen vision of Hideyoshi Toyotomi and of Ieyasu and a number of other great statesmen of the day. The drastic measures of suppression and persecution

and the decrees for the closing of the ports of the period of Kwan-ei were the results. Even then the command of Ieyasu to close the ports had nothing to do so far as the international commerce was concerned. But the foreigners, forgetting themselves more and more, insisted on taking so keen-sighted a statesman as Ieyasu for a blind fool. Under the name of commercial intercourse, they persisted in carrying on their black schemes, all of which finally culminated in the Chris-

tian rebellion of Amakusa. And this disturbance forced the Shogun of the day to place under ban even the trade intercourse between the people of Nippon and those of Europe. If you, moreover, wish to see the sincerity of the administration of the time in this matter, go to any authentic history of the day.

Now at the time of the Amakusa Rebellion, the Dutch at Hirado assisted the Shogun's forces against the revolt. And after the promulgation of the exclusive policy, an exception was made in the case of the Dutch. All of which shows, pretty clearly, that the ports of our country were closed by the administrations of those days, not so much against the foreign intercourse and peaceful commercial activities, and against the for-

COUNT OKUMA.

enemies as such, but they were closed against the enemies of the very life of the State who tried to gnaw their way into the heart of the land. Moreover, as is well known, the exclusion law of that time, nor of any other time, had nothing to do with our intercourse with China. To be sure, with even these two countries, the administrations of a later period imposed a certain limitations, but that was done solely for the reasons of coastal defense against the other powers of Europe. But since the years of the period called Ka-ei (1848-1854) many foreign Powers sent their embassies to knock at our doors, and they did knock constantly and with persistence that would not take a "no" from any quarters. With one voice they, one and all, demanded the opening of our ports. The Shogun's Government took the trouble of calling for the expression of opinions from some three hundred lords of clans on the question of opening the country to the international intercourse. Not a single one of them expressed himself in favor of the opening. On the contrary, they all were loud in supporting the policy of exclusion—of "driving away the barbarians." But the ministers of the Shogunate found themselves powerless. The foreign Powers were most imperative in their demand and in their impatience did not always take the trouble of even being civil to the Shogunate. The country was quite as powerless as the ministers of the Shogunate. What was there for the ministers of the Shogunate to do?—nothing but to bow before the inevitable. They signed, without the consent of the Imperial Court at Kyoto, a commercial treaty. This brought upon the head of the Shogunate the terrible storm. This divided the country into two parties; one for the Imperial Court and the other for the Shogun. And the strife culminated in the restoration of the actual power of administration from the Shogun to the Emperor, and we came to see the happy establishment of the new *régime* under the Imperial Government. In April of the first year of the new *régime* was issued the now famous five articles of imperial oath. Of supreme importance and significance, it by all means ought to occupy the first pages of our constitutional history. With the imperial

oath was also published the "Book on Body Politics." It is, in many respects, a curious document, this "Book on Body Politics." It was nothing more or less than the statement of political principles, which were the skeleton of the new Government. It took place of the governmental regulations of the present day; by nature they are the one and the same thing.

"Widely we shall call forth public assemblies and all affairs shall henceforth be decided by public opinion"—that is the opening article of the Imperial Oath. In opening the "Book on Body Politics," you come to this clause: "All the powers (legislative, executive, judicial, etc.) shall be invested in the Great Administration Office." At the first glance, it would seem that we are told, on the one hand, that all the governmental affairs would be decided by public discussion, and at the same time, on the other, that all the powers of administration would be vested in an office created anew under the imposing name of the Dai-jo-kwan, that is to say, "the Great Administration Office." The meaning of it all was simply this: Before the new *régime* came to be, the country had been divided into many clans governed under the three hundred lords of the clans, under so many different local governments. Now, under the new *régime*, the first act of paramount importance was the centralization of governmental powers in the Great Administration Office. Prior to the coming of the new *régime*, orders had been issued from two sources—from the Imperial Court at Kyoto and from the Shogun's Government at Yeddo. Now, with the new the fiction of the dual government was to be done away with once for all, and that all the orders were to be issued from the one source—this, then, was the meaning of the sentence in the "Book on Body Politics." As for the meaning of the first article of the Imperial Oath—of deciding all affairs according to public opinion—it was to open public assemblies that the many opinions of many diverse clans might be made public and might be made to harmonize. It was all important that the voice of a number of clans, such as Satsuma, Choshu, Tosa and Hizen, which had all of them a great deal to do in the

work of restoration of the governmental powers into the land of the new Imperial Government, should be heard; their opinions were entitled to the respect of both the new Government under His Majesty and also the people of the country. As you can see, therefore, that the very birth of the first public assemblies in Nippon was brought about because of the existence of the diverse powerful clans. They were created for the expression of their opinions, and not of the people in general. It comes to pass, strangely enough, that the first public assemblies owe their existence to the ancient feudalism, and as one knows very well that the representative Government under the present constitution is the fruit of these first public assemblies, one can say, without being fanciful, that after all it was the peculiar conditions of the old Nippon under feudalism which called for the Imperial Oath, and as the Imperial Oath is beyond all cavil the foundation of the present constitution, that the constitutional Government of today is the gift of the old Nippon. In other words, the history of the development of Nippon since its opening is not unlike to the story of the development of the Western countries; certainly it is alike in the causes which brought about the changes. In Europe, at the close of the Middle Ages, when the governmental powers were in the hands of barons, and in order to bring about the unification of petty principalities and states, an assembly was called into existence and the unification usually ended in the centralization of a national power under a crown; and then kings in turn became despots, and the reaction against the too powerful centralization of power flowered in revolutions—the revolutions which ended in giving birth to the constitutional governments of today.

At any rate, such was the path thru which Nippon entered into the household of Powers. There was something rather abrupt and sudden in our entry into the ranks of the nations of the world. In the earlier half of the nineteenth century the greater part of the world was hardly aware of the very existence of Nippon. And the students who opened the maps of those days could only see in a corner of the Eastern hemisphere, off the coast of the Asian continent, something like a

handful of peas, scattered without thought. And some of the men of learning thought that those islands formed a part of the Chinese Empire; others took them for a string of barren, uninhabited islands. The actual fact, as is so often the case, had very little in common with the learned conceptions of these men. Under a sovereign, sacred and inviolable, representing the oldest unbroken dynasty existent, the land was filled with the people who loved their country, who were loyal to their prince; rich in art, rich also in the beautiful that was of nature, mild of climate and plentiful in the yield of the soil; and altho the number of the inhabitants was none too large, they were nevertheless distinguished by a temper that made itself felt at the time of storm in the sore horrors of foreign invasions. As soon as some of these facts came to be known among the people of the West, almost every state of Europe looked upon our country as an Eldorado of happy fortune, and within our land we came to see many enterprises of Western people springing into life all thru the land. The introduction of things and institutions Western began to assume a great proportion. And we came in time to see the day of violent enthusiasm for everything Western, to be mad and drunk with the good, bad, and very bad that the West had to give us. Finally, in 1888, the constitution of the Empire was completed. In the mind of the people, the word "liberty" added much meaning and dignity. And in 1890 we saw the opening of the Imperial Diet. This marked an era of great progress; it solidified the foundation of the constitutional State; with it were inaugurated many reform measures in every department of administration.

Then came the memorable year of 1894.

The war with China was finally crowned with the honorable peace of Shimonoseki. The interference of the triple alliance, which prevented the honorable treaty from being carried into effect, left a great deal of tears, and in the heart of the nation the bitterness which, either awake or asleep, it could never forget. In 1900, in the trying days of Boxer trouble, all the world was forced to recognize a simple fact that

it was our army which stood the brunt of the fight which reaped the chief result and distinction of bravery.

As we have seen, in outline, the rise of Nippon to her present position; let us turn our eyes meanwhile to the activities of the many European states in the Far East. Their achievement is nothing short of a marvel. Take Russia, for example. Under the name of temporary occupation, and without losing a single man in battle, or a single dollar, she came to the vast inheritance of Manchuria; laid her railway; occupied Port Arthur and Dalny, and made them the ice-free outlet of her great trans-Asian railroad. As for Germany, taking advantage of the misfortune of one of her missionaries, she received the Kiau-chau lease—practically a perpetual lease—England in Weihai-wei; France in Kwang-chau Bay, all are the same. And while China was thus making free with her territory with the prodigal hand—a thousand miles a day—we were sitting across a belt of water from her and, pray, what did we receive with all our fine advantages, which geography was gracious enough to confer upon our country? Nothing. Worse than nothing. Even the territory and the rights which we rightly secured as the fruit of our victory, of them, too, the Powers were thoughtful enough to rob us. And when we read this chapter of our humiliation in the light of the achievement of Russia, of coming into inheritance to the domain twenty times as large as the Empire of Nippon, without shedding the blood of a single soldier, it only threw the bitterness of it all into an exaggerated relief.

Here, then, is a sharp light for you to read the proper position which Nippon held in those days in the household of nations. We had no voice in the councils of the Powers, over the great affairs of international import, not even over the matters which were specially pertinent to the Far East, and if one were permitted to be very plain about it all, he can say that Nippon did not have a voice even over the affairs which were entirely confined to the Chinese Empire. For was it not true that even in the affairs of China, the Powers of Europe and America would come together and discuss and decide on

the course of action or upon certain measures and policies, and then, as a matter of diplomatic courtesy, they notified Nippon of what they had decided to do in such and such Chinese matters?

Nippon is not a country that would be satisfied with this state of affairs. For ten years she had possessed herself in patience; sleeping little, awake for a chance to strike a blow upon this sad state of things. And in time the opportunity came to her. The curtain rose upon the first act of the drama, and the world saw with no little surprise the publication of the Anglo-Japanese Alliance. It was given to the keen vision of the British statesmen to see how imperative it was for England to shake hands with this race of brave and heroic people in the Land of the Gods. As for the ability of the British statesmen at the head of affairs at present, there is nothing for us but to pay our humble respect and admiration. There was nothing new in the formation of alliances between European states; as for entering into such an understanding with an Asian state, there was no precedent. It goes without saying that in thus forming an alliance with Nippon, it called for a great measure of heroic faith in the conviction and confidence of the wisdom of such a measure on the part of England before she saw fit to abandon her splendid isolation.

Then came, and not many years later, what every one expected to see—the collision of the aggressive policy of Russia in the Far East with the power of New Nippon. The result was the great action which marks the opening years of the new century. We gained as many victories as the number of battles we fought. The greatest power in Europe received a blow under which Russia's work of centuries in the Far East is turning into a bubble.

Now that the war is over, there are people who declare that Nippon has risen to the very first rank among the household of nations. In declaring our newly gained position so daringly, I feel a little hesitation. Nevertheless, I do believe most firmly that so far as the Far Eastern questions are concerned, Nippon has a perfectly audible and rather formidable voice. In other words, no country, how-

ever powerful, would be able to throw us aside and carry out her program in the Far East to her own sweet liking. For this simple reason: Upon the head of a power so reckless as to ignore our country and disturb the peace of the Far East would fall, I dare prophesy, a rather formidable dynamite—upon that power would burst the fifty millions of our people in a storm of fury. And as we have at present the actual power and strength to translate our conviction into action, the rest of the Powers of the world would hardly be so foolish as to ignore the wishes of our land; they would listen with respect to what we have to say and value our wishes.

Time was when the people of Europe

used to look upon the history of Europe as the history of the entire world. They faced the history with a deep conviction that there was no other country outside of Europe; no Power, in fact, outside of their Christendom. Today they have changed their minds a little. The events in the Far East came to form a portion of the world's history.

There is no question that the event which marks the first page of the history of the twentieth century is the great drama of which the actors were Nippon and Russia. And it is with pleasure and honor that we are permitted to see our Nippon crowned with the glory of the victor.

TOKYO, JAPAN.

## The Ethics of Our Village

BY LYDIA KINGSMILL COMMANDER

[Our readers will remember several of Mrs. Commander's articles on social subjects in *THE INDEPENDENT* recently. We are especially glad to print this article from her pen, as it takes a decidedly hopeful and fresh view of a class of Americans who have been greatly abused of late years.—EDITOR.]

**D**URING the past generation our country population has been steadily and swiftly flowing cityward. Thirty years ago three-fourths of the nation lived in the rural districts. The census of 1900 shows that over 40 per cent. are now city dwellers, nearly half of these being in "cities of at least 100,000."

From 1880 to 1890 the cities grew twice as fast as the nation. The entire population increased about 25 per cent. while the urban population gained nearly 50 per cent. In the next decade the figures were 20.7 per cent. and 32.5 per cent., with the cities again in the lead.

This phenomenon has long been observed, and we of the cities have said, complacently: "Of course the energetic and capable leave the country. We draw the best of each generation to the cities." In proof we point to the famous professional men, the wealthy business men and the powerful politicians who were born and reared on farms or in tiny hamlets.

Without doubt the forceful and ambitious do generally desert the country for the larger business opportunities of the city. But here arise two important questions. Are we right in supposing, as we have done, that these are always, or necessarily, the *best*? Is it not possible that our country districts, while losing in business enterprise and shrewdness by the constant exodus, have thereby gained in morals and manners?

These questions have come to me as the result of several summers spent in a little Catskill village, where I have become intimately acquainted with many of the people. This village is typical of many in the more remote districts. Its population is purely American; the tide of immigration has never even touched it. Its only acquaintance with foreigners is made during the summer months, when about 2,000 New Yorkers, many, naturally, of foreign birth, fill the dozen hotels which are empty and closed for three-fourths of the year.

During the period of this annual influx the villagers are, for them, alert and active. They think they work hard. A few of them do, but the majority simply have no conception of the meaning of the word in the New York sense. In the busiest hour of the busiest day they can spare ten minutes for a friendly chat. At any ordinary time an hour is an unconsidered trifle.

There is very little ambition and slight tendency to run risks. Business is "safe, sane and conservative" to a degree, suggesting that the village motto might be, "Anything venture, everything lose." The ideals of business success are most modest. Three hundred and fifty dollars a year lifts a family out of the ranks of poverty, \$500 means comfort, and \$1,000 prosperity. I have heard two different substantial business men spoken of as "getting ahead fast" and "making lots of money" because "they must clear every cent of \$500 a year for the bank." The post office, which yields a revenue of \$900, is considered quite a plum. The few whose incomes soar above \$1,000 are called rich men. Many never reach the \$350 mark, but maintain their homes on incredibly small amounts, with little or no improvement in their condition from year to year.

The ambitious among the young do go to the cities, thus robbing their native place of their enterprise. The shrewder of those who remain grow relatively rich. The rest are the unfit in the strenuous struggle. But it seems to me that their unfitness ends there. In a civilization where kindness, generosity, unselfishness and a human interest in the welfare of one's fellow creatures were at a premium, these villagers would be leading citizens.

They will trust one another and even outsiders, to a surprising extent, expecting to find honesty, and undaunted by frequent betrayals of their faith. They will undertake almost any task with nothing beyond an oral contract. Instead of trying to overreach others they will often, knowingly, sacrifice their own interests. Repeatedly my husband and I have had money differences with villagers, but invariably because they wanted to take less for some service or supply than we considered it honestly worth.

The storekeepers will tell the exact truth about their goods, so far as they know it, pointing out defects, even when they lose a sale by doing so.

We have never asked a favor that was not granted with instant cordiality; and people with gardens have frequently not only offered us fruit, flowers and vegetables, but have actually gathered them and carried them up the steep mountain path to our camp.

A few instances will illustrate more fully the ethics of our village. Our experience began four years ago, when, at the end of a hard summer, my husband broke down and we fled from New York. In this beautiful mountain village he found such rest and healing that before we left we had bought a tract of land on the mountain side and determined to have a summer cottage.

In selecting our site we had the active assistance of our host, whose hotel is more of a home than a hostlery. He knew all the choicest spots and piloted us to them, anxious only that we should get the best, for none of the land was his. He had been, formerly, a builder, but for the last twenty of his seventy active years had given up that business for his summer hotel. But we were strangers, knowing only him, therefore he promised to build for us the following spring, according to plans we left with him.

When spring came we expected a contract to be sent for signature. None came. A letter of inquiry brought the reply, "The cottage is nearly finished; you can come up next week." On our arrival the builder turned over to us, acquaintances of a month, bills covering the entire cost of the material and the work, made out to my husband and *receipted*. He had paid for our house, trusting to our honesty for his money.

Nor was this all. For his supervision he had made no charge. "I'm out of the business," he explained. "I just did it to oblige you, and because I wanted to see you make your summer home here. I wouldn't make any charge to you."

In answer to protests he finally agreed to accept something, but when my husband named a most modest sum he refused absolutely to take more than one-third of the amount. Ever since he has

treated us more as if we were his children than strangers, showing us an unvarying and even affectionate kindness.

Much of the medieval pride of the workman remains here. One man who contracted to make a piece of road at a given price found, as frequently happens in mountain districts, unforeseen difficulties, which added to the expense and wiped out his profit. Yet he finished the work as thoroly and carefully as if he had met with no financial disappointment. His pride in his task would not permit him to slight it.

Another man was engaged to do a certain amount of work on the grounds of a summer resident who had returned to the city. When the owner came up to see the improvements he was surprised to find a great deal more done. "Who authorized you to go on?" he asked. "Why," was the reply, "how could I stop until I'd finished? I'd have been ashamed of my job."

Poor as many of these people are, there is not in their natures the slightest trace of the spirit of mendicancy. The poorest shows a self-respecting independence and a determination to "hold up his end." In New York generosity to a laundress, maid or janitor is usually repaid by encroachments; the indulgent employer is apt to be regarded as an "easy mark" to be "worked"—and despised. Here, do something for the man or woman whose wages are small and needs many, and some acknowledgment will be offered.

My laundress, a poor man's wife with a big family, when overpaid, according to her reckoning, and given some clothing, sent me a young chicken and a fresh cabbage. Another working woman in whose little son I took a friendly interest showered me, the summer long, with flowers from her garden, and in the fall brought me half of the plums off her one tree.

Even the small boy who brings us milk, and enjoys the cakes and candies which fall to his lot, appeared one evening bearing a beautiful brook trout, sole product of an afternoon's patient fishing.

Such incidents could be multiplied. These simply serve to show the spirit of the people. They are always pleasant and polite. A quiet courtesy marks their conduct. In summer they are surprised and hurt by the pushing, aggressive selfishness of the New Yorker, who frequently brings his Brooklyn Bridge crush manners with him. They cannot imagine why anyone should want more than a fair half of the sidewalk or his turn at the post office window. Living is the business of life, not a mere incident in the crowded hurry of money making and money spending.

In later years there has been a swing out from the cities that has carried many back to country life. Suburbs and suburban towns are growing. The abandoned farms of New England are being bought and redeemed to fertility. Summer cottages are becoming country homes. People who formerly spent nine months in the city and three months out are reversing the figures. Books upon country life, lived for pleasure or for profit, are tumbling from the press. Magazines for the city-countryman are multiplying. Twenty are mentioned in an advertiser's list of 400 of our leading publications, and thirty more are for farmers.

Probably it is a longing for this easier, gentler life that is calling so many out of the dusty, roaring cities, first to suburbs and then to distant, peaceful villages, where quiet, kindly people live and where there is always time—time to live and think, time to be interested in one another, time to be human in all the finer meanings of the word.

PINE HILL IN THE CATAKILLS, N. Y.

## MUSIC

### ART AND DRAMA

#### The Opera

When Mr. Heinrich Conried was chosen manager of the Metropolitan Opera House there were not a few who feared that he, being a German, would unduly favor Wagner and other composers of the "Vaterland." They would have been astounded could they have had a prophetic peep at the repertory for last week. It included Verdi's "Aïda" and "Il Trovatore," Bellini's "Sonnambula," Donizetti's "Lucia," and Puccini's "La Bohème." Had it not been for "Parsifal," the Italians would have had everything their own way. Their opera was represented in its three main phases. "Sonnambula" recalled the days when opera was simply a prima donna and tenor show. There is some pleasing music in the score, but so little of it that one wonders how the last generation could have been so easily satisfied. In the prime of Adelina Patti it vied in popularity with "Il Trovatore." Today it requires the consummate vocal art of two favorites like Madame Sembrich and Mr. Caruso to make it palatable; yet those two artists are so popular that they can fill the vast auditorium even with that antique opera. When they sing, it may be slangily said that "any old thing will do."

Quite a different story is that of "Aïda." Here we have the greatest of the Italians at his very best—an opera that is intensely interesting quite apart from its interpreters, and when, at the same time, a cast is provided including five sterling artists like Madame Nordica, Miss Edyth Walker, MM. Caruso, Campanari and Plançon, one does not wonder that the audiences grow enthusiastic. There is no room in this brief review for detailed comment, but we must stop a moment to pay tribute to the perennial freshness and beauty of Madame Nordica's voice, and to note the joy of the audience at the return of Mr. Campanari, who has been giving concerts on

the road for two years, but who should never have been allowed to leave the Metropolitan. He is one of the few good Italian singers now on the stage, and while he has not a mellifluous voice, like Caruso, he is a better actor and in other respects a more thoro and conscientious artist.

Regarding the third phase of Italian opera represented in the repertory—Puccini's "La Bohème"—nothing need be said here except that Saturday night's performance gave Miss Bessie Abbott an opportunity to make her operatic *début* in this city. She had previously scored a quite remarkable success in the concert hall—so much so that three music teachers here and two abroad are already claiming her as their product. She has a beautiful voice and a refined style and will no doubt make her way if she has the energy and capacity for hard work required of a public singer in these days. The addition to the Metropolitan Company of Miss Abbott calls attention once more to the growing list of American singers on our operatic stage. Earlier in the season Mme. Rappold, of Brooklyn, won a remarkable success as Sulamith in the "Queen of Sheba," and last week, in "Aïda," Miss Lawrence, of the Opera School, sang the rôle of the priestess in a way that aroused pleasant hopes for her future. Then there are the great ones—Nordica, Eames, Walker, Homer—Americans all.

In a recent interview, Mr. Caruso, while paying tribute to our women singers, expressed his surprise and regret at the rarity of American men on the operatic stage. The American tenor seems extinct, if he ever existed. This is a matter of vast importance to Mr. Conried. French tenors are almost as scarce as Americans, and he is not so lucky as his predecessor, Mr. Grau, in having a Jean de Reszke, who could do all rôles—French, Italian, German—better than any one else. Caruso is at present the

prince of Italian tenors, but he could no more sing Tristan or Siegfried, than Patti could sing Isolde or Brünnhilde. Last year he consented to take the part of Raoul in the Huguenots, in Italian, but it proved a considerable strain on his voice. This year, his *début* in a real French opera, sung in French, was one of the events of the season, but he had to more than share the honors with Mme. Eames and Mr. Plançon. Caruso's "Faust" was, no doubt, an interesting impersonation; he sang the principal airs with his usual beauty of vocal utterance, yet there was much room for improvement. Gounod's "Faust" is rather remote from Goethe's, and to Italianize that French version, is to take us rather too far off the main road to artistic satisfaction.

It may be worth noting, as a curiosity, that in the same week that Caruso made his *début* in a French opera he narrowly escaped singing in Wagner's "Tristan and Isolde"; not, to be sure, as the hero, but as one of the chorus of men in the first act. He came too late; but others of Mr. Conried's stars filled up the gaps caused by the brief strike of the chorus. The first performance of "Faust" this season will be doubly memorable in local operatic annals; first, because of Caruso's *début* in French opera; secondly, because it was sung—doubtless for the first time since the première in 1859, without a chorus.

In the matter of German tenors Mr. Conried's audiences have nothing to complain of. We have the best there are—Knote and Burgstaller, beside Dippel, who rivals Jean de Reszke in versatility; his rôles—German, French, Italian—exceed one hundred in number. Dippel sings Parsifal today, Burgstaller being busy with the Tristan which he has this year added to his rather limited repertory. Two of the largest audiences of the season were drawn by the two "Tristan" performances so far given. Madame Nordica's Isolde equaled that of Lilli Lehmann at her best, and Burgstaller's Tristan also was impressive, both vocally and dramatically. He had sung the rôle but once before, at Bayreuth. The first "Parsifal" performance at regular opera prices did not draw so large an audience as was to be expected. That

great work still suffers from the inevitable reaction after the tremendous excitement over it two years ago, when \$10 seats were at a premium thruout the season. It was bound to share the fate of those novels which enjoy a sensational sale for a year and then are neglected. But being, unlike most of those novels, a masterwork, it will soon recover its equilibrium. In view of its semi-religious character, it may be well to keep it always out of the regular operatic repertory, but Mr. Conried will doubtless find it advisable, ultimately, to trim the score (there is a considerable amount of verbiage) and make it possible to produce it, like the other music dramas, in the evening, instead of beginning at five in the afternoon.

Miss Bessie Abbott.

Vassili Safonoff.

## Safonoff and the Philharmonic

The New York Philharmonic Society has given three concerts this month (each preceded by an afternoon "public rehearsal," at which the same program was played), and all of them have been presided over by Mr. Vassili Safonoff, Russia's greatest living conductor, and the director of the Imperial Conservatory of Moscow. Remarkable as were Mr. Safonoff's triumphs on each of two former visits to New York, those triumphs have been surpassed this year. At his first concert he made such an old familiar piece as Mendelssohn's overture to "A Midsummer Night's Dream" take on new beauties, and gave a fresh revelation of Tschaikoffsky's genius by an impassioned and eloquent performance of the prolix "Manfred" symphony. But it remained for the extra concert, given in Mr. Safonoff's honor on January 13th, to arouse a Philharmonic audience that packed Carnegie Hall to the doors to such a frenzy of enthusiasm as had not been witnessed in a local concert room in more than a decade. The program of that concert was made up entirely of Tschaikoffsky's music, and included the so-called "Pathetic" symphony, which is rapidly coming, in this neighborhood at least, to take the place long held in popular esteem by Beethoven's fifth as the best liked of all symphonies. Mr. Safonoff

conducts that swan song of the noblest of Russian composers as no other leader heard here has ever conducted it. Not only does he inspire his players (otherwise the stupendous effects he achieves would be impossible), but he inspires his hearers also.

Mr. Safonoff conducts without a baton; but few baton wielders have been able to get from an orchestra of 125 instruments such vivid and poignant interpretations—none heard here since the death of Anton Seidl has ever piled up such colossal tonal climaxes as he builds. Under his eloquent hands the great orchestra is a single vast instrument on which he plays at will.

A word of praise should go to the Philharmonic Orchestra for the noble manner in which it responds to the leadership of this Titan. Probably no other orchestra in the world can equal the splendid volume and "muscularity" of tone produced by its seventy-seven stringed instruments; and its wind choirs also played with phenomenal brilliance.

In the course of the next month Mr. Safonoff is to make a tour of the principal American cities at the head of the Russian Symphony Orchestra. No one who has an opportunity to hear him should miss such a rare treat.

## New Russian Music

The second concert of the season by the Russian Symphony Orchestra, was unusually interesting, because it brought to the attention of this public several new compositions not heard here before, all of which are worth hearing again. These were a fine, stirring, patriotic tone poem called "Finland," by Jen Sibelius, a Finnish composer; an orchestral suite by Rimsky-Korsakoff, made up of excerpts from his opera, "Christmas Eve" (produced at St. Petersburg in 1895), which is prettily naïve and decorative, but needs the operatic setting of scene and pantomime to make its themes really effective: the dancing of the stars in the frosty winter night, the procession of the comets, the witches' dance, the flight of the spirits of darkness, and so on; a violin concerto by Arensky, beautifully played by Miss Maud Powell, and a "Hebrew Rhapsody" by B. Zolotaryoff, one of the

most promising of the younger Russian composers, whose name had not hitherto appeared on American concert programs. This composer has made a special study of the household music of the Russian Jew, and the rhapsody is based on Hebrew melodies used in Russia among the Jewish families of the poorer classes. Those melodies are formed upon an Oriental scale, full of the character and flavor of Gypsy music. Zolotaryoff's rhapsody is thus far the most conspicuous attempt to develop modern Jewish melodies (secular songs) in symphonic style. The attempt is successful, for the composition is put together in a musicianly manner and is brilliantly orchestrated. It left the impression of originality and worth.

### Other Orchestral Concerts

Besides continuing his praiseworthy activity in the exploitation of important musical novelties (he is the most enterprising of all our conductors in that respect), Mr. Walter Damrosch has now followed the example of the Philharmonic and the Boston Symphony organizations, and placed his New York Symphony Orchestra for a brief season in the hands of a "guest" conductor from overseas, Mr. Felix Weingartner, of Munich, who had been here before as one of the Philharmonic's star conductors. At his concert of January 9th Mr. Damrosch brought forward Max Schillings's "The Witch's Song," characterized on the program as "a musical recitation with orchestra." It is an orchestral illustration of a poem by Ernst von Wildenbruch, which was read, to the musical accompaniment, by Mr. David Bispham in a vigorous but stilted style. Mr. Bispham sings better than he recites. The music does not represent Schillings at his best, tho it has passages of much cleverness and delineative effectiveness.

Mr. Weingartner directed the concert of January 16th. He is a masterful conductor, and he made the New York Symphony Orchestra play like a "crack" military band (the brass overbalanced the strings), with a precision and a *verve* that it had never exhibited before. But Mr. Weingartner rides his hobbies hard. Berlioz is one of them. That composer's

"Fantastic" symphony was the chief number of the program. It is a piece of sheer musical claptrap, and not even the commanding temperamental energy of Mr. Weingartner could make it sound worth while. As a foil to it, he played one of Schumann's symphonies, all of which are so empty, antiquated and outworn that they should be relegated to the top shelf of the conductor's library and left there. As a result, his program was the most uninteresting that has been heard in New York this winter.

Nothing new or striking was disclosed by the January visit of the Boston Symphony Orchestra. The most noteworthy fact in connection therewith was that the program of its concert of January 11th began with a work by an American composer. This was Rubin Goldmark's "Hiawatha" overture—an enjoyable and a sound and substantial composition by a young American who has ideas of his own and who knows how to give musical expression to them.

Mr. Arnold D. Volpe is continuing his praiseworthy work of providing orchestral drill for deserving young musicians, and this year has taken his student orchestra to Carnegie Hall, where it gave a concert on January 4th, with the help of twenty-five players from the New

Felix Weingartner.

York Symphony Orchestra. The youthful players Mr. Volpe has gathered about him show some good results of training and perform their tasks with enthusiasm; but, of course, they do not challenge comparison with the mature orchestras that call the faithful to worship in the uptown temple of music. Their playing sounded better in the smaller Mendelssohn Hall.

### Mr. Rubinstein

Mr. Arthur Rubinstein, a young Polish pianist, made his first appearance in America on January 8th as the soloist of a concert by the Philadelphia Orchestra. To those in whom great expectations had been aroused by the much bruited statement, attributed to the veteran French composer Saint-Saëns, that here was "a pianist worthy of his great name," the playing of this young man was something of a disappointment. He has unmistakable talent, but as yet it consists in little more than digital dexterity. He dashed off brilliant pieces by Saint-Saëns, Liszt and Chopin with brilliant execution and amazing rapidity, but of genuine musical feeling there was hardly a trace. In nothing that he played was the possession of much intellectual or emotional faculty disclosed.

### New Ventures

For the last five years the People's Symphony Concerts, under the direction of Mr. Franz X. Arens, have been doing an excellent work in educating laboring people of slender means to an appreciation of the best orchestral music. The Marum Quartet has now been formed for a somewhat similar purpose; to kindle the taste and ultimate love and enjoyment of chamber music among the people of the great East Side. It is composed of Ludwig Marum and Michel Bernstein, violinists; Jacob Altschuler, violist, and Modest Altschuler, 'cellist, all capable musicians, who play together admirably. The quartet's first concert, given in Cooper Union Auditorium on January 4th, was genuinely delightful, and it was enjoyed by an audience of 1,000 people. The program included the first performance in America of a quartet in A major, by R. Glière, a young Russian composer

hitherto unknown here, which proved to be a veritable gem, worthy of being added to the repertory of every string quartet in the land.

Believing that present conditions in the American musical world, so far as they govern native compositions, are hostile to the normal development of a vigorous creative art, certain music lovers of New York have formed an organization to be known as the New Music Society of America, with the object of creating conditions favorable for the artistic activity of the American composer, and of promoting performances of serious new works of native origin. The co-operation of the Russian Symphony Orchestra, Mr. Modest Altschuler, conductor, has been secured, and a series of three concerts of orchestral music by American composers will be given in Carnegie Hall on the evenings of February 19th, March 10th, and April 2d. Unique opportunity will thus be afforded to native composers, who are invited to send orchestral works for examination to the chairman of the score committee, Mr. Lawrence Gilman, 227 East Seventy-second street, New York City. Mr. Vassily Safonoff, who will remain in this country several weeks, has taken a lively interest in the New Music Society's effort to stimulate and reward creative musical activity in America. He has accepted honorary membership in the society's score committee, and will take active part in passing judgment on the compositions submitted. He hopes to perform several of the best of them at his own concerts in Moscow.

### Art of the Month

Though the artists themselves were never more serious nor harder at work, this is a curiously inactive season as regards exhibitions. We have had the first of the usual series of foreigners visiting America to paint portraits, Bertieri, at Oehme's; Chartrain, at Knoedler's; Troubetskoy, at Glaenzer's; Wilhelm Funk, at Fishel, Adler & Schwartz's. These men are all now familiar and in no way astonishing. The Academy and the Sculpture Society's showing of low reliefs were disappointing in their lack of really good things and in the failure of the best they had to show. The Union

League showed excellent examples of excellent men at its monthly show: Thaulow, Rico, Besnard, L'Hermitte, of the foreigners, and Eaton, Hassam, Chase, Snell, Ranger, Dougherty, Wyant, Groll, of our own men. Etchings, mezzotints and line engravings of the best have been visible at Keppel's, Knoedler's and other dealers' places. Mr. Macbeth has, as always, lovingly selected works by Americans to show.

The real storm center in the art world this year has not been connected with

private collectors, whose treasures could be far more numerous and gifts more frequent if such a large percentage of the money available for purchases abroad were not demanded by the Government for the so-called "protection" of American art. The artists' very livelihood depends upon the development of public taste, and they, above all others, demand free art for the educative value it will be to their public. The American Free Art League, with an office at 50 State street, Boston, has been formed to promote agi-

"The Temple of the Winds." By Louis Loeb.

any one society or movement of schools, but with the attempt at a concerted movement for the repeal of the tariff on art. Pleas and protests are going up from all sides and, as Mr. Cox said at a meeting held in the Hudson Theater to give voice publicly to these outcries, the artists are tired of putting up arguments against this tariff, which nobody ever takes the trouble to attempt to refute, for there is absolutely no valid reason for this absurd impost upon education. The museums, which are allowed to import free of duty, are not often able to buy works of art, and must depend upon gifts from

tation of this important question, with the hope of influencing Congress to act in accordance with the wishes of farsighted lovers of their country's best interests in this matter.

Sales of the month were not numerous. The Heber Bishop sale included very excellent Barbizon paintings and good examples of Degas and Israels and Vernet's "Triumph of Julius Cæsar," as well as choice Oriental objects.

At the Fifth Avenue Galleries, a number of works by G. H. Boughton were hung and sold, with a number of landscapes by F. T. Richards. Boughton's

Life and work are identified with the English academic work, but a few small landscapes shown here were surprisingly fresh and charming. Richards was sincere enough, but of a former generation in its lack of the insight into color in nature of our best men.

The Metropolitan Museum is awake and busy at last along very hopeful lines. Public interest in it has been genuinely aroused and gifts of books, furniture, money and painting have been numerous. The beautiful work by Louis Loeb, called "The Temple of the Winds," painted before he had passed into his late lamentable manner, has been presented by Mr. D. Guggenheim; the "Ariadne," by Watts' and "Chez les Humbles," by L'Hermitte, are also new acquisitions. A number of St. Gaudens's portrait reliefs are to be executed in marble for the Museum, and two panels by Crivelli, the precise early Venetian, have been bought with the interest of the Rogers fund. The Museum has become at last of real use to students by the removal of the restrictions hitherto placed upon copying, and by the evidences of development in the fine library, so little known under the old *régime*.

### National Academy of Design.

The eighty-first annual exhibition of the Academy was less interesting than last year's. The picture called "Mother and Child," by Hugo Ballin, which received the Clarke prize, tho obviously treated for its decorative effect primarily, laid itself open in its title to serious disapproval. Nothing in it was felt beyond superficial appearances. In so far as the artist can see his failure there is hope for him. One does not demand the drawing of school work in a decorative picture, but one does demand a real impulse toward making the whole thing exist with relative truth to the avowed idea.

The Hallgarten first prize was not given. The second went to Hawthorne, who paints splendidly, but does not always achieve a picture; the third went to Clark Voorhees, who is steadily climbing up. The Inness gold medal was deservedly received by Alden Weir, while the Proctor portrait prize went to Frank Benson for a large and interesting full length portrait of a girl.

Irving Wiles showed a delightful portrait of Henry Wolf, the engraver, whose head certainly suggests that a man thinks in terms of his craft, so capable, so accurate, so certain he looks. Gifford and Reynolds Beal are strengthening their position among the landscape men we are producing in America who use an emotional realization of color as a motive instead of as a means to help in the record of forms and facts. Lorenzo James Hatch was another interesting exhibitor with two landscapes freshly felt and painted.

Kenyon Cox's portrait of Maxfield Parrish was painfully literal. Henri's portraits were not an advance over last year's work. Louise Heustis has gained if her "Portrait of a French Sculptor" is not merely a happy accident. Walcott's picture of the kneeling child near a colonial door, with her cat and doll beside her, trying to thread a needle, in its expression of a very true tenderness for a child's form was more successful than any other genre picture in the exhibition.

Gutzon Borglum's ambitious group in beautifully colored bronze, "The Horses of Diomedes," is hardly successful. Even reading much into it, it still seems something of a play to the gallery, a chance to show off great knowledge and skill without adequate motive. But Borglum is a thinking and traveling artist always, and whatever he does is never perfunctory.

### Paintings by Dewing and Tryon

The really beautiful exhibitions of the month have to be put down to Mr. Montross's credit. First, he showed a number of new works by Childe Hassam, then four pictures by T. W. Dewing, with eleven by D. W. Tryon, filled his gallery enjoyably.

Two of the Dewings, "La Lute" and "La Pêche," were of similar decorative motive; great deep seas of green verdure of a most intense saturation, one a little warmer in general hue than the other. Each, at first sight, almost a wall of green, shutting out all beyond the four figures in each composition, but, gazed into, soon seen to let the eye into depths of green mysteries only to be imagined. In "La Lute" there are three girls in greenish gowns modified by yellows on

Front Cover of "Investigations and Studies in Jade," Presented to the Emperor of Germany. The German Arms are Inlaid in Colors. Other Motifs Are Derived from the Book. Stikeman & Co., Binders.

the left; two sit on a low bench and one stands, while a single girl with a great instrument across her lap sits on the grass in the lower right hand corner. In "La Pêche" the three girls are again on the left and the fourth stands to the right across an almost invisible brooklet.

Description fails entirely to convey the peculiarly individual renderings of color Dewing has been working out more and more precious as years of conviction mount up. The other two pictures shown were "The Woman in Purple and Green," those color names here meaning something exquisitely beyond the usual mental color images called up by their use, and the "Brocart de Venise," a little less successful.

Tryon, depending entirely on the heavens and the earth for his treasures of color motives, while not so arbitrary as Dewing, is just as selective. His tree and rock forms, his clouds and snow-covered fields, are all of native familiarity, and so are his renderings of nature's moods. His hour before sunrise is as tender as the hour itself. In his spring

mornings there are all the chill and the human element of resentment of this chill that nips and stings. His pasture lands in October have the briskness of treatment proper to that invigorating month. His sea at night is deep and delicately fascinating. One or two pastels are bold and direct, with strong purple patches of wild flowers playing against deep blue bays.

On every side with the harder working painters we feel this gradual growth of the appreciation of color as a distinctly felt phenomenon of the sense of sight of art from its use in helping toward producing an illusion of actuality in a picture. It marks the approach to a high period for painting as a truly great "fine art."

### A Magnificent Book About Jade

*Investigations and Studies in Jade*, in two volumes, elephant folio in size, is a book that is epoch making. With the possible exception of Audubon's great volume on "The Birds of America," no

Top and Side View of Round Box of Carved Jade in the Bishop Collection. Reproduced from "Investigations and Studies in Jade."

previously published book has had more loving labor expended upon it, more technical knowledge focussed thereon, or greater sumptuousness in the way of binding and tooling.

The Bishop book was first begun in 1886. The plan and scope of it from the first has been in the hands of George F. Kunz, the gem expert of Tiffany & Co., who has a pronounced personal interest in jade. The edition has been limited to 100 copies, the total cost of which has exceeded \$100,000. Not one of the books has been sold and there are none to come into the market.

Presentation volumes went to the King of England, the Emperor of Germany (see illustration), the Czar of Russia, the Queen of Holland, the Emperor of Japan, the Emperor of China, and to various art galleries, museums and libraries in various parts of the world. The book has a sheer weight of 124 pounds. The illustrations include 150 full-page illustrations in water color, etching and lithographic print, together with nearly 300 pen-and-ink sketches distributed thruout the text.

In the book's introduction the general subject of jade is considered, and the last word has been spoken in so far as our present knowledge of this mineral is concerned. Reference is made in this portion of the book to the suggestion, that has had some support, that jade was

really one of the twelve precious stones which studded Aaron's breastplate. The hardness of jade renders the working of it exceedingly difficult, but on this very account it has long had strong popularity among Oriental carvers as a base upon which to lavish their skill. The two illustrations that are reproduced from the book will give some idea as to the marvelous skill of some of the jade carvings in the Bishop collection.

The binding was executed by Stikeman & Co.

### The Drama

During the past month no new plays have appeared in New York which are really to be put in the same class with those we have previously mentioned as the most worth seeing, namely: The Marlowe-Sothorn Shakespearean drama, Sarah Bernhardt in her repertory, Shaw's "Man and Superman," and Barrie's unique "Peter Pan."

The visitor to New York who appreciates good acting should not fail to hunt up Orleneff's Lyceum, on Third street, just east of the Bowery. Here he will find in a low room underneath a noisy dance hall, a very mixed audience, in part composed of gentlemen in evening dress and ladies in expensive furs, who come in automobiles, and in part of Russian Jews from the New York Ghetto, but all

united in enthusiasm for the actors upon the little stage. They are a Russian troupe, expelled from St. Petersburg because they persisted in producing plays attacking the bureaucracy and sympathizing with the Jews. Madame Alla Nasimoff herself is of the race of Bernhardt and Rachel. She is a beautiful and accomplished woman, who translates the plays for the company and sometimes makes their costumes, even the heavily-jeweled royal robes used in the "Czar Feodor Ivanovitch." Mr. Paul N. Orleneff plays a variety of parts with great power and naturalness, Oscar in Ibsen's "Ghosts," Solness in Ibsen's "Master Builder," the last of the Ruriks in Tolstoy's "Czar Feodor" among them. The Russian players have had a hard time during the year they have been in New York, but lately they have been given several opportunities to reach a larger audience by appearing in an up-town theater. Russian is not yet a fashionable language, so their lack of a knowledge of English will doubtless prevent their becoming popular.

Sentimental comedy we have always had, but Mr. Barrie is giving us a new form of the drama, sentimental farce, in

which the extravagance of the satire does not destroy the effect of the pathos. "Alice Sit-By-The-Fire" is a sweet and wholesome play of parents who feel too young for their age, and children who feel too old. Miss Ethel Barrymore takes the *rôle* of the mother returning from India, where the superabundance of masculine society has kept her young, and finding herself under the chaperonage of a very much grown-up daughter, who knows a great deal of life from having attended matinees. The little play which precedes this, "Pantaloone," also by Barrie, loses some of its force for Americans who are not so familiar as the English with Harlequin and Columbine.

The much heralded and advertised play of the Rev. Thomas Dixon, Jr., came to New York this month, and no race riots have yet ensued. The play, of course, is an adaptation of "The Clansman," which we have sufficiently characterized in our Literary Department as mentally absurd, morally twisted and physically repulsive. Of course, the chief interest of the play is the race question, which, if the Northern views on social equality prevail, Mr. Dixon evidently thinks will result in "hybridization, mon-

## HENRI DE VRIES IN

grelization, Hell and Damnation," as Senator Tillman has so euphoniously asserted. The audience seemed to sympathize with Mr. Dixon in his extreme negrophobia, and received with delight the old retort of the Southerner to the Northerner, "Do you want your daughter to marry a nigger," and such phrases as "For God and the South" and "The death rattle in the throat of mah race." The play is fairly well acted and some of the scenes are pretty, but it is an insult to the good sense and good taste of both North and South.

"Cashel Byron's Profession" is a dramatization by Stanislaus Stange of Bernard Shaw's novel of the same name. Where Mr. Stange has taken over the dialog of the novel the play is equal to any of Mr. Shaw's super-Shakesperean masterpieces, but where Mr. Stange himself connects the links the joints creak somewhat audibly. The play is notable for the fact that James J. Corbett, the ex-champion pugilist of the world, takes the part of Cashel Byron, the hero prizefighter. If Mr. Corbett does not act as well as he fights, he certainly is no disgrace to his new profession. He may become an excellent histrion some day. Miss Margaret Wycherly, who played so beautifully last season in the Yeats Irish dramas, makes a fairly good heroine. Her rôle is that of a young lady of exquisite breeding, of aristocratic lineage

and of colossal wealth. In accordance with the gynecocentric theory of Prof. Lester F. Ward, she falls in love with the prizefighter because her feminine loveliness and delicacy unconsciously seek to mate with the ideal type of the physically perfect male human animal. With this end in view the actors take the audience thru plenty of humorous and biological dialog. The play is not bad, and any daughter can safely take her mother to see it.

Mr. E. S. Willard came back again last month to New York with his repertory, of which "The Professor's Love Story" and "The Middleman" were the prime favorites. Mr. Willard in these serio-pathetic plays is inimitable, and tho his support is not always the best, he is one of the most delightful actors on the English speaking stage today. Those who enjoy spending a wholesome evening away from their cares will come home with refreshed minds and renewed faith in human nature.

"As Ye Sow" is a four act drama founded on life and incidents in Cape Cod, Massachusetts. Its author is a minister, the Rev. Mr. Snyder, and the play is orthodox, as it should be, in every respect. It can safely be seen and enjoyed by all Christian Endeavorers. A minister is the hero, and his preternatural virtues would make him unquestionably too "goody goody" were not the part

As Putten.

As John Arend.

As Post.

## SEVEN DIFFERENT ROLES

played by an attractive young actor, Mr. Frank Gilmore. The heroine follows duty and clings to her brute husband when he unexpectedly returns to life after an absence of some years, when he was supposed to have been dead, and she refuses to run away with the young minister, altho she has got to the church door as his bride. The good die old, and vice is converted into virtue in every act of the play. As a sociological presentation of a certain type of life existing to-day the play is of value.

"The Redemption of David Corson," by the Rev. Charles Frederick Goss, did not amount to much as a novel, and as a play it is still worse. It is mere religious melodrama enlivened with rural horseplay. The only redeeming features to the play as given at the Majestic Theater were two rather pretty stage settings and the playing of Mr. Harrison Armstrong, who took the part of Andy McFarlane, the evangelist, with great propriety and sincerity.

Henrietta Crosman, in "Mary, Mary, Quite Contrary," is disappointing. The play moves with heaviness but rarely interrupted thru three acts original neither in conception nor execution. How the name applies, except that the heroine is called Mary, is a mystery. "Mary Had a Little Lamb" would be as appropriate.

Miss Crosman is "fair as a star when only one is shining in the sky," but even her efforts cannot save the very weak ending. The curtain raiser, "Madeline," in which Guy Standing supports Miss Crosman, is much more praiseworthy.

A rather remarkable production is "A Case of Arson," in which Henri de Vries takes the part of seven distinct characters. He impersonates the different witnesses in a trial, and so skillfully are the thirty seconds spent in changing consumed that one character seems to come on the stage as the other goes off. The play is not merely a stage feat, but contains some good acting. The individual variety of each appearance is splendidly carried out. The play is preceded by a farcical comedy of three acts, somewhat sensational in character.

There is some very pretty music in "Moonshine," a new musical play in which Miss Marie Cahill was featured last month at the Majestic Theatre. The book by Edwin Milton Royle and George N. Hobart contains a number of very happy references to current events. Young as well as pretty girls were discriminatingly selected for the chorus. They sang well and entered into the dances and other stage movements with artistic abandon.

# What Is Your Name?

BY LAURA ALTON PAYNE

STATISTICIAN FOR THE KANSAS STATE SUPERINTENDENT OF PUBLIC INSTRUCTION.

**H**AVE you ever thought of the meaning of your name? Do you know its origin—Celtic, Teutonic, Latin?

Some names speak for themselves as to origin and meaning, some are merely non-suggestive, while others are wholly misleading. A cursory glance at any list of English surnames is sufficient proof of this. Considering the surprising changes that many names have undergone, the almost universal lack of knowledge concerning their origin is not to be wondered at. What is there in "Peter Snooks" to suggest to the uninitiated that originally it was "Peter at the Seven Oaks?" Though "Thomas Whitehorse" suggests the American Indian custom in names, originally it was "Thomas at the White Horse," or "Thomas at the sign of the White Horse" (a tavern). This was the source of many of the "animal" surnames. In mediaeval times our genial Bill Nye would have been "Bill atten eye"—i. e., "at the island." Niles, Nash, and Noakes had similar origin. How can Sucksmith, Shuxsmith, and Sixsmith be expected to know that a remote ancestor of theirs made sickles, hence was called Skelysmith? Sidney is a corruption of St. Denys, Sinclair of St. Clair, Seymour of St. Maure, Janeway of Genoa, Curtis of "courteous," Armitage of "hermitage," Spark of Sparrowhawk, Turkle of Thorskettle (the sacrificial kettle of the gods also gave rise to the name Cattle), and Bunyan of Bonjohn—John Bunyan meaning "John Good John." Emerson and America had the same origin—Al-

meric, an old Norman name, Amerigo being the Italianized form.

Names, like things, are not always what they seem. Beers and Berry are not "beers" and "berry," but a corruption of "borough," often written "bury" and "bery." Badman was not originally "bad," but the opposite, "bead" or "bedeman," he who counted his beads, or rosary, as he professionally invoked heaven in behalf of his patrons. Death and Graves are not so sepulchral as they sound; the former is a corruption of the old Flemish name D'Eath. The latter has the same origin as the word "engrave"—"to carve"—originally applied to a clearing in the forest. Grove now means just the opposite. Chapman was "chepeman," or market man. Waters and Agate are not of "mineral" origin; Waters is a contraction of Walters, and Agate of "atte-gate." Nor is Lambkin of "animal" origin; it does not mean "little lamb," but "little Lambert," from St. Lambert. The original Tallboys was not a giant in his youth; his name is a double place-name, from "tailles" (underwood) and "bois" (wood). "Boys" and Boyce are other forms of "bois." Gotobed was not a sleepy-head; his descendants allowed his fine old Teutonic name, Godbert or Godeberd, to become corrupted. Quarterman does not signify a weakling, but *quatre-main*, "four-handed;" and Potiphar, instead of Bible origin, is a corruption of Pedifer—"iron-footed."

Some fine-sounding names were of very humble origin. The original Calvert (family name of the famous Lords

Baltimore, of Maryland) herded calves, hence "calve-herd." Campbell signifies "crooked-mouth" and Cameron "crooked-nose," just as the river Cam was so named because of its winding course. Labouchere is French for "the butcher." Its equivalent, Carnifex, is known in England, Metzger in German, while plain Butcher prevails in America. Durward was "door-ward" and Stewart was "stew-ward." "Stew-ward" was originally "sty-ward"—"sty" signifying "stall" for horses, cows, etc. Stanley was "stone-lea"; Gladstone, "glede-stone"—"crag of the kites, or gledes"; Stoddard, "stot-herd" (stot, A. S. for bullock); and some of our Goddards were "goat-herds." Oliphant is merely a euphonized "elephant."

In the beginning a single personal name sufficed. For awhile no two persons bore the same name, but as a stock of names accumulated repetitions became common, and as the population of the world increased distinctive names became necessary; hence we read of John the Baptist and John the Disciple, Darius Hystaspis and Alexander the Great, Joshua, son of Nun, and Simon Barjonas—"Simon, son of Jonas." As time passed, distinguishing names, given for various reasons, became common among nearly all, if not all, the nations of the earth, but the Roman cognomen was the nearest approach to our modern surname.

The surname is not necessarily the sire-name, or patronymic, as so many people think, tho the two are now generally synonymous in use, particularly in the United States and England. The proper orthography of the word is "surname," not "sirname"—"sur" from *super*, signifying "over," i. e., the "over" or additional name. Nor is the surname always inherited. The law recognizes a man's right to choose his own name, even providing for the change by a legislative act. Or a new name may be inherited with a legacy attachment—a custom that still obtains in Scotland and is not infrequent in the United States.

Surnames were first used in France, becoming general there during the latter part of the tenth or the forepart of the eleventh century. They were used hereditarily to some extent, however, prior to that time. They were introduced into

England at the Norman Conquest in the year 1066, but it required two or three centuries to establish the body of our nomenclature on a fixed basis. During that time surnames became general throughout the British Isles except in Wales, in some parts of which they are unknown to this day.

It is difficult to trace a pedigree back further than the thirteenth century, owing to a certain easy custom that sprang into use—that of the sons laying aside the father's name and taking one of their own choice from their residence, occupation, or other reasons, brothers frequently choosing different names. All of this was very confusing, but perhaps not more so than that of the present Scandinavian custom, under which the son of John Peterson may become Eric Johnson, whose son in turn may become Peter Ericson, the latter's son probably returning to the original name—John Peterson.

Surnames are now general in all civilized countries, I believe, except Turkey, in which country it is said that a man has no relatives, since he cannot trace them. In England alone there are from 40,000 to 50,000 existing surnames. In proportion to the population, Scotland has fewer surnames than England. Doubtless this is partly due to the adoption, in some instances, of the clan name by the whole clan. Owing to their crudity, inconvenience, or uncomplimentary origin, many of the early surnames have become obsolete: such as Withoutentown (without the town), Swetinbed, Smartknave, Saucemaker, and Lamentation. Not all such names are obsolete, however. Only recently the writer came across the names Goforth, Goforward, Godbehere, and Wellbeloved. Over 200 names collected by the writer from newspapers, magazines, and catalogs might better have been allowed to fall into "innocuous desuetude," among them the following: Turnipseed, Legliter, Sickendick, Dickensheets, Quartermouse, Oldfather, Younghusband, Webfoot, Redhair, Hedgepatch, Tindeer, Stickhorse, Sick, Colic, Measles, Demon. Even the well-known Poindexter loses its dignity in the original Pointdexter.

In most countries it is customary for the wife to take the husband's name, but in some European countries it is not un-

usual for the husband to append the wife's name, particularly when it is more honorable than his own. Hyphenated names and the wife's retention of her maiden name for a middle name are customs growing in favor in the United States and Great Britain. In Spain the wife retains her own name, and the son may choose the name of either parent, or he may combine the two names. In the former case the son is likely to choose the name that confers the most honor. This custom has obvious merit—obnoxious and dishonored names may be relegated to oblivion, euphonious and honorable names perpetuated. When the Spaniard unites his parents' names they are connected by a "y," signifying "and," the father's name being the first and most important, the mother's name being appended chiefly to distinguish father and son, as the terms *senior* and *junior* are unknown in Spain. For instance, the father's name may be Juan Blanco y Alvarez and the son's Juan Blanco y Diaz.

American surnames were determined by the colonization of the country, hence are chiefly of a triple source—English, French, and Spanish, the English consisting of Anglo-Saxon and Norman-French (the former Teutonic and the latter half Teutonic) and Celtic. The purely Teutonic, introduced by the Dutch of New York, has increased greatly by immigration. The great foreign influx is rapidly adding two more important elements—Latin and Slavonic. It is not uncommon for a foreigner with a polysyllabic name to drop part of it upon his arrival here. Occasionally there is a complete change—an "off" or a "ski" becoming by voluntary adoption plain Smith or Jones. As a rule, Scandinavians drop their peculiar custom in names (that of adding "son" to the father's personal name to form the son's surname) along with other old world customs that do not readily naturalize, for, of all foreigners, Scandinavians are the most eager to become Americanized.

Surnames have been drawn from every available source—personal names, location, occupation, deeds of prowess, mental, moral and physical attributes, terms of relationship, the human body, farm and household articles, buildings, foods and drinks, modes of travel, nations and

laws, customs and religions, geographical terms, weather and seasons, months and days, measures and values, the joys and ills of life, the animal, mineral and vegetable kingdom, and even from the Kingdom of Heaven. The use of nicknames and compound terms gave an almost inexhaustible source. Even oaths became embodied, as in Pardoe, from *par Dieu*. Words were clipped, elided, lengthened, blended and corrupted. Elisions were more common than additions. Augustine became Austin; Cheeseborough, Chesbro; Elias, Ellis; and Taliaferro, Tolliver and probably Dolliver. Dolliver may be a corruption of D'Oliver. Some names have retained their old-style orthography, others have taken the new. Norse words were "Frenchified," French words Anglicized, and British words Latinized. Also, many old Anglo-Saxon and Celtic terms, otherwise obsolete, have been preserved in surnames.

Bardsley, in his "English Surnames," summarizes the foregoing sources of our English nomenclature under the following headings: Baptismal names, patronymics and metronymics, place-names, office and occupation names, and *sobriquets* consisting of nicknames and pet-names. Place-names undoubtedly rank first in number; baptismal names, with their numerous "nicks" and "pets," second; occupation names, third.

Among the Anglo-Saxon names that preceded and survived the Conquest may be mentioned Aldred, from which came our Aldrich; Sigward ("sig," Teutonic for "conquest"), origin of Seward and Sigsby; Swain, or Swan, signifying "strength"; Harding, which has come down to us unchanged; and Hereward, ancestor to Howard and Harvard. One authority gives Hereward as a corruption of "hayward." But may not its origin be the same as Sigward, since "here" signifies "war"—"heriot," "a tribute for war purposes"?

Names derived from Teutonic mythology were also among the earliest: "god" (good) is found in Goodwin and Godard (one class); Os, in Oswald and Osborne; Thor, in Thustan and Thurlow; Orm (Pagan serpent god), in Orme and Ormsby.

Among the earliest names introduced and confirmed by the Conquest were

found Serl, Drew, Bryce, Harvey, Arnold ("ern"—eagle), Albred (now known as Albert and Allbright), Almeric, Ingelram, Ebrardus (Everard), Warin (Guerin, now Warren), Ivo, Hamon (Hammond), and Payn (originally Pagan). After their adoption as surnames the most of these became obsolete as personal names.

Other personal names that lost none of their popularity as such, while giving rise to a long list of surnames were Guy, Ralph (Rawlins and Randle), Charles, Roland, Oliver, Robert, Richard, Roger, Reginald (Reynolds), and Miles, or Milo.

The most popular personal names since the Domesday Book recorded them have been John and William, but their derivatives are too numerous to mention here. Roger, Robert, and Richard, took a double nickname in H and D, hence Hodge and Dodge, Hobbs and Dobbs, Hicks and Dicks, with the rougher forms of the last—Higgs and Diggs, and even Hitch, giving rise to Dickens, Hitchcock, and Higginson. Higginbottom may mean "Higgin's lowland," but one authority ascribes it to "hitchin," the mountain ash.

Diminutive and other affixes served an important part in the origin of surnames from personal names. The Anglo-Saxon "kin" and "cock" and "ing" are represented in Jenkins, "little John;" Hitchcock, "little Richard," and Browning, "little Brown;" the Norman "ot" and "et," in Eliot, "little Elias," and Emmet, "little Emma" (sometimes "lot" and "let"; Hamlet, "little Hamon"); the French "on" and "en" in Marion and Dickens. Later came "ie" and "ey," as in Ritchie and Willey. The Anglo-Saxon terminal "ish," in Standish, signifies "born of."

Many prefixes were used. The Celtic "Mac" or "M," of the Scotch; "Mc" of the Irish; "Map," "Ap," or "P" of the Welsh, and the Norman "Fitz" (Latin *filis*), signify "son" or "son of," and the Irish "O," "grandson of." McDonald means "son of Donald;" McPherson, "son of the parson." ApRichard, "son of Richard," eventually merged into Pritchard. In some instances, P was corrupted into B—Barry, Bowen. Fitzroy means "son of the king," and Fitz it-

self is a surname. O'Brian means "grandson of Brian."

There were prefixes to place-names also. The Norman "De" or "Du," the German "Von," and the Dutch "Van," signifying "of" or "from" an estate or place, was used by the nobility, and "at," "atte," or "atten," as in Atwood, Atterbury, or merely the local name, as Wood, by men in humble walks of life. "At" is shortened to "a" in Thomas a Becket—"Thomas at the Brook." The French "La" signifies "the"—Lamont, "the mountain." In Delafield we find "De" and "La" combined. "Saint" is a Norman prefix.

Suffixes are more numerous than prefixes, but, with the exception of "son" and the diminutives, chiefly in place-names. An old couplet says:

"In *ford*, in *ham*, in *ley*, in *ton*,  
The most of English surnames run."

Other popular terminals are man, field, land, burn, brook, street, and love. The Scandinavians write the terminal "sen" instead of "son," and the Welsh use the genitive—the source of all the seemingly plural names, as Owens, "Owen's son." Owens, Evans, Johns, Jones, Hanks, Jenks, Johnson and Jansen are the same.

A slight knowledge of old Celtic and Teutonic terms simplifies many names. The Anglo-Saxon "ton" means "town;" Benton signifies "mountain town;" Norton and Sutton, "north town" and "south town." The Danish "by" also means "town" — Kirby (Kirkby), "church town." Coningsby and Kingston are the same. Winthrop (Whinthrop) signifies "furze-village;" Burham, "brook home;" Heathcote, "heath cottage;" Auburn, "old brook;" Beverly, "beaver field;" Berkeley, "birch lea;" Bradford, "broad ford."

Some names apparently plain are misleading, owing to different meanings of a word, not only in different languages, but in the same language. Winchester (Latin *castra*) signifies "camp of victory," but Winslow (Whinslow) means "furze-hill." In some instances "worth" means "value," in others "farmstead" or "dwelling;" Woodworth, "dwelling in the woods;" Kenilworth, "manor on the canal." Kilpatrick means "church of Patrick;" Schuylkill, "hidden creek." The suffix "ing" in Browning means

"off-spring," but in Ruddington it means "meadow"—Rud(d)ing-ton. "red-meadow-town."

Many of these surnames are centuries old, and are found in the oldest records—Domesday Book and Hundred Rolls. The trade of weaving has been carried on in England since the thirteenth or fourteenth century by a Sussex (South Saxon) family named Webb. But many others are of a more recent date. How long, for instance, has Miss American's family borne that name, and why was it adopted or bestowed?

Upon gaining their freedom, the surnameless slaves generally adopted their

master's names, hence the prevalence of time-honored names among the colored race. The Chinese place the surname first. Prince Li Hung Chang, if plain "Mister," would be "Mr. Li."

As to the pronunciation of a name, a man may spell his name Smith and pronounce it Jones, if he so desires, and none can say him nay.

A fair knowledge of English nomenclature gives a fair knowledge of English history, so closely are the two interwoven; hence, the former being like the latter—voluminous, it is impossible to give in one brief article more than the merest insight into the subject.

TOPEKA, KAN.

## The Man Behind the Plow

BY HARRY H. KEMP

BARDS have praised in song and lay men whose  
office is to slay,

Men who go intrepid where their foemen  
lurk;

But the man behind the plow is a hero, too, I  
trow—

He's the man that keeps them while they do  
the work.

Oh, the man behind the plow with the sun-tan  
on his brow;

His sole honor is the labor he has done.

But to shoot their brothers down is the glory  
and the crown

Of a million men that stand behind the gun!

'Tis a stirring thing, no doubt, with the enemy  
in rout,

To follow war-flags leading on before;

But the man who stays at home tilling the re-  
luctant loam

Is the man who keeps the man who goes to  
war.

It is valorous to go where the warlike trum-  
pets blow,

And the deadly shrapnel on its course is  
sped;

But it seems to me this man follows out a  
nobler plan

Than the man who knocks his brother in the  
head.

Then remember when you hear drums' and  
trumpets' martial cheer,

That upon some little field the work is done,

In a simple, humdrum way, toilsome day suc-  
ceeding day,

That supports a man that marches with a  
gun.

Then apply it further still; all the shapers of  
world-will,

All the petty princelings who exact a bow,

All the fanfare of estate on which buttoned  
legions wait—

All depend upon the man behind the plow.

CHICAGO, ILL.

# Literature

## Schillings's Photographs of African Animals

WHEN Herr Schillings's *Mit Blitzlicht und Büchse* was published in Germany in 1905, naturalists, big game hunters, and the general public, were really startled by it. No such pictures had ever been taken. They were an absolute surprise. The interest felt has been shown by the frequent quotations from the work which appeared in the newspapers and later by the appearance in this country of two translations of the book; by far the better of which is that published by Doubleday, Page & Co.<sup>1</sup>

Mr. Schillings's work is an extraordinary account of hunting, photographing and natural history work in equatorial

Africa. It is a story of courage, patience and persistence crowned by success; a story illustrated by photographs that are absolutely unexampled and that give us by far the most intimate glimpses ever had into the life of many of the large and dangerous animals of Africa. Some of the pictures—taken at night, and often at a distance—are dim, and the photographs suffer by comparison with the much simpler nature photographs which we are accustomed to see, but if the extraordinary circumstances under which they were taken and the difficulty of getting night photographs be considered we shall think that the pictures are very good. On the other hand, many of the simpler pictures, even those taken in daylight, seem to be more or less out of

A Pair of Rhinoceroses Bathing. Photographed from a Distance of Fifteen Paces.  
From "Flashlights in the Jungle." Copyrighted, 1905. Doubleday, Page & Co.

focus, a result perhaps of the great distance at which they were taken. The author, in his preface, makes a great point of the fact that no retouching has been done to these negatives, and says that "this feature distinguishes my pictures from all others previously taken of animals in the wilderness."

Primarily a collector of natural history specimens, Herr Schillings of necessity did much killing of African wild animals, but always for an actually useful purpose—the increase of our knowledge. He condemns—as all thoughtful people must—the terrible destruction of African wild life, which has gone on for many years and which still takes place. It is true that in recent years a sentiment has grown up against this slaughter, and that game reserves have been established in which Europeans are forbidden to destroy animal life, but this is only a half measure. Much of this wanton destruction has been done by so-called sportsmen of America and Europe, but we have heard little of the devastation caused by the negroes, who, now armed with improved weapons, are absolutely thoughtless of the future, and consider only the question of food or the small money value of the horns, tusks and hides.

The volume is full of interest, the hunting and the photographing which constitute the first portion will strongly attract one class of readers, but many will be even more charmed by the abundant observations in natural history on the strange creatures, large and small, which dwell on the plain or in the forest. It is a contribution to the natural history of Africa such as has perhaps never before been made. It may be compared with Mr. J. G. Millias's "Breath from the Veldt," and is the work of a naturalist armed with a camera as well as with a rifle, and who thus can see and can record a multitude of things that a hunter would never wait to observe.

*Flashlights in the Jungle* is a beautiful book. The illustrations appear to be newly made, and printed in black ink, have an effectiveness which was wanting

in many of the more weakly printed pictures in the German edition, some of which are in a sepia or green ink. The translation is a good one and appears to follow the text closely, while the other American edition<sup>2</sup> is really little more than a loose abstract of the German and the pictures having been apparently copied from the German half tones are blurred and unsatisfactory.

The volume abounds in interesting quotable incidents of natural history. The domestication of the zebra is discussed, the ostrich is shown to lead the lion away from her nest, just as the tiny sandpiper in America leads the intruder away from hers. But after all to the general reader its most interesting feature is its wonderful pictures, in which we see charging elephants, lions capturing their prey at night, zebras, rhinoceroses and other wild animals—a multitude of most interesting subjects. It is a portrait gallery of wild life for Africa, such as is Wallihan's "Camera Shots at Big Game" for the Rocky Mountains.

## Modern Sermons

ONE of the most striking features of modern addresses and sermons is their practical character. The day has gone by when Christianity was thought to be a matter of dogma chiefly. It is being realized more and more clearly that the Christian calling is one to "follow His steps." This is set forth very emphatically in one of the most remarkable books in the religious literature of 1905, Professor F. G. Peabody's "Lyman Beecher" lectures for 1904 at Yale University, under the title of *Jesus Christ and the Christian Character*<sup>3</sup>. In a chapter of clear and reverential argument Professor Peabody shows the close relation between the ethical teaching of the Gospels and the problems of the modern world. Then, after a sketch of the character of Christ which leaves nothing to be desired by a thoughtful Christian, he proceeds to elucidate the roots, the growth, the personal consequences and

<sup>1</sup> FLASHLIGHTS IN THE JUNGLE, a Record of Hunting Adventures and of Studies in Wild Life in Equatorial East Africa. By C. G. Schillings. Translated by Frederick Whyte, with an Introduction by Sir H. H. Johnston, G.C.M.G., K.C.B. Illustrated with 302 of the author's untouched photographs taken by day and night. Doubleday, Page & Co. \$3.80.

<sup>2</sup> WITH FLASHLIGHT AND RIFLE. By C. G. Schillings. Translated and Abridged by Henry Dick, Ph.D. With 120 illustrations from photographs. New York: Harper & Brothers. \$2.00.

<sup>3</sup> JESUS CHRIST AND THE CHRISTIAN CHARACTER. By Francis Greenwood Peabody. New York: The Macmillan Co. \$1.50.

the social consequences of the Christian character. Finally he closes the volume by showing how the development of Christian ethics leads to a higher and wider outlook of hopefulness for the good of the world and a closer communion with God; while from this closer communion comes the power for daily duty. The lectures are full of power and present a study of Christian ethics which is truly inspiring.

Somewhat of the same idea, that of ascending in personal Christ-like life to fellowship with the Father, and thence deriving the help necessary for the fulfillment of duty, runs thru a series of twenty-nine sermons by the Rev. John Watson, better known as "Ian MacLaren". Each sermon breathes that practical Christianity which has characterized Ian MacLaren's fiction and theological writings alike. Strikingly beautiful as the language is, the volume will be prized by those who desire inspiring and helpful words for their devotional reading. In *God's Choice of Men*<sup>3</sup> the pastor of the Brick Presbyterian Church of New York City has approached the subject of Professor Peabody and Dr. Watson from a different side, for, in harmony with the Declaratory Statement accepted at the Revision of the Westminster Confession in 1902 and 1903, he sets forth the call of God to all men to a life of Christian practice. The seventeen chapters into which the volume is divided are logically arranged, and, while not so academic as the first book we have named, nor so beautifully expressed as the second, are full of sound, practical argument and exhortation to Christian faith and duty. *The Unlighted Lustre*<sup>4</sup> is a volume of thirty sermons by G. H. Morrison, M.A., of Glasgow, Scotland. The sermons are on varied subjects, but all are short, practical, pointed, and possess a readable quality not often associated with published pulpit utterances.

Dr. George Matheson, formerly minister of St. Bernard's Parish in the capital of Scotland, has provided a very interesting series of studies of *The Repre-*

*sentative Men of the New Testament*<sup>5</sup>. With each character is associated an idea suggested by the Gospel narrative, and we have thus a series of meditations which are well adapted for private reading. Dr. Samuel H. Virgin, pastor emeritus of the Pilgrim Church of New York, has arranged from his notes nineteen sermons preached during his ministry<sup>6</sup>. They are excellent specimens of the addresses of a dozen years ago, somewhat more lengthy than those of the present decade, well balanced, well illustrated, and full of practical application.

Those who are interested in the literature of the pulpit will find much to arrest the attention in the seventeen sermons by the Rev. Reginald J. Campbell, of the City Temple, London, England, collected under the title of *The Song of the Ages*<sup>7</sup>—the subject of the first in the volume. We have here some very good specimens of the addresses of a preacher very popular in the English capital, and the reason for his popularity will at once be evident, for the discourses are forcible, liberal in tone, eloquent and practical. The range of subjects is wide, and Mr. Campbell does not hesitate to deal with such difficult questions as the silence of Lazarus about the state of the dead. The sermons bear reading, which is a good test, and they reflect strongly the personality of the preacher.

**Mrs. Fitzherbert and George IV.** By W. H. Wilkins. New York: Longmans, Green & Co. Pp. xx, 476. \$5.00.

It is doubtful whether the good name of Mrs. Fitzherbert needed for its vindication the 476 pages which Mr. Wilkins has devoted to this object. Altho for a whole century some mystery has hung over the relations between this lady and George IV, yet it has long been generally believed that George while Prince of Wales went thru the marriage ceremony with Mrs. Fitzherbert and that except for the Royal Marriage Act she would have been his lawful wife. That the family and friends of Mrs. Fitz-

<sup>2</sup> THE INSPIRATION OF OUR FAITH. By John Watson ("Ian MacLaren"). New York: A. C. Armstrong & Son. \$1.25.

<sup>3</sup> GOD'S CHOICE OF MEN. By William R. Richards. New York: Charles Scribner's Sons. \$1.50.

<sup>4</sup> THE UNLIGHTED LUSTRE. By G. H. Morrison. New York: A. C. Armstrong & Son. \$1.50.

<sup>5</sup> THE REPRESENTATIVE MEN OF THE NEW TESTAMENT. By George Matheson. New York: A. C. Armstrong & Son. \$1.50.

<sup>6</sup> SPIRITUAL SANITY AND OTHER SERMONS. By Samuel H. Virgin. New York: American Tract Society. \$1.00.

<sup>7</sup> THE SONG OF THE AGES. By Reginald J. Campbell. New York: A. C. Armstrong & Son. \$1.25.

herbert should desire the fact to be made clear beyond dispute is natural; but it is a question whether so large a volume was necessary for this purpose or whether it was advisable to give to the world a detailed story of the somewhat trivial incidents in the connection of Mrs. Fitzherbert and her third husband, whom no writer can render respectable. The reason for any doubt concerning Mrs. Fitzherbert's character is to be found in the fact that in 1787—two years after the secret marriage of the Prince and Mrs. Fitzherbert—the marriage was openly and flatly denied in the House of Commons by Fox, who declared that he spoke from direct authority—a denial which was never contradicted by the Prince. It was not surprising that the Prince did not venture any contradiction of Fox's statement nor any acknowledgment of his relations to Mrs. Fitzherbert. The marriage was in contravention of the Royal Marriage Act which George III. had pushed thru Parliament in 1772—the act which made necessary the consent of the King to the marriage of all descendants of George II. The Prince was deeply in debt and there would have been no hope for relief from his debts nor of any increase of his Parliamentary allowance had it been known that he had taken so imprudent and audacious a step. Had the marriage been valid it would have been a still greater impediment in the way of the Prince; for Mrs. Fitzherbert was a Roman Catholic, and marriage with her would have made the Prince, under the Act of Settlement, ineligible for the English Crown. Altho Prince George seems to have been as sincerely attached to Mrs. Fitzherbert as it was in his nature to be, he did not allow his marriage with her to stand in the way when marriage to a German princess offered him release from his debts. Yet when this marriage proved a failure he returned to his old love, only to throw her aside again for a new attraction shortly before he assumed the royal power on account of the insanity of George IV. In the later years of George IV, from the beginning of the Regency to his death in 1830, Mrs. Fitzherbert had no part. Perhaps it was as well for her that it was so. "Prinny," of the Creevey Papers, was certainly far

removed from the Prince Charming whom Mrs. Fitzherbert had loved and married; and from the beginning of the final coldness and separation in 1806 there was a rapid deterioration physically and morally in George IV. It is to be hoped that the authoritative statement that Mrs. Fitzherbert had no children, either by George IV or her two former husbands, will put a quietus to the claims that are ever and anon made of descent from George IV by his clandestine marriage with Mrs. Fitzherbert. The historical value of Mr. Wilkins's book centers in the documents which were deposited at Coutts's Bank by Mrs. Fitzherbert and which are now given for the first time to the public by permission of King Edward. These documents include the marriage certificate, which is in the Prince's own handwriting, and which proves beyond doubt Mrs. Fitzherbert's claim to the title of his wife.

**The Road Builders.** By Samuel Merwin. New York: The Macmillan Company. \$1.50.

The author of "Kalumet K" delights in a plot where seemingly insuperable obstacles and discouragements are overcome by pluck and resolute determination. In *The Road Builders* the task before Paul Carhart is to build a railroad, on a rush order, thru a parched and trackless desert. The engineer has strikes, accidents and the plots of a rival road to deal with. One of the best features of the book is that even the minor characters, instead of serving as a background, have a strong individuality. Jack Flagg, the wily cook; Tiffany, the big engineer, and the two Vandervelts are all well drawn types, that are met in actual everyday life. The most realistic scene is the description of the stampee for water in the desert. The guide of the pack train incautiously remarks to the fainting men that water is twelve miles ahead. One man cuts out a mule to gallop ahead, and the rest follow pell-mell. When the straggling line reaches the stream, both men and mules plunge into the yellow water in their frenzy. The illustrations, by F. B. Masters, are very good interpretations of frontier life, and add to the vividness of the story.

**A Self Supporting Home.** By Kate V. Saint Maur. New York: The Macmillan Co. \$1.75.

That great and good divine, the Rev. Jonathan Edwards, once wrote to a fellow minister: "I have a great wish, for my health's good, to cultivate to profit a small plot of ground. I am full of ignorance on this topic and discover no printed book to aid me." His health had, no doubt, suffered from his exertions in the "Great Awakening." Would that the lamented man had lived in this age of plenty! Sometimes, when the books that treat of the pleasures and profits of life in the country swarm the thickest, we are inclined to cry "Too many, too many"; but when one full of sound sense and practical advice comes to hand, like *A Self Supporting Home*, by Kate V. Saint Maur, there is always a field for it. In this book we have the experience and advice of a woman who moved from New York city on to a twelve acre farm twenty-five miles from the city, which she rented at \$180 a year. This estate she stocked, little by little, and soon had it on a paying basis. Her husband commuted, and she did the rest—seemingly an immense amount of work, for the only assistant mentioned is a boy of twelve. Obstacles seemed to have no terrors to this valiant lady, for she even cemented the stable floor, and approached and conquered the hitherto unknown anatomy of a cow, with the result of pails full of milk. The energies of this redoubtable farmer were devoted chiefly to the raising of poultry, including several varieties of chickens, turkeys, ducks, Guinea hens, and pigeons. Much valuable information as to the management of these birds, with more particular advice as to their various foods, is given; and in Mrs. Saint Maur one wishing to begin work with poultry on a small scale would find a helpful friend. Rabbits, Angora cats, and bees were all added to the *ménage* in due time, as well as a horse, a cow, a dog and pigs—a veritable Noah's Ark of domestic animals. The division of the chapters under the names of the months is merely arbitrary, as all farm work connected with domestic animals is perennial. The book is well illustrated with fine clear photographs.

**The Wood Fire in No. 3.** By F. Hopkinson Smith. New York: Charles Scribner's Sons. \$1.50.

To all those rare souls who believe in open wood fires and in hearthside friendship, Mr. Smith's latest book will bring pleasure—just a gentle glow, a comfortable, slippered enjoyment of the stories told in Sandy MacWhirter's room, No. 3, while the hickory logs gleefully light up a circle of friendly faces, as knights of the brush and of the chisel talk together and spin fireside yarns—fantastic, amusing, weird or sentimental. The stories are to be judged in the flickering light of the wood fire, and in no colder ray, as they are reasonably unreasonable and conventionally unconventional in their gentle Bohemianism. They prove, if they prove anything, that every one should have some genial, whole hearted friends, and should start an open fire in his room, around which they may hold pleasant converse, or failing that, light a fire in his heart about which his intimates may gather for warmth and good cheer; all of which is quite enough for one small book to demonstrate to our liking.

**Letters of Labor and Love.** By Samuel M. Jones. Indianapolis: The Bobbs-Merrill Co. \$1.00.

During the summer and fall of 1900 and of 1901 the late Mayor Jones of Toledo addressed his employees in a number of letters on social questions and shop matters. These letters were privately printed in two volumes and circulated among the Mayor's friends. They are now given to the public in a single volume. A sympathetic and finely expressed introduction by Brand Whitlock, Mr. Jones's personal friend and political heir and present Mayor of Toledo, accompanies them. It is the real Jones as his friends knew him who appears in this book, and no one who wants a memorial of his life and teachings can well do without it. Written in "that simplicity which is often the despair of conscious art," they reveal the many-sided character of one who was at the same time man of affairs and dreamer, one without education and yet deeply steeped in the best writings of our literature, a lover of his fellow-man and yet fated

during all his later years to be constantly engaged in a battle for what he deemed just. "To his friends," writes Mr. Whitlock, these writings

"must ever have an appeal that is far above any question of art. They are the words of a great, honest American, who was desperately in earnest, and they have at least the simplicity and directness which our men of action, when they have done the real heavy labor of the world, always get into their writings. But it is not, after all, what he said that was so great; he did a great service for his workingmen, and so for all workingmen, and he did a great service for his city, and so for all cities; but the greatest thing he did was to live the life he lived."

### Literary Notes

ANOTHER of the Caxton Thin Paper Classics is announced by Scribners, \$1.25, "The Works of Oliver Goldsmith." His plays, lives and letters are all included in this pocket edition, which contains 767 pages. It differs from most of such compressed editions in that the type is good and clear.

....A "Teachers' Guide" for International Sunday School Lessons for 1906, by Martha Tarbell, is published by Bobbs-Merrill, Indianapolis. It will not replace Peloubet or the "Sunday School Times," for it is antiquated and uncritical, but its numerous quotations will often be suggestive and convenient.

...."Sporting Sketches," by Edwyn Sandys, contains some twenty-five chapters, many of which have appeared from time to time in *Outing*, recounting adventures with fish-rod and gun. When you have finished reading the 389 pages, you will be familiar with the life and habits of fish, flesh and fowl. (Macmillan, \$1.75.)

....Oliver Ditson, of Boston, issues "The Songs and Airs of George Handel" in two volumes, one arranged for high and the other for low voice. From Handel's voluminous work eighty numbers have been selected, which may fairly be said to include his best productions. The price is \$1.50 in paper, and \$2.50 in cloth per volume.

....Thomas Y. Crowell & Co., New York, publish four new booklets to the "What Is Worth While Series." They are: "Is Life Worth Living?" by Frederick Lynch; "Faith and Life," by Charles E. Jefferson; "Books in Their Season," by Annie R. Marble, and "The Beauty of Kindness," by J. R. Miller. They are designed to be helpful words of advice and cheer. (Price, 30 cents each.)

....The "American Art Annual" for 1905-1906 was issued late in December. This annual is exceedingly valuable for reference, as it contains much art information that is unavailable elsewhere. Its list of paintings sold at public auction for \$100 and over is very useful. The art magazines named include some very recently established ones. The book has been carefully edited by Miss Florence N. Levy.

...During the Middle Ages arithmetic was chiefly taught for the purpose of calculating ecclesiastical festivals. From our modern arithmetics that subject is entirely excluded and it is hard to find the rules. Therefore, "The Perpetual Ecclesiastical Calendar" (Columbus Press, 120 West Sixtieth street, New York, 25 cents), of C. E. Woodman, which gives all the necessary formulæ, with examples for calculating the date of Easter, etc., with tables of the dates from the beginning of the Christian era to the year 4499, will be of great use to a few persons.

### Pebbles

"YES, I quarreled with my wife about nothing."

"Why didn't you make up?"

"I'm going to. All I'm worried about now is the indemnity."—*Pittsburg Post*.

King Alfonso is engaged to be married to Princess Ena of Battenberg, a niece of King Edward. Did he select her by the Ena-meeny-miney-mo process?—Personal in *Harper's Weekly*.

An Atchison woman whose husband has a small salary, and who helps him all she can by doing her own work and keeping down expenses, had a note lately from an old school friend, saying she would pass thru town and would like to see the Atchison woman. The old school friend had married rich and lived elegantly. The Atchison woman was anxious to make a showing before her, and as she had two weeks to get ready, devoted her entire time to plans and work for the six o'clock dinner for her friend. She borrowed several Turkish rugs and silver and cut glass from friends whom she took into her confidence. She told her husband she would give up her fall suit and spend the money on the dinner. He thought Mary was acting rather foolish but let her have her way. She hired a first-class cook to get a nine course dinner, and a pretty waitress to serve it. She secured a young colored girl and decked her out in a white cap and apron to act as nurse for the children for that one evening. She took one of her old trousseau dresses and fixed it up for a dinner gown, and when night came, put it on, and squeezed her husband into the dress suit he had worn when he was married. The friend came and everything went off beautifully. After dinner the nurse brought the children, in starched dresses and gay sashes, into the parlor to see "Mama's friend." They were speechless with wonder over the magnificence of "Papa" in his dress suit and "Mama" in a party dress, but they had been coached and did not betray any surprise. Finally the grand guest came to the saying of good-bye to her hostess, and she said: "The beauty of my visit with you, Mary, is that you have not taken the slightest trouble but have given me a glimpse of your simple, everyday life. I would have felt terribly to have thought that I had made you any trouble, but your simple little family dinner was delicious."—*Atchison Globe*.

## The British Elections

THE defeat is a rout. The victory is quite too overwhelming. Queen Victoria when informed that the "America" had won the cup asked, "What boat is second?" "There is no second," was the answer. There is no second in this election—Unionists, Nationalists, Laborites, all together are distanced by the victorious Liberals.

Now what will it mean? History does not concern us—that is past; what of the future? Let bygone blunders be bygone. What changes of policy will the Liberals decree?

Already the new Ministry has stopped the importation of Chinese coolies into South Africa. That seems to mean that they do not mean that the British Empire shall enter into partnership with the milords of the gold and diamonds mines to cut down the wages of the laborers, white and black. If they want workmen they must enter the labor market and get them as other people do, or go without. The world will not suffer for a little less gold and a few less diamonds. Meanwhile there will be liberty given to the people of the Transvaal to rule themselves, and we may fairly expect that the great South African empire will be made a self-ruling colony, as free as Canada or Australia, within a few years. That is the way to create loyalty, for loyalty hangs on liberty.

Next must go ecclesiastical privilege in England and Wales, for really it is the principles of disestablishment that are in the saddle. One is amazed to see how many Dissenters were among the candidates for Parliament. There were seventy-five of them who, as members of the present House, sought re-election, and doubtless they will be returned. In addition to them over eighty others contested seats, and probably the larger portion of them were successful. The number is extraordinary when we consider that the prestige of both wealth and rank is with the Established Church. And the Free Churches are the very heart of the Liberal party and its vital force.

The first thing that the victorious ma-

jority will do is to overthrow the authority of the Church in all State-aided schools. No longer shall the rector rule, and no longer shall the choice of teachers be limited to members of the Anglican communion. The Liberal party will not exclude religious teaching—it has not yet itself learned that a Church is humiliated that asks the State to do its business of religious teaching—so we presume that it will not take the new Parliament long to send a bill to the House of Lords which will free the schools from religious control, and allow any denomination that chooses to enter the schools and teach its tenets to its own children.

But that is only the first step. Next comes the disestablishment of the Church in Wales. That is final; it must be—Wales will have no less. Anything more than that we cannot for the present expect, altho certainly the Liberal party will be looking to disestablishment in England, and the Laborites will be one with them in this. The cloud already looms large, and the Anglican Church sees the storm coming, and has just begun to make ready for it by initiating a new plan of self-government.

Then there is the great question of Irish Home Rule. But that will not be the immediate aim. It is likely to be made a part of a great system of local self-government, by which, under the name of devolution, Parliament will be relieved of most of its local business, and local legislation will be attended to by small local parliaments, one for Scotland, one for Wales, perhaps two for Ireland, and two or more for England. Devolution is home rule writ large and Latin. But that will have to be studied and worked out with care, and will take time, probably after another election and another mandate by the people. For this election is not carried on any real positive program of principles, but on a negative one. The most prominent, if not the principal question has been that of Free Trade *versus* Protection; and the people have decided that they will have no change of policy. So this election has not decided what the people want done,

but rather what they do not want done. Before such a great question as either the disestablishment of the Church of England or a new system of local parliaments is presented for action, the people will have to give their will at the polls. Already we see what is coming. The issue must be fought out.

Then there is the great, the immense, question of a reform in the government of India. Lord Curzon may have been right in his conflict with General Kitchener, and the Liberal Government is likely to agree with his views, that the military arm must be subordinate to the civil power. But he seems to have made a great mistake in the division of Bengal, joining part of that most progressive province with Assam; and all India is seething with revolt. It is a very serious outlook, when the great Empire of India is boycotting all British goods. John Morley's sympathies are with the natives of India in their aspirations. But we must wait to see how the integrity of the British Empire can be maintained while trusting the people of India to take their full part in government.

There will be various important, tho subordinate, questions that may require speedy action. We may expect that there will be further legislation to make it easy to sell the large landed estates to their actual occupants. These laws have worked well in Ireland. The Labor party will demand the repeal of the laws which, as interpreted by the courts, make the labor unions responsible for damages. But this introduces quite too large and perhaps ominous a question, namely, what we may expect when Labor becomes a political party and by its numbers overwhelms the classes that possess title or money. Will it be the Deluge, or the Millennium?

### Marshall Field

WHILE the late Marshall Field was at the point of death in New York, several former residents of Chicago, all of them unknown to him, assembled at a place not far from the room where he was lying, in order that they might express to each other their appreciation of his character. At the suggestion of one, who had not seen the inside of a church

in thirty years, another of these men prayed that Mr. Field's life might be spared. All were on their knees. Then it was agreed that each one should, every day at noon, in a church or elsewhere, repeat this prayer for the recovery of the world's richest merchant, who, beginning with nothing but his brains and his integrity, had accumulated a fortune of \$150,000,000 in a clean and honest way.

So far as we can learn, Mr. Field had the respect of all good men who knew him or knew of him. This is very remarkable in these days, when so many Americans of great wealth are the objects of continuous attack and denunciation. We have examined the comments of the press, and the estimates of his character and influence which men of various types and callings—clergymen, merchants, reformers, employees, etc.—have recently given to the public. Their uniform testimony is that Mr. Field was a man of unswerving integrity, just, generous, unassuming, kind to those whom he employed, strict but never harsh or oppressive in his business dealings, a promoter of good government, a hater of liars and hypocrites, one who gave largely in secret, and whose benefactions unknown to the public, exceeded those of which all have knowledge, and which could not be concealed. Always willing to contribute his just share of the expenses of government, he was the largest taxpayer in the United States.

"He was good to the poor," says the pastor of the Presbyterian church of which for twenty-nine years Mr. Field was a trustee; "he was a gentleman of retiring modesty and fine moral instincts, made luminous by broad, humanitarian sympathies and a wholesome faith." His private life was pure and simple. He avoided extravagance and any display of his great wealth. His money was not tainted. It had not been acquired by "methods morally reprehensible and socially injurious." Says Mr. Franklin MacVeagh, the well known philanthropist and advocate of municipal reform:

"All of Mr. Field's money was fairly made, and he was conspicuous among the immensely rich for the fairness of his competition and the cleanness of his methods. He made no money thru oppression and monopoly. He built himself upon no man's ruin. And his business

methods from the beginning to the end were so instructive and influential that his fellow citizens were constantly helped by his example. These methods by their conspicuously high standards became contributions to the citizenship of Chicago."

Some years ago the Rev. Z. B. Campbell, of Ada, Ohio, asked Mr. Field to give him his views as to the essential elements of true success. These elements, Mr. Field said in his written reply, were "honesty, truthfulness, temperance, thrift, purity of character, faithfulness, perseverance and thoroughness in whatever a person undertakes." He also said:

"The element of thrift is sadly neglected by young men of the present day, and the tendency to live beyond their income brings disaster to thousands annually. A young man should cultivate the habit of always saving something, however small the income. He should be particular in the choice of friends; should have the courage to say no and mean it when tempted to do what he knows to be wrong. He should aim to earn a reputation for candor, veracity and integrity that will win the respect and confidence of all with whom he may have any dealings."

It is not difficult to understand why all spoke well of him, why even men unknown in churches got down on their knees to pray for his recovery.

It was not only on account of what he had done, but also because of what he had refrained from doing. His was not predatory wealth. He had not acquired it by violating or evading the laws, by corrupting legislatures or municipal councils, by combinations designed to suppress competition and then to exact from consumers all that a high protective tariff would permit, by unjustly and unlawfully using common carriers to crush competitors, by corruptly exploiting municipal privileges, by speculating in stocks, by cornering wheat, or by rigging the share market for the promotion of corporations. He had bought no senatorships. His death was not followed by an outpouring of scandal as to his domestic and other social relations. He had never been a tax dodger, had never complained of the assessment that required him to pay upon \$10,000,000 of personal property in addition to the tax on \$40,000,000 of real estate. And this real estate included no tenements in which the health laws were ignored or with difficulty enforced.

His conscience had not permitted him

to incur and to deserve the contempt or the hatred of the public by doing the things which some other millionaires have done, and on account of which they are commonly regarded as enemies of the public welfare. A vast majority of the American people are not inclined to denounce the owner of a great private fortune, honestly and fairly acquired and decently used.

## Big-Endians and Little-Endians

WHEN that distinguished traveler, Lemuel Gulliver, visited Lilliput he found the inhabitants of that country divided into two factions called Big-Endians and Little-Endians, who were continually engaged in strife with pen and sword. Neither party could comprehend the other's way of looking at things, so they naturally persecuted and proscribed each other as is the way of little people. The war had lasted six-and-thirty moons at the time of his visit and 11,000 persons had suffered death rather than violate their principles by conformity with the opposing and dominant faction. Mr. Gulliver explains the origin of the party names by telling us that the cause of the controversy was a difference of opinion as to which end of an egg one should crack when he goes to eat it. An application to his narrative of the principles of higher criticism leads us to think, however, that this explanation was either an unwarranted inference of Mr. Gulliver's or he was misled by his imperfect acquaintance with the language. The Lilliputians in many respects resemble in their habits of mind the people of countries better known to us. This resemblance is so obvious that it has been previously noted by other critics, who, however, have failed to observe that ordinary humanity is divided into two general classes to which the same appellations could be applied, though with a different meaning. We refer to the ways people use aids to vision, such as telescopes and opera glasses. Some put the big end to their eyes and so see everything minimized; others look through the little end and magnify the world.

This really is the cause of most of our misunderstandings and quarrels. People see things so differently. All eyes are

about the same, so when people are looking at the same object we assume that they must all see it the same. But really nobody looks at things with the naked eye, except children, and it is uncertain about them. They may be born with mental binoculars for all we know, or they.

One man looks at the graft in modern politics and business, and is appalled at its magnitude. Another faces the same facts and regards them as insignificant. To some chess appears the greatest thing in the world, to others fashion, or furniture or jade or imperialism. The lover sees in his sweetheart beauties and virtues invisible to the rest of humanity.

These differences of vision would not matter so much if each person did not insist that his own way of using optical instruments is the only right one. Some rude individuals make it the business of their lives to go about snatching the telescopes from other people's hands and turning them end for end. The only flaw the optimist finds in the universe is that other people are not also contented, while the pessimist tries to make everybody around him as unhappy as he is himself.

To find out which way your friends have their glasses turned, mention in company some distinguished man in literature, art, or politics, past or present. At once the Big-endians will begin to tell anecdotes of his pettiness and foibles, and the Little-Endians will counter with epics of his great deeds. Amusing stories of his absence of mind are met by tales of his presence of mind on great occasions. Some consider him a vastly overrated man; the others gaze at him with awe. One is the valet's view, the other the vision of the disciple. Both parties can bring abundant proof that they are right; and neither can convince the other. George Sand said that the greatest books are not those with the fewest faults. The same applies to great men. In fact it is only a great man that can afford to have many faults. The bigger the sails, the heavier may be the ballast.

There is no unsalaried office which people are so ready to take upon themselves as that of Devil's Advocate. This doubtless accounts for the fact that there are so few canonizations completed now-

adays. Sometimes, when all the opera glasses of a nation are trained upon the chief actor upon the stage, a sudden and mysterious change takes place. The spectators, as tho at a word of command, will reverse their glasses, put the big end to their eyes, when, presto, the hero becomes a ridiculous strutting manikin, the drama is turned into a farce, and laughter takes the place of applause. The idol of the people is transformed into an Ichabod.

We do not wish to dogmatize as to the best way of looking thru a telescope at a prominent man, but merely to call attention to two elementary facts in optics. One is that you never see the man greater than he really is even when you hold the little end of the telescope to your eye, but you do make him seem smaller when you look into the big end. The other fact is that he appears greatest when he is brought nearest to you, so you can see him clearest, and you can only diminish his greatness by putting him a long way off, as you do when you put the big end to your eye. The general experience of mankind has shown that telescopes are most useful when used altruistically, that is, when the big end is directed toward others.

The most serious difficulty occurs when one gets in the habit of turning the big end toward one's own virtues and achievements, and reversing the glass when looking to see what other people are and do. This reversal of the lenses is doubtless unconscious, or becomes so by custom, but it is nevertheless the cause of many a blunder and foolish notion. It is even better to be a consistent Big-Indian than to do this, for it upsets one's sense of relative values, which is by far the most important sense we have.

## Feeding the Birds in Winter

BIRD feeding is no longer a fad or a fancy or a simple pleasure, but is getting to be a legitimate part of farming and horticulture. The orchardist has found out that he can hardly get on without the winter birds any more than without those who lend their aid in summer. They destroy millions of grubs and eggs during the mild days, and only need to

be fed on the colder days, or perhaps a little added to their meals when the sun shines. The farmer will be repaid a hundredfold for all his expense and trouble. He should take up the matter just as he considers that of feeding his cattle and his sheep. By diligent care, repeated thru successive winters, he will be able to multiply wonderfully his little allies and helpers.

Most people will consider these little bits of sunshine and life quite as valuable for their cheerful companionship as for what they can do in farm economy. Some of them give us more or less song right thru the storms, and the sight of one about the window is always inspiring. When you have really got hold of the matter as a business, you will find the one has become multiplied into a whole flock; and you may have, any day in the winter, fifteen or twenty flitting about your windows and the adjacent shrubbery. It is amazing that the little fellows can endure zero weather, but we have found that it is not the cold that is most dangerous to them, but lack of food. Many of them show a very intelligent love for their localities. Robins come back in the spring, almost always, before they are quite safe, and when a late snowstorm shuts off their food supply they perish by the score. An occasional robin stays with us all winter, but any number of them could not find food sufficient to keep them alive. The problem is just about the same as for our domestic animals. We must take them into the family, and do for them exactly what we do for our friends in the barnyard.

Those most ready to stay with us all winter are the nuthatches, the chickadees, the snow buntings, juncos, tree sparrows, woodpeckers, and blue jays. Sometimes a flicker comes, or a yellow-bellied sapsucker—the latter we can easily dispense with, and we prefer the blue jays during the winter months. The goldfinches are not far away, generally in the lowlands and swamps. The chickadee is one of the most lovable birds in existence, and takes to human companionship so very readily, that, if encouraged, they will come inside the windows, or even light upon our persons and eat from our hands. It is also a specially

valuable bird, gleaned from our cherries and plums. The hairy and the downy woodpeckers are also of great value to horticulturists. They have a knack for getting into just the right spot for pulling out the grubs. If carefully fed all winter, they put in an immense amount of tapping in the spring, just about the time that we are tapping our maple trees. Many of these winter birds are seed eaters, and destroy the seeds of noxious weeds, when the snow is not too deep. At the same time we must not forget that along the edges of the forests, and in the glens, the partridges are doing a great deal that is helpful, and should be encouraged rather than ruthlessly slaughtered.

Professor Beale, of Michigan, advises us to grow those plants about our lawns, which furnish seeds for winter eating, and a Vermont lady writes that she keeps her chickadees, nuthatches, song sparrows, linnets, robins, and even orioles with her all winter, by furnishing them enough hempseed, cracked corn, sunflower seed, bread crumbs, and a bread made of wheat and Indian meal mixed. Bits of meat, more particularly suet, constitute the favorite food of the chickadees, nuthatches and woodpeckers. These should be tied in small trees, near the house, or in the vines clambering over our porches. Seed-eaters can be best fed with grain placed on little shelves. Window sills are generally too narrow, and those who desire to have their little friends in sight, should construct specially broad shelves for winter use—to be removed, if desirable, during the summer. It must always be taken into account that cats and English sparrows and squirrels will interfere with our plans, if possible. If a cat must be kept about the house, she should be shut up during the daytime. English sparrows can be generally driven away by persistently fighting them. They learn, after a while, where they are not wanted. The habits of the red squirrel are so destructive of birds and birds' eggs that good horticulturists no longer count them among their pets. Mabel Osgood Wright tells us that nothing comes amiss with her birds,—pine cones, beechnuts, boiled eggs, apple cores, all sorts of nuts, and even the shells of eggs.

A peculiarly pleasant feature of this bird culture is the enlistment of school children. One of the Massachusetts schools has become quite notable by using snow shovels to uncover feeding places and then scattering grain after every storm. These boys and girls have established a chain of seventy-five feeding stations around the town of Stoneham, so that every intelligent bird can find his breakfast or his dinner when needed. The school feeding branch of the work is of considerable importance, not only to the birds but to the children themselves. The Connecticut State Board of Education has taken up the matter and issued a bulletin of suggestions. Every school has a flagpole, and around this pole a circular shelf, or more than one, is fastened, edged with a strip of beading, on which the food is placed. Each week a different child is appointed as bird steward. It is the duty of this official to collect the scraps after the noon dinner, and see that the birds get them. Parents, learning of the plan, furnish an additional lunch—a bird surplus. Children systematically taught this practical sort of nature study will in after years find that it constituted one of their most important branches of education. In some cases they are spreading their work around the township, so that they become intimate with the quail and pheasants, and many rare birds that do not approach our houses. A very pleasant way of arranging the feed is to set up small Christmas trees, little evergreens, outside our windows, and swing them full of chunks of suet. A half dozen birds will then be accommodated at the same time, in full sight. If bird study is to be carried on we know no better way than observing them during the winter. Along toward spring we get our gorgeous pine grosbeaks and the exquisite cherry bird or waxwing. These will, for the most part, feed from the berries still hanging on our shrubs—the barberries and viburnums. The lawn in this way becomes a most delightful aviary.

### More "Tainted Money"

THE looting of the Catholic Church by the Philippine friars is making a scandal which is recognized and admitted in the Catholic Church. The frankest utterance

is in *The Western Watchman*, whose distinguished editor, Father Phelan, has lately returned from a long visit to Europe to study Catholic conditions. He thus frees his mind:

"If ever there was 'tainted money' it was that realized by the monks from the spoliation of the Philippines. As the history of that spoliation is written the more sacrilegious does it appear. The conduct of the monks has brought disgrace on their orders and on the Holy See. We learned much of the sad story when we were in Rome last summer. Pope Leo XIII, in a public audience to Mr. Taft, and his associates of the American mission to Rome, explicitly and positively promised that the greater part of the money realized from the sale of the friars' lands would remain in the archipelago for the support of religion. On his return to Manila Governor Taft repeated the Pope's words at a public reception. The American Government is cognizant of this assurance, and marvels at the delay in the fulfillment of the papal promise. The Secretary of State and Secretary of War have voiced the indignation of the Government on more than one occasion. It is not the fault of Leo XIII that the promise was not kept. The late Pope cabled to the late Delegate Apostolic to the Philippines, Mgr. Guidi, giving him power and instructing him to unfrock the superiors of the orders if they did not turn over to him the money received from the sale of the friars' lands until the Holy See should make a final disposition of the funds. We can state positively that on his accession to the Chair of Peter Pius X, at present gloriously reigning, renewed the authority of Mgr. Guidi, and renewed the instructions of his predecessor regarding the purchase money of the friars' lands; and we feel sure that the late Delegate Apostolic would have used his extraordinary faculties had he lived to see accomplished the act of spoliation. Between the death of Mgr. Guidi and the appointment of his successor the money was paid and put out of the reach of Pope, or Delegate, and there was no one to say nay, and back up with a suspension. These are facts, and we stand ready to prove them. We make this statement before the world and challenge contradiction."

This is a long quotation, but it tells the facts and is worth its space. It is a courageous utterance by a brave paper. Dr. Phelan goes on to ask for another "History of Sacrilege" which shall fitly tell the story. "There is not a Catholic in the United States today," says he, "who would touch a dollar of the money stolen from the poor Catholic Filipinos," "but the sack of holy poverty does not refuse it; the long sleeve of the friar will conceal it." The United States Government, he says, "has dealt most honorably with the Church authorities, both at Rome and

Manila; it has kept every engagement, and has a right to expect that the Holy See will keep its engagements also." And the American hierarchy feels keenly this awkward condition in which they are placed by the friars, and American Catholics are asking disagreeable questions:

"As for the faithful, they will insist on knowing why monks who came into the ministry on the plea that they did not want, and would not have money, now forget their vow and place nine millions of 'tainted money' above the twelve millions of souls they left behind, and in danger of being eternally lost in the Philippines."

Of course, the friars have defenders, but they have a difficult task. A letter very lately received from the present Apostolic Delegate, Mgr. Agius, makes a pitiful appeal for help, and *The Catholic Mirror*, of Baltimore, Cardinal Gibbons's official organ, which publishes it, says:

"The difficulty seems to be that with the removal of the friars from the island churches there has gone too, the money which the United States Government paid for the ecclesiastical property, aggregating roughly about seven million dollars. The withdrawal of this fortune, which went to the friars as the holders of the church property, leaves the Philippine Church in a pitifully impoverished condition."

Mgr. Agius says:

"Hundreds of parishes are vacant, the whole population is Catholic, and entire provinces are at the mercy of schismatics [Aglipay] and of Protestants who work with a zeal worthy of a better cause. . . . It breaks my heart to see so many thousands of souls imploring for priests, and dying without the sacraments."

He says he has no money to pay even the traveling expenses of priests who may come, but he begs for them. It is a good work that *The Sacred Heart Review* has taken up, to collect \$2,000 to pay the passage of a few priests. It will not do to say that, because the friars have proved faithless, we will do nothing for the people they have robbed. Both Catholics and Protestants have an added duty to fill up the lack of spiritual service. Meanwhile, it might be well for these Catholic critics to reread that famous Senate Document "No. 190," 1901, and revise their judgment of it.

A distinguished Benedictine monk who has previously defended the Friars in the Philippines against the criticisms of the Filipinos and the Protestants, is

now syndicating a fresh and long defence of their action in carrying out of the islands the money paid by the United States Government for the lands sold by them; but this time it is against American Catholic journals, and really against the Pope himself that he defends them. His main point is that the Orders, and especially the Benedictines, are carrying on a large missionary work in various parts of the world, and that they need this money to support their missionaries in China, Japan, etc. But that property was given by Filipinos, for the support of the Church in the Philippines. The Pope promised Mr. Taft that the money paid should be used for the Church there. The American bishops in the islands are making a bitter cry for priests, and declare that they have not the money even to pay their passage from this country. They tell us that churches are falling into decay because there is no money to repair them, and that the people are falling away. It was in answer to this appeal that the New England Catholics have just sent money to England to pay the passage of six or eight priests. Those Catholic papers are right which talk bitterly on the subject, as one of them says, and the editor who writes it is a parish priest:

"A celebrated French cynic once said that if he ever lost his purse he would pray that it might not be found by a theologian. If the lands and property of the Church ever again get in jeopardy thru changes in politics, the faithful will pray that the title of them may not be held by men bound by a vow of holy poverty."

## Postal Problems

THE INDEPENDENT has so long advocated the establishment of parcels post and postals savings banks that it is more than satisfied with the action of the Farmers' Congress, the Grangers and the Farmers' Clubs in their effort to concentrate action upon these reforms. The agricultural press is, we believe, a unit on both questions, and there will certainly be a strong pressure brought to bear upon legislation during the present winter. Altho we shall hardly secure the desired object during the present session of Congress, we are nearing success with considerable rapidity. Postal banks would almost certainly become a power-

ful factor in solving the problem of farm help. When hired men can invest their money, in absolute safety, and in a bank as near as the post office, the temptation will be directly away from the saloon and from wasteful habits. The class of people upon whom the farmer must rely for help is of a shifting sort, mostly without training in economics, and it needs encouragement in the way of thrift. A bank book would do these people more good than a course of lectures on domestic economy, or an annual term at an agricultural college. The man who carries a bank book becomes a safer man every way and a wiser one. He is interested in the welfare of society, and he is much more likely to get out of the mass and become a valuable citizen.

Savings banks of the sort we advocate are no longer an experiment. They are working exceedingly well in every European State, as well as in Canada and our own Hawaii. The Austrian postal savings banks conduct the business of ordinary banks, as well as that of a savings bank. Depositors carry checking accounts, and their checks can be cashed at any post office in the Empire. The charge for cashing checks is merely nominal, and much of the business is transacted by ledger transfer of debit and credit. Taxes are paid thru the savings bank, and in the same way household bills are disposed of. The post office serves also as an agency for collecting bills. The bill is sent to a post office bank, and the postman presents it to the debtor, remitting the money when collected. The Austrian system is so free and so wide in its application that it has become of about equal value to the rich and the poor. The whole government banking, parcels post and telegraph systems are united in the hands of the people; and it is said that any proposition to turn them over to capitalists "would create a riot."

In this country every effort to create a parcels post and postal savings bank has been met by our express companies with the most determined opposition. Some of the banks have indulged in the fear that savings banks, so generally established, would have a detrimental effect on their institutions. We believe that this objection is an error. It is,

however, unquestionably true that the establishment of parcels posts would greatly reduce the profits of express companies—to the advantage of the people. The event cannot be long postponed; and it would be far wiser if the express companies would adjust themselves to the inevitable. The people must and will be allowed those privileges which even the monarchs and autocrats of Europe have not considered it expedient to hinder. It is not pleasant nor tolerable to recognize the fact that, in this free country, we are suffering extortion and debarred from privileges which place us in the rear of civilized nations. That we will continue much longer to pay exorbitant rates for public service, on the blind belief that private enterprise alone can sagely conduct complex business affairs, is not to be believed. A book or package that by mail (government management) costs us twelve cents' postage costs about thirty cents by expressage; a package that by mail is charged twenty-seven cents, by expressage costs over forty.

The just demands of the American people require a parcels post, not only greatly below express charges, but much below the relative cost of smaller packages now passing thru the post office. A reduction of rates at least one-third could safely and wisely be effected. The American rate for parcels—that is, fourth-class matter—is one cent for four ounces; but the English rate is six cents for the first pound and two cents for every after pound. In America the weight limit is four pounds, but in England it is eleven pounds. The English parcel of four pounds requires twelve cents' postage, but the American parcel requires one-fourth more. In America you cannot send in a parcels post anything that belongs in first, second or third class mail matter; therefore, all fourth-class packages must be left open for examination. The Englishman, on the contrary, can seal up his fourth-class matter. In this and in other ways our domestic system is considerably inferior to that of other countries, while our foreign service scarcely exists at all.

Instead of trying to remedy matters and improve the service, the department, under the influence of Mr. E. F. Loud,

three years ago undertook to secure such modifications of existing statutes as would greatly abridge even the privileges already existing—especially those of publishers and the reading public. Mr. Loud took his position by saying:

"Such business as the post office now does in carrying fourth class mail, should be done by private enterprise. If I had my way, the post office would give no more facilities than it does today; it would give fewer."

THE INDEPENDENT has already noted the appointment of the same Mr. E. F. Loud, so long chairman of the House Post Office Committee, as our delegate to the International Postal Congress, and has emphasized its protest. This appointment means that the American people are to be represented substantially by the express companies; that the sentiment of the people is to be ignored on the questions that are to be discussed, or are to be misrepresented. We are glad that the granges and other agricultural bodies are taking up this matter, and we believe their influence will be felt. The Central New York Farmers' Club, at a recent meeting, passed this resolution:

"That in the opinion of the Central New York Farmers Club, no more unfit person could have been selected, nor one who more thoroly misrepresents the sentiments of the American people; Resolved farther, that we request President Roosevelt to cancel the appointment of Mr. Loud, and select in his stead, some person who justly represents the wishes of the people of the United States; and who may be trusted to advocate vital progress in postal service."

This is not stating the matter too strongly, for Mr. Loud has openly acknowledged his position to be that of a reactionist, and he is understood to be even opposed to rural free mail delivery.

For at least three years the Farmers' National Congress has taken its stand very strongly in favor of a parcels post and postal savings banks. It has favored "broadening the parcels transportation facilities of the present postal system by increasing its maximum weight and decreasing the charges." Every one of our Postmasters General, with one exception, for the last twenty years, has advocated both the reforms suggested. It does not surprise us that the Manchester Guardian, one of the ablest papers in England, should pronounce our Post Office Department "inefficient, expensive and far

behind the times in all ways." We are not only paying for transportation four times as much as we should pay, but the Department is serving us according to the dictation of rivals and reactionists. Our hope for progressive action must lie very largely in the force of such action as can be taken by the people thru agencies as we have quoted. Now that agriculture is coming to the front and industrialism is gaining control, such resolutions become notably significant. The fact that postal facilities have been widened to include free mail delivery does not satisfy the rural population, as it should not. It is one of the happy results of progress that one forward step creates a demand for farther progress. In this case THE INDEPENDENT is heartily with the people.

#### Governor-General Wright

Denied over and over again, but never believed, Governor-General Luke E. Wright really has left the Philippines for good, and their good, and will be succeeded by Judge Ide, of the Philippine Commission, for a few months, when Judge Smith, of the same Commission, will take his place; and General Wright becomes the first Ambassador to Japan. This may fairly be understood to be the good work of Secretary Taft in his late visit to those Islands. The trouble with Mr. Wright was that to him—and he represents the Army feeling—a Filipino was a sort of inferior "dago," or "nigger," not fit to be considered and treated as a social equal; and this is the chief cause of the ill-will of the Filipinos to Americans. Personally they might like the Spaniards, with all their bad government, better than Americans of the prevalent sort. We most sincerely hope that the impression is correct that Mr. Ide and General Smith are not infected with the caste taint which General Wright took with him from Tennessee. General Smith is a Catholic, which may, or may not, make him more acceptable to the Filipinos, who were Catholics until the Aglipay schism withdrew a large part of them; as the cleavage of the two is very deep and has to do with very serious property questions which General

Smith may not find it easy to bridge. General Wright goes to a great yellow empire, where a richer color is no social or official disadvantage, and no indication of inferiority, as certain contemptuous Caucasians have lately learned to their sorrow.

#### John Burns in the Cabinet

One member at least of the new British Cabinet, John Burns, who represents labor, has made a public address in which he says he does not believe in a hereditary House of Lords, or in any hereditary authority. But that language includes the Crown, and that is declared to be treason, and all he will be ready to say is, If that be treason, make the most of it. He also will be opposed to the further introduction of Chinese coolies into South Africa. These coolies do not come of their own free motion. They are brought by the persuasion and promises of agents sent by the South African Government to get them to take the place of other laborers who will not work for the living wage and are held bound for a period of years. The owners of the mines want laborers and will not pay enough to invite white workmen, and so they have got blacks, by taxing them so much and then compelling them to accept the work at the low wages, so that they can pay their taxes and have something left over to buy a wife. But by degrees the blacks are getting other and better means of securing a living, and are unwilling to work in the mines. So the late British Cabinet allowed, at the urgency of the mine owners, the colony to send agents to China, and by glowing promises to bring already some forty thousand Chinese coolies and many more to follow. They replace the negroes, as the negroes replaced white laborers. Now they are dissatisfied with their work and pay, and it is the business of the police to arrest them as they run away and drive them back to their work till their term of service is expired. John Burns in his first speech declares this system to be the next thing to "absolute chattel slavery," which it certainly is. The new Cabinet is not inclined to carry on this system of peonage.

#### Cuneiform Clericalism

A new danger of Clericalism has been discovered in France, and it is clear that the watch-dogs must be on their guard against it. A successor has to be chosen to the late distinguished Dr. Oppert, who was Professor of Assyriology in the College of France, and one of the fathers of this science. The faculty of the college, and equally the French Academy, have nominated as his successor M. Scheil, the scholar who first translated the Code of Hammurabi and many other texts found by M. de Morgan in Susa. In the common order the Minister of Public Instruction would accordingly appoint M. Scheil; but he is Père Scheil, a Dominican monk; and the Radical journals, which doubtless command a profound knowledge of Cuneiform learning, have been protesting that no monk can be a fit man to teach in the College of France; who knows but he may convert it into a Clerical order and corrupt the youth of France who will crowd his lectures to learn from him the heresies of Akkadian wedges? Why not at once introduce a law that shall forbid a priest to be a scholar, at least of Oriental learning, and then our Radical friends may be spared the disgrace of seeing Fathers Scheil and Epping and Strassmayer defiling the pure well of Chaldean lore? Thus only can the flocking French youth "fly the Babylonian woe," a woe against which Horace warned us centuries before Milton:

*"Tu ne quaesieris, scire nefas  
nec Babylonios  
Tentaris numeros"*

Who knows but Père Scheil may offend the Government by failing to teach that the Holy Virgin is only another myth of the Goddess Ishtar; or may even whisper aloud—profane thought—that Hiram Abiff was not the hierophant of the holiest of French mysteries?

**A Lesson From America** M. Brunetière, editor of the *Revue des Deux Mondes*, is a skillful writer, but he does not know everything in the two worlds. He is a convert to Catholicism and was a very earnest opponent of the abolition of the Concordat. He believes that this separation of Church and State is a long step to pa-

ganism. He says that the great question at present is to determine whether the civilization of France is to be Christian or pagan. That is just the way that believers in the old order talked in Connecticut less than a century ago, when Church and State were separated there, by the action of all the unbelievers. And the unbelievers were right. They had justice on their side. But their acts delivered the Church and surprised its friends and confounded its enemies. No one would now go back to the old way. If the Freemasons, as M. Brunetière and his followers declare, have abolished the Concordat for the sake of destroying the Church, they have made one of Satan's usual blunders. The Church has got its freedom and will find its courage. It is ridiculous to see how Catholic journals in this free country are lamenting that the thing is done in France which they rejoice at here. M. Brunetière's myopia does not allow him to look across the Atlantic and find courage. The world has outgrown paganism.

#### Standing by the Guilty

One of the weaknesses of human nature is to stand by a member of one's crowd or family or nation, whether innocent or guilty. It is thought a point of honor, or even of patriotism, to stand by his country, right or wrong. We have had an example of it in the court martial of students at the Naval Academy, where it was regarded as more honorable to lie than to expose a companion's offense. A very sad case, also in the navy, was that which occurred several months ago in the harbor of Canton, and which has had very sad results. A squad of sailors from an American man-of-war, while passing over a bridge, seized the Chinese business manager of an English firm and flung him over the parapet of the bridge, where he was suffocated in the slimy mud of the canal. That was bad enough, but nothing further might have happened if the sailors had been punished. An inquest was held before a Chinese Magistrate and the British Consul-General, and complaint was lodged before the American Consul-General; but nothing could be done, owing, it was believed, to the unwillingness of the American naval officers to secure the evidence which would

discover the guilty parties. They could easily have indicated who the murderers were. Of course, the Chinese were very much excited and were indignant. If a foreigner is killed, they say, sharp punishment must follow, but if a Chinese is killed that is of no account. Not simply the riot in Canton followed, but this wilful neglect of those American officers has aroused a general hostility to foreigners; and the murder of the American missionaries at Lienchau, in the same province, was the result, probably, in part, of this unavenged crime.

The Filipino Progress Association has good names on its list of officers, but it seems to be run for other purposes than the one designated in its title. It is sending out a circular asking opinions on a resolution presented to Congress requesting the President to open negotiations with foreign countries for the neutralization and protection of the Philippines as soon as the United States shall grant them independence. We regard the proposition as irrational, because it tends to make a disturbance in the islands, where we want peace. It is cowardly because it proposes that we shall run away because of fear of trouble to ourselves. It is selfish because it plans to refuse to benefit the islands and to leave them to internal anarchy, where we are preparing them for freedom and peace.

We are glad to have our attention called to the fact that not all the Methodist *Advocates* have been silent, or silenced, as to the removal of Professor Mitchell from the Divinity School of the Boston University by the Board of Bishops. The *Christian Advocates* of Cincinnati and Pittsburg have discussed freely the question whether bishops should have the duty thrust upon them of judging heresy. The strongest utterance comes from the Report of the President of Boston University, who would have the University withdraw its consent to have its teachers approved by the Bishops before confirmation.

We wait, as the country waits, for Judge Calhoun's report on Venezuela. We presume that Congress will call for it.

# Insurance

## The Springfield Fire and Marine Insurance Company and Its New Building

To accommodate its growing business the Springfield Fire and Marine Insurance Company of Springfield, Mass., of which A. W. Damon is president, has been obliged to enlarge its quarters from time to time. The magnificent new building which it has just erected has proved to be of particular interest to life and fire insurance underwriters. The entire building is devoted to the company's business.

The Springfield Fire and Marine Insurance Company was chartered by special act of the Massachusetts Legislature on April 24, 1849. Business was begun on May 31, 1851, in an exceedingly modest way in two rooms in the City Hotel Building, the rental being \$100 a year. The capital stock was fixed at \$150,000, which was all paid in within two months after the business of the company be-

gan. The company presently established an agency in New York City. In 1859 the capital stock was doubled. In 1866 the Legislature made the company's charter perpetual, and the capital was further increased to \$500,000. The company survived the Chicago fire of 1871, which was perhaps the most disastrous in the history of the world, notwithstanding the fact that its losses on this account were almost equal to its entire capitalization. The Boston fire of 1872, following on the heels of the Chicago conflagration, was a severe blow to the Springfield, and cost it something like a quarter of a million dollars. The stock was assessed to meet losses in both cases, and the Springfield paid all its losses. More recently the Baltimore fire cost the company \$440,000, which, thanks to conservative financiering, the company was able to pay not only without assessment, but without embarrassment. The Springfield almost from the first day of its business existence has avoided localizing its

The New Building of the Springfield Fire and Marine Insurance Company, Springfield, Mass.

business, but has reached out to other sections of this country, both East and West, and has also formed German and other alliances abroad.

The company's statement, just issued, shows total assets of \$7,156,532, which is an increase over last year's figures of \$709,634. The reinsurance reserve of the company is now \$2,907,227, as against \$2,630,601 last year. The premium receipts in 1905 were \$3,788,135, or \$287,530 in excess of the preceding year. The ratio of losses incurred to

premiums written was 45.47 per cent. The company now has a net surplus of \$2,024,000.

....Forrest F. Dryden, third vice-president, has been elected second vice-president of the Prudential Insurance Company of America, taking the place of Edgar B. Ward, resigned. Jacob B. Ward, who has been chief counsel for the company, is the new third vice-president. The permanent counsel is Richard V. Lindabury. He also has been elected a director.

### Holding Corporations

THE holding company is not the only instrument for building up the great corporate monopolies of the present time, but it is the most usual and most effective one among the municipal public service corporations, as well as among the great interstate railroads and the industrials. It is used for capitalizing the unearned increment coming to a public service company as a great city grows in population. As fast as the street railroad company's, or the gas company's, or the electrical company's earnings thus increase, its old stock is converted into bonds and new stock is issued to represent that increment. The new stock is sold to the public, with large profits for the syndicate managers. Legislative regulation of rates is then resisted, on the ground that the unfortunate stockholders would lose their dividends. The State is put into a dilemma between doing justice to the public who have made the increment, and doing mercy to the ignorant stockholders who have invested their savings in the new stock. The profit of the promoters cannot be reached. The most recent example is the so-called Ryan-Belmont merger of the elevated, surface and subway lines in the New York boroughs of Manhattan and the Bronx. It is proposed to inflate enormously the capitalization of these lines by issuing bonds and stock of a new holding company in return for the stocks of the present corporations—themselves partly holding companies also.

It is not generally known to the public that such holding corporations are devices of the present generation. They were regarded by the common law as against public policy. The common law allowed no corporation to buy the stock of another corporation for the purpose of control. It allowed no corporation to buy the stock of a competitor. The Sherman Anti-Trust law of 1890 and contemporary State legislation would doubtless have prohibited holding companies if they had been then a menace to the community; but they were not, because even at that late date it was still impossible to create them except by special statute. They were first made possible in New York by an amendment inserted in the stock corporation law in 1892. In New Jersey they date from about the same time.

Mr. Shanahan, of Brooklyn, one of the leading members of the New York Assembly, has introduced a bill to modify this amendment of 1892, so that it shall not permit holding companies to hold the stock of public service corporations. His bill makes it unlawful for any other corporation to hold, directly or indirectly, more than \$100,000 in par value, or 10 per cent. of the total outstanding amount, of the stock of any public service corporation operating in the State of New York. The bill forfeits to the State all stock acquired in violation of its provisions. If this bill passes it will be the first serious setback to the evil of overcapitalization, and will make the formation of great traction and lighting com-

binations as difficult as it was before the year 1892. It will do this by applying a scientific remedy; not, as is the case with so much anti-Trust legislation, by attempting to curb natural processes of development, but by taking away from the corporate promoter a purely artificial contrivance which his astuteness has procured from the legislatures of the last decade. There is nothing natural or wholesome about a law which permits one corporation to hold the stock of another, which in turn holds the stock of a third. Such contrivances are indeed effective agents of concealment, by which profits or losses can be hidden from the public and from the stockholders, for the enrichment of insiders and of syndicates. But the general opinion of conservative business men condemns them.

DECEMBER'S output of pig iron was 2,052,397 tons, making a total of 22,600,000 for the year.

....George J. Baumann, cashier, has been appointed vice-president of the New Amsterdam National Bank.

....It is announced that the local telephone rates at pay stations in the several boroughs of New York city will be reduced from 10 cents to 5 cents not later than July 1.

....In 26 of the principal cities of the United States last year permits were taken out for the construction of buildings representing a cost of \$528,186,000, or a gain of 40 per cent. over the total in 1904.

....Among the indications of prosperity in this country last year was the importation of more than \$36,000,000 worth of diamonds, the highest value in any previous year having been \$28,500,000, in 1903.

....Maurice H. Ewer, assistant cashier, was last week appointed cashier of the National Park Bank of New York, of which Richard Delafield is president. Mr. Ewer, in addition to his banking experience in New York and Boston, was for several years assistant bank examiner in Massachusetts.

....According to a report recently issued by the Government, there were 534,000 miles of railway in the world in 1904, and 211,074 miles in the United

States. Other countries having more than 20,000 miles were as follows: European Russia, 35,323; Germany, 32,967; France, 28,102; India, 26,950; Austria-Hungary, 24,120; Great Britain, 22,634.

....At the annual meeting, on the 8th, of the American Graphophone Company, of which the Columbia Phonograph Company is the sole sales agent, the capital stock was increased to \$10,000,000 and the par value of shares was raised to \$100. Since 1895 the company's assets have grown from less than \$700,000 to nearly \$6,500,000, and its working capital from \$40,000 to nearly \$3,500,000.

....Attempts are still being made to establish a competing telephone company in this city. It will be recalled that the Merchants' Association last year, after a thoro investigation, induced the existing company to make a reduction of rates amounting to \$1,525,000 per annum in revenue. It also declared, after careful inquiry in other large cities, that telephone competition in such cities was not beneficial to the public. This is our own opinion. Duplication of telephone systems is an economic waste. The best telephone service is that which is furnished by one centralized system, subject to municipal supervision, and to reasonable control in the public interest.

....Mr. Thomas W. Mulry has been elected president of the Emigrant Industrial Savings Bank. He succeeds James McMahon, who retires after a service of fourteen years. Mr. Mulry is prominent in Catholic circles. He is president of the Superior Council of the St. Vincent de Paul Society and a member of the Central Council of the Charity Organization Society. He also holds the office of first vice-president of the National Conference of Charities and Correction, besides being on the boards of many charitable institutions, Catholic as well as civic. Mr. Mulry is a director in the Guardian Trust Company, the Prudential Real Estate Corporation, and the United States Title Guaranty and Indemnity Company.

....Dividends announced:

Atch., Top. & S. F. R'way, Debenture Bonds, Series D, payable February 1st.

Atch., Top. & S. F. R'way, Debenture 4s, Coupon No. 8, payable February 1st.

## Survey of the World

### Passage of the Statehood Bill

The Statehood bill was passed in the House, last week, by a vote of 194 to 150. It was asserted by the leader of the Republican insurgents on the 23d that he could rely upon the votes of 64 members of his own party, and that 54 of these had given pledges in writing. Sixty-four Republicans, voting with the Democrats, could have prevented the adoption of the rule, reported on the 24th, for the exclusion of all amendments. It was the desire of the insurgents and the Democrats so to amend the bill that the proposed admission of Arizona and New Mexico as one State should be prevented. The union of Oklahoma and Indian Territory they did not oppose. By the vote on the rule the strength of the opposition was tested, and it was at once seen that there were not enough insurgents. On a motion for the previous question only 43 of them (instead of 64) voted with 122 Democrats, and the motion was carried, 192 to 165. That was really the end of the contest. On the following day, when the bill was passed, there were only 34 Republicans in the negative. Several of the insurgents were absent, and two or three had been converted. Little time was allowed for debate. In the course of the discussion, Mr. Payne, of New York, speaking of unequal representation in the Senate, pointed to the large population and great interests represented by the two Senators from his own State. He was followed by J. Adam Bede, of Minnesota, who said: "He speaks of the New York Senators; most people are trying to forget them." Whereupon the proceedings were inter-

rupted by much laughter and prolonged applause on the floor and in the galleries. Mr. Tawney, the new chairman of the Appropriations Committee, said that, in his judgment, neither Arizona nor New Mexico should be admitted, separately or in union, but he would submit to the leaders of his party and vote for the bill. For this he was sharply rebuked by Delegate Mark Smith, of Arizona. The bill provides that the proposed new State composed of the two Southern Territories shall be named Arizona. Its capital is to be Santa Fé (New Mexico) until 1915, when the people may decide where it shall be thereafter. Until the same date, the capital of Oklahoma is to be at Guthrie. It is not expected that the Senate will pass the bill in its present form. An amendment permitting each of the two Southern Territories to vote separately upon the adoption of the State's Constitution will be supported, it is said, by all the Democrats and 14 Republicans. If this change should be made, by rejecting the Constitution Arizona could avoid the proposed union with New Mexico, to which she objects, and remain in her present condition.

### An Isthmian Canal With Locks

The majority and minority reports of the Advisory Board were considered by the Isthmian Canal Commission last Saturday, and it is understood that the minority report, which is in favor of a canal with locks, was approved. Probably the Commission's decision will be in accord with the views of Chief Engineer Stevens, who has said to the Senate committee that he prefers a

lock canal with a summit level 85 feet above the sea. He would make a summit lake thirty miles long by building a great dam at Gatun. Such a canal, he says, can be completed within eight years at a cost of \$147,000,000. From four to seven years in addition, and \$100,000,000 more, would be required for a sea-level canal.—The House has adopted, by a vote of 120 to 109, an amendment to the Urgent Deficiency Bill providing that the eight-hour law shall not apply to alien labor employed in making the canal.—Testifying before the Senate committee, Mr. Shonts, chairman of the Commission, said that he was receiving a salary of \$12,000 as president of the Toledo, St. Louis & Western Railroad Company, in addition to \$30,000 from the Government, but he gave no time to the management of the railroad. Some reports were sent to him, and other officers occasionally were in consultation with him. Describing recent preparatory work on the Isthmus, he asserted that the arrangements for food supply and housing were now better than those usually made for railroad construction in the States. The Executive Committee now consists of himself and Governor Magoon, who has been on the Isthmus since May last, but who returned to the States last week. Talking to reporters, the Governor, who is in excellent health, said that his only illness on the Isthmus had been at attack of malaria soon after his arrival there. Many suffered from malaria, but yellow fever had practically been suppressed. At Panama there had been no case in the last seventy-four days, and Colon had had only one (on December 11th) in a long time. There was not a gambling house or a house of ill-fame in the Zone.—Mr. Poultney Bigelow has resigned his lectureship at Boston University. President Huntington says that the Dean of the University told him he intended to give Mr. Bigelow a hint that his resignation would be acceptable. He adds that in his own judgment it was better for the University that Mr. Bigelow's connection with it should be severed. It does not appear, however, that Mr. Bigelow was forced to resign. He has sent to the *Louisville Courier-Journal* a check for \$1,000, the same to be forfeited if "upon a fair investigation" the state-

ments made in his recent article are proved to be untrue. He is willing, he says, to pay the expenses of any responsible person who will make such an investigation on the Isthmus.

#### Congress and the Railroads

On Monday last, while certain members who oppose official inquiry as to railroad combinations were inattentive, Mr. Gillespie, of Texas, procured the adoption of his resolution calling upon the President and the Interstate Commerce Commission for information as to the alleged merger of the Baltimore & Ohio, the Chesapeake & Ohio, and the Norfolk & Western railroad companies with the Pennsylvania Company, and for a report as to whether this is a combination of parallel and naturally competing lines. After action had been taken, Mr. Dalzell, of Pennsylvania, moved for a reconsideration, but his motion was tabled by a vote of 122 to 95. The adoption of this resolution was the chief cause of a considerable fall of prices on the New York Stock Exchange in the afternoon of the same day.—After much debate in the House Committee on Interstate Commerce, the Hepburn Railroad Rate bill (which is practically the Townsend-Esch bill, passed by the House last year) has been reported favorably by unanimous vote, the Democrats joining the Republicans in supporting it, after a few amendments suggested by them had been accepted. The bill takes its name from the committee's chairman, and it is in accord with the views of President Roosevelt. Debate upon it begins this week, and it will be sent to the Senate with nearly the unanimous approval of the House. No bill has been reported by the Senate committee, in which those who agree with the President prefer one introduced by Mr. Dolliver, while those who are more in sympathy with the railway interest are inclined to support bills prepared by Mr. Foraker and Mr. Elkins.

#### Trial of the Beef Trust Case

In the Beef Trust case, at Chicago, the court has begun to take testimony with respect to the plea of the defendant packers that they are entitled

to immunity because, as they allege, Commissioner Garfield assured them that the information he obtained from them should not be used to their disadvantage. The first witness was Louis C. Krauthoff, formerly general counsel for Armour & Co., who gave an account of his interview with Mr. Garfield on April 13, 1905, asserting that the Commissioner then said that his Department was separate from the Department of Justice, that the information for which he asked would not be given to the latter Department, and that those who gave it would be protected.—The President has published correspondence relating to payments of money by one of the packers' lawyers, Judge George W. Brown, to newspaper men engaged in reporting the proceedings. District Attorney Morrison informed Attorney General Moody that Judge Brown, on December 27, gave to one Hasler, reporter for the *Inter Ocean*, "a certain amount of money, ostensibly as a Christmas present," directing him to give \$100 of it to Hector H. Elwell, reporter for the City Press Association, whose reports of the Beef Trust case were used by all the local papers and largely by the Associated Press. Elwell declined the \$100, and, when it had been shoved into his pocket, reported the matter to his employers, under whose instructions he returned it to Judge Brown, who said he had given it in gratitude for complimentary notices of himself. Hasler had retained \$100. Brown, who is counsel for the *Inter Ocean*, says it was merely a personal present to an old friend and neighbor. It is shown that Hasler (who has since been dismissed by the *Inter Ocean*) was hostile to the Government in this case. President Roosevelt, in a letter directing that the correspondence be published, says it appears that Judge Brown "has been guilty of bribing a reporter, who disseminated false and misleading statements." "Extraordinary efforts," he adds, "have been made in this case, as in one or two similar cases, to poison the public mind" by such statements.—Independent refiners in the Kansas oil field have made formal complaint to Commissioner Garfield that the Standard Oil Company and the railroads have conspired to prevent them, by

means of extraordinary freight charges, from selling their refined oil outside of the State. One of the examples given is this: That the freight rate from their refineries to the northern boundary, 254 miles, is 10½ cents per hundred pounds, and that it is increased to 30 cents if the oil goes only seven miles further to a station in Nebraska.

#### Various Topics

Some remarks attributed to Mr. Jacob Riis have led other intimate friends of the President to say that his attitude toward a renomination in 1908 has undergone no change. Mr. Riis was said to have expressed the opinion that the President would accept another term if at the end of the present one he should not have been successful in his contest with "the money power." It appears that what he said was incorrectly reported. The opinion he expressed was that the President would continue the fight, not in the White House, but perhaps in Congress. Mr. Lodge on the 24th, in the course of a speech in defense of the President's foreign policy, said that the President had entirely removed himself from the field of candidates for the nomination in 1908. Col. Cecil Lyon, chairman of the Texas Republican State Committee, says the South will demand the renomination of Mr. Roosevelt.—The Rev. George G. Ware, formerly rector of Episcopal churches at Deadwood and Lead, S. Dak., and president of a land and cattle company in Hooker County, Neb., was found guilty at Omaha, last week, on all of fourteen counts of an indictment for conspiring to defraud the Government by means of false homestead entries. At Denver, David W. Irwin was convicted of perjury in connection with extensive land frauds in Eastern Colorado, and sent to the penitentiary for five years.—Brig.-Gen. Joseph Wheeler, U. S. A., retired, a famous cavalry leader in the Confederate army, afterward a Member of Congress for many years, and in later years a commander in the war with Spain and against the insurgents in the Philippines, died in Brooklyn on the 25th ult., of pneumonia, at the age of sixty-nine.—The Imperial Chinese Commission arrived in Washington on the 23d ult., and on the following day was received by the

President at the White House. Commissioner Tai Hung Chi, presenting an autograph letter from the Emperor, said he was fortunate in having this opportunity of paying his respects to "the greatest champion of peace" and the "stanchest friend of China." The Emperor's letter was in part as follows:

"The United States Government has long been known for its excellent organization by the adoption of new principles of government with satisfactory and beneficial results. As we contemplate the existing condition of affairs with a firm determination to improve the present order of things, we desire to avail ourselves of your close friendship and neighborly kindness to obtain the necessary information for comparison with a view to proper selection."

At a dinner given in honor of the Commissioners by Secretary Root, among the seventy guests were members of the Cabinet, justices of the Supreme Court, Senators, Representatives, and prominent officers of the army and the navy.—Addressing a meeting of the Civil Service Retirement Association, which desires to create a retired list and pension fund for Government employees in the civil service, Secretary Shaw said that six years in the Government service were enough for any man. He believed that the interests of Government clerks would be improved by the operation of a law excluding them from the service at the expiration of a limited period, not to exceed six years.

#### Anarchists in Pennsylvania

While looking for the murderer of Michael Carrazola, a rich Italian, the authorities of Washington County, Pa., on the 23d ult., obtained evidence of the purpose of a band of anarchists to kill Governor Pennypacker, of Pennsylvania, and Governor Pattison, of Ohio. Having arrested one George Barli, they found in his pockets papers by means of which they discovered in a swamp, at Baird, a small mining town, ten miles east of Washington, a shanty in which the anarchists were accustomed to hold meetings. In this shanty were many letters addressed to John Spida, the head of the organization. From these letters it was ascertained that to this group of anarchists at Baird had been assigned the killing of Governor Pennypacker and Gov-

ernor Pattison, and that similar groups in other States had undertaken to kill other Governors. Spida was arrested, and with him the two secretaries of the group, Levi Constantina and Pietro Larrachi. All of the arrested men wore button badges bearing a picture of Bresci, the Paterson anarchist, who killed King Humbert. It appears that these conspirators had attempted to extort money from several persons by means of "Black Hand" letters. Carrazola refused to pay, and was shot. Michael Corusco was told that he must contribute \$2,700 or lose his son Stephen, nineteen years old. He declined, and the young man was killed. Four murders were thus committed by the conspirators, who were in communication with other anarchists in Paterson and Hoboken, N. J. Believing that branches of the organization exist in several towns of the Monongahela Valley and feeling unable to cope with them, the authorities of Washington and the neighboring counties have asked the Governor for the services of a troop of the State constabulary.

#### The Philippine Islands

Owing to the appointment of Governor-General Wright to be Ambassador to Tokio, the Filipinos were disturbed last week by a report (originating in Europe) that he had been instructed to negotiate a sale of the islands to Japan. His successor at Manila cabled to Secretary Taft a suggestion that the report should be officially denied. The Secretary at once replied that there was "not the slightest vestige of truth" in the rumor.—The bid of the syndicate in which J. G. White & Co., Cornelius Vanderbilt and others are interested, for the construction of 100 miles of railway in Panay, 100 in Negros and 95 in Cebu, has been accepted. The Government guarantee is 4 per cent. on 95 per cent. of the cost, for a period of thirty years. J. G. White & Co., who recently completed the Manila trolley lines, will build these roads, the cost of which will be about \$12,000,000.—The Philippine Tariff Bill recently passed in the House is vigorously opposed in the Senate Committee. Governor-General Wright, testifying in support of it, remarked that American sugar and tobacco growers who

feared Philippine competition "saw ghosts." When asked by representatives of the sugar interest to explain why the production of hemp, a non-competing product, was not stimulated by tariff legislation, he replied that it could not be, because land suitable for hemp was in the interior, and two-thirds of the inhabitants lived within three miles of the coast, where the land was suitable for sugar, tobacco and rice. The condition of the sugar industry, he added, was deplorable; sugar plantations were mortgaged to the limit.

**Porto Rico and Cuba** Roberto H. Todd, Mayor of San Juan, now representing at Washington the League of Porto Rican Municipalities, has been heard by the House Committee on Insular Affairs in support of the demand for an elected Senate in Porto Rico. The present Upper House consists of eleven members, of whom five are natives. All are appointed, and the majority are heads of the Executive Departments, or members of the Governor's Cabinet. Mr. Todd asserts that the native members are not consulted and are practically ignored, and that Treasurer Hollander admitted to one of them that they were regarded as "figure-heads." He also said to the committee that each of the leading American officials (one excepted) occupied a public building as a residence, paying no rent and receiving light, ice, etc., free of cost, while the Legislative Assembly and the Supreme Court were very poorly housed. Five successive Attorney-Generals had interpreted the laws according to the varying decisions of the States in which they had practiced, and the result, he asserted, was a hopeless tangle. In his judgment, the people had enjoyed a larger measure of representative popular government under Spanish rule.—Seventeen Cuban cigar-makers were expelled from Key West recently by a Citizens' Committee and compelled to take passage on a steamship for Havana. This was an incident connected with the cigar-makers' strike. Complaint has been addressed to our Government by the Cuban Minister, and there will be an investigation.—Representatives of all the political parties and of the Administration asked, last week,

in the Senate, for the passage of a bill appropriating \$25,000 to be expended by President Palma in procuring a wedding present for Miss Alice Roosevelt. Upon the motion of Senator Cisneros, an irreconcilable Anti-American, the bill was passed by acclamation.—The Senate has rejected, 8 to 5, a bill for a Commission to revise the tariff. In debate, the approaching reduction of our duty on Philippine sugar was considered, and it was said additional concessions from the United States should be obtained (by means of a larger preferential reduction of the Cuban tariff), in order that Cuban planters might not suffer by Philippine competition.—President Palma has vetoed a bill forbidding the importation of foreigners to work on the docks and shipping in the places of employees on strike.

**The English Elections** The voting in England for members of Parliament is now practically over and the new House of Commons will probably stand as follows: Liberals, 381; Unionists, 159; Nationalists, 84; Laborites, 46. This gives the Liberals a majority of about 93 over all other parties. Owing to the erratic method of restricting the popular majority of the Liberals is not so great as their majority in the House, and the Conservatives use this as an argument to prove that there has not been such a revolution in public sentiment as the election returns would indicate. As an example they show that in the election of 220 Liberals, constituting most of the Liberal majority, their vote was only 200,317 more than that cast for the Conservatives, the Liberal vote being 2,592,876 and the Conservative 2,392,559. The vote is the heaviest ever known in Great Britain. Up to January 27th 5,231,297 votes had been cast, while the total vote in the election of 1900 was only 3,089,389. The composition of the new House of Commons is very interesting from some points of view. Barristers are the most numerous class, there being 100 of them. Manufacturers come next, numbering 70. They are followed by 60 merchants, 45 ex-army officers, 34 solicitors, 29 journalists, 20 ship-owners and shipbuilders, 19 authors, 10 mine owners, 10 doctors, and 10 brew-

ers. Among the Labor members are 13 ex-pit boys, ex-miners and ex-factory lads, 5 compositors, 4 carpenters, 3 grocers' assistants, 2 mechanics, 2 stone masons, 2 navvies and 2 railway guards, 1 newsboy, 1 blacksmith and 1 agricultural laborer. There are 9 bankers, 8 stockbrokers and 12 farmers. One hundred and fifty are members of non-conformist churches. There are thirteen Jews, a larger number than ever before. The largest number of Liberals in any preceding Parliament was 300, after the passage of the Reform Bill in 1832. In order to make a place for ex-Premier Balfour, Mr. A. G. Gibbs, Member of Parliament for the city of London, has resigned his seat. It is possible that the Liberals may decide to run some strong candidate against him, in the hope of overcoming the 10,000 majority recently given to Mr. Gibbs in that precinct.

#### The Death of King Christian

Christian IX, King of Denmark, died suddenly from heart failure on the afternoon of January 29, at the Amalienborg palace, at Copenhagen. Altho he was nearly eighty-eight years old his death was entirely unexpected, as he gave his usual Monday morning audience to the public, at which he decorated twenty-four sub-officers of the navy with long service medals. But at lunch he became ill and died two hours later, in the arms of his daughter, Marie Dagmar, the Dowager Czarina. The death of no other monarch would have caused mourning in so many European courts, for King Christian was known as "the father-in-law of Europe," on account of his numerous family connections with reigning houses. Born in comparative poverty and obscurity, he became prominent, not on account of any extraordinary abilities, but thru the exigencies of international politics. The duchy of Schleswig-Holstein, which was all that he had an apparent chance of inheriting, he afterward lost to Germany. He was the fourth son of Duke William of Schleswig - Holstein - Sonderburg - Glücksburg, and was born April 8, 1818. In 1842 he married Princess Louise, daughter of Landgrave William, of Hesse-Cassel, and niece of King Christian VIII, of Denmark. Ten years later, by the Treaty of London, her husband

was made heir to the throne of Denmark, and on the death of Frederick VII, November 15, 1863, Christian became King. He had six children, of which Prince Frederick now becomes King of Denmark, Princess Alexandra is Queen of England, Prince William is King George of Greece, Princess Marie Dagmar, who was married to Alexander III, Czar of Russia, Princess Thyra, Duchess of Cumberland, and Prince Waldemar, who married Princess Marie, eldest daughter of the Duke of Chartres, of the French royal house of Orleans. The Crown

Christian IX, King of Denmark,  
Who Died January 29th.

Prince who succeeds his father as Frederick VIII, of Denmark, married, in 1869, Princess Louise, daughter of King Charles XV, of Sweden and Norway. They have eight children, one of whom, Prince Charles, has recently become King Haakon, of Norway. The late King was very democratic and unostentatious in manner, and the quiet and moral family life at Copenhagen has been a model for all the courts of Europe.

#### Catholic Foreign Mission Work

In his new edition of the "Abriss" of the History of Protestant Missions since the Reformation—a classic in its kind—Professor Warneck, of the University of Halle, the leading

authority on the subject, has for the first time compiled statistics of Catholic foreign mission work also. The contributions of the entire Catholic world to this cause is about \$3,500,000, of which \$625,000 are contributed by Germany. Over against this the Protestant total is \$17,000,000. But the Catholic Church does not pay its mission expense with these annual contributions. By all odds the largest sums for this purpose are secured by the Catholic societies from three other sources, namely, the funds of the Propaganda, from the religious orders, and from various state treasuries. How great the sum is contributed from these sources has never been made public, but the Catholic writer on mission subjects, Peter Baumgarten, in his "Missionstatistik," computes that in the past century the voluntary contributions of the Catholic Church for mission purpose was \$123,120,000, while the total expense had been \$401,500,000. The total number of Catholic mission workers in the foreign field is 5,800 priests, not counting in the secular clergy, who are especially well represented in the older mission fields. Still greater is the number of order brethren and sisters. Warneck concludes that, without the secular clergy, the foreign mission work of the Catholic Church engages 14,000 persons.

#### Russia and Her Problems

It has been many months since Russia has been as quiet as it is now, altho the disorders still occurring are sufficient to cause serious alarm in any other country. The Government continues to prevail both against urban revolutionists and the rebellions in the Baltic and Caucasian Provinces. Ten thousand troops in Livonia have surrounded the greater body of the revolutionists and are gradually narrowing the circle. Those who are caught are at once tried by court-martial, and if found guilty are imprisoned or shot upon the spot. Nearly 250 revolutionists have been shot and several thousand taken captive. The destruction of property during the agrarian riots in the Baltic Provinces is quite incalculable, for the castles of the old German families contained many collections of great historic and artistic value. The two hun-

dred castles burned in the Wenden district are valued at \$4,000,000, exclusive of their contents. The "North Caucasian Republic" has collapsed after a nominal existence of one month. The "army," consisting of mutinous soldiers and members of the revolutionary organizations led by a Cossack officer, defeated with great loss a detachment of three companies of Cossacks sent against them, but could not stand the attack of the next column of Cossacks with artillery and infantry. The troops having regained control of the railroads, are now pushing into the mountains, where the Armenians and Mohammedans are fighting each other. In Vladivostok a mutiny has again broken out among the soldiers, who have seized and still hold, the battery of the Holy Innocents and are defending that fortress with machine guns and rifles. General Mistchenko has been sent to Vladivostok to put down the mutiny. The vigorous repressive measures of the Government have completely crushed the outward manifestations of revolutionary movement. The leaders are now confining their activity to political assassinations as under the old régime. General Prosorovsky, chief of the gendarmerie of St. Petersburg, has received from the revolutionists a notification that the recent assassination of General Livorsky was a mistake on their part, that General Prosorovsky was the intended victim, and that they will rectify their error at the earliest opportunity. There appear to have been several attempts recently upon the life of the Czar. Two nuns carrying bombs have been arrested at Tsarskoë-Selo. The Czar did not venture to perform in public on the Neva the ceremony of the blessing of the waters, at which he nearly lost his life a year ago thru the "accident" of a loaded cartridge having been used in one of the saluting cannon. Instead of the Neva the waters blessed were those of a small lake in the Tsarskoë-Selo Park. The Government is prosecuting the newspapers which have published seditious matter such as the manifesto of the Workmen's Council. Seven of the leading editors are on trial, the first to suffer being Alexis Suvorin, editor of the *Russ*, the most widely circulated newspaper in Russia, who was in this country at the time

of the Portsmouth Conference. He has been sentenced to a year's imprisonment in a fortress. Among those whose cases are pending is Professor Miliukoff, formerly instructor in Russian history at the University of Chicago. The growing friendship between the Czar and the Kaiser was emphasized by the words of Emperor Nicholas in proposing a toast to the Emperor William at a luncheon given at the Tsarskoë-Selo in honor of the birthday of the latter: "I drink to the health of the Emperor of Germany and King of Prussia, my brother and very dear friend." Then, turning to the German Ambassador on his right, he is reported to have said: "Brother—that is more than ally." The incident is considered to have special significance, now that France is counting upon the support of Russia in the Algeciras Conference.

#### The Moroccan Question

The conference at Algeciras has apparently made but little progress during the week, altho none of the questions have been raised on which there is likely to be a deadlock between France and Germany. The Moroccan delegation surprised the Conference by presenting an elaborate scheme for increasing the revenues of the country, by taxes on business transactions and public amusements, such as theatres and cafes, and by a heavy protective tariff. The proposed duties average 20 per cent. *ad valorem*, but tobacco is taxed 100 per cent., and tea, coffee and sugar 40 per cent. The delegates of the Powers were not prepared to act upon this increase of duties and have telegraphed home for instructions. The question of contraband trade has been disposed of by the agreement that the enforcement of the regulations adopted shall be left to France and Morocco, as regards the Algerian frontier, and to Spain and Morocco in regard to the Spanish frontier. Herr von Radowitz, the head of the German mission, and M. Révoil, the head of the French, met in private conference, and agreed to have all the questions involved discussed in detail by their colleagues, Count von Tattenbach and M. Regnault, with a view of coming to an agreement in regard to them before bringing them before the Conference. While the Powers are thus

discussing the affairs of Morocco the internal condition of the country is becoming worse. The Anjera tribe sent three notables to the Sultan with presents. They were assassinated on the road by Raisuli, the brigand, who last year kidnapped Perdicaris and Varley. In revenge the Anjera burned three villages in the vicinity of Tangier.

#### The Chinese Anti-Foreign Movement

The new treaty between China and Japan, consequent upon the Portsmouth treaty, opens to international trade sixteen cities in Manchuria, among which the following are those whose names have become familiar to us thru the Russo-Japanese war: Feng-Wang-Cheng, Liao-Yang, Tie Pass, Harbin and Kirin. But it has become quite evident that these will not become semi-foreign cities like the old treaty ports. Viceroy Yuan Shih Kai has drawn up regulations for these cities as well as for the newly opened port of Chinanfu, the capital of the Province of Shan-Tung, and has carefully provided against a predominance of foreign influence. No foreigner is to be allowed to buy land. It may be leased for a period not longer than thirty years at terms fixed by the Government. The lease may be renewed. The taxation, police and postal service are to be kept in the hands of the Chinese. On account of the recent shooting of a native woman by American native officers in the rice fields near Nanking, the Governor has petitioned the Emperor to prohibit hunting outside the foreign settlements. The Government has ordered the Viceroys to report the number and nationalities of the missionaries holding valuable property, and also to send in inventories of all mines and other possible concessions. The anti-foreign feeling is increasing and outbreaks are feared by the residents, which may take the form of either Boxer violence or a Taiping rebellion. The Government still refuses to agree to the Anglo-Tibetan treaty which Colonel Younghusband obtained at Lhasa. On the contrary, the Chinese propose to strengthen their hold on Tibet by placing in Lhasa a Chinese Governor supported by troops drilled in the European manner.

# How I Wrote "Lay Down Your Arms"

BY BARONESS BERTHA VON SUTTNER

[Last December, the writer of this article was awarded the Nobel Peace Prize for 1905, and what most contributed to secure this high honor was the authorship of that remarkable work, "Lay Down Your Arms," which has been described by M. Frederic Passy, the first laureate of the Nobel Peace Prize, as enjoying "the rare merit and great good fortune of popularizing a horror of the useless and evil slaughter occasioned by war." Oddly enough, this indefatigable peace advocate is the descendant of a distinguished Austrian military family, her father being the late Count Franz von Kinsky, Field-Marshal.—EDITOR.]

I T was toward the end of the year 1880, when I had already reached a mature age and was in the midst of zealous studies in science, philosophy and history, that the idea dawned on me and soon became a deep-set conviction, that war was an institution handed down to us by the barbarians, and to be removed by civilization. At this same moment I learned by accident that a society existed in England based on this same idea and aiming to influence public opinion in favor of the creation of a court of arbitration. So I hastened to write to this "Peace and Arbitration Association" and asked for information. The now venerable Hodgson Pratt, who is the founder and president of that organization, forthwith sent me the bylaws and publications of the society, and thenceforth kept up an active correspondence with me. Thus it was that I learned all that had been done and all that remained to be done in this important field of work.

The more I looked into the question the more I became absorbed by it and the more eager I was to do what little I could to advance the cause of peace. As I had had some experience in authorship, I felt that it was in the department of literature that I could do the most good. My idea was, at first, to write a little story in which I would describe a young woman who had lost her beloved husband on the battlefield, and who then, as it had happened to me, suddenly awoke to the condemnation of war. In my own case, however, my convictions were based only on theories, whereas my heroine was to be converted thru dire experience.

While I was engaged in gathering materials for my little tale, so much accumulated on my hands and my mind was so teeming with my subject, that from a

novelette my plan grew into a two-volume novel. Not satisfied with superficial information, I now began to consult recognized authorities, to study the campaigns of 1859, 1864, 1866 and 1870-71, to read the memoirs of different generals, to examine the reports of army surgeons and the Red Cross Society, to rummage in libraries and archives, among the diplomatic dispatches exchanged during those periods and among the orders given the various armies. Provided with this data, I set to work on the historical scaffolding of my book and the development of my plot, whose foundation was, of course, the ardent condemnation of war; and when I could write on the last page of my manuscript "The End," and put at the head of the first page, "Lay Down Your Arms," I felt that now I really was in a position to do something for the cause so near my heart. I was armed!

Full of confidence, I sent my manuscript to the Stuttgart editor who had always heretofore accepted what I offered him and who had recently asked me for a fresh one. But it was promptly returned to me with this message: "We regret it, but this novel we cannot use." So I tried other editors, but all declined it with the remark: "This does not interest our public," or "It would offend many of our readers," or "It is impossible to publish this in the present military state of affairs." Such were the opinions of the leading editors of German periodicals.

I next turned toward the publishers, and first sent the manuscript to my habitual publisher, Pierson, of Dresden. He kept it a long time and then advised me to change the title, which he found too aggressive, and to submit the manuscript to a competent public man for revi-

sion, who would suppress or modify the passages which could give offense in military and political circles. This I, of course, utterly refused to permit. The title of the book expressed clearly the purpose I had in writing it, and told the reader, without any subterfuge, just what he was to expect between the covers, while the passages which it was proposed to cut out because they would excite disapproval in certain quarters were the very essence of the book, what gave it its *raison d'être*. So I would consent to no change, either in title or text.

As I afterward took part in the peace movement, it has been thought in some quarters that I wrote this book as a consequence of that movement. But the facts are exactly the contrary. My book made me a peace advocate, but it did not spring from my participation in that reform. This is how it happened.

In the spring of 1891, about fifteen months after the publication of "Lay Down Your Arms," I and my husband were stopping in Venice. One afternoon somebody knocked at the door, and the servant being absent, my husband himself opened it. An elderly, well dressed gentleman was standing on the landing.

"Does the Baroness von Suttner live here?" he asked.

"Yes; she is my wife," was the answer.

"What! you are the husband of Madame von Suttner—Bertha von Suttner?"

"I certainly am."

"You are not dead, then?"

"With your permission, I am still living."

"But were you not shot in Paris?"

"It seems not."

In the meantime I stepped forward and led our guest into the drawing room, when he presented himself to us and told us the object of his visit. We soon learned that we had before us Mr. Felix Moscheles, son of the celebrated composer, Ignaz Moscheles, and godson of Felix Mendelssohn, he himself a painter, an earnest peace advocate and vice president of the London Peace and Arbitration Association. He told us he had been ill during a pleasure trip in Egypt, and his wife, to amuse him, had given him a copy of "Lay Down Your Arms" to read. He began the book rather against his will, he went on to tell us, for he does

not care for fiction. But when he saw the nature of the volume he hurried thru to the end with feverish interest, because here were all his own views against war condensed in a living and possible story. "I must make the acquaintance of the author of this volume," he then and there said, and forthwith decided to journey home via Vienna. He had intended simply to pass thru Venice, but while telling one of his friends why he was going to Vienna, learned that the person sought for was at that moment in Venice, and that she even lived in the Pleazzo Dario, just opposite his lodgings. So he started out immediately to make the personal acquaintance of the unhappy widow, the expounder of all his cherished ideas, when lo! her lawful husband himself opens the door. Thus the widowhood was found to be fiction, while the communion of ideas is still a living thing; and, during that first hour was formed a friendship between us three which has lasted without a cloud from that time to this, and whose first act, on the evening of that same day, was the laying the foundations of a new work which was to have an important influence on the peace movement.

At that time there lived in Venice, where he kept open house, Marquis Beniamino Pandolfi and his wife, who had been a friend of my childhood. I knew that Pandolfi, who was a member of the Italian Parliament, was a supporter of peace ideas, and as he was giving a reception that evening, I suggested to Mr. Moscheles that he seize the occasion to speak with him about the movement in England, and that he urge him to secure, among his colleagues in the Italian Parliament, adherents to the Inter-Parliamentary Union, which was at that time a very small body. It was especially important to strengthen this organization at that moment, for in November of that year the Union was to meet at Rome. This association had been founded in 1888 by Wm. R. Cremer, M. P., of London, and Frederic Passy, of Paris, then member of the Chamber of Deputies, and it was at the French capital, during the International Exhibition of 1889, that the first Inter-Parliamentary Conference was held, France and England alone being represented. The second meeting

was held in London, with a few more parliaments represented, and now the third meeting was to take place in Rome.

The result of the advent of Mr. Felix Moscheles at the Palazzo Bianca Capello, Pandolfi's home, was that, while the elegant society of Venice and its gay youth were dancing and eating in the big dining room, a long conversation took place in the host's study, in which the Marquis, Mr. Moscheles and we two participated.

The upshot of it all was that not only did Pandolfi promise to aid in the organization of the approaching conference, but invitations and circulars were prepared on the spot looking to the foundation in Venice of a peace society. The plan succeeded, and some of the most prominent men of the town came into the movement. Shortly after this social meeting at Pandolfi's he returned to Rome, Mr. Moscheles to London and my husband and myself to Vienna.

In the course of a few weeks I learned from Pandolfi that he was having marked success in securing collaboration in Rome, and at the same time we began working up a favorable sentiment in Vienna. We talked to our Parliament friends of the newly established peace society of Venice and of the coming meeting in Rome, and in the end I had the great pleasure of being instrumental in bringing about the formation of a Parliamentary group at the Austrian capital. I addressed myself personally or by letter to one after another of the members of Parliament, sent them the Pandolfi circulars, and used every possible means to secure an Aus-

trian delegation for the Rome conference. In this ungrateful preliminary labor I was especially aided by two Deputies, Barons Pisquet and Kübek. I still have in my possession letters from different prominent members of that time which dwell on the inopportuneness of the proposal and the practical difficulties in the way of its realization. But we succeeded, nevertheless, in getting a delegation sent to Rome, with Dr. Russ at its head. This

was an important step. Another was to follow.

It was a fancy of mine that, at the same time with the holding of the Inter-Parliamentary Conference, it would be a good idea if an international congress of peace societies were also assembled in the Eternal City. But as there was no such society in Vienna, I seemed thus called upon to create one there. In undertakings born to succeed, there generally lies an ingenuous ignorance of the risks, an incomprehension of the obstacles and a happy unconsciousness of one's own arrogance. So, on September 1,

1891, I sent out a call for the founding of an Austrian peace society, and great was my astonishment, two days later, to see it given a conspicuous place on the first page of a leading Vienna daily, the *New Free Press*, with these words from the editor accompanying it: "On this question no authority is higher than that of the author of 'Lay Down Your Arms.'" Then followed this editorial comment on the idea set forth in the call:

"Because of the new instruments of destruction and the increased armed forces, war has been changed into a thing that ought to

Baroness von Suttner.

be described by another name. Because of the continuous development in warlike preparations, armies are now quite different from what they were when we last saw them brought face to face. Let me illustrate my meaning. If you keep on warming a bath till the water boils, so that the person who steps, rather falls, into the tub is scalded to death, can you still call this a bath?"

Since the above lines were written, fifteen years ago, things have gone from bad to worse, and this will go on. The great book of the late Jean de Bloch, "The Future of War," proves this. From all sides pour in the accusations against the wholesale murder of modern warfare. The god of war, who has silently grown into a race-devouring Moloch, has been brought before the awakened conscience of the world. He is summoned to defend himself, or, if he fails to do so, to accept the death warrant which sooner or later must be his lot.

The response to my call astonished me much more than its prompt publication in the Vienna daily. Immediately hundreds of enthusiastic letters came pouring in upon me from all classes of society, and prominent persons offered to aid in founding the proposed organization. So thus was the Austrian Peace Society established, of which I am still president. I was sent as its delegate to the Rome Peace Congress, and there, in the Capitol, I made my first public appearance in the peace movement. So I repeat, that the writing of the novel, "Lay Down Your

Arms," cannot be regarded as a result of my public career, but, on the contrary, my career sprang from the novel.

All this is now very far off. Then, novels and the forming of peace societies were important factors toward the advancement of the movement. But today it has reached such a point and is associated with such high and decisive political problems, that the acts of the individual, in letters or societies, have been pushed into the background. It has become the question of the hour, and neither the energy of its originators nor the pleadings of its followers are now essential to its final triumph.

What we must do now is to develop the existing organizations, such as the Inter-Parliamentary Union, the Hague Tribunal, etc., and create an international political system that will give a legal basis to universal peace. Practical work toward an ideal end is peculiarly the part of America and Americans. It is quite natural, therefore, that it should be the United States branch of the Inter-Parliamentary Union that has formulated a plan for the accomplishment of this grand result. At the next Conference of The Hague, whose convocation we owe to President Roosevelt, the proposal of the American body and its chairman, Mr. Bartholdt, Member of Congress, will be laid before the world. Then will the peace movement take another grand step forward.

VIENNA, January, 1906.

## A Prayer

BY MARY EASTWOOD KNEVELS

LORD, of Thy gifts I ask but one,  
That I should never be content.  
But climb all day beneath the sun,  
And count my every feast a Lent.

To hold success another loss,  
To say my failure is a gain,  
To bear with pride a heavy cross,  
To look on highs and not attain:

To stumble into heaven at last,  
Too spent to lay my burden down.  
Unconscious that the world is past,  
And this new weight I wear, a crown!

WEST ORANGE, N. J.

# Plato and His Lessons for Today

BY PAUL SHOREY

PROFESSOR OF GREEK IN THE UNIVERSITY OF CHICAGO.

NEAR the close of his pathetic autobiography, Herbert Spencer makes the naïve admission: "Still quotations from time to time met with have led me to think that there are in Plato detached thoughts from which I might benefit had I the patience to seek them out." The "detached thoughts" of Plato are accessible to everybody now in the index of Jowett's translation, and, consulted merely in this desultory way as a vast repertory of ideas, the Platonic dialogues retain for the age of Darwin all the suggestiveness, if they have lost much of the authority, which they possessed for the age of Plotinus or of Marsilio Ficino. It is a permissible tho mistaken belief that this vague suggestiveness and his ideal temper are the only lessons which Plato has for the hurried readers of a progressive century. "Plato," says Joubert, "shows us nothing, but he brings brightness with him. He teaches us nothing, but he prepares us and makes us ready to know all." And this is a plausible account of the matter for all but serious and systematic readers. "Not every one who cries 'Plato! Plato!' shall be admitted to that ideal kingdom," says Mr. Morley. The most conspicuous Platonists have always been those whom Coleridge calls the Plotinists—those who, as Pope puts it:

"tread the mazy round his followers trod,  
And quitting sense call imitating God."

From Alexandria to Florence, from Concord to Jacksonville and Osceola, they have made Platonism synonymous with mysticism.

On minds of this type the beautiful poetry in which Plato conveys his hopes or conjectures of the transcendental operates as a rank poison. And the healthy aversion felt for this esoteric Platonism by the robust common sense of Landor, DeQuincey and Macaulay is the chief cause of the widespread prejudice that regards Plato as the apostle of *a priori* sentimentalism and the

antithesis of inductive and utilitarian science. Macaulay's specious comparison of the Platonic and Baconian philosophies, the chief stock in trade of commencement orators denouncing the outworn classics, has sunk deep into the popular mind.

The mystics who provoked this reaction are themselves past medicine. But the bias of anti-mysticism may be cured if those who share it will consent to regard as the true Platonists not the mystics, but, to limit ourselves to the nineteenth century, men like Emerson, Matthew Arnold and John Stuart Mill. And, since the sober, scientific mind will distrust the hyperbolical encomiums of Emerson, and may misapprehend the delicious irony of Arnold, let us confine ourselves to Mill, who, without paradox, we may pronounce the chief Platonist of the century. He began to read Plato at the age of eight, and to the end of his life affirmed that the dialogs provide an intellectual discipline for which modern education has devised no substitute. But apart from this, the influence of Plato's substantive thought is conspicuous in all his writings, and especially in the "Utilitarianism," the volume on Representative Government, and the posthumous essays on religion. How can those who in the name of progress proclaim the "passing of Plato" reconcile this deliberate and well informed judgment of Mill with the view that Plato has no lessons for the best modern minds?

But what are those lessons? They can hardly be summed up in a paragraph. The literary charm, the moral elevation, the inexhaustible fertility of suggestion, the mere disciplinary value of the dialogs as logical exercitations, will suffice for some readers. Others, like Matthew Arnold in "Culture and Anarchy," will be more interested in the applications to similar phenomena in our own age of Plato's profound if some-

what reactionary criticism of the political, social and religious life of the Athens that "was dying of the triumph of the liberal party." Those who demand something at once more specific and of more universal practical application may be answered in the words of Mill:

"The necessity of a scientific basis and method for ethics and politics, and of vigorous negative dialectics as a part of the method . . . are the greatest of the many lessons to be learned from Plato."

Plato did not know and would not have used the word "sociology." But the best extant description of what our sociologists call "social control" is that found in his "Protagoras." And his thought, to put it crudely, is that the unorganized and casual social control exercised by public opinion voicing itself thru the megaphone of the yellow press and the trumpets of the platform ought to be replaced in government, education, and, to a large extent, in literature and the drama, by the expert judgment of the best and best trained minds of the age—by the "scholar in politics," in short. This thought is worked out in the "Republic," a book replete with anticipations of genius which, of course, do not admit of direct application to the life of the huge modern nations that representative government and steam have put in the place of the small city-state contemplated by Plato. The influence of this "noble philosophical romance," as Huxley calls it, has been incalculable. It has not only been read by all subsequent explorers of Utopia, from St. Augustine to More, from Fontenelle to Bellamy, but it has been studied by every educated sociologist and political philosopher of modern times. And in every generation it has surprised thinkers who supposed themselves to belong to the anti-Platonic camp with the pleasant shock recently experienced by Mr. H. G. Wells when he turned "from the lean, pretentious emptiness of Mr. Spencer to the concrete richness, the proliferating suggestiveness of Plato." Space fails to analyze the "Republic," and, distinguishing the imaginative vesture from the substantive body of its thought, disengage from local and historic accidents the residuum of abstract and general truth. But it contains one great idea that admits and invites

practical application to the business and political life of today. And at the risk of the gross misunderstandings to which a summary statement is exposed, I will expound this one great political or "sociological" lesson which we might learn from this old-world book.

Plato teaches that no real reform is possible until either philosophers become kings or kings philosophers. Such philosophic rulers, in addition to practical experience of affairs, must "know the idea of good." By this he means mainly that fitness for steering the ship of state is not demonstrated by success in grasping the helm. Government, the most difficult of the sciences, should be practiced as an art by men of high scientific competence, exerting their powers not to keep themselves in office, but for the realization of a definite and consistent ideal and philosophy of human welfare. To such rulers autocratic authority may and must be entrusted. This idea we reject as one of Plato's obsolete aristocratic prejudices, incompatible with our democratic institutions. As Mill says, the notion of the autocracy of the capable man is one that would commend itself to a reactionary like Carlyle. But he adds that Carlyle would be less pleased with the doctrine that the capable man is not born, but made by the severest discipline and scientific training. And we, too, in our repudiation of the idea, overlook a no less important qualification. These rulers and their highly trained assistants are to lead a life of enforced disinterestedness. They will have no sinister interests because they will have no private and separate interests of any kind—no families, no personal property, no secret storehouse or safe deposit vault not open to inspection. And Plato makes it plain that the chief if not the sole motive of these communistic regulations (applicable only to the rulers) is the necessity of protecting the people against the abuse of the powers which, to secure efficiency, must be entrusted to a few. Under present conditions, he tells us, there is no human soul that can endure the strain of absolute and irresponsible authority.

Now, it is perfectly possible for us to divest Plato's idea of its paradoxical dress. We need not establish communal marriage among the caste from which

the presidents of life insurance companies are chosen in order to prevent them from bestowing preposterous emoluments upon their kin. We need not require our legislators and judges to eat Spartan black broth at a common mess in order to check jobbery and nepotism. All that is needed is to qualify our American doctrine that every man is to do as he pleases, and is presumed innocent until proved guilty, by the Platonic principle that the trustees of high and irresponsible power must submit to restrictions which we need not impose upon the ordinary man, and that they must be presumed to be grafters unless they will accept a surveillance that makes grafting impossible. They are doubtless "honest men." But as Dr. Caius says: "Vat shall de honest man do in my closet? Dere is no honest man dat shall come in my closet." For the notion that politics and fiduciary finance are a game which every man has a right to play we must substitute the idea that they are trusts of which society has a right to dictate the terms.

When this principal has been once admitted, the practical applications will follow. Any restriction on anybody's liberty to play the game as he pleases and to the limit will seem impracticable to those engaged in playing the game according to the present rules. But we face the alternative of restricting this kind of liberty in those who may fairly be deemed trustees, or of trying social experiments that will destroy the free play of individualistic competition altogether. Beneath the wild and whirling words of socialistic declaimers is the plain fact that the present state of affairs outrages the sense of justice of the average man, even tho our American cornucopia secures him personal comfort. Interference with the institution of private property would still outrage our sense of justice more deeply. But public trusts are not private property. And there is no injustice in imposing severe self-denying ordinances upon those to whom the present order of society delegates powers of an essentially fiduciary character. If they do not like the terms, they need not accept the trust. Let them enjoy life and liberty and pursue happiness in some other oc-

cupation. Socialism is justly condemned in that it deprives men of "natural" rights and destroys the motives of efficiency. But no man has a natural right to hold political office, to exercise the power of eminent domain, or to control with State aid for private ends public utilities that are natural monopolies. And if society can check the abuse of these powers, it may well prove that no further interference with the system of individualistic liberty will be required.

It would be absurd for a closet student to dogmatize about the precise applications of this principle. Even a partial application would secure that indispensable fulcrum of disinterestedness which is needed to give the forces of honesty a "purchase" on the world. Let us suppose, for instance, that Senators, or judges, or life insurance or railway presidents, or special classes of expert inspectors and accountants were placed under restrictions that, humanly speaking, freed them from all suspicion of sinister interests. Grant them, for example, a comfortable but not exorbitant income for life or a term of years, as the case may be, and prescribe with it the prohibition of all outside pecuniary undertakings, the submission to inspection of all accounts, and the limitation of all powers of appointment by some form of civil service rules and the exclusion of kinsmen.

The present incumbents of such positions would denounce these conditions as monstrous and impracticable infringements of personal liberty. But society could obtain quite as good experts as they on these or similar terms. There is a type of men, and that not the least trustworthy or efficient, to whom these restrictions would not seem intolerable when accompanied by comfort, security, honor, freedom from worry and suspicion and the opportunity of faithful service. And if this be thought Utopian, the partial application of the principle to judges, inspectors and accountants would go far to restore that confidence in some ultimate appeal to incorruptible disinterestedness and fair dealing somewhere, for the lack of which we are drifting toward anarchy. This, I believe, is the most valuable practical lesson which Plato's republic suggests for the life of

today. Stated by a student in concrete imaginative form it can easily be made to appear fantastic and Utopian. But the fundamental conception of applying some rule of publicity and enforced disinterestedness to the retainers of abso-

lute and fiduciary power is one that must find its place in practical politics. It is the minimum modification of the American idea of "doing as one likes" that will save us from the reactionary tyrannies of socialism.

CHICAGO, ILL.

## A Good Example

BY FRANKLIN H. GIDDINGS, LL.D.

PROFESSOR OF SOCIOLOGY IN COLUMBIA UNIVERSITY.

THE newspapers and other monitors of the public conscience, including THE INDEPENDENT, are finding pleasant occupation in holding up to view the late Mr. Marshall Field, of Chicago, as a good example of many praiseworthy qualities and of honorable business success. He was.

He was a good example also of something else that was not set forth in THE INDEPENDENT's interesting editorial a week ago—a something else really significant, and at the present moment deserving of particular consideration. The career of Mr. Field is being exploited by the organs of capitalism as a triumphant demonstration that a "right smart" poor boy by enterprise, honesty and attention to business may amass an enormous fortune without drawing it from any other source than that wealth which he himself by his productive activity contributes to mankind. As usual, the organs of capitalism in their over-conscientious desire to walk in the narrow path of truth have inadvertently stumbled into error. The career of the estimable Mr. Field was a convincing demonstration that no man on earth can possibly amass in his own lifetime as much as \$100,000,000 without freely tapping the reservoirs of that wealth which is created by the brain-sweat and the muscle-tension of mankind, rather than by his own individual productivity.

This correction of the record I beg to submit is important, so let us look at the facts.

And first, the contention of capitalistic

apologetics. "Here is a man," says one of our bravest organs, "the largest taxpayer in America, whose estate is variously estimated at \$100,000,000 up, that owned no franchises, was aided by no invention, sought no especial privileges, attempted to establish no monopoly, was protected by no tariff, and, wonderful to relate, was no tax-dodger." The last item in this statement I understand is strictly true, and it shall be counted to Mr. Field's everlasting credit. Some other items in the list are not strictly true.

Mr. Field was aided by one of the biggest inventions ever made. In fact, it was the foundation of his fortune. I refer, of course, to the invention of the department store, and it happens that it was not made by Mr. Marshall Field nor even by one of his salaried employees, who could have turned it over to him in exchange for a reward of merit, as many clever inventors, employed by millionaires and corporations, turn over their ideas to appreciative masters. This particular contrivance was invented in France, and was carried to its highest practical exploitation in the famous Bon Marché of Paris. There didn't happen to be any tariff on the idea, so Mr. Field imported it.

Having started out with this excellent nest egg Mr. Field did, contrary to the assertion of our apologist, proceed to profit mightily by our American tariff. On almost everything that he imported, subsequently to the original invoice of idea, he, like other honest merchants,

paid heavy duties, and like other honest merchants he thereupon charged prices for his goods which included a pretty percentage of profit upon the duties paid, as well as upon the original purchase cost.

Now let us turn to certain incidents in Mr. Field's career, about which the apologist has failed to enlighten us, but which have been fully set forth in the news columns of the public prints.

Mr. Field made a great deal of money out of his department store, but not a fortune of \$100,000,000 or more. Many years ago his sagacious mind began to reflect upon that item of wealth which the political economist calls "unearned increment." It so happens that the really desirable parts of the earth's surface are limited in area, and as population grows the demand for them increases. The narrow island of Manhattan, for example, is advantageously situated for commercial purposes, and a large number of human beings may be observed here carrying on various industries and trades. Little strips of land on the main thoroughfares have in consequence become so valuable that they are now sold not by the acre or even by the rood, but at so much a front foot, in certain instances even at so much an inch. The men that own these parcels of land do not themselves, as individuals, create its value, they only take it. Quite honestly, to be sure, they take it, because the community, which collectively creates it, in its wisdom permits any smart man with a taste for speculation to appropriate it.

To the alert mind of Mr. Marshall Field unearned increment, growing like a banyan tree on Manhattan Island, appeared as a source of private revenue not

to be despised. Ten or twelve years ago he began picking up a few good things on Fifth avenue. Little by little he acquired adjoining parcels, until he controlled a frontage of 164 feet on Thirtieth street and 254 on Thirty-first street. This property, it is understood, he leased to Benjamin Altman for ninety-nine years. In like manner, and on a yet larger scale, he bought in his own town. Of the \$40,000,000 worth of Chicago property on which he paid taxes, \$30,000,000 was in real estate. In addition to these investments Mr. Field had real estate holdings in various other States, and he owned large blocks of stocks and bonds in corporations holding valuable franchises conferred by the public.

This correction of the record of Mr. Field's honorable career is, I wish to repeat, important from the point of view of those who maintain that a man starting with nothing can in the United States amass a fortune of many millions by his own productive effort. This contention, I venture to submit, holds out wrong impressions and false hopes to the American boy who is "poor but honest." It may lead him into commercial error. If his purpose is to get together a little competence of a hundred million dollars or so, he should not rely upon his own wealth-creating powers. He will find it much safer to look about him for wealth created by the enterprise of the community, and with the assistance of trustworthy legal counsel find ways of tapping it, thru franchises and other privileges created by competent legislative authority, and thru advantages offered by our perfectly legal real estate system.

NEW YORK CITY.

# What Governor Folk Has Done

BY W. D. VANDIVER

[Mr. Vandiver is well known for his personal investigation and prompt action in the recent insurance scandals. He was a college professor for a number of years, and was then sent to Congress for two terms. He declined re-election for a third term, but was unable to retire to private life, being at once summoned to the part that he has since played in Missouri State politics. He has been closely associated with Governor Folk, both in his campaign and in his administration as Governor, and is now State Insurance Commissioner of Missouri. This article was given a an interview.—EDITOR.]

The clear cut reforms in Missouri which have brought the State into public attention a number of times within the last year were foreshadowed in the campaign which preceded Governor Folk's election. This was in many respects the most remarkable campaign for the Governorship which was ever waged in the State. It was not only the most strenuous campaign for nomination for Governor, but it was the most prolonged. It extended over a whole year of active campaigning.

The movement began with the organizing of a business men's committee by Mr. N. W. McLeod, a lumber merchant, of St. Louis, for the purpose of testing the question of whether or not it was advisable for Mr. Folk's friends to present his name as a candidate. The members became satisfied with the wisdom of such a course, and after they had effected organization in a general way, they asked me to take the chairmanship of the campaign committee. With some reluctance and hesitation I consented to do so, and took charge some nine months before the election.

Mr. Folk had, by his vigorous prosecution of the boodlers in St. Louis, earned a national reputation, and it was my thought that this reputation and assurance of integrity ought to be utilized by his party. I was then serving in Congress, but was not a candidate for re-election, and, therefore, was able to give some time and attention to the Governorship campaign.

There were many Democrats who felt that Mr. Folk's unyielding prosecution of some who were prominent in the party

would alienate a considerable number of voters, and, therefore, as a political move his nomination would be unfortunate for the party. But others of us took the ground that while he would lose some votes from that source, he would gain many more from the better element among the citizens of the State. What is known as the "old machine" opposed his nomination; not so much, however, because they were themselves personally corrupt as because they failed to comprehend the political force of a moral issue. There were also some people of good character who opposed his nomination because they doubted his party loyalty. But after a vigorous campaign he was nominated by an overwhelming majority, in the convention, and was elected by more than 30,000 majority in the general election, altho he was the only Democrat elected on the State ticket, thus more than justifying the calculation of his friends that he was 30,000 stronger than any other candidate. The next one to him on the ticket was beaten by over 17,000. This demonstrates what the moral element of society can do when it is united and determined.

In regard to reforms accomplished under this administration, Governor Folk has more than made good. In the first place, the Legislature, which met last winter at the time that Governor Folk was inaugurated—Democratic in one branch, the Senate; Republican in the other branch, the lower House—was remarkable mainly for the fact that it was the first Legislature in many years whose members did not ride on railroad passes. It is believed that not a single member of

that Legislature traveled on a pass. It was also remarkable for the scarcity of lobbyists. Railroad attorneys, instead of taking up headquarters at the State Capitol, were scarcely seen at all, and when they did appear it was only on very short visits, to present themselves openly before committees of the Legislature, after which they left immediately. A maxi-

of the whole administration, and is likely to become the slogan of the next campaign in the State.

The law of Missouri has for many years prohibited the sale of liquor on Sunday, but it had been so long evaded that it had come to be considered a dead letter. Many persons, and even some eminent attorneys, thought it was impos-

W. D. Vandiver.

mum freight bill passed both houses and was signed by the Governor, altho it was opposed by all the railroad corporations of the State, and as a law on the statute books it has had the effect of materially lowering the freight rates, which had been in many instances excessive.

But the reforms of this administration have been more apparent in the executive department than in new legislation. "The Enforcement of Law" is the motto

sible to enforce the law in a great city like St. Louis. Nevertheless, it has been enforced, not only in St. Louis, but in the other large cities of the State—Kansas City and St. Joseph—and the result has proven so beneficial in reducing the number of criminal offenses that it is now very generally conceded that the Governor's course in this respect was not only right, but good policy as well. I venture the prediction that the Democrats in the

next campaign will boldly declare in favor of the Governor's policy of Law Enforcement, and that no other party will dare openly to oppose it.

One of the most notable incidents connected with this administration was the closing of the Delmar racetracks. An association of gamblers had managed for years to evade the law, and had succeeded in doing a very lucrative business until they had become so powerful as to control the politics of St. Louis County. So, when the Governor's order came for the enforcement of the law against racetrack gambling, they at once ignored the order and appealed to the local authorities whom they had put in power. For a time it seemed that they might successfully defy the authority of the State. But when, one fine morning last June, they were confronted with a cordon of policemen from the city of St. Louis, armed with authority from the Governor to break open their gates and take possession of their whole paraphernalia, and accompanied by the announcement also that if it were not sufficient the State militia would be sent the next morning to complete the job, they suddenly took flight and moved across the Mississippi River. This is, perhaps, the most notable triumph of courage in administration that has been witnessed in Missouri during the present generation.

Minor practical reforms have also been instituted in the various State institutions. As has so often happened in other States, so in Missouri, the various State institutions—of which there are twenty odd—had become the prey of small grafters in various little matters. Special favors in contracts for supplies and employment of labor, etc., gradually get to be fastened on public institutions and finally have to be uprooted by the strong hand of a courageous executive. This has been done in every part of the State, notably in the police system of St. Louis. The Police Department has been taken out of active politics. A number of police officers found guilty of little grafts and acceptance of favors for winking at crime have been dismissed, and the whole department given such a shaking up that even the patrolman on his beat is made to understand that his duty is to protect the public, and not the private violators

of the law. In short, the whole civil service has been toned up, and the administration of the law has been put on a higher plane.

The work accomplished by the Insurance Department of the State has, of course, been of particular interest to me as Superintendent of the department. I was not a candidate for this office, nor, indeed, for any other appointment under the Governor, but some time after Governor Folk was inaugurated, and after my term in Congress had expired, he offered me the position. At first I told him I did not think I wanted it, but he put the matter to me in such a way that I could not very well decline, as he said he felt that this was a very important office and he wanted some one to fill it that he knew he could rely on. I therefore accepted it, and again devoted myself to a subject to which I had given considerable attention in years gone by.

I soon found that a great many abuses needed reforming, but before I got very far in that direction the wonderful disclosures brought out by the New York Investigating Committee had astonished the whole country. It was found that great insurance officers, handling hundreds of millions of policy holders' money, had misused large portions of the funds in political campaigns, for lobby purposes in controlling legislation, and in exorbitant salaries. In order to test the question as to whether or not it lay within the power of the State to prohibit these things, I singled out the strongest and most powerful officials—the president and vice president of the New York Life—and notified them that unless their misused funds were returned and the officials forced to resign, the license of the company to do business in Missouri would be revoked. At first they denied the authority of the Superintendent to take this action, and boldly replied that insurance presidents "might die, but never resigned." Nevertheless, they have resigned, and Mr. McCall has replaced in the company's treasury \$85,000 in cash and given his note for \$150,000 more, and the company, under its new organization, has given assurance that these abuses can never occur again.

Other irregularities are being eradicated, such as giving large rebates to

special policy holders, issuing side contracts or special agreements as an inducement for people to take policies, and using extravagant illustration figures which mislead the policy holders as to the amount of profit or dividends they are to receive on the business. These and various other abuses, which have been

practiced by smaller companies as well as by the larger ones, are being driven out, and the general motto of the Insurance Department of Missouri, promulgated at the opening of the new year, and accepted, I am glad to say, by all the reputable insurance people of the State, is: "Honest business, or no business in Missouri."

JEFFERSON CITY, MO.

# Control Emigration Rather Than Immigration

JAMES DAVENPORT WHELPLEY

[Mr. Whelpley has recently returned from Europe, where for the past two years he has principally been engaged in studying European immigration to the United States for the purpose of his book, "The Problem of the Immigrant," which has just been published. He has long been known as one of our best newspaper and magazine writers, especially on industrial economics and political subjects.—EDITOR.]

**I**MMIGRATION into the United States cannot be effectively controlled without the co-operation of the countries from which the immigrants are drawn. In other words, effective control of immigration can only be secured by international control of emigration. At first thought this may appear impossible of achievement, but a careful review of the emigration laws of Europe, the economic and political conditions of European countries and the present tendencies of thought and legislation in those countries suggest that this much to be desired status of affairs may not be so far distant after all.

The immigration laws of the United States are, up to the present time, the most restrictive in force in any country, and they are the most rigidly, intelligently and honestly applied. Their limitations lie in political expediency at home, and in inevitable lack of jurisdiction over foreign lands and peoples. There is now practically no restraint upon outsiders in their efforts to break down the legal barrier erected by the American people to keep out undesirables. The slightest weakness in this structure is fatal, for the most powerful influences are forever at work to test its strength and effectiveness.

The country now attempting to control immigration is always on the defensive. However well intrenched upon its own territory, it must await attack and be content with repulsing the enemy. No victory, however, great, can be followed up. One repulse merely invites further effort. In brief, no defeat of the besiegers is final, and the attempt of the United States Government to discriminate in the admission of aliens is a wearisome and unending struggle against the combined forces of the alien army of the world. This army is directed by the able executives of all nationalities. It is enlisted, organized, provisioned, and transported by the most improved machinery known to modern business and at minimum cost to each individual.

Emigrants are landed upon the shores of the New World in appalling numbers each year and with no regard as to their fitness for citizenship in a self-governing republic. The burden of sorting them out, rejecting the unfit and compelling the return of the latter to their native lands is placed entirely upon the shoulders of a people that does not want them and that has issued urgent warning against their coming; a people that is fighting in a spirit of self-preservation for ideals which would soon become

hopeless of achievement if the country was overrun by an indiscriminate horde often recruited from the scarcely human social under-strata of the Old World.

The problem is not at all one-sided. The countries from which the immigrants are coming sustain annually an enormous economic loss. This is recognized by European statesmen and already reasonable effort has been made thru restrictive legislation to check the outward flow. Up to the present time, however, little beneficial effect has been noted. In many cases the causes for the emigration movement lie deeper than police legislation can reach, and to remedy them implies such a complete reorganization of the body politic as to amount to the adoption of a new form of government. Such reforms can only be secured in the older countries thru a process of slow evolution from despotism and a social organization inherited from previous centuries, which still throws its blight over the nations now furnishing, at least, seventy per cent. of the million or so people coming as immigrants to the United States each year.

Italy has taken the lead in Europe in discouraging her people from leaving their homes, but not until many sections of Southern Italy are almost depopulated. It is now contrary to the Italian law to solicit emigrant traffic and rate wars between steamship lines are impossible, for the Italian Government fixes the minimum price at which a ticket can be sold. For the protection of those who do go most stringent laws governing transportation companies have been enacted, and the Italian Government co-operates with representatives of the United States Government in an effort to prevent the embarkation of those likely to be refused admission upon arrival in America. No other European country goes as far as this in its effort to restrict emigration, but in nearly all those countries solicitation of business by steamship agents is prohibited, and more or less protection from imposition is afforded the emigrant. England has been and still is the worst offender in giving every facility to people of all sorts and conditions, criminals, paupers and deficients, an opportunity to reach the United States. In self-protection, how-

ever, England is about to mend her ways, and within three months an immigration law will be in force in that country.

Once the attention of a European nation has been aroused in practical manner to the necessity of retaining its effective population, and, still more, when a people like the English revolt against the unrestricted addition of dangerous and competitive aliens to the dependent classes, there certainly is hope that in time co-operation may be secured in a struggle long carried on single-handed by the United States. Whenever immigration matters are discussed in the United States or England, considerable is heard about "maintaining an asylum for the oppressed of all the world." This is largely buncombe and of the political variety. No nation comprising many millions of people can justly maintain an open door for diseased, criminal, pauper or deficient aliens, and all nations should be compelled by international sentiment to carry their own burdens of this description. To dump these people on a foreign shore is insanitary for the receiver of these objectionable goods, and certainly a criminal evasion of responsibility on the part of the shipper.

The important factor in all emigration movement is the transportation company. In fact, when economic and political causes are eliminated from the discussion, and the situation is viewed from an immediate and practical standpoint, it will be found that nearly all the greater evils of the present immigration into the United States arises from lack of control over the man who induces the alien to become an emigrant, sells him his ticket and convoys him through the American barrier. The handling of emigrant traffic has become an enormous and most profitable business. It represents in gross at least fifty million dollars each year, of which probably one-third is profit. This business has been built up far beyond its normal size. The emigrant movement of today is unnatural, for it is fostered, encouraged, stimulated and enlarged by every possible means by those who profit thereby.

The laws of all countries are evaded whenever possible. The test of an emigrant's value to a steamship company

is the ease with which he can be passed through Ellis Island. As a rule, the medical examination is fairly thoro when made at foreign ports, but it is conducted with the idea of complying with the letter and not the spirit of the American law. There is no examination at points of embarkation as to pauperism, criminal record or fitness for American citizenship. Once in possession of the emigrant's money, the strongest selfish incentive exists to provide in some way for his or her admission to the United States. The burden of refusal is placed upon the American immigrant officials, and it is only when all resources have failed that the steamship company unwillingly carries the rejected passenger back to the first foreign port at which he can be gotten rid of.

There is but one way to mitigate this evil, and that is by conducting the sorting out process as closely as practicable at the initial point of departure, or at least at the point of original embarkation for the ocean voyage. To do this the co-operation of foreign governments must be secured, as the United States, having no jurisdiction over foreign lands, peoples or steamship companies, must secure permission for its agents to work abroad in official capacity; and the laws and regulations of foreign countries must possess more or less international harmony and provide the machinery for severely penalizing all violations thereof.

There is another side to this question, which in these days of a higher civilization may well be taken into consideration, and that is the terrible injustice done to those who are induced to make the journey but to be rejected and returned to some foreign port, destitute, despairing and with no future but to become dependent upon the charity of the community into which they are thrown. People are now brought from the interior of Europe to points of embarkation for the United States and there told that they can go no further because they come under the prohibited classifications in America. Such people should never be dislodged from their native environment. The over-zealous ticket agent should be prevented from deluding them, not only because it is a crime against the individual, but also because these people

almost invariably fall back helplessly upon the charity of strangers in a country under no obligations to them. The hospitals, poorhouses and charitable institutions of England are filled with aliens who have failed to secure passage to the United States, or who have been deported after making the trip across the Atlantic.

An ideal condition of affairs would be an international agreement among the countries interested whereby each country undertook the care of its own deficiencies, paupers, criminals and helpless without thought of allowing them to depart for foreign lands, much less assisting them to do so, as is now occasionally done. Whenever one country enforced certain requirements for admission, other countries, parties to the agreement, should allow foreign jurisdiction over the departure of avowed emigrants for that country. All countries now enforce a more or less uniform system of quarantine for arriving and departing vessels. This, in principle, could be applied successfully to the emigration movement. An outgrowth of such an agreement also would be an international police system of great value in reducing to a minimum the involuntary exchange of criminals.

It will be enormously difficult to bring about such an ideal condition of affairs, and one which would prove so advantageous to the United States. The situation is far from hopeless, however. A few years ago such a suggestion would have been regarded as less than an idle dream; it is now a practical possibility of the future. The instinct of self-preservation has been aroused in England, and the people of that country would unquestionably welcome any aid in stemming the tide of humanity from the Continent which is overwhelming their native sons and daughters in the workshops and the tenements of London. Other European nations are aroused to the sapping of their vitality through the continued loss of able-bodied men and women from the producing class and the military reserve. In the minds of European statesmen the economic situation is rising superior to the profit of a few influential transportation companies and the lust of minor Government officials for the *pourboire* secured by closing the eyes to evasions and

violations of existing laws. The American people would not only benefit themselves could they decrease the alien movement to America by raising the standard of admission and stopping the coming of all but those who moved intelligently, but they would assist in solving for Europe a problem which is vexing her wisest rulers.

The international idea is not new even in practice. The United States protects Canada along three thousand miles of border as effectively as the home country is protected, for no alien is allowed to land in the United States if coming within the prohibited classifications, even if intending to at once cross into Canada. That is to say, the United States does not maintain an open door for objectionable aliens, even though they be en route to a foreign country. By affording every friendly assistance possible, Canada has reciprocated, and thus an international arrangement has been reached, tho without much formality, it is true. The idea is practical and its operation can be extended thruout the world, but it will take time to break down Old World conservatism and dispel the fatalism which apparently governs so many European nations in that treatment of economic problems affecting the masses of the people.

The importance of this New English law cannot be overestimated, for it must be remembered that England now has no immigration law restrictive or otherwise, and her adoption of such a law will have an immense influence upon the emigration situation in Europe.

England is now a great highway for the emigrants from Northern Europe.

If England was to prohibit the landing of objectionable aliens, whether en route or not, great benefit would result both to the United States and to Canada. Here is a near opportunity for a practical attempt at international concert of action between two great countries with the same end in view. Unfortunately, such action as would be desired by the United States might reduce the earnings of the English steamships now sailing from English ports only, and as her shipping is the pride and resource of the British nation, therefore, all powerful in legislative matters, the situation is delicate and difficult. If England looked upon Canada as an integral part of her territory, which she does not in spite of all the talk of unity of Empire, the United States might justly call attention to the protection now given to Canada and ask for something by way of reciprocity. Such argument does not have much weight with the English law makers, however, and any claim the United States may make for consideration must be based upon direct benefit to England and upon a look into the future when international harmony upon these matters will include the whole of Europe.

Progress is slow, but it is nevertheless sure. The United States has led the way, and an international conference of those concerned in emigration and immigration called upon the initiative of this country is an event which will not be long postponed. A better mutual understanding of one another's needs and desires than now exists is necessary as a preliminary to the international co-operation which is sure to come.

NEW YORK CITY.

# A Railway Across Five Continents

BY ALEXANDER HUME FORD

FROM Cape Horn to the Cape of Good Hope by rail is the latest project of our giants of finance who have control of limitless capital.

This round the world trunk line, which is already more than half completed, is to be some 25,000 miles in length. Beginning at the tip of the South American Continent, it is surveyed to follow the crest of the Andes, winding up thru the Isthmus of Panama into Central America, then across Mexico, the United States, and Canada into Alaska, under Behring Straits and across Arctic Siberia and torrid Central Asia to the Holy Land and Egypt, where it is to connect with the Rhodes Trans-African railway now in course of construction from Cairo to Cape Town. A distance in all equal to the circumference of the

globe, and the building of but 10,000 miles of additional railway remains to fill in the gaps and complete this most remarkable project of modern times.

Half a billion dollars, a sum Congress appropriates every winter, will complete the Cape Horn to Cape of Good Hope railway, little more than the amount already expended on the construction of the Trans-Siberian Railway; and this sum has already been subscribed, if the projectors of the great world uniting scheme are to be credited.

The plan of a round the world railway is the joint idea of an American, an Englishman and a Frenchman. Andrew Carnegie has offered to finance the New York to Buenos Ayres project, having subscribed \$50,000 for the preliminary surveys, and M. Loieg de Lobel has had

National Railway Train, Ocoyocae, Mexico.

Summit Station, White Pass Railroad, Klondike, Alaska.

a survey made of the New York to Paris air line that, when built, will serve to connect the Cecil Rhodes "Cairo to Cape Town" with the "Pan-American" railway, thus bringing Paris and New York in touch by Pullman service with every great city of the five continents.

"Within five years," is the promise of the enthusiastic Frenchman. "In about a decade," is the surmise of the cautious Scotch-American, that the various Trans-Continental railways will become united in one connected world system. It is encouraging to note in this connection that, thanks to American assistance, the Trans-Siberian railway was built and finished several years in advance of the date set by the Russian engineers for its completion, and the Panama Canal, abandoned as an impractical project by the French, is being carried to success by the Yankee. The money needed for the construction of the greater part of the round the world railway has already been pledged in this country, while, it is claimed, Russia has promised a land grant of eight miles on either side of that portion of the road passing thru her territory. Actual construction work may begin on the Alaska and Siberian sections this fall.

Will the inter-continental railways compete with the trans-oceanic steamship lines? is a question that puzzles many thoughtful statesmen and others. In England it is held that British sea power will become endangered by the completion of the short link in Afghanistan that would unite the railway system of India with that of Europe. Chiefly to protect the vast vested interests British subjects have in the Oriental ocean carrying trade, English statesmen refuse to listen to any project for pushing the Russian railways through Afghanistan or the Turkish railway across Persia to Beluchistan and the Indian frontier, either of which projects if carried to completion would bring Bombay and Calcutta within a week's travel of London and sound the death knell of passenger traffic thru the Red Sea by boat. Just prior to the outbreak of hostilities in the Far East, mail was being sent from London to Shanghai via the Trans-Siberian railway in sixteen days, as against six weeks by boat via Suez. The recent completion of the railway southward from Peking to the Yangtsekiang River and the construction of the American railway in China, either by the American promoters or the Chinese themselves, toward Hongkong will bring that

British outpost on the Pacific within less than three weeks of London by rail; it is therefore doubtful if, since the conclusion of peace between Russia and Japan, European mail will very much longer reach the Far East by the long, round-about water voyage. Heavy freight will ever seek the cheaper all water route, but passenger and mail service will choose the swifter way. It is safe to say, however, that the inter-continental railways will ever prove a greater menace to European than to American shipping.

The trip from New York to Paris by rail on fast express trains making an average, say, of forty miles an hour will consume the greater part of two weeks, as against five days by swift trans-Atlantic mail packet. To many other parts of the globe the traveler from New York will find that his voyage by rail will be similarly handicapped. From New York to Buenos Ayres he will perhaps make as good time by rail as by boat, and it will be nip and tuck between locomotive and ocean flyer to the coast cities of China. With South Africa three weeks distant by swiftest trains, however, the Dark Continent will be at least seven days nearer our Eastern seaboard by water than by rail. The completion of the in-

ter-continental railways will do much, however, to advance competition between the land and water routes.

At present the quickest method of reaching Buenos Ayres is to take ship for Liverpool or London, and engage passage on one of the English steamers bound for South American ports. In point of time South America, our next door neighbor, is the most distant continent from our markets, with the result that England and Germany, having brought her immensely rich fields to their very doors, have seized her trade at our expense. It is to regain for his adopted country the lost trade of South America that Mr. Carnegie wishes to extend the Paris to New York railway ten thousand miles further south to Buenos Ayres, and the principal cities of Pan-America.

Mr. Cassatt, president of the Pennsylvania Railway, which is to form the first section of the Pan-American system, was the first chairman of the New York to Buenos Ayres project. Already the railway from New York has reached Central America, and the building of the Panama ditch is hastening its extension to the Canal zone. In South America, Yankee engineers are

Grade on Ferrocarril de Costa Rica (over 200 feet per Mile), Costa Rica, Central America.

Locomotive and Freight Train Wooding in British South Africa.

extending two streaks of rust across Ecuador, and the railway from Buenos Ayres northward has crossed Bolivia and half of Peru. The most hazardous portion of the Pan-American Railway remains to be built, however, for from now on the track layers must work above the clouds in an atmosphere so rarefied that thru passengers on the completed road will have to make several stops to accustom their lungs to the thin air of these great altitudes. Besides the regular passenger and freight cars, locomotives on the Pan-American Railway will have to haul water tanks for hundreds of miles at a stretch, as no wells can be sunk in the crest of the Andes. It is certain that thru freight will never follow the all-rail route from New York to South America, but its value cannot be overestimated when we consider the avidity with which our commercial drummers seized upon the facilities offered by the Trans-Siberian Railway to scour northern Asia to show the natives samples of American made goods. I have met these pioneers of our commerce in Siberia, aglow with the triumph they had achieved, and noticed that the stores along the route were

well stocked with American hardware, canned goods and merchandise of every description. It was the extension of the American system of railways into Mexico that sent our commerce with that country up by leaps and bounds, and doubtless the building of the Pan-American Railway, north and south from the Canal Zone, will create a half-way stopping place there for both rail and steamer traffic from every part of these United States, that will bring the great cities of the two continents, New York and Buenos Ayres, into a much closer commercial understanding with each other, to say nothing of the vast territory in between.

The "New York to Paris" special will doubtless begin its westward trip over the tracks of the New York Central and then via the New Trans-Canadian railway, now under course of construction, to a seaport on the border between British Columbia and Alaska. Colorado capitalists have organized a company capitalized at fifty million dollars to carry the railway thru Alaska to Behring Straits, from which point M. de Lobel will continue the construction, with money partly raised in America, via the

route originally surveyed by our own Kennan for the overland New York to Paris telegraph line. M. de Lobel has spent years in Siberia and even wintered at Behring Strait, while his engineers were surveying a route for the 36 mile tunnel under the waters dividing America from Asia, and the 3,600 miles across the Arctic regions to Lake Baikal and the Trans-Siberian railway over which the New York to Paris special will continue its run to Moscow and Warsaw, traversing nearly seven thousand miles of Russian steppes before German territory is entered and the home run across France to the gay capital is made with a final burst of speed.

It is not improbable that the journey across the three continents by rail begun in a New York tunnel may end in London rather than Paris, for since we have demonstrated the expediency of sending subways beneath our chief rivers, England has again taken up the much mooted project of a tunnel beneath the English Channel, and while Parliament still fails to look favorably upon the scheme, it is declared to be perfectly feasible; in fact, a tunnel on which work was once started is likely to be carried to completion if

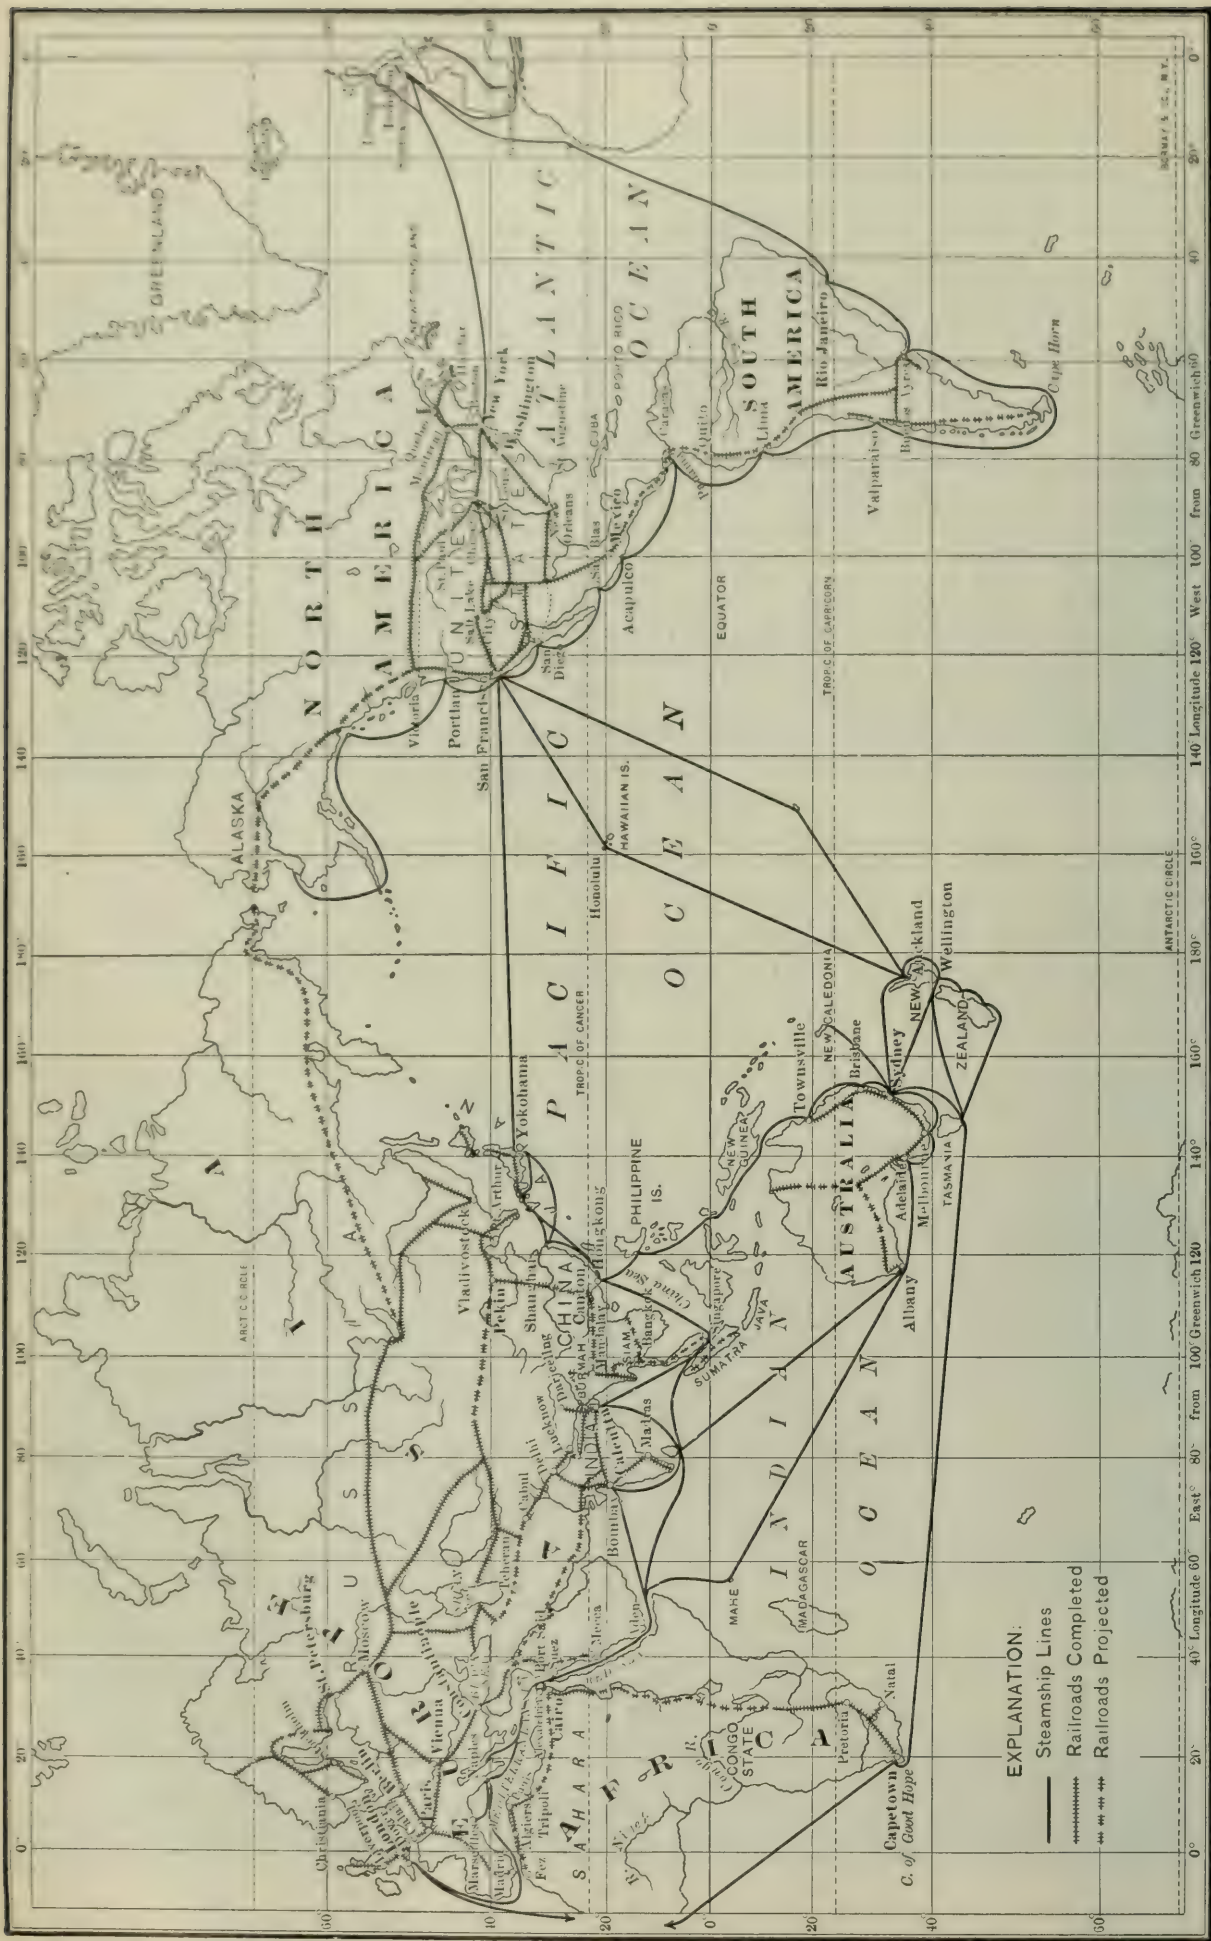

England and France now coquetting with each other, do form an alliance. The Dover-Calais tunnel would present fewer engineering difficulties than the boring of the Behring Strait tube, which altho twice as long as the proposed English Channel project, M. de Lobel expects to have completed within three years at most. A scant twenty miles of tunnel is all that is needed to bring London in direct touch by rail with practically all of Europe and Asia, with the probability that before long the railway system of Africa will also be brought into the network that is rapidly spreading from continent to continent.

The present day crusade of the nations is via the railway to the Holy Land. Germany has pushed the railway from Constantinople eastward, until it is about to connect with the railway system of Palestine, and England is to extend her Egyptian system over the route traversed by Joseph and Mary when they fled from Bethlehem, so that before long an all-rail route from European countries to Jerusalem and the Nile country will be an accomplished fact. It then but remains for the British engineers to close the gap between the Northern terminus of the

Engine and Train on Narrow Gauge (Two Feet Wide) to Darjeeling, India.

The World's Through Routes.

Cape railway in Central Africa, near Victoria Falls, and the Southern terminus of the Egyptian military railway, at Khartoum, and the Calais to Cape Town project is completed. The Holy Land has become the meeting place of the great inter-continental trunk lines of the Old World, for besides the German and English projects, France is pushing her North African railway eastward and the Sultan is building a railway from Mecca to Damascus, that his subjects

land carry her Trans-African railway across Asia, she would have by far the greatest railway system in the world, longer by 2,000 miles than the proposed Pan-American Railway, for the Indian system, with which the Cape to Cairo would connect is rapidly extending into China, and in time will reach Hong-kong; in fact, the Cape Town-Hong-kong railway is every day becoming more and more a strategic necessity to offset the encroachments of Russia,

Making a Deep Cut for the Trans-Siberian Railway.

may make their holy pilgrimages pay tribute to the treasury of the State.

If the railway from Jerusalem across Arabia and Southern Persia to India is ever built, Great Britain declares it will be with English and not German capital. There is a half somnolent British state project on foot to extend the Cape to Cairo railway across Arabia and head off the German railway from Constantinople at Bagdad. If this is done England will doubtless be compelled to build across Persia, for both Germany and Russia are marching toward India by rail. It is interesting to note that should Eng-

France and Germany. For more than twelve thousand miles this proposed Inter-Continental railway would pass only thru British Colonial possessions, protectorates, and spheres of influence, binding them together in one unassailable whole extending more than half the distance around the globe in an unbroken line.

Russia has not given up all hope of securing the trade of India. Even while fighting Japan she sent a new railway quietly across Central Asia, and in June, 1905, a new rail route from St. Petersburg and Moscow to the borderland of Afghanistan was opened for

traffic. This gives Russia two rail routes terminating not 400 miles from the outposts of the Indian railway system—only Afghanistan stands between; should the Ameer take it into his head to build a railway from one to the other of his two capitals, Herat and Cabul, an all-rail route would at once exist between every country of Europe and the uttermost parts of India. The Ameer is a most progressive potentate, who rides in an automobile and desires an American trolley system for his chief capital; it is only by heavily subsidizing him that Great Britain postpones the inevitable day when Paris, Berlin and St. Petersburg will be brought into rail connection with the wealth of the Indies, to tap the till of its commerce so jealously guarded by the English for many centuries.

The wealth of Asia has enriched, in turn, almost every country of Europe, and now America and Japan are reaching out to seize the spoils. The thousand miles of railway projected in the Philippines by our Government are but a bagatelle compared with the aggressive private enterprise of foreign and home capital in China. Peking and the Yangtsekiang Valley are already connected by rail with the European capitals, and the heads of the two governments most interested may yet clash over the American railway bisecting China, north and south, which, when completed, will bring Hongkong within three weeks of London

by the northern rail route. Japan may be said to have placed herself in rail connection with her island ally off the coast of Europe, for but a ferry crossed in a few hours separates the railway systems of Japan and Korea. Since the beginning of the war with Russia the Japanese have built a complete railway from the point of Korea nearest Japan to a junction with the American built railway in Manchuria, so that thru tickets will doubtless be sold, good for passage on the Tokyo-London limited express. Japan has reached across two continents, why should not America?

The Cape Horn-Cape of Good Hope Air Line would place every city of the old and new worlds possessing a railway station at the mercy of the ubiquitous Yankee drummer. It is being built, and will doubtless be completed, for our financiers seem to believe that commerce follows the cross-tie as well as the flag, and within the last month the manufacturers of rails in Europe and America have apportioned the part they are to play in the future construction of inter-continental railways—our home steel trust is to supply all the rails needed in the two Americas, while the European rolling mills are to turn out similar products called for in Asia and Africa. The men and the money to complete the great inter-continental railway are ready to begin work, and the time seems ripe for its extension to the uttermost parts of the earth.

## A Thought for Courage

BY RICHARD WATSON GILDER

THIS thought unto the poet gave new strength—  
 "Let not thy listening spirit be abashed  
 By the majestic ranks of ancient bards  
 Or all the clarion singers of thy day:  
 For in thy true and individual song  
 Thou art a voice of nature; as great winds,  
 And cries of moving waters, and all shows  
 And speaking symbols of the universe  
 Are but the glorious sound and utterance  
 Of the mysterious power that spoke the Word—  
 The immense first Word that filled with splendored light

And vibrant potency the house of life—  
 Whose candles are a million million stars.  
 Whose windows look on gulfs unthinkable.

Think not of thine own self,  
 But of the enormous currents silently

That flood the unseen channels of still force,  
 Or with the sound of earthquake, and the shout  
 Of circling storms, complete an unknown doom.  
 Not less than these the music of thy mind  
 Of nature is the resonance and rhythm;  
 And thine the function, exquisite, mystical,  
 In forms of lyric and eternal art,  
 Clearly to utter and resyllable  
 The primal Word:

So is thy verse of kin  
 To the sea-shell, the lily and the leaf,  
 And crystals of the snow and the deep rocks;  
 It hath a natural right and majesty,  
 Being of the infinite, all-evolving might  
 True jet and symbol; one with the morning  
 star  
 That in the sky of dawn sings with its mates."

NEW YORK CITY.

# The Baptists and Mr. Rockefeller

BY JOHN B. CALVERT, D. D.

EDITOR OF "THE EXAMINER," AND PRESIDENT OF THE BAPTIST MISSIONARY CONVENTION OF THE STATE OF NEW YORK.

I HAVE read with more than a feeling of surprise the paragraphs in the article on "The Church in Social Service," by Rev. W. D. P. Bliss, in THE INDEPENDENT of January 18th, relating to the Baptists in New York. Mr. Bliss says:

"The fifty-two Baptist churches in Manhattan and the Bronx, with their 19,738 members, and their property valued at \$6,000,000, present almost the one sensational instance in New York city of a denomination ruled by one wealthy man."

"Mr. John D. Rockefeller agrees to double each year the amounts raised by the Baptist City Mission and the New York State Baptist Convention. The result is that it is more than whispered that if any Baptist city missionary or State preacher pleases Mr. Rockefeller, he remains; if he does not, he goes."

I have been officially connected with the Baptist Missionary Convention of the State of New York for the past twenty-six years, seven years as Corresponding Secretary and nineteen years as President, and it may be presumed that I know something of the contributions to the society and of the men who direct its management. From my intimate knowledge I can state that what Mr. Bliss says in regard to Mr. Rockefeller's contributions and in regard to his policy of interference is without foundation, and so wide of the facts as to seem not only reckless, but malicious. The facts are:

(1) As to Mr. Rockefeller's contributions to the State Convention, Mr. Rockefeller has never, in one year or any series of years, "doubled the amount raised by the New York State Baptist Convention." The published reports of the Society will show this. Mr. Rockefeller has long been a friend of the Convention work, and because he believed in it and in its importance, has contributed generously toward it. At first he gave an annual offering. As the work grew he increased his offerings, and then he agreed to give 25 cents for every dollar contributed to the missionary department of the Convention, and a lump sum not exceeding \$5,000 to

the Church Building Department. The receipts for the missionary work last year were \$26,826.11, of which Mr. Rockefeller gave \$4,638.45. No *pro rata* is given on interest from invested funds or legacies. The receipts in the Church Building Department were \$28,877.23, of which Mr. Rockefeller's share was \$4,999.90. In other words, toward a total of \$55,703.34 Mr. Rockefeller gave \$9,638.35—a sum less than one-fifth of the whole amount.

I have been more or less familiar with the City Mission Society for the same period of time, and the statement as to his contributions to that society is not strictly true. Mr. Rockefeller often makes special gifts in case of special needs to that society, as he does to other missionary organizations. While it may be said in general terms that he gives dollar for dollar for all live contributions from churches and individuals to the City Mission work, it cannot be said with truth that he "agrees to double each year the amounts raised by the Baptist City Mission." In the last report at hand, that for 1903-1904, the treasurer's statement shows that the total cash to be accounted for, including balance of previous years, was \$105,210.99, and that Mr. Rockefeller's gift to the regular work was \$26,866.97, and his special gift to the Mount Morris Church debt was \$7,500. The statistics prove that the effect of Mr. Rockefeller's gifts to both State Convention and City Mission work, as well as to the National missionary societies, has been greatly to stimulate and increase the offerings made by churches and individuals.

(2) As to Mr. Rockefeller's policy of interference with the management of the City Mission or State Convention. In my twenty-six years of acquaintance with "the Baptist City Mission and the New York Baptist Convention," I have never personally known Mr. Rockefeller, by letter or word, in public or in private,

directly or indirectly, to interfere in any way with the management of these societies or to give any cause for the statement:

"It is more than whispered that if any Baptist city missionary or State preacher pleases Mr. Rockefeller he remains; if he does not, he goes."

Any one at all acquainted with Baptists and Baptist churches knows that, on the face of it, such a statement could not be true. The fact is, when advice and counsel has been sought from Mr. Rockefeller he has steadily and persistently refused to give it, and has thrown the

burden back upon the officers, with the remark, "You are better qualified than I to decide these questions." No man of all the contributors or directors of these two missionary organizations could be more free of this charge than Mr. Rockefeller.

If the statement is true, that "Baptists are losing ground in New York," it is not a very great compliment to the credited organizing and administrative genius of Mr. Rockefeller to state that "the denomination in New York city is largely ruled" by him.

NEW YORK CITY.

## Life Story of a Pushcart Peddler

[This life story was obtained by a representative of THE INDEPENDENT, through the medium of an interpreter. The Spartan who contributes it does not wish to have his name appear.—EDITOR.]

I WAS born about forty years ago in a little hamlet among the mountains of Laconia in Greece. There were only about 200 people in this place, and they lived in stone huts or cottages, some of which were two stories high, but most of them only one story. The people were shepherds or small farmers, with the exception of the priest and schoolmaster.

Two of the houses pretended to the character of village stores, but they kept only the simplest, cheapest things, and as a general rule, when we wanted to buy anything we had to go down to Sparta, the chief town of our State, which was two hours' walk away from our village. There was not even a blacksmith shop in our town.

But the people did very well without shops. They made almost everything for themselves. The inside of the cottage consisted of one large room with a board floor. Sometimes there were partitions inside the cottage, making several rooms, but everything was very simple. The fireplace at one end of the room was large and open; beds were made of boards covered with hay, and stools and tables comprised about all the remainder of the furniture. Cooking was done on an iron tripod with the fire underneath.

Cotton goods we bought in Sparta, but we seldom bought anything else. We made all our own clothing, shearing the sheep, washing the wool, carding, spinning and weaving by hand as they did in the time of Homer. We made our own butter and our own wine, ground our own wheat and oats into flour and meal, and did our own baking.

Our farms varied in size from ten to forty acres, and we raised on them such things as are raised here in America—all the grains and most of the fruits and vegetables. We plowed with oxen, thrashed with flails, winnowed by hand, and ground our grain in a mortar.

We had very little money, and so little use for money that the currency might almost as well have been the iron sort of our remote forefathers.

There was a little school in the town—there are schools all over Greece now—and most of the people could read and write, so they were not entirely ignorant; yet they had small knowledge of the world, and there were many, especially among the women, who knew almost nothing of what lay beyond the boundaries of their farms.

True, by climbing Mount Taygetos, where the Spartans used to expose their

children not physically perfect, one could get a wide view of the surrounding sea with its ships and the shore with its cities, but the top of Taygetos was a day's journey from our village, and few of us had time or inclination to make the trip.

All people who were able worked from sunrise to sunset, the men on their farms or with the sheep, the women in the houses, spinning, weaving, making clothes or baking. If they did not know much about the great world, they also cared less. Now and then some one went down to Sparta and came home filled with its wonders, for Sparta has 15,000 inhabitants and is quite a bright little modern city, with horse cars, street gas lamps and a mayor.

Narrow as our lives might be considered by Americans, there was plenty to interest us in the success or failure of our crops and our little plans, and, considering matters from the standpoint of our wants and our needs, we were certainly prosperous and happy. Most of us eat only one meal a day, but it was a hearty healthy meal, and tho we knew that some of the richer people ate two, the fashion did not commend itself to us. Like all Greeks, we were naturally inclined to temperance. There was no gluttony and no drunkenness, altho we had plenty of good strong wine.

Forty days of the year were saints' days, and on those we feasted and did no work. We dressed in our best clothes and, gathering in one of the best houses, we danced to the music of the violin and guitar.

Sometimes there came an election, and then the men always carried rifles with them to the polling places, and around their waists were sashes stuck full of daggers and pistols, making them look wild and dangerous. But really there was seldom any fighting. In the first place, there were soldiers around the polling places and the elections were honest; in the second place, the armed peasants stayed sober, and in the third place, there was no stump speaking such as here, and no newspaper attacks, where the candidate of the opposite party is called a robber and accused of all manner of crimes.

Feeling ran high at our elections and partisanship was bitter, but did not often

lead to fights, because there was no speaking, no incitement.

The people are naturally very peaceful. They carry arms because it is their custom, coming down from the times when the Turks were in the country and the Greeks had to retire into the mountains and maintain constant watch in order to save themselves and their families from Turkish outrage and brutality.

I don't know on what lines the parties were drawn, or what principles they advocated. I think that the difference was just that some were in power and some were out, and that those who were out wanted to get in.

All loved our king and the royal family. Next to God we revered the king, and his whole family shared our love for him. Greeks are very democratic, but the members of this royal family are fit to be the first citizens in a pure democracy—they have done so much for the country and for all the people.

As I said, the people, in spite of their arms, are very peaceful. There is no brigandage, and murder in our locality occurred not more than once in ten years. There used to be a great deal of what was called brigandage in Turkish times, but it has all passed away. When the Turks retired, two-thirds of the land which had belonged to Turks came into the hands of the nation, and since that time the class of people who were formerly robbed and harried and oppressed until they were driven into brigandage has been encouraged to take to agriculture. Now there is no more Government land. The people have bought it all up, and altho they have little money they are tolerably happy and prosperous.

On Sundays in our little village we dressed in our best clothes, and went to the church, where we heard the old priest, whom we all respected. There was only one church there, the Greek Orthodox, and tho religion was free and a man could worship as he pleased, or not worship at all, there were no dissenters among us.

At the same time there was little superstition, to the best of my knowledge. Few believed in ghosts or fairies, or any sort of supernatural appearances; nor did they believe in modern miracles, and our respect for the saints was for men

who had laid down their lives for Christianity. We had no sacred relics that miraculously restored health, and knew of none.

The only encounter with the supernatural that I ever had occurred when I was about ten years of age.

My grandmother needed a pound of wool to finish some sort of blanket she was weaving, and she sent me to the house of a neighbor, who lived far away. I set out riding a jackass and followed by a dog. I had not gone far when I met a little girl carrying a cat.

At the sight of my dog, down jumped the cat and ran for her life; the dog dashed after her, I dashed after the dog, the little girl after me. The only one who maintained his dignity was the jackass. Cat, dog and myself all fell into a stream, and when I emerged and presented the cat to the little girl I was dripping. She invited me to her house to dry, and there her mother fitted me out with the clothes of her little son, who had died a short time before. She said I looked just like him, and tearfully begged me to stay over night. I finally consented, as my grandmother would not expect me back the next day.

She put me in the little boy's bed, and went away, after bidding me good night. I went to sleep immediately, but woke up later and was horrified to see a large, round eye glaring at me. It was very large, about ten inches in diameter. I tried to scream, but I could not, and my fear was increased by the sound of footsteps coming toward me. I was sure it was the dead boy coming to avenge my taking his clothes and bed. Finally I was able to speak, and I said:

"Don't hurt me; I am going away, and I will not take the clothes with me."

But the footsteps continued to come directly toward me.

Then I jumped from my bed and desperately grabbed at the approaching thing. I seized a hairy head and pair of horns, and was more frightened than ever, feeling sure that I had caught the devil. But when the woman and the little girl came in laughing, with a light, the devil turned into the pet goat, which used to play with the little boy. The round eye also turned into a mirror.

Of the past of our country we knew

little. We only knew that once Greece had been great, the light of the world, and we hoped that the time was coming when she would again resume her leadership of men. There were no ruins and no legends and traditions among us.

The school in my little village had only four grades, and when I had gone thru those I was sent to Sparta to the High School. There I continued my education much as an American boy would do. Greece has a fine system of schools, established by the Government.

We had play in plenty. We played with marbles and tops and kites, and we practised many of the classic sports, like running, and pitching flat stones at a mark, like quoits, or throwing the discus. We were great hands at wrestling, and in certain seasons of the year we hunted and shot partridges, rabbits and ducks.

When I had finished in the High School, I went to Athens, to an uncle who was in the drug business. I worked for him for a few years, and then had to enter the army, where I spent two years in which there was nothing of particular interest.

All these later years I had been hearing from America. An elder brother was there who had found it a fine country and was urging me to join him. Fortunes could easily be made, he said. I got a great desire to see it, and in one way and another I raised the money for fare—250 francs—and set sail from the Piræus, the old port of Athens, situated five miles from that city. The ship was a French liner of 6,000 tons, and I was a deck passenger, carrying my own food and sleeping on the boards as long as we were in the Mediterranean Sea, which was four days.

As soon as we entered the ocean matters changed for the better. I got a berth and the ship supplied my food. Nothing extraordinary occurred on the voyage and when I reached New York I got ashore without any trouble.

New York astonished me by its size and magnificence, the buildings shooting up like mountain peaks, the bridge hanging in the sky, the crowds of ships and the elevated railways. I think that the elevated railways astonished me more than anything else.

I got work immediately as a push cart man. There were six of us in a company. We all lived together in two rooms down on Washington street and kept the push carts in the cellar. Five of us took out carts every day and one was buyer, whom we called boss. He had no authority over us; we were all free. At the end of our day's work we all divided up our money even, each man getting the same amount out of the common fund—the boss no more than any other.

That system prevails among all the push cart men in the City of New York—practical communism, all sharing alike. The buyer is chosen by vote.

The buyer goes to the markets and gets the stock for the next day, which is carried to the cellar in a wagon. Sometimes buying takes a long time, if the price of fruit is up, for the buyer has to get things as cheaply as possible. Sometimes when prices are down he buys enough for a week. He gets the fruit home before evening, and then it is ready for the next day.

I found the push cart work not unpleasant, so far as the work itself was concerned. I began at nine o'clock in the morning and quit about six o'clock at night. I could not speak English and did not know enough to pay the police, so I was hunted when I tried to get the good place like Nassau street, or near the Bridge entrance. Once a policeman struck me on the leg with his club so hard that I could not work for two weeks. That is wrong, to strike like that a man who could not speak English.

Push cart peddlers who pay the police make \$500 to \$1,000 a year clear of board and all expenses, and actually save that amount in the bank; those who don't pay the police make from \$200 to \$300 a year. All the men in the good places pay the police. Some pay \$2 a day each and some \$1 a day, and from that down to 25 cents. A policeman collects regularly, and we don't know what he does with the money, but, of course, we suspect. The captain passes by and he must know; the sergeant comes along and he must know.

We don't care. It is better to pay and have the good place; we can afford to pay. One day I made free and clear \$10.25 on eighteen boxes of cherries.

That was the most I ever made in a day. That was after I paid \$1 a day for a good place.

There have been many attempts to organize us for political purposes, but all these have failed. We vote as we please, for the best man. No party owns us.

I soon went on to Chicago and got work there from a countryman who kept a fruit store. He gave me \$12 a month and my board, but he wouldn't teach me English. I got so I could say such words as "Cent each," "Five cents for three," "Ten cents a quart," but if I asked the boss the names of things he would say never mind, it was not good for me to learn English.

I wrote home to my uncle in Athens to send me a Greek-English dictionary, and when it came I studied it all the time and in three months I could speak English quite well. I did not spend a cent and soon found a better job, getting \$17 a month and my board. In a little while I had \$106 saved, and I opened a little fruit store of my own near the Academy of Music.

One night after ten o'clock my lamp went down very low and I wanted to fill it again. I had a five gallon can of kerosene and a five gallon can of gasoline standing together under the stall, and in the darkness I got out the can of gasoline. I filled the lamp while it was still burning. It exploded over me and I ran out of the place all in flames. The people were just coming out of the Academy of Music when I rushed among them shouting. Men threw their overcoats about me and put out the flames, but I nearly lost my life. I was taken to a hospital, where I lay for four months. All my hair was burned off, my eyebrows and the skin of my neck and head, and I was in great pain.

Finally I was able to get out, and my landlord took charge of me and started me in business again.

He was a German; I think his name was Hackenbush. At any rate he was very kind. I had not had sense enough to get my store insured, and so had no money when I walked out of the hospital. My landlord stocked it for me with fruits, cigars and candies, and did all he could to put me on my feet, but I had bad luck and gave up.

Then I left Chicago and went roaming, riding about on freight cars looking for work. I had twenty dollars in my pocket when I set out, but it was soon gone. I could get no work. I fell in with a gang of tramps, mostly Irish fellows; we rode generally in the cabooses of freight cars. They used to beg, but I said "No, I'll starve first."

I slept at nights in cemeteries for fear of being arrested as a hobo if I slept in the parks, and for seven days I lived on eleven cents. On the eighth day I got a job carrying lumber on my shoulder. I worked two days at this and earned three dollars, but was so weak that I had to give it up.

So I went on, riding on top of a freight car. There were three of us on top of that car, two lying down and one sitting up reading a paper. We came to a tunnel, and when we had passed thru the man who was reading the paper was gone. When the train made its next stop I and my companion went back and found the missing man lying dead on the track. That ended my riding on top of freight cars. I never tried it again.

I got a job in a bicycle factory soon after this. It paid me nine dollars a week and I could save seven, so I soon had money again; but when the war with Turkey broke out I thought I would go back and fight for Greece and I did, but the war was a disappointment. I was in several battles, such as they were, but no sooner were we soldiers ready to fight than we would all be ordered to go back.

When the war was over I returned to this good country and became a citizen. I got down to business, worked hard and am worth about \$50,000 today. I have fruit stores and confectionery stores.

There are about 10,000 Greeks in New York now, living in and about Roosevelt, Madison and Washington streets; about 200 of them are women. They all think this is a fine country. Most of them are citizens. Only about ten per cent. go home again, and of these many return to America, finding that they like their new home better than their old one.

The Greeks here are almost all doing well; there are no beggars and no drunkards among them, and the worst vice they have is gambling.

From Christmas till January 5 of each

year there is great gambling in the Greek quarter, especially in the back rooms of the four restaurants. The police know all about it and it is allowed. Each of these restaurants takes in from \$50 to \$200 a night from gambling during the Christmas celebration. I suppose the police get their share. Poker is a favorite game, and other card games are played, thousands of dollars changing hands among the players.

That is our big spree, taking place once a year. Aside from that, we are very quiet and law abiding.

The Greek push cart men are the Greek newcomers. They all save and they all get up. When they have a little money they open stores of their own, confectionery, flowers and fruit.

We think that the push cart business is good for the city. The fruit is fresh every day, and people get what they want as they pass along the street. When the push cart men finish selling dear to the people with plenty of money they go and sell cheap to the poor in the evenings. Plenty of fruit is a fine thing for health.

The fruit here, tho, is not as good to eat as it is in Greece. The reason is that here it is picked before it is ripe and lies in an icehouse for weeks. That takes all the flavor, and so, tho the fruit looks so fine, it has no good taste. The icebox is a bad thing. There is no ice to the fruit in Greece.

We Greeks are doing well here, we are taking citizenship and we like this country; but the condition of the country we have left disturbs us, and we would give all we possess, every cent, all our money and goods, to see Greece free.

Greece, the country as it is today, has only 2,500,000 inhabitants, but there are 18,000,000 Greeks living in Turkey under virtual slavery. In the city of Constantinople three out of four inhabitants are Greeks. We want to see them all free.

They are ready for freedom, they are educated. There are ten Greek schools for every Turkish school in Turkey, and the people are intelligent. The American schools there have done great things, so it would be easy to set up free Greece again in all the country formerly ruled over from Constantinople before the coming of the Turks.

That would have been done long ago were it not for the jealousy of European powers. Even as it is it must soon come—the Turk in Europe is dying fast.

In addition to the schools set up and maintained by the Greek Government and the Americans, there is another source of light in Greece. That is the returned emigrants. Everywhere in Greece now one meets men who have been in America and understand how happy a country may be. They have carried back American ways and ideas, and are Americanizing the whole country. In all the little towns and villages now English is spoken.

Greeks are perhaps better fitted than any others in South Europe to enjoy freedom. They take politics seriously, and believe in voting for the best man.

In New York city many attempts have been made by the political bosses to organize us in clubs, so that we could all be voted together for this or that side; but there was no success. We wouldn't club.

We value our votes and our independence, and we don't want any boss telling us how we must vote.

Free Greece must come soon, but in precisely what shape no one knows. There are so many things to be considered. Constantinople ought to be the capital, but Russia wants Constantinople. Russia is jealous of Greece, as matters are now, because the patriarch head of her church is Greek and resides in Constantinople. She would resist an extension of our power.

Germany and Austria, also, look upon those parts of old Greece which are under Turkish sway with covetous eyes. When Turkey dies they will present themselves as the natural heirs.

And yet, in spite of all, we Greeks feel that our country will rise again; happy and prosperous, free and glorious, standing once more as leader of the nations.

How this will come, we know not; but it will be so, and that within a generation.

NEW YORK CITY.

## Darby and Joan

BY HENRY AUSTIN

### I.

Do you remember  
The red September,  
When, like an ember from sunset skies,  
The orchard olden  
Shone rosy-golden  
Thru violet haze, a vain disguise;  
And I beheld the earth's gay beauty,  
Its autumn splendor, full and fruity,  
Reflecting deep in hazel eyes?

### II.

Do you remember  
The gray November,  
When, brown and amber from hill to shore,  
With pearl tints dimmer  
Was all the shimmer  
The languid land at sunset wore?  
Yet then thru downcast lids Love beckoned,  
And you, for one shy, sudden second,  
Looked up, a woman—girl no more!

### III.

Do you remember  
The white December,  
The carven chamber, the hearth's faint beams,  
Whereat I found you,  
Soft fragrance 'round you,  
Low singing to the weird gleams?  
Then first I dared to stroke your tresses,  
And you sighed back, amid caresses,  
"Love, 'tis the Christmas of my dreams."

### IV.

Now, red September  
And gray November  
And white December, a double score,  
Gliding around us,  
Like dreams have found us  
Lovers; yes, lovers more and more;  
With sweeter, deeper, holier blisses  
In all our glances, all our kisses,  
Than e'er we dreamed in youth of yore.

### V.

And we have pleasures  
Past mortal measures,  
Have hidden treasures in Faith's calm skies;  
So might we care not,  
Since here they are not,  
That Life no longer flows, but flies.  
And I, whose day now dims to even,  
Am glimpsing, nay, beholding, Heaven,  
Reflected deep in hazel eyes.

PASSAIC, N. J.

# Literature

## The Autobiography of Alfred Russel Wallace \*

This autobiography naturally reminds one of that of Herbert Spencer, both because the two names are associated on account of their connection with the theory of evolution, and because the two books are remarkably alike in length, style and *naïveté*. It can no longer be said that autobiographies fail to give a true picture of their subjects, on account of the inevitable tendency of a man to put his best foot forward. At least this does not apply to scientists. Both Wallace and Spencer have exposed with astonishing frankness, not the bad side of their characters, because they had no bad side, but the weak side of their greatness. They are portraits "with the wart on," such as Cromwell wanted of himself. If they were not autobiographies, their friends might be as indignant against the authors as Carlyle's friends were against Froude.

An English literary man who had read Spencer's "Autobiography," but never a page of his "Synthetic Philosophy," recently published his opinion that Spencer was not a great man. One might easily be led to a similarly erroneous judgment on Mr. Wallace, for his really good work as a naturalist is contained in his scientific papers and such books as "The Malay Archipelago" and "The Geographical Distribution of Animals," while in the volumes in hand, more space is given to what must be called his hobbies, such as spiritualism, phrenology, anti-vaccination, land nationalization and the anthropocentric theory of the universe. But this is of considerable interest, because it shows how he happened to become enamored of these theories. For example, his interest in psychical research and phrenology was excited by the experiences of his boyhood, when he found that he could mesmerize his playmates, and when a traveling "Professor of Phrenology" examined his head and gave an analysis of his character and

capabilities. Fortunately he gives this complete, and most readers will find that its vague terms apply about as closely to themselves as they do to Mr. Wallace.

An amusing chapter is that devoted to his attempt to prove that the earth is round to the satisfaction of Mr. Hampton, a flat-earth crank, who had offered to give \$2,500 to any one who could show the convexity of a lake. Since, so far as Mr. Wallace could see, this required nothing more than sighting a level across a lake, he accepted the wager. He won the money, but had to pay it back later because the law does not recognize a wager, and, besides, he was involved in two lawsuits and had to bring four prosecutions for libel against Mr. Hampton, who persecuted him with malicious slanders for fifteen years. After this experience Mr. Wallace naturally felt himself justified in ignoring challenges of the anti-Newtonian philosophers. Yet he is very indignant because Romanes, Tyn-dall and other scientific friends of his took a similar attitude in regard to spiritualism, and refused to investigate his mediums, or, having investigated, came to a different conclusion than himself. It is one of the mysteries of human nature that a man of Mr. Wallace's ability should quote as an instance of a remarkable prediction the words of "Sunshine," the Indian girl who was the "control" of a London medium: "The third chapter of your life, and your book, is to come. It can be expressed as Satisfaction, Retrospection and Work." THE INDEPENDENT was, as he points out, the unconscious agent in fulfilling this prediction by asking him to write what he regards as this prophesied "third chapter," the article on "Man's Place in the Universe," which created such a sensation and was afterward expanded into a book.

It is apparent that Mr. Wallace's championship of so many unpopular causes is really due to his strong sense of justice. When he thinks any subject is being intentionally ignored or unwarrantably neglected by scientific men, he hastens to its rescue with all the warmth of his unselfish nature. The best evi-

\* MY LIFE. A Record of Events and Observations. By Alfred Russel Wallace. 2 vols. New York: Dodd, Mead & Co. \$6.00.

dence of his greatness is found, not so much in the fact that he discovered the law of natural selection simultaneously with Darwin, but that he never manifested the slightest jealousy toward one whom a meaner man would have deemed a rival. Altho he differed decidedly from Darwin as to the extent and methods of evolution, he recognized fully the superior thoroughness and completeness of Darwin's work, and gave to his own book the title of "Darwinism." It is unfortunate that this instance of "in honor preferring one another" is so rare as to be conspicuous in the scientific world.

That Mr. Wallace is a stickler for justice is shown by his devoting several pages to telling how the British Museum cheated him out of sixpence in 1867. We all of us know how a petty imposition of this kind rankles in one's heart for years, and this touch of nature, like a hundred others in the book, draws the reader to the author with almost a personal affection. In fact, after reading these two volumes one knows more of his life and character than he does of any but the most intimate of his friends. This autobiography is as self-revealing as Pepys's or Rousseau's, and as Mr. Wallace is a more estimable character, it is much more profitable to know him intimately. Besides this personal interest, the book is of value from its detailed accounts of life in Wales in the early part of the last century, of Mr. Wallace's travels in America and Asia, of how he wrote his books, of his numerous friends, and of the varied interests of his life of eighty-four years.

### Railway Rates and Legislation

So much of the literature now appearing on the subject of governmental regulation of railroad rates is either superficial or subsidized that it is a pleasure to point out three recent volumes which are worthy of consideration. Mr. Haines's *Restrictive Railway Legislation*,<sup>1</sup> tho written by a man of large and varied practical experience in railway management, has something of the academic flavor. The style is leisurely and graceful; the method is historical, the author showing, chiefly in

this country, the progress of legal restrictions upon different phases of railway activity and usually justifying them by his recital of the circumstances which brought them about; the judgments are moderate and often suspended; and deference is shown for those whose opinions differ from the author's. On the whole it is an exceedingly lucid and fair-minded review of the railway situation in its present-day aspects.

Professor Meyer's *Governmental Regulation of Railway Rates*<sup>2</sup> is in many ways the antithesis of all this. No one will charge the author with the academic habit of "sitting on the fence." He has reached clearly defined conclusions and he presents them with the passionate zeal of one who feels that a vital principle, not only of railway regulation, but of public policy, is at stake in the present controversy over the revision of the Interstate Commerce law; and he hopes that the facts which he has with rare industry and intelligence collected may be of service in the crisis that is upon us.

Professor Meyer's point of view may be gotten from the following:

"Some one individual, acting eye-single to his own long-run pecuniary advantage, and dealing in full independence as an outsider with all the persons to be managed and all the interests to be harmonized, is essential to the efficient conduct of business. Government may make and execute general laws holding the managers of the world's business to their long-run interest, which they occasionally lose sight of, and which is the interest of all; it may, in several ways, give them a general assistance; it may not undertake to do their work for them."

This sounds like a return of faith in the "invisible hand," so much relied upon by the father of Political Economy; like an echo of the Manchester school. But Professor Meyer's opinion, so old that it seems new, is worthy of attention in these days of growing reliance upon governmental wisdom. Starting upon his inquiry twelve years ago with a bias in favor of government control, he has been led to his present conclusions by a broad and painstaking inductive study. He finds that wherever the government controls rate-making the rates are deter-

<sup>1</sup> *RESTRICTIVE RAILWAY LEGISLATION.* By Henry S. Haines. New York: The Macmillan Co. \$1.25.

<sup>2</sup> *GOVERNMENT REGULATION OF RAILWAY RATES.* A study of the experience of the United States, Germany, France, Austria-Hungary, Russia and Australia. By Hugo Richard Meyer, Assistant Professor of Political Economy in the University of Chicago. New York: The Macmillan Co. \$1.50.

mined by political, rather than by commercial, considerations. Established communities seek to preserve their local advantages, as vested rights, by insisting upon distance tariffs which prevent the development of remote regions by low long-distance rates. In Australia this policy has prevented the building up of interior distributing points and has brought about an abnormal centralization of population and industry in the chief city of each province. To this is largely due the small train loads and high cost of transportation, against which traffic managers, working under inflexible government-made rates, struggle in vain. In Germany there is high technical skill shown by railway managers and the discriminations so much complained of in America are unknown; but here again machine-made rates leave no discretion to traffic managers, who are unable with the traffic they can develop, to maintain the roads on an efficient basis and prevent constant encroachments upon their business by the waterways. In fact, the Prussian roads, at least, are rapidly sinking to the position of short-distance feeders for the waterways. Similar evils show themselves in Russia and Austria. In the United States a vast territory without legal restrictions upon freedom of trade offered an opportunity to traffic managers of developing vast regions thru low long-distance rates that had no relation to the cost of service involved, thus building up numerous competing centers and making possible a decentralization of industry not dreamed of in countries having government-made rates. State regulation has checked the railways in their beneficent work. The Interstate Commerce Commission has been estopped from working colossal disaster thru a narrow interpretation of the "long and short haul clause" of the Act to Regulate Commerce, thru its economically unsound decisions in the export rate cases, etc., only by the overruling decisions of the courts. To give the commission the powers sought in the Esch-Townsend bill would, in the opinion of Professor Meyer, be little short of madness.

The book is thruout permeated on the one hand with a profound distrust of government "interference" in any form,

and on the other with a naive confidence in the rectitude and wisdom of the Napoleons of industry which few can just now share. As a statement of the difficulties of government rate-making the book could hardly be excelled; but as a treatment of the whole problem of railway rates it has notable weaknesses.

While there is little that is new in Judge Noyes's exposition of the principles underlying railway practice,<sup>3</sup> the material is presented with a directness and lucidity that entitle the book to a very high rank in the literature on the subject. The book concludes with an admirable discussion of Federal regulation of railway rates. While the author believes that a Federal commission clothed with power to fix rates is desirable, and that it is possible to frame legislation to that end, he argues very forcibly that the measures recently introduced in Congress will not stand the test of constitutionality. Instead of a commission to hear grievances, and to fix rates, subject to review by the courts, Judge Noyes proposes a court to hear grievances in the first instance, with a commission empowered to determine future rates when the court finds that existing rates are unreasonable.

### Lippincott's New Gazetteer

THE *Lippincott Gazetteer*,\* in this thoroly revised edition of 1905, may be considered an indispensable volume in every library of reference, its treatment of geography from the dictionary standpoint being more complete than that of any other current publication.

The extreme difficulty of accurate and proportionate treatment in such a volume is recognized, and while there are grounds for criticism, yet as a whole the work will fulfill satisfactorily nearly all demands made upon it. It would have been a great improvement if there had been added designating marks to indicate that the place named was on a railway or provided with telegraphic facilities.

<sup>3</sup> AMERICAN RAILROAD RATES. By Walter Chadwick Noyes. Boston: Little, Brown & Co. \$1.50.

\* LIPPINCOTT'S NEW GAZETTEER. A Complete Pronouncing Gazetteer or Geographical Dictionary of the World. Edited by Angelo Heilprin and Louis Heilprin. Philadelphia: J. B. Lippincott Co., 1906. 10½ x 7½ in. 2,063 p. \$10.00.

The full and satisfactory treatment of changes due to the Japanese-Russian war is not extended to China. Under the Chinese Empire are recorded certain other treaties, but there is no mention of two important treaties between China and the United States, viz: On Immigration and Commerce, 1880, and on Commerce, 1903. The data relative to Canton ends commercially in 1843, tho it now has a trade of \$50,000,000 annually. Its foreign suburb, called Sha-main, while its local name is Shameen, deserves separate consideration, as indeed do the

and data as to population are later than in any other similar work.

South America is treated with a gratifying fullness, perhaps too much so compared to other countries. Mexico presents many names and much data heretofore lacking. The United States, Hawaiian Islands, Porto Rico and the Philippines leave little to be desired in fullness or accuracy.

The preface, however, strikes more than one false note for a geographical gazetteer. It claims absolute proof-reading, while there is an error on a near

From Dunbar's "Howdy, Honey, Howdy." Dodd, Mead & Co.

foreign concessions at Shanghai. The tremendous advances in the development of China's mineral resources, in extensions of railways (3,400 miles already open) and telegraphs, and the institution of a modern postal system merit full consideration not herein given. China is one of the richest countries of the globe in its mineral resources, to which only about one-third as much space is given, with indefinite information, as is devoted to religion.

The geographical conditions of Russia have been well presented, especially relative to the great industrial centers,

page. Mt. McKinley's Russian name is *Bolshaya* in the preface, and *Balshaya* in the text. Irrigation advances are dwelt on in the preface, but there is no mention in the work of the remarkable irrigation system of China, on which 5,000,000 depend for their living.

In omissions and errors the Territory of Alaska fares worst, its data evidently referring to 1903, since which year its commerce, white population, and gold production have practically doubled. In correcting palpable errors, it may be stated that Sitka is not its capital; the headquarters of the military department

their writing." Nor does his analysis end there; it enters into the consciousness of the author as well, for example, in his shrewd reduction of Thackeray's cynicism. In these respects, then, Mr. Dawson is admirable—in his application of common sense to criticism and in his moral prepossessions of literature.

**Ways of Nature.** By John Burroughs. Boston: Houghton, Mifflin & Co. \$1.10.

Mr. Burroughs tells in this of the swift or chimney swallow—it is a creature of the air, and never perches on the trees or alights on the ground, resting only in the tall chimneys, where it takes refuge at night. It gathers twigs for nest building, feeds, and does all of its business of life on the wing, tireless, unresting. We would take off our hat to Mr. Burroughs and respectfully compare him to this bird—untiring and unresting in his observations of nature, minutely recording and carefully weighing, he is a son of the wild air as much as is the swift. In his latest book, *Ways of Nature*, he gives a series of short, disconnected chapters on varying topics bound together by a central theme. This theme, as noted in the preface, is the setting forth of the result of his prolonged investigations of wild life. It treats of the intelligence of the wood creatures, and attempts to discriminate between the influence of instinct and of thought, if, indeed, any of the acts of these lesser children can honestly be laid to the deliberate influence of thought and reflection. His conclusions are clearly that many of the present day naturalists—Romance Naturalists, he calls them—"read their own fancies into whatever they look upon," thus giving the wild creatures credit for more sense than they really possess. To Mr. Burroughs's mind

"The animal does rational things without an exercise of reason. The animal knows what necessity taught its progenitors and it knows that only as a spontaneous impulse to do certain things."

We have had many books, purporting to be true stories of animal life, so colored by the fancies of the authors that the honest skunks and foxes masquerading in their pages would blush for the silly picture they cut. Let us be honest with the animals, who can write not even a single magazine article in their own de-

fense, and try to see them with Mr. Burroughs in the light of sense and reason. Let us put the salt of unbelief on the tales of some hermits whose "strong imagination hath such tricks." The chapters of this *Ways of Nature* are immensely attractive to the nature lover. Especially might be noted "Bird Songs and Nature with Closed Doors."

**James Russell Lowell.** His Life and Work. By Ferris Greenslet. With illustrations. Boston: Houghton, Mifflin & Co. \$1.50.

It seems a bold undertaking, when so many excellent publications have appeared within a few years bringing Mr. Lowell's correspondence and story to the public, to print a fresh Life of him, with so little new material as Mr. Greenslet is able to offer, but his one small volume justifies itself. It is addressed to the new generation of readers, and packs within small compass the salient events of a rare life, laying stress on particulars which, tho they have not in any respect escaped the attention of former editors, may perhaps seem to the newer critics more "significant" than they seemed to an older school. A diamond will take kindly to light from many points of view. The new matter is but slight in quantity, and adds no new touch to the admirable picture we already have of Mr. Lowell's early or later life. The book as a whole is well done, the smaller details being handled with fondness for such details, and the critical notes touching all the sensitive points. They may not add any new "distinction"; they may not constitute the "definitive" Life, if one may use the shining words so dear to the latest school of writers, but it does show that the "aloofness" of the scholar of today from the "potencies" of forty years ago is diminishing. It "accents" the "resurgence" of patriotic feeling and supplies us with a "certitude" and a promise that our literature will get back by and by to that sane and stable base, when "our nature" will no longer have occasion to "resent" what Mr. Lowell calls the "closing up of the windows in its emotional and imaginative side"—when, perhaps, the many who "deny the inspiration of Scripture" may not feel obliged to "redress this balance by giving a reverential credit to the revelation of inspired tables and camp stools."

**Old Provence.** By T. A. Cook. 2 vols. New York: Charles Scribner's Sons. \$4.00.

These are the pages of one who has already won his spurs in knightly literature by his historic recital of the romance of "Old Touraine," and who apparently proposes soon again to regale us with the too long withheld delights of the "Poetry of Provence." The author's work is laden with details, steeped in the spirit of its theme, like some old cloister or cathedral carving, but there hangs round it also the sentiment of historic continuity, the deep perspective and wide reference to varying relationships that serve to vitally evoke and spiritually reconstruct the past. It is a vast field that he traverses, from "The Dawn of History"—from Greece and Rome, the "Phoenicians and Phocæans"—to our day; a field, moreover, of many special skills, like archeology and art and architecture; but a most patient collection of material is placed within our hands, requiring only interest and imagination to enliven it, and there are many excellent digressions, of leisured amplitude and pace, in which this kind of evocation is vividly accomplished for us. Indeed, the brilliancy of some descriptions is carried almost to extremes, giving evidence of a glowing as well as sensitive imagination; but it is matched and overmatched by accurate and solid summaries of information not elsewhere easily accessible and of impressive and permanent interest. It is a province—nay, a Provence—of romance with which he deals; as he says of the women, the mere names of the cities that he chronicles sound like the chiming of sweet bells, and over all is the glamor of the past and of the South. The great events and leading personages of history gleam beneath the tissue of his narrative, or stand reanimated, like some faded tapestry saved from an ancient house—St. Louis, the Crusades, Simon de Montfort; King René and the Troubadours; Petrarch, Joan d'Arc and Jacques Cœur; the Albigenses, the Waldenses, the Tour de Constance; Spain, Naples, Sicily, England and the Empire; the Saracens, Charles the Fifth and the Black Prince freebooting; these and a thousand more. The hints of character, the historic setting, the casual sentences that swim in meaning, the curious illum-

ination and recondite details of ancient life, the grateful savor of the past—for all this we are thankful. Crowded with circumstances as the book is, at times appearing the despair of any but the antiquary, pressed as occasionally the writing seems beyond the limits of good measure, until the country of your memory melts in a daze of words, yet the effect is excellent and exquisite, the information fixed and true.

## Literary Notes

"TIBERIUS GRACCHUS," an historical tragedy, by Hunter MacCulloch, late President of the "Writers' Club of Brooklyn," has just been published by Margaret H. MacCulloch, his daughter, thru the Rose & Thistle Publishing Company, of Brooklyn, N. Y.

.... "Who's Who," for 1906, is just issued by Macmillan (\$2). This is the original, not the American "Who's Who," and contains addresses and biographical data of prominent men and women of all countries, altho, of course, most of the names are English. A new and useful feature is the addition of telephone numbers and cable addresses.

.... "Charlotte Temple," which has been for over a hundred years one of the best selling books of fiction in the United States, is now published by Funk & Wagnalls (\$1.25), from the original text of 1794, with very full historical notes in regard to the identity of the unhappy Charlotte and of her seducer, to the author, Mrs. Rowson, and to the well-known grave in Trinity churchyard.

.... Thru a misprint in our issue of January 11th, the price of Professor Metchnikoff's work on "Immunity in Infective Diseases" was given as \$1.25, and the Macmillan Company have been embarrassed by orders for the book from several of our readers at that price. The book is sold at \$5.25 net, and is well worth it, not only to physicians, but to general readers who wish to keep themselves informed of the wonderful progress of medical science.

.... Elson's "History of the United States," which we reviewed at some length when it first came out (Vol. LVII, 1904, p. 451), is now published by The Macmillan Company in an enlarged and improved form in five volumes. The most important of the changes consist in the addition of 200 full page illustrations selected by Professor Hart. These are not the "battle scenes" and fake portraits which are usually found in popular histories, but are pictures of real historical value, from contemporary photographs, paintings and prints. Elson's history gives what the general reader wants, a complete and connected narrative of events from the earliest times to the inauguration of President Roosevelt.

# Editorials

## Parasites of Society

THERE is a familiar rhyme which tells us that fleas have smaller fleas to bite 'em, and so proceed *ad infinitum*. We have had an example of this fact the past few weeks in the trial of the case brought for libel by Judge Deuel, one of our city magistrates, against the editor of *Collier's Weekly*, but which was really a trial of a certain so-called "smart set" in society, and of *Town Topics* and of Judge Deuel and its editors, whose business it was to exploit the follies of rich men and women to the limit of blackmail.

There are men who are in the most honorable business of scavengering. Such are the army of white-clad men who sweep our streets. They help keep the world sweet and clean. Our police and our judges are moral scavengers, and the judge's white ermine matches the white jackets of the street sweepers. Their business is to keep society sweet and clean. But there are also vermin that delight in filth, that feed on it, the rats of our gutters and sewers and cesspools. Such is that "society journal," no matter how sleek and fat, which has no business or livelihood except to discuss and feed on the scandal and sin of those whose life is in the public eye.

What is called Society is not all bad. It is not the rule that rich people are scandalous in their personal moral character. Most rich men who have got their wealth with much labor are too busy to be otherwise vicious. They mostly have decent homes, and make no show of their wealth or their wickedness. Take our two wealthiest men, Mr. Rockefeller and Mr. Carnegie; nobody suspects the least irregularity in their most respectable, even honorable, private life. Every few days we hear of the death of some man of millions who has never been mentioned in the public prints, whom the general world has known nothing of, who was undistinguished for display, and unfellowshipped by folly, but who has lived the decent family life of the decent people. Such are most of our rich men and women.

And those who inherit wealth are not all bad, altho in their case the temptations are great. It is dangerous to be

brought up rich. Out of such come the vulgar parades and the moral scandals of Society. They are the Smart Set, the rich fools, who have no business but to waste time and money with shows and dissipation. They are themselves not real society, but its parasites, of no service to the true society, but a shame and disgrace to it, a venomous and corrupting sore to the company to which they are attached. They are in the public prints, their fads and fancies, their Lucullus dinners and their lavish expenditures, and their amours and liaisons are in the gossip of the street or the ballroom, and their divorces reach the public prints.

They are the parasites of social wealth, and on them and their vices another class of lesser parasites feeds. We have had evidence of it these last few days. It has been proved that the editors of *Town Topics* were rodents, scouring about every gutter of fat social filth, searching out the weaknesses and worse of rich fools and degenerates, even trying to bite and frighten the more decent and busy rich, and living on what is no better than blackmail. And at the head of this company of vermin was one who had earned the title of colonel, and another who bore the honor and designation of judge, and whom a jury threw out of court in fifteen minutes when he was insane enough to bring the charge of libel on one who exposed his methods. Judge Deuel will certainly have to purge the bench of his presence, perhaps will be disbarred. At any rate, he has proved himself one of the most discreditable members of a most honorable profession. But, after all, the folly, the amazing folly, of the weak and wicked rich is the most notable exhibition of this miserable affair, even if we have more disgust for the sewer-rat than for the garbage on which it feeds.

## Class Antagonism in Politics

MULTIPLYING incidents are calling attention to a momentous change in the alignment of political forces. It is a long time since political contests in Western Europe and in America have divided the population on class lines, as they divided it in the revolutionary period a generation

ago. It is true that in France, after the Franco-Prussian war, the issue between republicanism and a half resurrected Bourbonism was to some extent a question of class interest, but it was almost as much the question of secularism *versus* clericalism. So in England, the great free trade struggle in which the Liberal party was born was, from one point of view, a conflict between a rapidly growing capitalist class and a long established landlord class, but it was even more a struggle between a new and an old economic order. In the United States the great political conflicts have been sectional and economic struggles.

But that things are changing we are now reminded almost every day. The sort of political struggle that has been going on in the little state of Belgium for a quarter of a century, between a socialistic working class and a rich employing class, is making its way into the larger countries. Notwithstanding the strenuous efforts of the Kaiser and the privileged orders in Germany to bring international questions to the fore, the real issues in every part of Germany are those of agrarianism and socialism, and the Socialists have all but attained complete control in the Reichstag. Thruout France the workingman's movement plays an increasingly important part in national politics, and the Socialists have a strong representation in the Chamber of Deputies.

In the English-speaking countries the new alignments have been taking place more slowly, except in Australia and New Zealand, where it can almost be said that the work for which new alignments are made has even now been accomplished. For in both of those countries the socialistic working class controls the political situation and is putting its program into operation. In the United States the abortive attempt of the Knights of Labor to attain political importance was quickly forgotten after the disastrous strikes of 1886. Of late, however, the political interest of organized labor has grown rapidly, and the undisguised appeal of Mr. Hearst and his newspapers in the recent mayoralty contest in Greater New York was, from his point of view, justified by results too fresh in our remembrance to need specification.

And now comes the tremendous up-

heaval in England, which has sent the Conservatives all along the line into retirement, and has placed the Laborites in a commanding position.

Naturally, to cautious minds these developments are disquieting, while to the capitalistic class they seem menacing. By those whose interests are identified with the existing order, and especially with privilege of any description, a class struggle is dreaded above all things, for a class struggle means a determined attempt on the part of those that have little to take from those that have much. Moreover, it is liable to become a more or less violent struggle, attended by blood-letting and destruction.

Whether violence and destruction are, however, necessary incidents of class conflict, is an open question. They are precipitated usually by a deplorably mistaken attitude and policy on the part of the cautious and privileged, who think of and talk of the aggressive masses as revolutionists and incendiaries. Instead of seeing and accepting the inevitable drift of society toward democracy, they try to hold on to distinctions, inequalities and advantages, which they have come to think of as divinely ordained, and they resist popular demands as wanton assaults upon property and law.

Desiring above all things that democratic evolution in the United States shall go forward peacefully and constructively, we feel no little apprehension when we view the present attitude of the powerful and privileged class in American society. The revelations of greed and dishonesty in high financial circles, of an unscrupulous corruption of certain legislatures, that have been made this winter, have more than justified the hardest things that have been said against capitalism by the labor agitators. If class hatred exists it is not the active spirits in the labor movement, nor even the demagogues, that are primarily responsible for it. It has been created by the conduct of men to whom much has been given. If we presently see the wage earning classes and the farmers of America arrayed in one great political party against the capitalistic element in another party, the capitalistic class will have only itself to thank.

Under such a constitution as we enjoy, the American people ought to work out

the problems of democracy without precipitating a struggle that allows no quarter between economic classes. We ought not in this land to drift blindly on into a *régime* of purely proletarian socialism. Such socialistic measures as we adopt should be a civic socialism, adopted and supported by a broad minded citizenship, embracing public spirited men of every economic class, of every profession, of every grade of educational attainment.

### Shall the School Seek the Pupil?

THEORETICALLY there is only one best school for each boy or girl, just as, theoretically also, every Jack has his Jill waiting patiently somewhere until chance shall bring them together, and instinctive and irresistible affinity accomplish their preordained union. Practically, the course of true love and of learning does not run so smooth. It is necessary for interested parties—first, second or third parties—to assist the blind god a little, and it really does not matter which is the suitor, provided both are suited in the end. This has led in the one case to animated discussions of the etiquet of courtship, in which various views are expressed, ranging from the conventional romance to the Shaw play; and in the other case, to the question of the propriety of different forms of school advertising.

For advertising of some sort is an admitted necessity nowadays, even in the profession which ostensibly eschew it. Lawyers are very accommodating in regard to giving public addresses. Doctors are kind about offering their services in cases of street accidents. Preachers—well, of course, preachers do not advertise, but isn't it queer in what connections they get into the papers sometimes? And we have known of universities which would shudder at the idea of advertising, but did not hesitate to buy space in the editorial columns of country newspapers.

Naturally, school authorities show a decided preference for those forms of advertising that do not cost them anything. Alumni banquets, commencement addresses, and heart to heart talks with high school seniors are eminently in favor. Magazine articles one can get paid for, and books, even good books,

often pay their own way. A successful football team will get more space in the newspapers than could be purchased at regular rates by the whole college revenue, and glee clubs and dramatic companies are worthy of encouragement. The chief difficulty with the utilization of such athletic and musical organizations is that the conduct of students in strange towns is not always a good advertisement to the college.

The competition among colleges is becoming greater every year, but it is not now as great as it will be, or, indeed, as it ought to be. For, on the whole, the change in the relation between the schools and the students has been a beneficial one for both schools and students.

In the first place, the schools get more students when they go after them than they did in the days when they waited for the students to come. Education is not a thing that children cry for, and a little enticing in front may profitably supplement the parental prodding behind. We are not yet giving higher education to half enough of our population. Doubtless some are seined into college who ought not to be there, but it is better to educate too many than too few. When the faculty manifests the same energy in searching the high schools for good brains that the athletic committee shows in getting football fuel there will be a decided increase in the number of distinguished names in the alumni lists. The discovery of the exceptional man, to which Mr. Carnegie has devoted \$10,000,000, is the duty of every college. The Greeks should make more frequent raids into the land of the barbarians for the capture of prisoners. University extension, correspondence courses and all the other methods of the educational expansionist are to be employed and developed as far as possible. There is still need of more of the missionary spirit among our educated men. In Germany some are beginning to fear the growth of what they call "the learned proletariat." In this country we have no need yet to fear that, except that too many young men study for the same profession, the remedy for which is not a reduction in the number of students, but an increase in the number of studies taught.

This leads us to another benefit of the

modern method of seeking the student; it gives him a better opportunity to select the kind of school he needs. Formerly a boy was born to go to a certain college just as inevitably as he was born to bear a certain surname thru life. Nowadays, when he has several collegiate suitors, he is like the maiden, who is not obliged to bear her natal surname, but can change it for any other, of course within certain limitations due to circumstances not under her control. Parents are apt to be rather hazy on educational methods, but they have rather clear ideas of what they want made of their children. It is undeniably a fact that the progress that has been made in development of new forms of education to meet the demands of modern life has been due more to this pressure than to the initiative of educational authorities. The Procrustean curriculum is bound to break down as soon as the students or the outside world have anything to say about it. We are teaching many things now that were once thought non-teachable, and no limit to the advance in this direction is yet in sight. The most dangerous malady to which our educational institutions are liable is the "sleeping sickness," altho the tsetse fly, which causes the disease among the African natives, is unknown here. Almost anything is to be welcomed that converts *otium cum dignitate* into scholastic hustling.

Many of the recent academic catalogs show queer marks of the struggle between the older and the newer methods. Courses, dating from the time when the Seven Liberal Arts, like the Seven Stars, shone alone in their glory in the educational firmament, are mixed with parvenu studies, admitted under protest and semi-ostracized. Formal language and traditional phrases, mostly anglicized Latin, are interlarded with paragraphs of advertising in newspaper American, while the incongruity is intensified by pretty campus pictures of tennis matches and co-educational settees. Some schools have sensibly abandoned the attempt to patch old garments with new cloth, and so they issue two publications, one containing the curricula, register and other official information presented with unimpaired scholastic dignity, and the other compounded of equal

parts of half-tone and hustle. Caps and gowns look well in a procession, but they are inconvenient when one is running to catch a student.

A similar change is coming in educational advertising in the magazines and newspapers. The formal card of address is being replaced, as it should be, by a frank statement of the distinctive features of the school. If it has no distinctive features, the less it advertises the better for the public. To get the right student into the right school is so important and difficult a task that all methods must be wisely utilized. That is one reason why we think the educational advertisements in *THE INDEPENDENT* are as useful as any other part of the magazine. We hope our advertisers will see to it that they are as interesting—and as truthful.

### Euthanasia Once More

THE daily papers of recent date have once more had many references to the question of shortening the lives of those who are incurably ill or who are suffering so severely as to make life an intolerable burden. The renewal of interests in the old subject is due to the introduction of a bill into the Ohio Legislature providing that when an adult of sound mind has been fatally hurt or is so ill that recovery is impossible or is suffering extreme physical pain without hope of relief, his physician, if not a relative and if not interested in any way in the person's estate, may ask his patient in the presence of three witnesses if he or she is ready to die. If the answer is affirmative, then three other physicians are to be summoned in consultation, and if they agree that the case is hopeless they are supposed to make arrangements to put the person out of pain and suffering with as little discomfort as possible.

Perhaps the greatest surprise with regard to the bill is that, in spite of the awful frank cruelty and crudity of its terms, it was drawn up by a woman. Another feature which has brought it into prominence is that at least, according to common report, this plan of legalizing the taking of human life has received the approval of so distinguished a scholar and humanitarian as Dr. Charles Eliot Norton.

There is a final surprise, and that is that the bill, instead of being stifled in committee or killed at its first reading, was, after its introduction into the Ohio Legislature, ordered to its second reading. Of course, there is no question that in the present state of our civilization at least, any such legislation should ever be considered seriously, and yet the advocates of an easy death for the incurable continue to attract increasing attention every year.

The supreme difficulty, of course, would always be the decision that any case was absolutely hopeless. Every physician of large experience has seen patients whose friends were told, after a consultation of most distinguished physicians, that there was no hope for them, and yet who not only survived the immediate danger but continued, sometimes for months and even years, to enjoy an amount of good health that made life well worth living. No physician, then, of extensive experience would care to assume the responsibility for taking human life under such circumstances, as has been suggested, quite apart from the consideration of the moral law in the matter. On the other hand, there is much of sympathy wasted over the supposedly hopeless suffering that some of the severely ill are thought to bear. The remedies at the command of physicians at the present time enable them to relieve nearly every variety of pain. Indeed, in most cases nature's sympathetic reflection to other organs leads to a benumbing of the patient's feelings that makes the suffering of the very ill more apparent than real. Most of the tossing patients who seem to suffer so much are utterly unconscious of pain, many of the moans that are supposed to represent reactions to pain and discomfort are only reflex and are not conscious. This is not a matter of conjecture, but knowledge, and the like can be seen every day under anesthesia, when patients moan and toss yet have no recollection of pain after recovery. Bystanders in their sympathy, especially if they are near relatives, are likely to suffer much more pain than the patient who seems to call for their condolence so much.

Besides this, if suffering is extreme and has to be borne consciously, the use of

the proper remedies will not only relieve the pain but often tend to shorten the time that it has to continue. Not infrequently a physician faces the alternative of having to use anodynes, even tho they may prove harmful to the patient's general condition. The restless sufferer from pneumonia, for instance, who complains very much of discomfort, may have to be given opiates in such quantities as will likely have a distinctly bad effect upon the course of his disease. Here, however, the doctor is facing the alternative of allowing his patient's restlessness to do him injury or by quieting him, of taking his chances that nature will ultimately overcome the affection in spite of the lulling effect of opium upon all tissue change. As far as this goes, every physician is ready to take his share of the responsibility that his duty brings him. Beyond this, however, and especially as regards the idea of deliberately shortening human life because of the pain involved in it, the physicians of this country as a body would surely be opposed. Human life cannot be trifled with in that way, and even hopeless pain may have some beneficial place in existence of which we know nothing. It is only in recent years that we have realized that pain under ordinary circumstances is a protective reaction of nature rather than a visitation for physical or moral ills. Without pain as a warning irretrievable damage might be inflicted on tissues before their pathological condition was disclosed by failure of function. The presence of the mystery of pain without any such conservative purpose gives us pause as to the significance it may yet prove to have in the scheme of things as our growing knowledge enables us to understand what lies behind.

~

### The Law's Delays

WILLIAM M. RICE, a feeble and eccentric old man who had accumulated a fortune of \$8,000,000, was murdered in this city on September 23d, 1900. Albert T. Patrick, arrested a few days later, was indicted for the murder in the following April, convicted in March, 1902, and sentenced to suffer the penalty of death. A lawyer himself of considerable ability, he has employed other lawyers eminent in

their profession, and now, nearly five and a half years after the death of his victim, whose money he sought to obtain by criminal violence and fraud, he is still alive. All the devices by which the execution of sentence could be prevented or delayed have been skillfully used for his benefit. With the lapse of time, remembrance of the wrong done to Rice has been dimmed in the public mind, and sympathy for the man found guilty of the murder has been excited. At last, all the obstacles set up by his counsel having been overcome, January 22d was named as the day for his final punishment. But now a reprieve has given him at least two months more of life.

This is a notable example of the law's delay. At the same time we see another in Chicago. On December 30th, 1903, the whole world was shocked by the loss of more than 500 lives in the Iroquois Theatre, and by the evidence of the criminal violation of law which exposed so many to the tortures of a horrible death. But not until last week was it decided that the manager of the burned theatre must go to trial.

Hundreds of cases might be cited to illustrate that delay of justice which in recent years has been the subject of many learned addresses and several official investigations.

One cause of it is that we have outgrown and are constantly outgrowing the provision made for the trial and punishment of offenders. This is true of civil controversies as well as of criminal cases. Our people, especially in those places where the population has been concentrated and has most rapidly increased, have not been willing to pay for courts and judges and prosecutors enough to keep pace with this growth.

Another cause is that criminal laws and the statutes governing criminal procedure are not only in some measure a survival coming down from remote times when a defendant's need of safeguards was much greater than it is here at present, but also are to a considerable degree the work of men engaged in the business of defending accused persons. Some of them have been framed for the benefit of the criminal rather than for the public good.

Mr. Roosevelt said at Little Rock, in October last:

"At present the right of appeal is in certain cases so abused as to make it a matter of the utmost difficulty ultimately to punish a man sufficiently rich or sufficiently influential to command really good legal talent. I am speaking of what I know, for I am speaking in the light of experience during the past three years in trying to get at certain public offenders who have been indicted, and some of whom it has been almost impossible to get into the jurisdiction of the courts at Washington in order to try them."

The use of money promotes delay, not because the money is used corruptly, but for the reason that it enables an indicted offender to take advantage of all the twists and turns of the law, with which expert counsel are familiar. Commenting upon present conditions in Chicago, where many murders have recently been committed under circumstances of peculiar atrocity, the *Tribune* of that city remarks that the fact that one-fourth of the male convicts at Joliet and half of the female convicts there are negroes "does not argue for the criminality of the race, but its poverty":

"Negroes do not profit by the maladministration of criminal justice in Chicago because they have not the money to hire the right kind of shyster lawyers to defend them. The criminal laws of Illinois were not made by the people for their protection. They were made by lawyers to promote the interests of lawyers."

Not only has the population in many places outgrown the facilities for enforcing justice, and has declined so to increase those facilities that they shall be equal to the demand for the use of them, but in certain cities the people are unwilling to pay for a sufficient number of officers to preserve order, protect peaceable citizens, and arrest those who violate the laws. This is true of Chicago, where the people have recently been shocked, as we have said, by an extraordinary number of brutal and atrocious crimes, some of them committed at mid-day on the streets in highly respectable residential districts. Altho the city has a population of 2,250,000 and covers an area of 100 square miles, it employs only 2,190 police patrolmen. The number in service eight years ago was 2,738, so that this protective force has been reduced by 20 per cent., while the population has increased by about 30 per cent. Every patrolman, the Chief of Police says, is trying to do work for which three

should be assigned. It is great folly so to restrict the number of policemen, and the terrible cost of such folly is seen in the many recent exhibitions of criminal violence.

An insufficient supply of courts and prosecutors is not the only cause of the delays of justice, nor can crimes of violence be wholly prevented by an adequate force of police; but for all the courts that are needed, and for as many policemen as the conditions demand and the experience of well-governed communities suggests, the people of a city should be willing to pay. Nothing can be saved, but much will surely be lost, by a failure to provide adequate means for restraining the disorderly and punishing the guilty.

### Protestant Parochial Schools

THERE are practically no Protestant parochial schools in this country except those maintained by the Lutherans; and among Lutherans only those congregations that do not speak English maintain such schools. It is different with the Catholics. Their ecclesiastical system is so rigid that they can require and compel their clergy to keep up parochial schools. It is a law of their Church that no priest can be the irremovable rector of a church unless it has a parochial school. Even ecclesiastical penalties may be visited on parents who do not send their children to the parish school.

There is no such ecclesiastical compulsion upon Lutherans, but with them it is the pride of language which keeps up the parochial school, even when they stoutly declare that it is for a purely religious purpose. The statistics make this perfectly plain.

According to the latest statistics there are 65 synodical organizations of the much divided American Lutheranism. They have 4,795 parochial schools, with an attendance of 239,941 pupils. But not all Lutheran congregations maintain such schools; they are almost wholly confined to such as speak other languages than English. About three-fourths of the 1,846,610 reported Lutheran communicants, speaking German, Norwegian, Swedish, Danish, etc., support schools in which their children learn the language of their parents as well as their cate-

chisms. There is a single English speaking body of Lutherans—the English Synod of Missouri—that supports schools, and it finds it difficult to maintain them, for of its 74 congregations, with 10,380 members, only 19 report schools. In some of the larger German and Scandinavian synods almost every congregation maintains a school of its own. Thus the greatest Lutheran body in the country, the German Synod of Missouri, which has 2,367 congregations, large and small, has 2,110 parochial schools, the smaller ones taught by the pastor of the church. In the conservative non-English synods of the West it is in most cases regarded as simply a *sine qua non* that there *must* be a church school to indoctrinate the youth.

The purely English sections of the Church have no schools of the kind. The General Synod, with its 25 smaller synods, has not a single church school to report; and the same is true of the eight English synods comprising the United Synod of the South. In the East there are practically no schools of this kind. Even the old "Mother Synod," that of Pennsylvania, with a membership of 136,495, has only 31 such schools.

As might be expected, where parochial schools flourish there are few Sunday schools. The Missouri Synod, which reports 97,138 pupils in its parochial schools, reports no Sunday schools at all, altho it has a membership of 462,867. The English-speaking churches send their children to the public schools on week days and to the Sunday school on Sundays.

To be sure, the advocates of the Protestant parochial school protest loud and long that the preservation of a foreign language has nothing to do with the maintenance of these schools; but the fact is that they are dropped as soon as their supporters come to prefer the English language. Even in the Catholic Church it is the Germans who are most in love with the parochial school, while the English speaking Catholics find it hard to keep them up, and they send their children to other schools as soon as they can. It is not strange that the Germans should be the conservative element in the Catholic Church, holding on to the customs of their youth in the

Fatherland, where Church and State are united.

It is a most serious question, under our system of complete separation, whether the Church is able to teach religion to the children, who learn nothing beyond good morals in the public schools. Can the Sunday school, supplementing parental instruction, or any other such religious teaching given on a Saturday afternoon, give as good religious instruction as that given in parochial schools, or in the public schools of Germany or France? We think this can be done, and we believe that our youth are growing up quite as religious as those of Europe. But here we have another test. Are the youth in the English-speaking Lutheran synods, and their adults who have grown up under the American system, as religious, as moral, as temperate, self controlled and intelligent as those trained in, for example, the German Missouri Synod? We think they are.

### Remaking the Army.

IT is not surprising that the article of Col. Charles W. Larned, in the *International Quarterly*, on "The Regeneration of the Enlisted Soldier," should have attracted the attention of military journals and military experts. In the first place, Colonel Larned is qualified to speak. He is a graduate of West Point; he early saw service in the plains; for many years he has been engaged as a professor at West Point in training officers for the United States Army, and is now the Dean of the faculty of that institution. Then again, Colonel Larned is not only entitled to speak, but he has something to say, and he says it in a forcible and effective way.

For years the problem before the War Department and the General Staff has been to deal with the great number of desertions. In 1905 the strength of the army was 63,022 men, and the number of desertions 6,533, or 10.3. From 1900 to 1905 the percentage of desertions has steadily increased from 4 to 10 per cent. That is to say, one man in every ten finds the service irksome and deserts. The attempt to reduce the number of desertions by rigorous punishment has failed. The large majority are never caught or con-

victed. Drastic deterrents have never been potent in reducing crime in civil life, and we cannot expect a different result in applying the same means to military offenses. On this subject Lieutenant General Chaffee, Chief of the Staff, says: "Trial, conviction and punishment by dishonorable discharge and confinement for one or three years of the few deserters that are apprehended or surrender themselves have, in my opinion, but slight influence as a restraining force on the service generally." The only remedy which General Chaffee has to suggest is the passage of laws in the different States and Territories disfranchising deserters, which he thinks might be a more effective deterrent.

Colonel Larned, on the other hand, finds in the large percentage of desertions but an indication of a larger and more difficult problem—the function of a standing army in time of peace in a great and peaceful republic. He points to the fact that the social viewpoint of the military function has changed, but that the underlying conception of military service is still fundamentally feudal:

"The bond of service by which the soldier is held; his social inferiority with respect to his officer; the arbitrary laws, and circumscription of civil rights; the annihilation of initiative and complete subordination of will; the absorption of the entire fruit of his labor, and the claim over his life, place him in an environment of coercion wholly artificial as compared with that of his civil brother, and under conditions closely resembling those of the feudatory villain of the past."

Colonel Larned points to the fact that the private in the American service has gained an individuality and initiative entirely at variance with the automatic idea:

"The problem of today and the future is how to preserve these fundamentals of patriotism, pride in the military profession, subordination to authority, and discipline in military performance during the long periods of peace training without the sacrifice of individuality, initiative or self-respect and do this in competition with civil pursuits; how to change the conditions of military service so as to transform the service into a privilege."

In answering this question, Colonel Larned urges that the army be converted into a military school for the enlisted man as well as for the officer, and the enlisted man paid as much as the average laborer in civil life. He would concen-

trate the United States troops into a few carefully selected posts, provide that all promotions to commissions in the regular army, other than those from the Military Academy, shall be from enlisted men rating highest in theoretical, practical and moral attainment in different branches of the regular army. Thus the soldier would have an adequate pecuniary reward and an adequate opportunity. The grade of the enlisted personnel would be entirely changed; it would develop individuality and initiative, and provide a body of 60,000 intelligent, highly trained soldiers, the great majority of whom would make good junior commissioned officers for volunteer forces.

The scheme is worked out with more or less detail, but it is the essential principle which concerns us. In spite of the fact which we pointed out a few weeks ago, that American soldiers are paid vastly better than those in foreign armies, Colonel Larned shows that the private soldiers are paid much less than ordinary farm laborers. In support of his position that the economic basis of the soldier life, compared with that one of civil pursuits, favors desertion, we may point to the fact that desertion in the army is almost entirely confined to the white soldiers. The fact that so few negroes desert in proportion to the number enlisted is partly due to their greater amenability to discipline, but also to the fact that the negro has much less to gain in leaving the army for some occupation in civil life: his rate of pay is much nearer that which he would receive outside. An army officer high in the recruiting service at Washington, when questioned recently by a member of the staff of THE INDEPENDENT, said that if the same equality in pay existed between white soldiers and men in civil life, the number of desertions would be far less numerous.

This scheme, tho radical, is by no means utopian. It is time that we should abandon the European tradition and develop a soldier who corresponds more with the genius and spirit of American life.

As an illustration of the conditions that create dissatisfaction in the army, we publish the following from a non-commissioned officer:

During recent years there has grown up in the Army (in three regiments to the writer's

knowledge and probably in many others), *one* system, at least, in which neither the interests nor the wishes of the men are ever regarded; a tyrannous habit, because it is unjust and absolute, there being practically no appeal.

The case in point is this: Until recently authority for the re-enlistment of married soldiers had to be obtained from the Secretary of War. During those times the only requirement was for the request to be accompanied by a statement of the soldier's immediate commander that his re-enlistment would be to the interest of the Government. Later this authority was delegated to regimental commanders absolutely, to accept or reject as they see fit. Now the requirements are, to my knowledge in three regiments, and I have heard that the same holds good in many others, that as the price of the privilege of serving in the ranks of Uncle Sam's Army, the married soldier must consent that as long as his wife lives in a military post she must be willing to be a servant for any officer who may desire her services; this without regard to her household duties, her husband's claim upon her, his rank, or to what she is to receive for her services. In other words, in the re-enlistment of married soldiers it has ceased to be a question as to whether or not the re-enlistment is to the interest of the Government, and has become one of whether or not it will be to the interest of the officers of his regiment.

In this case the soldier has an appeal—to the War Department, but wherein would he be benefited? Of course the War Department might order the practice discontinued—with the result that the soldier, after twenty-five of his best years given to the Government, and with but a little money saved (depending on his prospective pension on the retired list) would find himself thrown out of the only employment for which he is properly fitted; for the regimental commander would simply say, "I will use my authority to reject you."

This is not right. An officer has no more right to require such an agreement of a soldier as the price of permission to serve his country than the head of any department has to require a retainer of a civil service appointee as the price of his permission to hold his job.

If the wives of soldiers have become a nuisance to the army, let the nuisance be abolished by making it a rule that no more enlisted men, or officers, shall have their wives at army posts than are supplied separate quarters by the Government. Officers should not be allowed to require married soldiers to sell their wives' privileges for permission to serve the Government.

**The Annapolis Court Martials** Very properly Secretary Bonaparte is dismissing from the Naval Academy students guilty of hazing, and proposes a law for violation of laws of discipline. The bill defines hazing thus:

"Any unauthorized assumption of authority by one midshipman over another midshipman,

whereby the last mentioned midshipman shall or may suffer or be exposed to suffer any cruelty, indignity, humiliation, hardship or oppression or the deprivation or abridgment of any right, privilege or advantage to which he shall be legally entitled."

That would not be a bad definition to be adopted by college officers in their treatment of hazing. But especially is it to be commended to those who conduct institutions for education supported by the Nation or the States. That students of a State university, created by laws of the State, its funds supplied by State law, its students taught without charge by acts of a legislature, should disobey its laws, should recklessly flout and despise them, is especially bad. Students of other institutions are under duty to the laws only as all other citizens are; but students in a State university are particularly guilty when they spurn the hand that feeds them. State universities have a peculiar duty to teach reverence for law. We have been told that our military schools at West Point and Annapolis especially cultivate the virtues of truth and honor. They ought to, for they are paid to be examples of these virtues; and yet there has been evidence in these last court martials quite to the contrary. One would think that of all men a student should be a gentleman, should set an example of pure manliness—law-abiding, self-respecting—something superior to the men who sweep our streets, and no burden on the watchfulness of our police. Such is too often not the case; but especially on our State universities rests this obligation to see that the laws are cheerfully, faithfully, reverently obeyed and public decency enforced.

#### Governor Wright and Governor Ide

We would add something more to what we said last week as to the retirement of Governor General Wright, and the succession of Mr. Ide. So far as Filipino opposition has been directed toward *persons* in the Government, it has been directed toward Mr. Ide more than Mr. Wright. Ide is felt to have been responsible for the instances where, in small ways, the executive has sought to impose its will upon the judiciary. No flagrant case is cited, and probably none

exists. But in small ways, from the Department of Finance and Justice, some judges have been made to understand that "the Government" wished so and so. Such things became known, and it is plain how they would stimulate a tendency to believe that there was executive control of the courts, and that there was a regular "Government machine," comprised of police power (constabulary), prosecuting power (under Ide's control), and judges (subservient to "indications") which would railroad to jail the men accused by the Government. One can see what harm such a popular notion would do, even if unfounded, and there was some foundation for it. It was Mr. Ide who brought forward and pressed to enactment the internal revenue law of 1904, which aroused such opposition. He is energetic and "up and at it." Wright is easy-going, and Ide was always at his elbow pressing his own opinions and measures. The Filipinos are right in saying that Ide was the real Governor-General. The Cavite-Batangas affair, suspension of habeas corpus trial of Rovas, prosecution of *El Renacimiento*, and obstinate support of bad constabulary officers alienated much sympathy from Wright last year. Still, he is personally liked by the Filipinos even today. Mr. Ide has been "let down" and is allowed the honor of a few months as Governor-General before retiring. He is trimming a different course now and seeks conciliation with Filipino opinion.

#### Irish Home Rule

In the new Liberal Ministry there is but one Irishman, James Bryce. But the Irish Nationalists could not be represented, for they are pledged not to accept any office under the Crown, but to sit with the Opposition members until Home Rule is granted. It is a curious situation by which they sat with the Liberals when the Tories were in power, but will now sit with the Tories when the Liberals are in power. Mr. Redmond himself, their leader, could not honorably accept a place in the Cabinet. But this does not mean that they have no friends in the Cabinet. The Premier, Sir Henry Campbell-Bannerman, is with

them; so are James Bryce and John Morley, and Herbert Gladstone, and John Burns, and the Earl of Aberdeen. And this does not mean that the Cabinet will introduce a bill to give Ireland a Parliament. It is much more likely to institute reforms and a better land act, and to prepare the way for a representative Irish Parliament. If Ireland needs to manage its own affairs, so equally does Scotland or Wales, or England. Too much burden is put on the British Parliament. Our way of devolving local legislation in local legislatures is much better.

**King Christian** King Christian was not a great man, but he had the wisdom to rule prudently and to let popular movements have their way. He was not rich and could not afford the regal display of great courts, and so he could invite his children and grandchildren to holiday, where convention was thrown off at his quiet palace; and there monarchs and their families played holiday and cemented peace. He cultivated the art of agriculture, and his little kingdom became the purveyor of dairy and farmyard products for Europe. Many are the stories told of the unpretentious life of his court, where his distinguished visitors threw off the cares and style of royalty. One was told by Hrolf Wisby in THE INDEPENDENT of September 17, 1903. He and his eldest son, the Crown Prince Fredrik, and the late Czar, Alexander III, were on a pedestrian tour in Denmark. Weary of walking, they asked a peasant to give them a ride home, to which he assented. It was evident from the peasant's manner that he had no idea who were his august passengers. The King made up his mind to play a practical joke on the man, but it was turned upon himself. Nudging the Czar with his elbow, the King said to the peasant: "Good man, have you ever seen the Crown Prince of Denmark?" "Crown Pete? No," replied the man, his answer being a vernacular pun on the Crown Prince's title; "but I know he lives up there in the Castle." "Well, I am the Crown Prince of Denmark," announced the holder of that title, restraining himself from laughter

with great difficulty. "And I am the King of Denmark," supplemented King Christian, impressively. "Czar of Russ!" broke in the late Czar with his barbarous pronunciation of Danish, which, in the tongue of the present Czar Nicholas, sounds like that of a native. The peasant looked them over slowly, one by one, with a mischievous eye, and barely removing his pipe-stem, said in a slow, crooning voice: "Weel-a-weel, if you're the Crown Pete, and you're the King Bee, and that is the Czarri o' Russialand, then—I am the Imperor of China."

The Confederate Veterans had a dinner on Wednesday evening of last week at the Waldorf-Astoria in this city, at five dollars a head. They have found profit in business here. Mr. F. Hopkinson Smith, author and artist, one of the Southerners who have found hospitable welcome at the North, made an address that stirred great enthusiasm. He talked about the good old time negroes, the black mammies; but to have given them immediate liberty, he said, was all wrong, and to give them the franchise was a crime. He loved them, as carpenters and blacksmiths. "Let us teach these men to be our friends, but never our equals." Then cheer after cheer rang thru the room, and they sang "Dixie." Meanwhile General Joe Wheeler was dying near by, and at a more modest dining-room the Scotchmen were celebrating the birthday of the man who wrote "A man's a man for a' that."

A Quaker hazing! At Earlham College, Richmond, Ind.! We refuse to believe the story in the papers that the students made war not only on the student hazed, but on a professor who attempted to defend him. We have fallen on evil days.

We were in error in giving the title of "Lieutenant" to Mr. T. B. Godson, writer of "A Defense of the Army" in a late issue. He asks us to make the correction.

# Insurance

## French Control of Insurance

LATE dispatches from Paris announce that decrees have issued which place the entire control of French insurance companies under the Minister of Commerce. Provision in these decrees has also been made in the interest of policyholders. The foreign companies doing business in France were not mentioned in the decrees as published in the official journal. The details of insurance are considered at some length, and special mention is made regarding company formation, registration, office records, including book-keeping and the expenses of management. Under the new regulations it is essential for a company to begin business within one year after notice of its formation has been given, otherwise its registration is void.

The expenses of company formation are limited in the decrees promulgated, in so far as mutual or tontine companies are concerned, to a proportional part of the original capital, expressly stipulated, while in the case of other companies the formation expenses must not be in excess of 25 per cent. of the original working capital. Without exception these expenses must be written off within fifteen years.

Extensive calculations have been made regarding premiums, reserves and the expenses of management. In accordance with these calculations mutual companies which do not pay commissions or give rebates will be limited to interest charges of  $3\frac{1}{2}$  per cent. on the expenses of management, 6 per cent. on gross premiums and 1 per cent. for collections.

Companies not in the class indicated will be permitted to deduct for mortuary policies  $3\frac{1}{2}$  per cent. for management, 6 per cent. on gross premiums for collection, and 1 per cent. of assured capital for canvassing.

In the case of endowment policies the limitations which apply are one-tenth of 1 per cent. of assured capital on each annual premium for the expenses of management,  $2\frac{1}{2}$  per cent. on each gross premium for collection, and one-half of 1 per cent. on each gross premium for canvassing.

Five per cent on the amount of each annuity will be allowed on annuities, to cover the managerial expenses; 3 per cent. on the gross sums of such insurance are allowed for canvassing.

Each and every insurance company will be required to keep a separate register for the differing kinds of policies, together with data regarding their beginnings and expirations, the number of premiums payable, and of their annulment because of lapses.

The whole French experiment cannot help being a direct object lesson to American companies, and the way our Gallic neighbors work out their problem will be very interesting to all insurance companies doing business in the United States.

## The Causes of Fires

THE Continental Insurance Company has analyzed the causes of 50,955 fires with which it has been concerned in the settlement of claims arising under policies issued by it during the five years from 1899 to 1904. From this table it would appear that the greatest fire hazard arose because of defects in the various heating systems used in the buildings covered by the Continental's policies. The list will be found interesting alike to the insured and the insurer:

|  | Per cent.<br>of total. |
|--|------------------------|
| Unknown .....                                      | 6.32                   |
| Outside causes, exposures, etc.....                | 13.96                  |
| Lightning .....                                    | 8.23                   |
| Incendiary .....                                   | 5.34                   |
| Carelessness.....                                  | 17.91                  |

# Financial

## Trust Company Reserves

In the Senate and also in the Assembly, at Albany, there has been introduced a bill, supported by the State Bankers' Association, requiring trust companies in this city to maintain a cash reserve of 15 per cent. against deposits. For trust companies in other cities the bill requires 10 per cent. In either case, half of the reserve may be money on deposit with other banking institutions, but the other half must be in the company's vaults. This is by no means an unreasonable proposition, and we regret that there has been no agreement of the banks and trust companies as to the maintenance of a reserve by the latter. It will be recalled that the Clearing House Association insisted upon a vault reserve somewhat exceeding that which the bill requires, the result being that all but two of the companies withdrew from it. President Nash's later suggestion of a compromise was in accord with the terms of the bill now pending at Albany, but it was not accepted by either party. The average vault cash reserve of the thirty-five Clearing House banks in November last was 23.7 per cent., or 32.3 with deposits elsewhere included. At the same time the average vault cash reserve of thirty-two trust companies having more than \$1,000,000,000 of deposits was only 1.84 per cent., and their average, when deposits in other institutions were added, fell below 15 per cent. And bank reserves were then exceptionally low.

Eventually, the companies will be required by law to maintain a reserve equal to, or not much below, that which the pending bills require, and such a settlement of the question ought to be reached now by harmonious agreement. The methods of the companies and the character of their business have greatly changed in the last few years. So far as they are banking institutions, and some of them are quite distinctly institutions of that kind, they should be subject to the regulations imposed upon banks. Reasonable reserves are needed in the interest of safety. The Clearing House Association should include the

companies, and thus more adequately represent all the financial interests of our American money centre. The suggested reserves would be an additional element of strength in time of stress. A reserve requirement is not uniformly opposed by the companies in this city. It is favored by some, and we understand that few, if any, object to a required reserve within certain limits, as to which there is no concert of opinion. They ought to agree among themselves as to a reserve policy, and then seek an agreement with the banks.

## The Year's Great Foreign Trade

OUR foreign trade in the calendar year 1905 surpassed all previous records, and the gain was shown most clearly in the year's closing month, when exports (\$199,709,068) exceeded those of the highest preceding month by 14 per cent., and imports (\$101,155,363) were greater than those of any month in any previous year. The year's exports (\$1,626,962,343) show the exceptionally large increase of \$175,643,603 over those of 1904, and the gain in imports was \$143,449,656. The sum of exports and imports is now approaching three billions, being \$2,806,321,189, against less than \$2,500,000,000 in 1904, only \$2,300,000,000 in 1900, and less than \$1,700,000,000 in 1895. In the following table are shown the exports and imports for a series of years, beginning with 1895, the last of the years in which the exports were less than \$1,000,000,000:

|        | Exports.        | Imports.        | Excess Exports. |
|--------|-----------------|-----------------|-----------------|
| 1905.. | \$1,626,962,343 | \$1,179,358,846 | \$447,603,497   |
| 1904.. | 1,451,318,740   | 1,035,909,190   | 415,409,550     |
| 1903.. | 1,484,753,083   | 995,494,327     | 489,258,756     |
| 1902.. | 1,360,685,933   | 969,316,870     | 391,369,063     |
| 1901.. | 1,465,375,860   | 880,419,910     | 584,955,950     |
| 1900.. | 1,477,946,113   | 829,149,714     | 648,796,399     |
| 1899.. | 1,275,467,971   | 798,967,410     | 476,500,561     |
| 1898.. | 1,255,546,266   | 634,964,448     | 620,581,818     |
| 1897.. | 1,099,709,045   | 742,595,229     | 357,113,816     |
| 1896.. | 1,005,837,241   | 681,579,556     | 324,257,685     |
| 1895.. | 824,860,136     | 801,669,347     | 23,190,789      |

Since 1895 the gain in the total has been 72 per cent.; exports have almost been doubled (an increase of 97 per cent.), and 47 per cent. has been added to the imports.

Vol. LXI

NEW YORK, THURSDAY, FEBRUARY 8, 1906

No. 2984

## The Treaty With Santo Domingo

There was some excitement on the Democratic side of the Senate last week, owing to indications that several Democrats had decided to vote for the Santo Domingo treaty. It has been understood that all the Republicans would vote for it, altho a few of them would do so with reluctance, but the treaty has not been taken up for action because there are not enough Republican votes to give it the required two-thirds majority. Four Democratic votes are needed. On the 31st ult., Mr. Patterson, of Colorado, surprised his party associates by making a speech in which he defended the treaty and warmly commended President Roosevelt. The latter, he said, had been justified in all the steps he had taken with respect to Santo Domingo. Mr. Roosevelt was honest and patriotic in all things. He had done much to remove sectional prejudice and much that should commend him to Democrats. The Senator expressed a doubt whether, if the Democrats had elected their candidate in 1904, "we should now find him striving so earnestly, zealously and fearlessly in sustaining the rights of the people against those who unite to oppress the masses, as the present Chief Executive." The President was engaged in a contest against the money power, and had the support, the Senator believed, of the people of the West and even those of the South. While Mr. Patterson was making these remarks nearly all of the Democrats withdrew to the cloak room, where it was decided that a caucus must be held without delay. It has been customary to regard the decision of a caucus as a binding one when made by a two-thirds majority. On the following day it was reported that not less than a dozen Democrats intended to vote for the treaty. Several of those

mentioned made haste to deny that they had decided thus to support the Administration. It finally appeared that only three had reached such a decision. These were Messrs. Clarke, of Arkansas; Patterson, of Colorado, and McEnery, of Louisiana. There was a Democratic caucus on the 3d, and it was in session for five hours. Mr. Patterson spoke at length, declaring his purpose to vote for the treaty and expressing a willingness to resign his committee places, which had been assigned to him by the party managers. He departed before a vote was taken. Mr. McEnery was absent, and so was Mr. Taliaferro, of Florida, as to whose attitude there was some doubt. Mr. Clarke cast the only negative vote against a resolution declaring that the treaty ought not to be ratified, but Messrs. Mallory, Foster and Daniel joined him in voting against another resolution saying that it was the duty of every Democratic Senator to oppose ratification. Mr. Daniel and Mr. Mallory spoke earnestly against the coercion of Senators by a caucus decision concerning non-partisan questions. On the 5th, Mr. Patterson introduced in the Senate a resolution referring to the action of this caucus and saying that such dictation was plainly in violation of the spirit and intent of the Constitution. Any attempt thus to coerce a Senator, it continued, was an invasion of his rights; a Senator submitting to such coercion degraded his State; if he did not vote in obedience to his sense of duty alone he degraded his high office and assailed the Senate's dignity. Upon this resolution he will hereafter make an address. At last accounts there were in sight only three Democratic votes for the treaty.—The sum deposited in New York for foreign creditors by the American collectors in Santo Domingo now exceeds \$1,000,000. In Dr. Jacob

H. Hollander's report to the President, the face value of Santo Domingo's entire debt is placed at a little more than \$40,000,000. It is said that a searching investigation would reduce this to \$15,000,000, possibly to \$10,000,000. The terms for loans negotiated by revolutionists were always extraordinary, and frequently the sum received was very small in comparison with the principal eventually to be paid. Thus, one issue of \$3,000,000 in bonds yielded only \$250,000. For another loan of \$1,600,000 it was agreed that \$7,300,000 should be paid. For twenty years the ordinary charge on Government loans was 10 per cent. a month. President Caceres desires, it is reported, to lay aside his office in favor of Gen. Horacio Vasquez, whom he regards as the head of his party.

**Railway Rate Bills**      Speeches concerning the Hepburn Railway Rate bill have consumed the time of the House for several days past. The Senate committee has decided to take up, on the 16th, the bills referred to it, and to report the one receiving the most votes. The most prominent measures to be considered are the bills of Senators Dolliver, Foraker and Elkins. By that date the Hepburn bill, transmitted from the House, may be in the committee's hands. It is admitted that the Hepburn bill will come to the Senate with the support of almost the entire House. Because of this support, and on account of a reported agreement of the President with the House leaders concerning the legislation in question, the opposition of Senators in sympathy with railway interests appears now to be confined to efforts for the amendment of the House bill. The most important amendment sought by the element which Senators Aldrich, Elkins and Kean represent is one definitely providing for a review of a Commission rate decision by the courts. It is provided in the House bill that a rate order issued by the Commission shall go into effect within thirty days and remain in effect until suspended or set aside by the Commission itself or by a court of competent jurisdiction. The attempts of conservative Senators to obtain consent for the

desired amendment providing definitely for an appeal to the courts and for a review by the courts have given rise to many published rumors as to changes in the President's attitude. Some of these have been officially denied. It appears to be true that the President does not object to provisions for judicial review, unless they are so framed as to delay final action for a long time or as to deprive the Commission of the power which the House bill is designed to grant. It is understood that if the Senate fails to take action, the President will call a special session for further consideration of the bill.—The Commission's reply to the Gillespie resolution of inquiry about the Pennsylvania road's relation to the Baltimore & Ohio, Chesapeake & Ohio, and Norfolk & Western roads, merely shows the Pennsylvania's large holdings (not a majority of shares in any case) of the stock of these roads and the presence of Pennsylvania officers in their boards of direction. No opinion is expressed as to the alleged violation of law.

**Plea of the Beef Trust**      In the Beef Trust cases at Chicago last week, additional testimony was taken concerning the defendants' plea that they are entitled to immunity. At the interview between Commissioner Garfield and representatives of the beef companies, some time before the companies were indicted, Charles G. Dawes, formerly Comptroller of the Currency, and now president of the Central Trust Company, introduced the Commissioner to Louis C. Krauthoff, counsel for the packers, and Samuel McRoberts, treasurer of Armour & Co. Of the four men present, Messrs. Krauthoff, McRoberts and Dawes have testified. They agree in asserting that Mr. Garfield said that the information he desired to obtain from them would be used only by his Department, would not be given to the Department of Justice, and would not be used in prosecuting them. He intended to report it to the President, and the packers need not fear that it would be used to their disadvantage. In introducing Mr. Garfield, Mr. Dawes assured the packers that he was a gentleman, and that they could rely upon his promises. Mr. Garfield was in-

troduced to Edward Morris, of the firm of Nelson Morris & Co., by James H. Eckels, formerly Comptroller of the Currency, and now president of the Commercial National Bank. Mr. Morris testified that the Commissioner assured him that the information he sought would be used exclusively by the Department of Commerce, and not in any prosecution. After the report was completed and proofs of it had been shown to him, he continued, the Commissioner had compelled him to submit for examination the firm's secret books relating to profits and losses. Attorney-General Moody arrived in Chicago on the 3d. He denies, it is stated, that Mr. Garfield gave the Department of Justice any of the information which had been obtained from the packers. This preliminary hearing of the packers' plea for immunity is one of considerable importance. Mr. Moody says, according to dispatches from Chicago, that if the packers escape prosecution by reason of their unsworn statements to Commissioner Garfield, the Government will be unable to prosecute railroad rebate cases upon evidence obtained by the Interstate Commerce Commission. A decision soon to be announced by the Supreme Court concerning a plea for immunity made in the Paper Trust case may affect the question now pending at Chicago.

#### The Panama Canal Inquiry

Testifying before the Senate committee, last week, Chairman Shonts said that in his opinion the Canal Zone was not wide enough. It should be made so wide that no foreign nation could get near enough "to blow the United States out of the canal." The Markel contract for feeding the workmen was annulled after the Chief Engineer had reported that it would yield a profit of \$1,000,000 a year, altho Markel had offered to reduce the contract price of meals. Robert P. Schwerin, general manager of the Pacific Mail Steamship Company, answered with some sharpness the assertion of Secretary Taft that the congestion of freight at the railway terminals was due to his company's indifference and neglect. The Secretary, he said, had thus blamed his company either thru malice or on

account of his ignorance of the situation. He insisted that the railroad company was the offending party. It had reduced the wages of the dock employees, thus bringing on a strike, with the result that both companies were now paying more than they had paid before the reduction, and were getting poor service. The railroad company, after it had passed under the control of the Government, had given Canal business the first place, and for this reason ordinary commercial traffic had been delayed. He denied that his company was guilty of any neglect. The Tehuantepec railway would be finished in June, he said, and then both the Panama railway's commercial business and that of his company on the line from Panama northward would be greatly reduced, because the time of passage from New York to San Francisco would be cut down from thirty-four to only twenty-six days. On Monday last, John F. Wallace, formerly Chief Engineer and a Commissioner, testified that his main purpose in resigning was to get away from William Nelson Cromwell, the lawyer who negotiated the sale of the French company's canal property. Mr. Cromwell, he said, had been charged by the President with general advisory duties, and these brought him in contact with the witness on all sorts of occasions. The lawyer, he added, had promoted the revolution, was Panama's fiscal agent, and was officially connected with the railroad. He had the President's ear and exercised so much influence that he was regarded as a dangerous man by the witness, who feared he might lead the Government into a scandal.—The Commission has employed several hundred Spanish laborers who have been engaged in railway construction in Cuba. Rear Admiral Endicott was the only member of the Commission who voted for a sea-level canal.

#### Pennsylvania's Insurance Department

It is due to the popular revolt against ring rule in Philadelphia that a brief but fruitful investigation of the State's Insurance Department has taken place at Harrisburg. The Philadelphia boss, Israel W. Dur-

him, was Insurance Commissioner until public condemnation of his course caused him to resign, some months ago. In his place the Governor appointed David Martin, another well known politician of Philadelphia. Durham is in California. It was shown at the investigation (made by a joint legislative committee) that the Department's actuary, Robert E. Forster, in office since 1891, had turned over a great part of his fees to Durham or his predecessors. These fees, amounting now to about \$33,000 a year, are derived from a tax of 2 cents upon every \$1,000 of insurance written in the State. Forster testified that he had retained various sums, ranging from \$3,000 to \$5,000 a year, and disposed of the remainder as follows: To Commissioner Luper, \$15,883; to Commissioner James H. Lambert, \$28,183; to Commissioner Durham, \$5,000; to J. Clayton Erb, \$141,223. Erb was regarded as a kind of secretary for Durham, to whom, it was understood, this money was transmitted. But Erb afterward, to the surprise and entertainment of the committee, testified that he himself had kept all of it and was entitled to it, being an actuary by Durham's appointment, altho his connection with the office appears to have been unknown to the real actuary, Mr. Forster. The Deputy Commissioner, who has held the office since 1894, testified that several employees, whom he had never seen and who performed no service, had been regularly paid. Two or three of these men made feeble efforts to show that they had done work for the Department in Philadelphia or elsewhere. One, a brother of ex-Gov. Stone, admitted that he had done nothing, but had remained on his farm. Another, named Reed, had been a member of the jury that gave a verdict of acquittal in the memorable Salter ballot box stuffing case, and had received his appointment from Durham a few days before the trial of Salter. Durham's last annual report of the Department's receipts and expenditures was made in only twenty-seven words. The testimony indicated that the pay of the Commissioner in recent years had been from \$50,000 to \$100,000 a year. The Department had no pay roll, and it was admitted by the Auditor General that its books had not been audited in twenty

years. As the committee had only four days for its work, the press now calls for a thoro investigation of the Department and also of the State Treasury. The testimony has been sent to the Attorney General by the committee. Nearly all of the members of the committee are lawyers, who are said to hold the opinion that the three Commissioners named should be prosecuted.

It was suggested by the Mayor of Santiago that the \$25,000 appropriated by the Cuban Congress for the purchase of a wedding gift for Miss Roosevelt be used in buying the plantation which includes San Juan hill. The Cuban Minister at Paris had already been instructed however, to purchase a suitable gift there. It is said that the Cuban Government has official information that President Roosevelt will permit his daughter to receive the gift, which comes from the people of Cuba.—Four years ago, W. A. Merchant, vice-president of the National Bank of Cuba, estimated the amount of capital from the States invested in the island, at that time, to be \$60,000,000. He had made a careful inquiry. His estimate of the amount invested now is \$100,000,000. Others say the sum is larger.—New York capitalists have begun work upon the projected railroad, sixty-five miles long, which is to extend from San Pre, on the Cuba Eastern road, to La Maya (in Santiago Province) on the line of the Van Horne system, and will open a rich district adapted to the production of sugar and coffee.—Secretary Taft, while supporting before a House Committee a proposed appropriation of \$50,000 for the purchase of coal lands in the Philippines in order that the navy might be supplied from them, suggested that the Government, after buying the lands, should lease them to capitalists, requiring them to sell coal to the navy at 10 per cent. in excess of the cost of production. In this way Government ownership and operation could be avoided.—It is not expected that the Philippine Tariff bill will be passed in the Senate in the form in which it was received from the House. The proposed duties on sugar and tobacco may be

doubled. Among those who oppose the House bill's rates is Senator Smoot (a Mormon Apostle), who represents the objections of prominent Mormon Church officers and other Mormons who are largely interested in beet sugar companies.

#### The Algeciras Conference

The proceedings of the conference on Moroccan Reform continue to be somewhat dull, for it is generally agreed that neither France nor Germany expect a war to result whatever may be the outcome of the conference, and most of the diplomatic work is obviously being done outside the assembly room. The report of the Committee on Reform in Taxation was adopted, the only incident of interest being the somewhat heated opposition of the second Spanish delegate, Señor Perez Caballero, to a proposal of our representative, Mr. Henry White. The Committee recommended that the taxation of foreigners be put into the hands of the consuls, who should receive 1 per cent. for the cost of collection. Mr. White, thinking that this was inconsistent with the fundamental principle of the conference, the recognition of the authority of the Sultan, suggested that he be allowed to collect the taxes on foreigners as well as natives on the same terms, as soon as the Moroccan administration is competent. This proposition was so strongly opposed by Señor Caballero that it was withdrawn. The conference has rejected the high tariff asked for by the Moroccan delegation, but is likely to agree to an increase in the present duties from 10 to 12½ per cent. *ad valorem*.

#### Riots in French Churches

The law recently enacted for the separation of Church and State provides that all the property of the churches be inventoried by the Government, in order to turn it over intact to the local religious associations which are to own and control it in the future. This action has met with furious opposition on the part of the Catholics, who regard it as profanation to have the sacred utensils and relics of the church handled and appraised by officials. Cardinal Richard,

Archbishop of Paris, notified his curés that the law did not require the opening of the tabernacles, and that they should refuse to do this, but should declare to the assessors the number and value of the sacred vessels containing the Eucharist. The Government retracted the order requiring the opening of the tabernacles, but this did not allay the indignation of the Catholics, who put the Government in an embarrassing position by compelling the resort to force to carry out the law. When the Commissioners arrived to take the inventories, they found the churches filled with worshippers, including members of the nobility, Senators and Deputies and leaders in fashionable and literary circles, who refused to allow them to enter and resisted the police who were brought to their support. In the Church of St. Roch the Commissioner was ejected and chased down the street, and when the police entered fifteen of them were wounded. In the Church of St. Francis Xavier the leaders of the congregation in their resistance to the police were François Coppée, the poet, and Count Gabriel de la Rochefoucauld. A strong stand was made at the Church of St. Clotilde, where about 150 persons were wounded and as many more arrested. When M. Meusan, Director of Municipal Affairs, came to notify the authorities that the inventory was to be taken he was flung down the steps. M. Lepine, Prefect of Police, then arrived with a company of municipal guards, and ordered the gates and doors to be broken open. The defenders of the sacred edifice used chairs, stones, footstools and lighted candles as missiles, and M. Lepine himself was hit three times. After an entrance was forced barricades of furniture had to be taken by assault. The altar was surrounded by kneeling women reciting the rosary, while the Government commissioners made their inventory of the property. On the following day, February 2, a more serious conflict took place at the Church of St. Pierre du Gros Caillou. When the Prefect arrived the bells tolled and the people inside the church, numbering about 3,000, began singing psalms while the crowd on the street responded with revolutionary songs. Among the fashionable ladies present was the Marquise

McMahon and Baroness Reille. The church was captured by the aid of firemen, who broke thru the windows and the roof and turned the hose upon the people within, drenching them all to the skin and covering the floor to the depth of several inches with water, on which floated hats, books, cushions and chairs. Several revolver shots were fired on the police, but the chief weapon of defense was red pepper, which was thrown from the windows and barricades in the faces of the assailants. No one was killed, but over fifty seriously wounded. At Agen, Montpellier, Pau, Olivet and Dijon similar scenes took place. Altogether 2,200 inventories have so far been made in the whole of France, and of the sixty-nine Catholic churches in Paris about half have been visited by the commissioners. The Pope has telegraphed to the French episcopate exploring the violence and advising submission to the taking of inventories. In the Chamber of Deputies the Government was attacked for its action, but Premier Rouvier stated that the law must take its normal course, and that the utmost tact and moderation would be used in carrying out its provisions. The Government then was given a vote of confidence by 384 to 166.

#### The Crisis in Servia

The Powers which created the Balkan States intended them to remain separate, weak and dependent upon their more important neighbors so that they should not disturb the peace of Europe. But they have developed a surprising degree of national self-consciousness and occasionally rebel against playing the rôle of pawns on the board of European politics. Just now Austria is much worried over the attempt of Servia and Bulgaria to form a close commercial union which would be injurious to the interests of Austria as well as a disturbing influence in the Balkans by furnishing a center of crystallization which might attract Macedonia and other disaffected portions of the Turkish Empire. At the beginning of the year Servia and Bulgaria concluded a commercial treaty of far-reaching scope and containing some ambitious provisions. The treaty was

to be in force from March 1, 1906, to March 1, 1917, and provided for free trade and equal privileges between the two states and an eventual monetary union and railroad merger. By 1917 a uniform foreign tariff was to be established. This treaty was passed by the Bulgarian Sobranie January 2, and was about to be brought before the Servian Skupshtina when Austria interposed a veto, demanding that the treaty be abrogated, because it might interfere with the Austro-Servian commercial treaty then under negotiation. Servia refused to concede this, but consented not to bring the Servo-Bulgarian Convention before the Skupshtina until the conclusion of the treaty with Austria and to make any changes in the former inconsistent with the latter, provided such changes were not incompatible with the essential character of the Convention. Neither party will make further concessions, so the result is a commercial warfare. Both Servian and Bulgarian merchants are boycotting Austrian goods in favor of German, which has led to the suspicion that the difficulty between Austria and Servia was caused by the German emperor or German financiers. As a retaliation a rigid quarantine has been established upon the Hungarian frontier, excluding Servian pigs and cattle because of alleged disease. The Ottoman Government, doubtless at the instigation of Austria, has also protested to Bulgaria against the Servo-Bulgarian convention on the ground that Article XVII, providing that the arrangement "shall apply to those territories which in the future shall fall within the fiscal jurisdiction of either of the allied nations," is a distinct threat against the integrity of the Turkish dominion. The affair has roused strong opposition against King Peter of Servia, who has not shown himself sufficiently strenuous in his opposition to Austria to suit the people. His private secretary has been driven from Belgrade for opposing the Servo-Bulgarian treaty and at any time King Peter may have to follow him or share the fate of King Alexander and Queen Draga. The students of Belgrade demand the expulsion of all Austrians and the establishment of a Servian republic.

**Russian  
Affairs**

Thruout Russia the revolution has died down to bomb throwing. The most important assassination of the week is that of General Griaznoff, Chief of the Staff of the Viceroy of Caucasus, who was killed as he entered his carriage from the Palace in Tiflis. The assassin was disguised as a painter, and the bomb was concealed in his paint can, which he swung by a cord, and threw at the General from behind a wall of the Alexander Garden. It struck him in the neck and exploded, killing also the coachman and the Cossack orderly and his horse, and mortally wounding a woman on the street. The assassin was caught and beaten into insensibility by the soldiers. He was a Georgian revolutionist. In the Baltic Provinces General Orloff is putting down the rebellion with great severity. In Vilna alone 53 were shot, including two boys of 15 and 16. On reaching Riga he bombarded the Polytechnic School, killing and wounding a number of persons. Street fighting in Riga is still common. The anti-Jewish massacre at Gomel, during which most of the city was burned, was chiefly due to the Cossacks, who plundered, burned and murdered for several days unchecked by the authorities. The Vladivostok mutiny was quieted by the withdrawal of the Cossacks from the town. Governmental commissions are busily at work on various projects to be brought before the Duma when it assembles. Count Ivan Tolstoy, Minister of Education, has drafted a plan for the reorganization of the universities on the German plan. The Council of the Empire is now considering the establishment of governmental life insurance to be conducted at cost thru the state savings banks. Policies will be limited to \$2,500, and it is expected that rates will be so cheap that private companies will be driven from the field of small insurance. A commission of the Ministry of Finance has prepared a project for a progressive income tax to applied to all incomes of \$600 and over, not excluding the incomes of the Church and landed estates. Mr. Pokotiloff, the Russian Minister at Pekin, is negotiating with Mr. Tong a Russo-Chinese treaty similar in scope to that recently made between China and Japan

in regard to Manchuria. It is understood that Russia is trying to secure mining, commercial and railroad privileges in Mongolia and Chinese Turkestan. Evidently Russia has not by any means abandoned her ambitions for an empire in the Far East. General Grodekoff, who was Governor of the Amur Territory during the Boxer rising, has just been appointed Viceroy of the Far East, an office which was said to have been abolished.

**The Attack Upon  
the Sultan**

The trial of those implicated in the attempt to assassinate the Sultan of Turkey on Friday, July 21st, has been completed, and has cleared an affair as mysterious as any forming the plot of a detective novel. The explosion took place among the carriages in the court in front of the Mosque Hamidié just before the Sultan emerged from the doorway, and twenty-six people were killed and thirty-eight wounded. The carriages and horses assembled were torn to pieces and a great hole made in the ground. In this hole was found a fragment of the rubber tire of a carriage bearing the mark of a Vienna manufacturer, and thru this clue the whole plot was unearthed. The carriage was found to have been ordered made with an unusually large driver's box and was billed to Silvio Ricci, which was found to be the alias of Eduard Joris, a Belgian anarchist, who had been won over to the cause of the Armenian revolutionists by one of their leaders, Kindirian. The conspirators at first planned to use bombs, but Kindirian and another Armenian were killed in Sofia while experimenting with bombs, so an infernal machine was decided upon. This was loaded with 180 pounds of melinite, which had been brought to Constantinople by the way of Athens in two pound packages, and the clockwork set to explode the apparatus within one minute and forty-two seconds, for it had been observed on thirteen occasions that the Sultan took exactly this time to walk from the door of the mosque to the place where the carriage was to be stationed. As the Sultan appeared in the doorway the two conspirators who were in the carriage, Lippa Ripps and Robina Fein, set the

clockwork in motion, and, taking another carriage, drove home and left Constantinople that night. The Sultan stopped on the steps to speak to the Sheikh-ul-Islam and so escaped harm. Bombs, dynamite and revolvers were concealed in the Austrian Hospital. The plot had been arranged by the Armenian revolutionary committees in Geneva and the Caucasus, and \$60,000 had been expended. The court found forty-one persons implicated, but many of these had escaped or been killed. Of the chief conspirators, Joris and three Armenians have been condemned to death. The Belgian Government has protested against the execution of Joris on the ground that the Ottoman courts have no right to try a Belgian subject. In support of this the position of the United States in the Vartanian case is quoted. Ghirkis Vartanian is an Armenian revolutionist who claims American citizenship. He has been condemned to death for the murder of a wealthy Armenian merchant for refusing to subscribe to the revolutionary funds, but the American Government on October 30th warned Turkey against executing the sentence of a court at which our consul was not represented. In spite of this protest the Court of Cassation has confirmed the sentence.

#### Japan Criticises the British Army

Great Britain is surprised and shocked to find that her ally does not intend to remain a silent partner, but takes seriously the clause of the Anglo-Japanese treaty which provides for mutual consultation in regard to military and naval matters. This is Article VI of the new treaty and reads as follows:

"The conditions under which armed assistance shall be afforded by either power to the other in the circumstances mentioned in the present agreement and the means by which such assistance shall be made available will be arranged by the naval and military authorities of the contracting parties, who will from time to time consult one another fully and freely on all questions of mutual interests."

In the Japanese Diet, on January 21st, Mr. Oishi, leader of the Progressives, asked the Minister of War, "Does the Government intend to urge the British Government to reform its army organization?" The Minister of War, General

Terauchi, responded as follows, according to the official report:

"I am aware of the article in the treaty of alliance, as pointed out by Mr. Oishi, stipulating that the naval and military authorities of the two Powers shall frankly and sincerely consult each other on the conditions and means of armed assistance to be rendered. The Government, therefore, will have to act upon this stipulation hereafter; but they have not as yet entered into any discussion of the subject."

This reply, somewhat misquoted in the first cablegrams, aroused some indignation in England, where this army question is a sore subject. Field Marshal Lord Roberts, in a recent address before the Liverpool Chamber of Commerce, declared that the nation was as absolutely unprepared for war as it was in 1899. He considers it necessary to have an army of a million men, half of them for the defense of India and half ready for use in a European struggle. If this is true, Mr. Oishi was quite justified in saying that the British army was not undergoing a development equal to that of the navy, and in inquiring whether it did not require improvement to be a match for the Japanese. That Great Britain is not unwilling to learn from her ally is shown by the fact that four officers of the British army and three from the Indian army will be assigned to Japan annually for study, remaining there for two years. The official statistics of Japan on the war have now been published and give the following summary of its cost in life and money. The total number of deaths recorded is 80,378, which is not greater than some of our newspapers reported as lost in a single battle. Of these, 47,152 were killed in action, 11,424 died of wounds, and 21,802 died of disease. Of these last, 16,982 died of disease in the field and 4,820 died of disease in Japan. The comparatively small number of losses from disease indicates that the Japanese surgeons have set a new standard of military sanitation. The Finance Department reports that Japan expended on the war, from the breaking out of hostilities until September 19, \$585,000,000. Of this, \$495,000,000 was for the army and \$90,000,000 for the navy. In the army expenditure the principal items were \$140,000,000 for provisions, \$85,000,000 for arms, and \$70,000,000 for clothing.

#### THE NEW KING OF DENMARK.

Frederick VIII was proclaimed King of Denmark on January 30th, in Amalienborg Square fronting the palace in Copenhagen. The impressive ceremony lasted but a few minutes, but when it was over the eldest son of the late King Christian, who died suddenly on January 29th, reigned in his father's stead. The new king in outlining his policy stated that he would rule in accordance with the example set him by his father, and he hoped for the co-operation and support of the people. The new king has requested the present holders of ministerial portfolios to continue in office for the present and they have agreed to do so. The following proclamation has been promulgated by the government, viz.:

"We, Frederick VIII, King of Denmark, by the grace of God, etc., do hereby announce and make known that our dearly beloved father, King Christian IX, was yesterday gathered to his fathers by a sudden but calm and peaceful death. We have thereupon, in accordance with the law, ascended the throne. While thus assuming this high and responsible position for which the Almighty has chosen us, it is our determination to maintain unswervingly the Constitution of our country and to preserve the rights and privileges of our whole people. If the people themselves will have the same confidence in their King which we have in our people then will God grant His grace and blessing to all of us.

"It is our will that all public business follow its uninterrupted course, and until further notice the officials appointed by our dearly beloved father will remain at their posts in accordance with their oath.

FREDERICK R."

"Given at our Castle of Amalienborg, January 30th, 1906.  
The court will remain in mourning for thirty weeks, and the Minister of Justice has notified all the theatres and other places of amusement that they must remain closed this week, as well as the day before and the day after the funeral. King Frederick is a great admirer of America. He reads closely the best American books.

Frederick VIII was born June 3d, 1843. He married Princess Louisa, daughter of King Carl XV of Sweden and Norway, on July 28th, 1869. He has eight children.

# Lincoln

BY W. C. STILES

He looked upon the pained face of the slave—  
A graver weight on him their woe pressed down;  
Saving the state himself he might not save,  
But gained a martyr's crown.  
NEW YORK CITY.

## The Political Convulsion in England

BY JUSTIN McCARTHY

I HAVE been an observer of very many General Elections in Great Britain and Ireland. I have taken part in many and have myself been elected to the House of Commons several times during my years of political activity. But now, as an outer observer, I may say that I can remember no General Election which opened with so many exciting events as those of which we have lately been hearing the news. My readers will remember that this General Election was brought about by Arthur James Balfour, then Prime Minister of these countries, and that he and the other members of the Government resigned their offices in order to put to a test the challenges of the Liberal Party and of the Liberal press. The impression entertained here in all quarters was that the retiring Ministers had taken this course in the hope that Sir Henry Campbell-Bannerman and the Liberals might be induced to accept office at once and to go on working as a Government without waiting for the lapse of the time which would make a dissolution and the election of a new Parliament legally inevitable. The retiring Ministers, it was understood, were in hopes that if the Liberals were to take this course and to carry on the Government they might soon get themselves into some difficulty concerning the question of Home Rule and be defeated in the existing Parliament, the

majority of which was made up of Tory members.

Campbell-Bannerman and his colleagues did not, however, adopt any such course, but advised the King to dissolve Parliament and bring on the General Election at once. Thus far the result has been a splendid triumph for the Liberals and a disheartening and most ominous defeat for the Conservatives. At the very opening of the contest the public were amazed by the news that the late Prime Minister, Arthur Balfour himself, had been defeated by an immense majority in that constituency, the Eastern Division of Manchester, which he had represented in the House of Commons for twenty years. Manchester had, in fact, returned to its own, its old political faith, the faith which it professed in the days when Cobden and Bright and their followers were known as the Manchester School of political doctrine. Since that time a great reaction has set in, one result of which was that Toryism became generally adopted in Manchester, and that Arthur Balfour, one of the most brilliant and distinguished of the Tory Party, came to represent, for twenty years, one of its divisions. The late Prime Minister of England does not, therefore, even become leader of Opposition, but has ceased for the present at least to be a Member of Parliament. He may, of course, if he should feel so

disposed, offer himself to some other constituency when the first opportunity arises—some safe seat may be found for him, by the voluntary resignation of a political follower, and he may thus before long return to his place in the House of Commons. But, for the present, all we know for certain is that the late Prime Minister of England does not now represent any constituency in Parliament.

So far as the contest has gone there has been victory all along the line for the Liberals, and there seems no reason to believe that the elections yet to come will show any considerable difference of result from that which we have already seen. I sincerely hope that Mr. Balfour may yet accept some opportunity of finding a place again in the House of Commons, because, altho I do not share any of his political opinions, I have always regarded him as a man whose absence from Parliament would be a heavy loss to the representative chamber. He is a man of the highest character, a man of remarkable intellect and remarkable culture, with more perhaps of the philosopher and artist in him than of the

Henry Labouchere.

politician; a graceful, persuasive and even eloquent speaker, a friend to his friends, and most genial in his ways with even his most extreme political opponents. I find it hard to picture a House of Commons at the present time without Arthur Balfour, and I presume that he will accept some early opportunity of finding a place there once again.

Thus far the results of the elections are entirely in favor of the Liberals, and the very fact of such an opening must of itself tend to influence discouragingly for the Tory party the results of the elections yet to come. Winston Churchill, son of the late Lord Randolph Churchill, who withdrew from the Conservative ranks during the recent Parliament and took his place among the Liberals, has now been re-elected by an immense majority over a Tory antagonist. Winston Churchill already holds office as a member of the Liberal Government. He is, beyond question, one of the most ready and brilliant debaters Parliament has known since the death of his gifted father, whom I knew well in the old days and whom he resembles in many characteristics, but with the difference that he has become a thorough convert to the

Charles Ritchie.

Liberal cause. There now can be no doubt whatever that Mr. Chamberlain's policy of recent years has been the main cause of the troubles which have fallen upon the Conservative party. I am not going to enter into a disquisition here as to Free Trade and Protection, but I have always felt perfectly certain that a contest between Free Traders and openly avowed Protectionists in England must end in the utter defeat of the Protectionists. Mr. Chamberlain assuredly worked the Protectionist pedal much too strongly and too noisily, and Arthur Balfour's misgivings would seem to have been drowned in the noise. Mr. Chamberlain, however, is a man given to rapid changes of political faith. He began as an extreme Radical and even almost a Republican; he became an extreme Tory and an opponent of every popular movement. He was at one time a devoted supporter of the Home Rule cause, a close political ally and adviser of Charles Stewart Parnell, and he suddenly became the most uncompromising enemy of the Irish National party and of the Irish National cause. No one can say that Joseph Chamberlain may not yet become the leader of a crusade against Protection.

For the present, however, Mr. Chamberlain may be trusted to keep firmly to his Protectionist doctrines. He has carried his election for one of the Birmingham divisions by even a larger majority than that which he had at the last General Election, and Birmingham has in fact held firmly to him as its leader in questions of tariff. Of course, one of the many causes which have brought about the sudden fall of the Conservative party has been the dissent created by Mr. Chamberlain's Protectionist crusade. Some of the best men in the Conservative Administration resigned their offices because they believed that Arthur Balfour had by his indecision committed himself and his Government too much to the Chamberlain doctrines. Protection has in fact been the ruin of the Conservative party just now, and Mr. Chamberlain's personal success is almost the only important exception to the casualties which have come upon the Conservatives. Of course, it has to be taken into consideration that Mr. Chamberlain has been for

many years a most popular personage in Birmingham, and in fact, if I may quote what is understood here to be an American slang phrase, to boss the whole show there. The immediate contrast is that Arthur Balfour has lost his seat and that Joseph Chamberlain has regained his by a larger majority than ever.

Some men who made a marked success in a former Parliament, but who lost their seats at the General Election of 1900, have been now elected once more to the House of Commons and will be cordially welcomed there. Among these are Mr. Herbert Paul and Mr. Augustine Birrell. These men have both won high distinction in literature as well as in Parliament. Both are authors of most successful books and both won for themselves, during their former time in the House of Commons, the full admiration of the House for their ready argument and brilliant eloquence. I am sorry to see that the electoral fates have dealt less kindly with Leonard Courtney, who has this time failed in his attempt to re-enter the House of Commons.

The new House of Commons will miss some figures long familiar to its predecessors. I do not as yet venture to include in these the figure of Mr. Balfour, for the reason that he can easily find a seat there if he should so desire. But the new House of Commons will not have Henry Labouchere among its members, and Parliament, during many past years, had no figure more remarkable than that of Labouchere. His was always a peculiar and most interesting personality. He was one of the readiest and most amusing debaters in the House; he was a wit, a satirist, an almost freakish humorist, who seemed to enjoy his own droll sarcastic sallies as thoroly as his listeners enjoyed them, but underneath all that he was a man of sincere convictions, of steady purpose, and filled with a deep sympathy for every movement in the cause of humanity, civil equality and freedom. Labouchere has withdrawn from the House of Commons entirely of his own accord. His constituency would have been only too glad to retain him as its representative to the very end of his life. But he has announced that, having attained the age of seventy-four, he thinks the time has come for him to retire from public life, and I

believe he intends to pass his coming days for the most part in his villa at Florence. I need perhaps hardly observe that we have had men in the House of Commons who continued to do splendid parliamentary work and to pay unceasing attention to their duties long after they had passed what Mr. Labouchere seems to regard as "the very sea-mark of his utmost sail," if I may quote for this purpose the words of Othello. The habitual visitor to the galleries of the House of Commons will find that the debates have lost much of their lively interest when there is no longer the possibility of Henry Labouchere arising to reply in some sparkling sentences to an elaborate argument from the opposite side.

Another but a very different figure will be universally missed in the new Parliament, and the absence in this latter case is all the more deplorable because it is due to the stroke of death. This man, whom the House of Commons would have lost in any case, because he had lately been made a member of the House of Lords, was Charles Ritchie, one of the ablest and most respected members of the Conservative Party. Ritchie held many high offices in Conservative administrations, and he only withdrew from his place in the late Government because he could not endure the shiftings and shufflings of the then Prime Minister with the Protectionist enterprises of Mr. Chamberlain. Ritchie was a man of high administrative capacity, especially in questions connected with trade and commerce and local government, and he was also a man of large and liberal education—I do not now use the word liberal in the political sense—and with an appreciation of literature and art. I had the pleasure of his acquaintance during many years of my parliamentary life, and altho we differed on most political questions, I have the most pleasing and just now regretful memory of our occasional intercourse. There is a general impression among the outer public that the personal intercourse of Members of Parliament is

much limited by the barriers of opposing political opinion; that Liberals and Tories keep ever on the most formal and distant terms with each other, and that a member of a Conservative Government would be afraid to be seen in frequent conversation with an Irish Nationalist representative. There is, of course, no foundation whatever for any such supposition. The members of the House of Commons meet and converse with each other in the most unconstrained and genial fashion, and Ritchie personally was just as popular on the one side of the House as on the other. Lord Ritchie's death is a genuine loss to our political world.

While on this melancholy theme I must say something about the death of Sir Mountstuart Elphinstone Grant Duff, whose varied and brilliant career came to an end a few days ago. Grant Duff was a man of the widest information on almost all subjects—he was indeed one of the best informed men I have ever known. He was a distinguished member of the House of Commons, and held several high offices in Liberal administrations, and he was a successful writer of books, his recently published memoirs having had an immense success. He had been out of the House of Commons for many years because of his appointment as Governor of Madras. My first meeting with Grant Duff was on a somewhat remarkable occasion. It was at the country home of a Member of Parliament in the Isle of Wight, at a time when my host was entertaining General Garibaldi, the famous Italian leader—my readers will see that I am going back a good many years in British history—and among the guests was Alfred Tennyson. At a later period I used to meet Grant Duff often in the House of Commons while he and I were both members of the House, but since his removal to India I never had an opportunity of meeting him. I have unfading and deeply interesting memories of his bright intellectual and delightful conversational powers.

LONDON, ENGLAND.

# The Churches in Social Service

BY THE REV. W. D. P. BLISS

[This article concludes the one begun in THE INDEPENDENT of January 8th. The first was a comprehensive analysis and description of the economic aspects of the various churches in New York City. This article draws conclusions which we think should be of interest to all concerned in any way with one of the greatest problems of the day.

WE have said in our previous article that the Church situation in New York City as regards reform was not sensational. But it is not the sensational which is the important. Sensations are ordinarily exceptions, and, therefore, not representative. What is important in this matter is that here we have not one Christian denomination in New York City to which economic or social reform can look with any hope. Here is the city almost crying out for reform. Vast bodies of citizens are agitating for it. The Citizens' Union, the Radicals, and even Tammany pose as reform organizations. But the Church—the Church of Christ, the Church of the Carpenter, the Church of the Son of Man, the Church once the world's first great international, a communistic Church—the Church of today cares nothing, at least does nothing, for these things. Now and then Dr. Parkhurst may preach a sermon or probe a wound; Bishop Potter and a few Episcopalian clergymen are said to have played a prominent part in the vice crusade. Methodists and others work for temperance or agitate against the Raines hotels. Let us give the Church credit for all she does; she needs it. But does the Church do aught for these positive and fundamental economic measures which the conditions of the citizens demand. The poor are crying out under the burden of rent. What clergyman in New York City has done aught or said aught upon that question? A rich church is one of New York's great landlords, and has had to hire an attorney to work out a labored argument to defend itself against the charge of violating even the moderate requirements of the tenement law. The city is languishing in the grip of the Gas and Light Trust and the Transit monopoly. Has the Church done aught on this? Nay, churchmen are for the most part the directors and guiding

hands in these monopolies. Is corruption discovered in private companies and graft unearthed at Albany, it is the exception when the names of prominent church members are not involved. Millionaires are in the churches, but the leaders of labor are not. The popular idea is that the Church is tied hand and foot to capital and invested wealth; too often to corporation bribery and greed. Even the Conservative Citizens' Union does not have one single clergyman on its committees. If clergymen cannot venture even this, is there any hope of their venturing more?

What is the cause? It is not in creed. Before we try to point out the real cause, let us study for a moment the Jewish Church. That will show us that the cause is not in creed, for the same conditions exist here as in the Christian Church.

As is well known, the Jewish Synagogues or temples in Manhattan and the Bronx outnumber the churches of any single Christian body, not excepting the Roman Catholic. New York City bids fair to become a Jewish city, the greatest Jewish capital of the world. Already in 1902 the New York Federation of Churches declared that the nationality figures of New York City showed that there were more Slavonic males *under* the age of twenty-one than of any other race, and *over* the age of twenty-one more than of any race except the German and the Irish. This means, of course, the Russian Jew, the Jew of Poland, Hungary, Bohemia, Rumania. The fecundity of this race is also known. The percentage of families with three or more children is larger among Hebrews than among Protestants, and the difference in the number of children progressively grows till there are six times as many Hebrew families with nine children as there are Protestants. The Federation of Churches said in 1902 that New York was bound to

have in the decade 1900-1910, a growth of 500,000 from the expansion of its American-born Hebrew population. Now in 1905 we know that it is also bound to have enormous growth from its Hebrew foreign-born immigration. From 1901 to 1904 alone there arrived in the United States, and mainly at the port of New York, from Russia, Poland, Austria and Hungary, no less than 1,142,284 persons. These were largely Jews. It becomes of interest, if not of vital importance, therefore, to study what may become the prevailing religious faith of New York City.

There are at present in Manhattan and the Bronx 168 Jewish synagogues or temples, reporting in the "Eagle Almanac" 20,808 members. This would indicate, in the first place, that the Jewish Church, beyond perhaps the observance of two or three times a year of the greater feasts, does not have a great hold upon the Jewish people. The Jewish population of New York in 1900 was estimated at 597,000, with 407,000 in Manhattan and the Bronx. It would not seem, therefore, that one can look to the Hebrew synagogues, numerous as they are, for a deep influence upon the Jewish population.

What is the situation in these synagogues? Are they for the people? Are they for reform? Are they ruled by money? Of the Jews in Europe and America, as is well known, very many are Socialists—particularly in Germany. A large number of the Socialist leaders of Germany, particularly the two greatest, Marx and Lassalle, were German Jews. Is this true of the Jewish synagogues of New York City? The Socialist party of New York City does not know a single rabbi who is a Socialist. Not a small proportion of the liberal Jewish rabbis are progressive men in many lines of thought and a smaller number of them are somewhat progressive in their sympathy and occasional utterances for milder economic reforms, but of Jewish rabbis, radical in economic views, there is perhaps not one. Christian clergymen in America are not unfrequently known as Christian Socialists. But there seems to be no religious Hebrew Socialism.

Yet the synagogues as a class are not under the rule of money. Most of them are very poor. The Jewish exemptions in 1903 in Manhattan and the Bronx

were \$11,418,000, but this is very unequally divided. The Jewish synagogues, like the Roman Catholic churches, are each financially independent. Apart from occasional gifts of wealthy individuals, the wealthy synagogues do not, as a rule, help the poorer synagogues. Here you would say is the chance for the rabbi among the poor to stand out and demand the poor man's rights and champion the people's cause. Practically he never does. Most of the rabbis of the poorer synagogues are orthodox in their faith, much concerned about the reverence and the obedience due the Hebrew law, little informed and little interested about the laws that govern the poor in New York City. Does the purse rule? We asked this of an informed Jew and he answered: "Well, there is one." But usually on the East Side and in most synagogues there are no purses. Among the wealthier synagogues—Temple Emanu-El has property valued at \$1,000,000—the rule of the purse, of course, exists, though the rabbis of these synagogues are more apt to be liberal in their religion and in all things. Altogether the situation is not very different from that in the Christian Church, with perhaps more inequalities among its members.

The cause, then, which holds back the churches from participation in reform is deeper than that of creed. Protestant or Catholic, Hebrew or Gentile, something stops the mouth of the preacher and binds the activities of the Church. What is it? We answer, secondly, it is not, in our opinion, the clergymen themselves. They are often faulted, and continually by reformers. They are called cowards, hypocrites, knaves. We think that, as a class, they are none of these. We believe facts will show them to be economically both more honest and more ignorant than they are given credit for. But mainly as a class their hands are tied. If anybody thinks that the clergymen of New York do not work hard, he has not been frequently either in the rectories of the wealthier parishes or in the home of the missionary among the poor. Few men in the great city have more calls upon their every effort than the rectors of great parishes, like St. Bartholomew's or St. George's, while none, perhaps, are to be more pitied than the faithful mission-

ary who sees want around him at every step, and his mission unable to do anything to meet its deeper needs. The average clergyman's salary in New York is small. The Secretary of the New York Federation of Churches puts it at \$1,200, which, considering New York rents and prices, is less than in most towns, and far less, considering the calls upon it than the wages of most New York artisans—at least while at work. The clergyman's vacation plays a large part in the diatribes against the Church, but many New York clergymen get no vacation except what they can occasionally steal between Sundays, and those who do get it as a needed relief from a life often as strenuous as any lived in all the city. New York's clergymen, if one may generalize, do not seem great men; they seem, as a class, average men in a very difficult place. Their pulpits are usually sought for all over the United States, but mainly by those who know least about them, and because they are, to a degree, positions of denominational power, not because they are places of luxury or of ease. Many a vigorous clergyman has come from a town parish to find less of power and an early death in New York city. The New York clergyman's epitaph seems like the melodrama, "More to be pitied than scorned."

What, then, is the cause of the Church's social inactivity and of the clergyman's silence? If we should put it in one word, we should say it was "The Past." It is "The Past" today that fetters Rome, and accounts mainly for both the social activities and the plutocratic tendencies of the Episcopal Church. It is "The Past" that misleads the minds and checks the speed of both the Jewish rabbi and the Protestant parson. Rome is rooted in medieval sacerdotalism, and therefore cannot be democratic. Judaism is saturated with the formalism of a dead past, and therefore cannot live. Protestantism is by birthright individualistic, and thus cannot be socialistic. Anglicanism is the only Church that inherits any secular tendencies wedded to freedom. Therefore, the Protestant Episcopal Church shows more secular helpful activities than any other. But she unfortunately also inherits more mammonism and wealth-worship. He who would

change the Churches, therefore, must change the past. But the newer Churches, we shall be told—the Unitarian and the Universalist—are like the rest. Yes; but even they inherit, if possible, even more individualism and quite as much dogma, tho of a different and unformulated kind.

But why cannot reforming parsons and iconoclastic critics change the Churches. The Churches are making, in some cases, almost revolutionary changes in their creeds; why not in their economics? Because the creeds affect mainly the clergy and the economics affect the people. The man of business in the rush of New York city, and the workingman in his struggle for higher wages, know little of the creed and care less. But their ideas of Individualism or of Socialism, of Protection or of Free Trade, enter into the daily life, affect immediate interests and take a deeper hold. Therefore these ideas change more slowly.

Now, the clergyman is in the hands of his people. If he modifies his creed and becomes liberal, provided he does it with good taste and changes his thoughts more than his terminology, the people like it and his success depends much more upon his social tact and pulpit power than upon his theology or his doctrines. But if he talks sociological heresy, his people grow suspicious. The average clergyman is in advance in social ideas, not of the outside world, but of the average congregation. The reason for this is simply that the advanced layman has usually ceased to come to church. Here, too, the reason lies in "The Past." Romanism being historically paternal, and Protestantism equally historically individualistic, the great modern social democratic movement has about equally little use for either. Another element also enters here—Other-worldism. The Churches, Catholic or Protestant, are still ghostly, concerned mainly with ghosts. Those, therefore, to whom other-world matters are far away and vague and indifferent, while this world's problems are the vital things, have for this reason quit the Church. Particularly is this true among progressive labor men. The Church workingman is the inferior and non-progressive workingman. The Church means to the average trades unionist a thing well enough to keep

children out of the street and a place for old wives' tales, but little more. Two labor leaders once went to see a former labor man baptized. As they went away they said, "Good bye, Brother ———; you are lost to the labor movement." The Church of the Great Laborer is lost to the Labor Movement. Therefore, even when the clergyman would speak on advanced themes, he finds himself before a congregation where the progressive element has largely vanished.

It is the mistakes of the past, rather than the sins of the present, that bind the Church and the clergyman. See how it is in different situations. Suppose the clergyman be a worker among the poor. The poor who come to church want help. They are cold; they want the warmth of the mission stove; they do not want to hear about a far away Socialism that can bring them no present heat. They are hungry and they want the Sunday morning breakfast, not harangs about the citizen's duty. They are homeless and have no tenement at all; they take only a very sordid interest in tenement reform. Poverty compels them to be selfish and to live for the moment, even tho self indulgence and living for the moment have caused them to be poor. They are depressed; they want the cheer of an emotional Gospel and the most comfortable chapel and church house the missionary can induce some wealthy churchman to build for them. This is the missionary's duty—to beg from the rich and give to the poor. His experience indeed causes him, when he has time to make them, many radical reflections and more rarely utterances, but usually he is too busy administering to social symptoms to have time even to know much, still less to do much, about underlying causes. It is the poor rather than the rich who keep the clergyman among the poor from the cause of reform.

Suppose the clergymen work among the middle classes. These people all the week—in business, pleasure or education—think and have to think about dollars, dimes and cents. The one middle class question is and has to be: "What does it cost?" They are immersed in a struggle to keep up appearances—a struggle more exhausting than the struggle to exist. In the extremes of utter wealth or poverty

there comes a certain abandonment of money values. Among the middle classes it is never absent. They are striving to live on a thousand dollars as the wealthy live on twenty thousand. The millionaire's wife sets the pace and the cashier's wife struts after. These people, as a rule, have little time for thought, and progress in theology does not go far, while religious indifferentism goes very far. If, however, they are religious enough to escape the morning paper, or the Coney Island boat, and go to church at all, the last thing they want to hear about is dollars, dimes and cents. They want to be soothed and comforted and caressed. They like to hear about the angels and the streets of gold. Those who do want reform are at the political committee or the Socialist lecture. The clergyman knows this and preaches about the angels. If he does not and gets down to solid earth, he is quickly told what is expected of him.

Suppose the clergyman preaches to the wealthy. It is never in good form to talk about money to people who have it. They are above such things. Reform is tabooed. It involves thoughts and reminders that are unpleasant. Business is business and should be kept out of church. Business, too, is politics, and politics should never enter the pulpit. The wealthy have time to think, and are interested in all sorts of progressive, or, more often, reactionary theologies, whims and fads. Rich women like to sweep church steps or embroider ecclesiastical stoles. Millionaires write theological tractates and take a lively interest in church politics. There is little telling what an idle brain will do. The clergyman leaves all this and becomes the rich man's, or, more likely, the rich woman's, pet. If he does not; if he preaches, not what the people want, but what the people need, he is not told to desist, tho he gets many hints. People simply go to other churches.

It is beside the mark to tell the clergyman he should preach the truth, whether people come or not. Is there any gain for reform in preaching to empty pews? The only way is to preach so that people will come and put in all the reform people can stand. This New York clergymen among the wealthy largely do.

There is another consideration which enters into the subject, but which the ardent social reformer usually forgets. This is the element of true religion and real spirituality in so many churches, but which works, with all its good results, also to keep them content with the present and forgetful of the evil. Beneath the cares and pleasures of rich and poor, in the heart alike of the millionaire and the pauper, in the merchant and employee, there is, more or less developed, active or dormant, yet eternally there—the God-hunger. Materialists may scoff and Socialists may sneer, but it is there. Religion is not dead nor the religious instinct. Let a new revivalist, a reputed prophet come, and people will go any distance, suffer almost any inconvenience, to see if he has a message that will meet their vague yet very real needs. Usually they are disappointed. But still they go. Now, to satisfy this need is, to say the least, a part of the Church's duty. Yet historically this spiritual element of the Church's life has come down to us unassociated with the secular. Hence people, by inheritance, who seek the spiritual—at least, *when* they seek the spiritual—do not want the secular. To this the Protestant Episcopal Church is the main, but only a very partial and limited, exception. The consequence is that both the administrant and the receiver of spiritual food are blinded by the very realities of the spiritual life to the divine claims of the secular. Again the past is responsible. We have written over the Caucus, "Give up all religion all ye that enter here," and have put up over the Prayer Meeting, "Give up all politics all ye that enter here."

The brave and progressive clergymen who are struggling to end this divorce and preach the full Gospel of a completely divine life, secular and spiritual, the full Gospel of the Incarnation, the old Gospel that the Christ preached, do not succeed today because Church people are not with them, and those who would be with them the mistakes of the churches of the past have driven out of the churches of the present. If this article seems in a way to exculpate the present churches and the present clergy, we be-

lieve it states facts, and only shows, so far as the churches go, how helpless is the case. If the fault were only with the present it might be remedied. But you cannot reform the past. Meanwhile, the present rushes on to an ecclesiastical cataclysm. Increasingly the reform forces leave the churches, exactly in proportion to the extent to which reform becomes their passion or their intense desire. Increasingly the conservatives cling to the true in their spiritual life, but blindly mingle with it social and political crimes of the rankest sort. The greatest financial gambler in America is, we think, an honestly tho blindly spiritual churchman. The men who have been proved by recent investigations to have bought legislators, falsified reports, been faithless to sacred trusts, committed every financial crime, have most of them been churchmen of high repute, and, in the main, of unquestioned personal virtue. Where will it end? True religion is gaining in the world. That a new social conscience is developing is manifest on every hand. Nations are brought to the bar of conscience and corporations and their officials to the bar of justice. The movement is yet but in its beginnings, but, beyond all question, it has begun. But this very movement, coupled with the present condition of the churches, must mean ruin and overthrow to the Churches in their existent form. From their ashes the New-Old-One Church may arise. As, beginning with Constantine, the Church seemed to gain the whole world and lose her own soul, so, when the Church has lost the whole world she may find her own soul.

Meanwhile, as we have studied the present, a verse from Jeremiah has recurred to us again and again. Judged by internal evidence, in the light of the Higher Criticism, we are convinced that Jeremiah could not have written earlier than the year 1900 A. D., for no one living before the nineteenth century could have written this reference to New York's churches of the present time:

"The prophets have prophesied falsely; the priests bear rule by their means; my people love to have it so; and what will ye do in the end thereof?"

AMITYVILLE, LONG ISLAND,

# The Reason for the Chinese Commission

BY THE REV. ARTHUR H. SMITH

[No man has a closer knowledge of Chinese conditions and feelings than the distinguished missionary who wrote the following article, and who will follow it with a second article on the Chinese Commission and its membership. He was in the siege of Peking, and is the author of several books on China, of which, perhaps, "Chinese Characteristics" and "Village Life in China" are the best known. He accompanied the Chinese Commission on its voyage to this country and has been much consulted by Chinese officials.—EDITOR.]

TO the average American everything relating to the Far East has an air of what an English writer of half a century ago called "ten-thousand-miles-off," and inherently unintelligible. For this there are excellent reasons, which it is not necessary to recapitulate in detail. Let one suffice. The conditions in China change so rapidly that without constant and intelligent attention it is hopeless for an outsider to follow them. Old residents of the Celestial Empire are themselves often taken wholly by surprise at some sudden development, which appears unrelated to anything which preceded.

It cannot be too often called to mind that the Chinese Government—whoever and whatever is connoted by that term—resembles a family of young kangaroos carried in the maternal pouch. One may hear occasional squeals without at all comprehending what points are in dispute, nor how they are adjusted. The Chinese Court is in like manner *marsupial*. Its acts seem to be the result of a composition of forces, some of which are inscrutable and none of which are fully known.

China, the great hulky giant, was defeated in 1894-95 and forced to a humiliating peace by little and despised Japan. But the empire, as a whole, cared nothing about the matter, if only because, as a whole, it knew nothing about it. Some tributary State was supposed to have rebelled. Only two provinces were concerned, and even when the treaty was signed, its disgrace was mainly felt in the irritation of increased taxation. The Emperor's attempted reforms in 1898 called universal attention to the need of changes. It is always easy in China to adduce convincing proofs of the value of such reformation by pointing out that in the Sung, the Fang and the Chow dynas-

ties similar problems with "barbarian tribes" had been successfully faced and settled. If His Majesty Kuang Hsü had but moved more slowly in that fateful year, it is quite conceivable—altho far from certain—that every important measure might have been actually adopted, with no important reaction. China seemed ready for it, and only wise statesmanship was requisite to bring it about. But, unfortunately, wise statesmanship is the one thing which China never, by any accident, possesses. For five and forty years this great Oriental ship of state has been adrift, with a clumsy and broken rudder, and with a medieval compass, with a "variation," owing to magnetic deflection, of about (let us say) 45 degrees. The "real Chinese question" is, why this craft still continues to float, despite every mismanagement and every storm. The imperial reaction of September 1, 1898, when the Empress Dowager dethroned and virtually imprisoned her "son-nephew," contained the seeds of all China's coming disasters. It was impossible that the popular mind should not perceive the irrepressible conflict between the obsolete old and the impracticable new.

If Western nations had designed a general cataclysm they could not have acted in a manner better adapted to produce it. For a year and more there was a wild welter of "concessions" (the baptismal designation of "aggressions"), and then came hot and cold blasts from Peking, the sudden rise of Boxerism, and its adoption by the Government as a means of self preservation, which, even in China, is a first law of nature. If the Throne had antagonized Boxerism, the Manchu dynasty might have been extinguished by its reaction.

The "settlement" of the Peace Com-

missioners in 1901 settled nothing, except only that nothing was really settled. Every single measure adopted was both irritating and inefficient. It was inevitable that the resolution of a dozen forces pulling toward every point of the compass must be literally no motion at all.

But deep unrest filled the stolid Chinese mind. Much was the matter—he did not know just what, and China was being hauled about by the “Powers” in a shameful way. What might have been had the Japanese-Russian war not occurred no one dare say. It is this event which has altered the entire situation in China, as in time it bids fair to influence the history of the whole world. In the effort to estimate the set of the “Japan current” in China, it is essential to discriminate between instinctive feeling and co-ordinated knowledge. The rise of Japan for more than a generation excited very slight interest in China, altho it occurred at her doors and under her immediate observation. Up to 1895 the Japanese were still thought of, and spoken of, as dwarfs. Since that time the immense results attained by Japan have gradually penetrated the inner consciousness of all China. It is for this reason that the slowly developing Chinese world-consciousness dates from 1904. The argument is short but cogent. Japan is our junior by many ages. Japan got most of what she had from us—language (in part), literature, civilization. She is only a tenth our size, but she has lost no territory to Western nations, has abolished extraterritoriality, is accepted as fully their equal, and now on land and sea has decisively defeated a Power of the first magnitude, in ways and under conditions phenomenally spectacular.

China is old, compact, homogeneous, illimitable in actual population and in potential resources. What is to prevent us, ten times as large an empire as Japan, from doing at least as much now, and more later on? This we believe to be the nidus of the profound restlessness of China, a restlessness which is of gradual growth, but perpetually increasing. The organ of this nascent national feeling, not yet developed into such a love of country as to lead to sacrifice for it

on any large scale, is found primarily, but not exclusively, in the class of students. Their minds are more receptive than those of adults, and their youthful years make them hot-blooded and careless of consequences. Their judgment is immature, their actual acquaintance with philosophy, history, and the science of government for the most part quite rudimentary. But their self-confidence, their enthusiasm, their determination seem unlimited. In an important sense their unregulated and apparently ungovernable activity is one of the great dangers of China to-day. Every one of them is an apostle of change, more or less, narrow of vision, but firm in conviction and in purpose, and most dogmatic and dictatorial in tone.

These enterprising youths read all the numerous Chinese journals, arrive swiftly at conclusions, and inundate the Foreign Office in Peking with hortatory, minatory, and not infrequently mandatory telegrams. A friend who knows tells the writer of these lines that there is sometimes on hand a pile of these messages a foot high, which no one has the time to read.

Eight thousand government and private Chinese students in Japan, mainly in Tokio, were but lately threatening to leave Japan, as many—perhaps most of them did—disgusted at the belated efforts to bring them under regulations like those of Japanese students. Yet these youths, who are unwilling to be themselves controlled, are quite ready to take charge of any public enterprise, however delicate and difficult. Something analogous to this may be said to occur in every land where education is extending. But in all lands but China there is a large and powerful body of actual incumbents who perfectly understand their own position, and are not affected by sudden squalls. In China the obstinate conservatives (proportion totally unknown) despise the radical reformers, while the latter are absolutely certain that unless something is done China will go to pieces.

No such demonstration of the essentially unity (amid diversity) of the Chinese people was ever given as in the Boxer uprising of 1900. The anti-American boycott is but another in the

same series, and, in the opinion of the writer, so is the riot in Shanghai, December 18th, 1905, when buildings were wrecked, foreigners attacked and wounded, and many Chinese killed, all in protest at real or alleged aggressions on Chinese, who are determined no longer to submit.

As in the case of Boxerism this tremendous force might (and often poten-

tially is) turned against the Manchu dynasty, which was never loved, and is now by many hated. The reply—one reply—of the Government to these confusing and alarming symptoms may be said to be the present Imperial Commission. What it is and what it may conceivably do must be discussed in a later article.

## A Subway Crisis in New York

BY FRED W. HINRICHS

[We are fortunate in being able to publish this exceedingly timely article by Mr. Hinrichs, the Chairman of the Committee on Franchises of the Citizens' Union of New York. Altho the article deals primarily with a local issue, it is of extreme importance to the whole United States, as showing what subtle influences are arrayed against the greatest city in the country, and what a campaign of education is yet needed before the people will realize the necessity of preserving their franchise rights. If the reports are true every city in the land has a similar problem on its hands.]—EDITOR.]

**M**R. METZ, recently elected Comptroller on the so-called Democratic ticket, is quoted in the *New York Times* of January 30th as saying:

"Mr. Belmont has told me that he is ready to bid on the plans adopted by the Rapid Transit Commission and that his company will build with its own money. This merger of the traction interests may be a bad thing for the city . . . but we want subways, and unless some substantial syndicate with real money comes to the front, I am in favor of giving the contracts and franchises to the *people who can make good on their promises.*"

This italicized phrase means, of course, Mr. Belmont and associates.

The real people, the four millions who constitute the population of the great city, appear to be of no consequence. The chief financial officer of the city, with his three votes in the Board of Estimate and his seat in the Board of Rapid Transit Railroad Commissioners, declares, before the question is before him officially for judicial action, that he is ready "to give the contracts and franchises to the people who can make good on their promises," without apparently making any effort to retain for the real people whom he is supposed to represent the inestimable treasures which lie beneath the surface of our city streets.

Of the potential hundreds of millions of dollars involved in the franchises for subways about to be sought by Mr. Belmont and Mr. Ryan, each owns today, in this city of four million souls, but one-four-millionth part. And the humblest mechanic or day laborer owns as much—no more and no less. If the Comptroller has his way, in a few weeks Mr. Belmont, Mr. Ryan and a few powerful associates will own all, and the millions of their fellow citizens nothing. Furthermore, such use as these millions may make of the subways which may be built must be paid for in fares big enough to return interest on millions of watered bonds and dividends on millions of watered stock.

It is manifest that the franchise grabbers are about to demand, and the chances are that they will receive, *perpetual franchises* for the new railroads about to be built under our city streets; railroads which are bound to be the most profitable railroads in the world.

The recent election has given evidence of a great public awakening, so that even the conservative Rapid Transit Commissioners and their counsel seem to be willing to make some concessions to their fellow citizens and to the city. It is an

open secret that prominent members of the Citizens' Union and the Rapid Transit Commissioners are in substantial accord as to certain modifications of the Rapid Transit Act, in order that the city may at least receive *the power* not only to *construct* roads, but to *equip, maintain and operate them*. Amendments to Section Thirty-four of the act (which section at present compels the awarding of a contract to construct to the *same* corporation which intends to operate) have been drafted, making it optional for the Commission, with the approval of the Board of Estimate, to let the contract for construction separately, and in different sections to different bidders, and the contract for equipment, maintenance or operation to others.

But the Rapid Transit Railroad Commissioners balk at amending Section Thirty-two of the Rapid Transit Act, which makes it possible to give Mr. Belmont franchises in perpetuity, if he but pays the entire cost of the proposed new roads. And this is just what he is about to offer to do, and thus secure for himself and associates, for all time, the greatest railroad privileges on the planet, growing more valuable as the years roll by and the city increases in area and population.

It is manifest that a greater upheaval than that of last fall is required to teach our Government and the party machines that the people, *the real people*, understand the franchise problem, and have property rights which they will insist that their Government respect and protect.

A word about this Section Thirty-four of the Rapid Transit Law as it stands to-day. Under this law the respectable gentlemen who constitute our Rapid Transit Railroad Commission act. They constitute a body appointed at Albany, with the right of self-perpetuation, and subject to no effective control, except that of the Legislature of the State, which created it.

How skilfully the law was drawn and amended, in order that the matters essential to the masters of high finance might be hidden from the average citizen, tho well known to the railroad magnates, with whom the Rapid Transit Railroad Commissioners are in social

and financial sympathy! What chance is there for the plain people, the public, with whom the Railroad Commissioners have no association, who are believed by such commissioners to be incompetent to govern themselves? Is this public again to be deprived of its property for a grossly inadequate consideration? Is there to be further private confiscation of public property under the forms of law?

The entire Rapid Transit Act, as in effect to-day, contains sixty-seven sections and covers about sixty-seven pages, in the pamphlet recently issued by the Rapid Transit Railroad Commissioners. Of these sixty-seven pages, eleven are devoted to said Section Thirty-four alone, under which section the existing subway railroad was built and is now being operated. Very few have the patience to read thru so long a section, and still fewer can remember what the section contains after the reading.

After this section was enacted it was assailed on the ground of its alleged unconstitutionality. But its constitutionality was sustained and simultaneously its provisions were interpreted and construed by our highest court. (See the Sun Printing & Publishing Association against The Mayor, decided in the year 1897, and published in 152 New York Reports, page 257.) The court, it is true, was divided. There was a prevailing and a dissenting opinion. But all of the learned judges concurred in this view, at least, that the Act gave as the *maximum term of a lease for operating* a subway built at the cost of the city (as the present subway was) fifty years and no more. And yet, after the court's learned interpretation and construction of the law, the Rapid Transit Railroad Commissioners gave to the Belmont syndicate a contract for fifty years, *with a renewal of twenty-five years*.

Seventy-five years is a period so long that few men living to-day will see the end of it, and many of our children and children's children will have passed away before the city will be able to reclaim its own. Is it probable that any man then living, after the countless reorganizations of operating companies and modifications of rapid transit conditions which will occur in the interim, will be

able to state how the present subway railroad ever got below the surface of our streets?

The present lease to Mr. Belmont is practically a grant in perpetuity. If the New York Central can operate its cars on Eleventh avenue without any legal right, and the lighting companies can occupy our streets without any franchises whatever, how easy will it not be for the subway railroad (if city governments remain as slothful as they are today) to continue in possession forever, after the seventy-five years of the present contract will have elapsed.

Considering the great length of the franchise itself, it is not singular, perhaps, that the contract setting it forth, as made by the Rapid Transit Railroad Commissioners, constitutes a printed book of 222 pages, to say nothing of lengthy *addenda* covering some 272 printed pages more.

It may be asked how could the Court of Appeals have interpreted and construed the law as it did, if there is really any warrant in the law for the giving of a seventy-five-year contract?

If any reader of THE INDEPENDENT will turn to said Section Thirty-four he will, after reading the first three pages of such section, find the following very clear language:

"Every such contract shall also provide that the persons, firm or corporation so contracting to construct said road or roads shall, at his or its own cost and expense, equip, maintain and operate said road or roads for a term of years to be specified in said contract, *not more than fifty years.*"

Any one reading such sentence would say, as our highest court said, that fifty years constituted the maximum term. Any ordinary mind would expect to find at this point a provision as to the renewal or renewals of the contract, if any such renewal or renewals was or were contemplated by the act. But no such provision appears at this point.

The confused student of this extraordinary section is obliged to read thru two more closely written pages before he stumbles upon the following sentence:

"Any such contract may also provide for a renewal or renewals of the lease of said road, upon the expiration of the original term and of any renewals of the same, etc."

This sentence apparently might be con-

strued to mean (standing alone) that a contract for operation could be granted in perpetuity. For such contract may provide, it will be noticed, not only for a renewal, but for "a renewal or renewals" "upon the expiration of the original term" and "of *any renewals of the same.*" A contract upon such construction could provide, it would seem, for a dozen renewals, each of any number of years. That the contract for the present subway provides for but *one* renewal for twenty-five years may be a case of "pandering to the moral sense of the community"—altho even the one renewal is in direct violation of the opinion of the Court of Appeals, expressly saying that the contract could be but for fifty years.

The evidence is at hand. Thus Judge Haight, in the prevailing opinion in the Sun Association case above referred to, says, at page 263:

"It is further provided that the Commissioners may also enter into a contract with the contractors for the building of the road, for the lease and operation of the same for a period not less than thirty-five years, *nor more than fifty years,* . . . and that the same may be renewed from time to time *as the lease shall expire.*"

Again, at page 271:

"The evident intention was that at the *expiration* of each term for which the road had been leased, a *new* contract should be made for the re-leasing of the road upon such terms and conditions as to the Board should *then seem just* . . ."

Again, same page:

"That this construction was intended is made apparent from the clause of the statute which follows, providing a valuation of the equipment used in operation in case the parties should not agree for a renewal of the lease, *so that at each recurring period for a renewal,* the situation of the municipality and of the operator of the road may be taken into consideration *and the renewal THEN made* upon such terms as shall be just."

The able dissenting opinion of Judge O'Brien, in which Judge Vann concurs, holds the act to be unconstitutional as violating Article 8, Section 10, of that instrument, which forbids a city to lend its money or credit "to or in aid of any individual, association or corporation, or become directly or indirectly the owner of stock in, or bonds of, any association or corporation . . ."

But as far as the dissenting opinion refers to *Section Thirty-four* of the Rapid Transit Act now under discussion, Judge

O'Brien holds with Judge Haight and says at page 275:

"It is true that the act in question provides for a *fifty year lease only*, but if the matter is within the power of the Legislature at all, it may make the period as long as, in its judgment, may be proper or in perpetuity."

Nothing could seem to be plainer, therefore, than the fact that the present Belmont subway railroad, which received a lease or franchise of fifty years, *with a renewal of twenty-five years*—a period of seventy-five years in all—has a contract made without warrant of law and in direct violation of the decision of our highest court.

Has the city skill enough and courage enough to set aside the illegal twenty-five year renewal forming part of the present Belmont contract?

Has the Legislature wit enough and courage enough to modify Section Thirty-two of the Rapid Transit Act as well as Section Thirty-four? Section Thirty-two authorizes the Rapid Transit Rail-

road Commissioners, with the consent of the Board of Estimate, to grant, if Belmont and associates do their own building, a contract in perpetuity, and this, too, without publicity or competition of any kind.

Comptroller Metz's frank avowal before the matter comes up before him as a member of the Rapid Transit Commission, as well as of the Board of Estimate, seems to point to the granting of a perpetual franchise to "the people who can make good on their promises," that is, the people who under the merger monopoly will furnish the money—money entrusted to them, however, by a confiding public in return for the outrageous issues of bonds and stock now contemplated.

It will probably be necessary, as above intimated, to give our city authorities and the party machines another shock, somewhat severer than that experienced by them in the last fall election.

NEW YORK CITY.

## Way for the King

BY HAMILTON B. WILLIAMS

Way for the King—make way!  
This is the King's day;  
Haste to the crowning.

Weave Him a garland of olive and bay.  
And they wove Him a crown—of the thorn.  
Was such garland as this by a King ever worn?  
Still He was King!  
Way for the King—make way!

Way for the King—make way!  
This is the King's day;  
Haste to the throning.

Lift Him on high, where a King should be.  
And they lifted Him high;—Yea, 'twas a tree  
That they gave Him for throne on the hill Calvary . . .  
Still He is King!  
Way for the King—make way!

# A Defense of the Arts and Crafts Movement

BY MADGE C. JENISON

[Our readers will remember an article we published a few months ago by Miss Martha Bensley, entitled "Is the Arts and Crafts Movement Degenerate?" The following article takes a very different view of the subject.—EDITOR.]

THE debatable ground as regards the arts and crafts movement is this—Is the hand made product necessarily better than the machine made? There are three reasons why it is. The first concerns the use of beautiful things. Every work of art has two missions—to delight and cultivate the community and to delight and cultivate the producer; and putting aside the attainment of any real beauty, the cultivation of the producer thru his attempt, still remains. It cannot be said that a hand made table even tho it be poor, is futile, and had better not have been made. "The clear clean joy of creation" is about as near to heaven as we get in this world and a man experiences it when he makes a shaky table. He has become, moreover, a better judge of tables; he has grown in that he understands the principles of good work in tables and in all things akin to tables, better than he did before he made one; and if his lumber holds out, and his time, and he sees that his table is bad, he will eventually make you something good. Even if he does not know that his table is bad, he is to be envied above the man who has never tried to make anything, and he is himself better off than he was, before he made it. All this admitting that his table is always bad. But is it?

The whole theory that the work is for the worker, is well exemplified by the everlasting music lesson. Why this endless procession of tortatory mothers, of halting little daughters, this never ending line of piano stools screwed up and screwed down, this succession of despairing glances at unenterprising clocks? Is all this, with the idea of evolving so many pianists whom the critic will pronounce good? If the pianists are not good is the effort wasted? Whatever

the purpose, the result is a large number of young women who can play upon the piano in a way which adds to the gaiety of an evening party or the happiness of twilight; and who can moreover appreciate a Chopin nocturne, and the rendering of it, as they could not if they had not endeavored to render nocturnes themselves. Edith Wharton has an allegory of a man who saw the Parthenon and wished to build a like temple to his God. He strove earnestly, but when he had finished, he saw that his temple was but a mud hut. Then, as he wept his despair, a stranger who passed by comforted him thus: "There are two men more unfortunate than thou art. One is he who has no God, and the other is he who knows not the difference between a mud hut and a Parthenon." That this man's appreciation of the Parthenon was keener after he built his temple, is not a matter of doubt. After men have made mission furniture for a time they begin to make a point of looking into the windows where they can see Greuby and rugs. "Let's go by Field's and get cultivated," they say. As a matter of fact they are showing that they have been cultivated.

The vital thing in the arts and crafts movement for our generation is that it reaches many who would never, by any possible chance, attempt to write a poem or paint a picture. These men are not, of course, identified with the arts and crafts societies. Perish the thought! They are simply making mission furniture in the basement. But does anybody doubt whence came this impetus toward a more general craftsmanship than we have had for a hundred years? The protest which is made necessary by the increasing cheapness and ease of production of machine made things has been

taken up by a few people—the "Look out for the engine" slogan of art; and the impetus to try to create something has been handed on to many more who have no name by which to call it. How long this protest will maintain its present form it is impossible to tell. That there will be a new form of the same protest when this has cried itself out, there can be no doubt.

History shows that the attempt to make something beautiful is necessary to the artistic sense of a race. A man grows thru what he has made; or better, thru the making of it. "To be surrounded by beautiful things," says Mrs. Gilman, "has much influence upon the human creature; to create beautiful things has more." The race rises by its individuals, and the individuals rise by the effort to create. Art is for man, not man for art; let it serve him as it can serve him best. The defense of a general craftsmanship does not, moreover, rest upon the argument that the making of beautiful things develops a sense of the beautiful in a race; the crafts educate not only the taste, they educate the faculty for design. A man learns how to design by making things. If we had no more craftsmen we should have few good designers. This is too readily admitted to be argued.

The second defense to be made of the hand-made product is more difficult of approach. It is useless to say that hand-made things are better and more beautiful than machine-made things, when somebody else says they are not. You seem to come to a standstill. With everything beautiful, as with a play of Shakespeare, you may analyze, you may point out, you may explain, you may set it beside the sources, but the essence of the thing remains still unresolved. You can never put your finger upon the final secret of its power. If a man says—"Well, I like Marie Corelli better"—what can you say? There is Abraham Lincoln's old reply—"Well, if a man likes that kind of thing I should think that would be the kind of thing he would like."

There are a number of examples illustrating sharply the difference between machine-made beauty and the beauty which comes immediately from the hand of a man. The Pianola is as patent as

any. You have a Liszt rhapsodie, you have perfect execution, you have diminuendo and crescendo, largo, staccato and adagio, all on the exact beat marked in the text, yet no one will hold that the best Pianola comes within shouting distance musically, of the simplest performance of many a child. The Pianola is a machine and can reach the perfection of its use, only thru one who can make better music without it. Improve the Pianola by all means. But in the name of sense, do not say that it makes as good music as two hundred different people you know. Compare a mechanical drawing with a free hand drawing. Whenever an architect wishes to get an effect he does his work free hand.

Without the field of art we find the same conditions, the greatest perfection attained by hand work. For example, we can turn to any of the great mechanical industries. A sheet of rolled iron when it comes from the rolls, has not a straight surface; it is, as mechanics say, buckled. If this sheet of iron is to be used for saw blades, or safe doors, or for anything else for which it must be straight, it is straightened by hand. No machine has been made which can straighten sheets of rolled iron. But some men can. Again, the steel used for the slide valve in the steam chest of the engine must fit, if the valve is to be steam tight—with absolute accuracy; in all good engines the steel for the slide valve is scraped by hand.

If we cannot prove beauty, can we give any sufficient reasons why a machine cannot do either as good or as beautiful work as a man? There are several. The most notable is the inexorableness of the machine, the unvarying law which makes it do a thing always exactly in the same way, to the same degree, until it comes to the same cog. A machine can, of course, never be guided by either the demands or the possibilities of the material given it. An artist uses the vein in his marble, or the variations in the color or grain of his wood. The indifference of the machine to the individual power and beauty of the material given it, is an aphorism of modern life. The enemies of education say that our universities are machines; and when the routine of a man's work has so possessed him that he

dictates letters all night, and dreams that his wife is half woven wire and half acme clasps, he pounds the table and groans that he is nothing but a machine.

In the very exactness of a machine and the inexactness of other things, lies the machine's imperfections.

We speak with enthusiasm of a surgeon who works with exactness. Is not a machine more exact than a man? A machine could measure to a hair's breadth just where a man's appendix should be, and cut out that bit of perdition with a hand which could not by any possibility, tremble and slip. Would any of us like to be operated upon by a machine? If not, why not? A machine is absolutely exact. The trouble is that we are not. It is the perversity of some men to have an artery in the exact place where an artery seldom is. A surgeon feels about and avoids that artery. Why? Because he has a mind which guides him from instant to instant. He adjusts himself to conditions with every gesture. When a machine is perfected, is set in motion, it is practically without the guidance of any discriminating intelligence. The direct connection of intelligence with it ceases when the lever is lifted.

The dissenter may point to the compressed air chisel or hammer as an example of a machine which is guided immediately by a man. But these are both instances of power back of which a brain must constantly be. These are, therefore, not machines, but tools. The piano, the violin, the fountain pen, the air chisel, are all examples of tools improved by some mechanism in their construction. In the loom for hand weaving we have an example of the improved tool. The line between the tool and the machine is not that of the saving of labor; it comes where we step from an aid to creation—the tool—to a vehicle of infinite reproduction—the machine. If everything which intervenes between a man's hand and his material, is to be called a machine, there is no such thing as a craft, and the question before us is no question.

Nothing in the world is exact except mathematics and machines. Such may be the excuse of the maker of arts and crafts pottery who puts his design on one side. God put the writer's nose on

one side, and one of the Venus de Milo's eyebrows higher than the other. This must be the right way to make things.

"God is an artist, not an artisan."

The potter who deliberately puts the centre of his design crooked so that his vase will look hand-made, is insincere. But this has nothing to do with the arts and crafts movement. It is the spirit of commercialism making capital of the arts and crafts movement. Certainly, irregularity has charm; irregularity is one of the elements of beauty. The unevenness of the threads in the linen our grandmothers wove, gives an irregularity to the surface, which is good art. "Let there be light—and shadow"—is the decree of the creation which has most to do with art.

The hand-made product is bound to triumph over the machine-made, thru adaptation to material. The arts and crafts movement has added to this ideal, that of adaptation to the consumer. As soon as you want individuality in your rooms you turn to the handicrafts. A machine will not consider *you*; it works for the *genus homo*. It is true that one flat differeth not from another flat in glory, but a flat is not a home; it is just the possibility of a home. Furniture is not made to fit certain wall spaces; it is made to fit certain men and women. Machine-made chairs are never comfortable. This statement can be proved in any room. A machine makes a chair which will be fairly comfortable for any one and is therefore really comfortable for none. No one would argue against adaptation to the consumer who had enjoyed the luxury of a rocker swung for his especial length of limb.

It is especially true of arts and crafts products that there will always be room for them at the top. The hand-made product will always usurp the field of costly work. It will never pay to build and perfect a machine to make pieces of furniture costing from three hundred to a thousand dollars, because the demand for such furniture is small; the largest furniture houses do not sell more than one or two such pieces in a month. If people who bought such furniture would be willing to have it made all upon the same design, and were willing to relinquish personality and the fitness to their

special needs, it would pay; but they are not. People who pay these prices demand many things; the people who pay two dollars and a half for a chair can demand very little, and such people form the bulk of the trade. A factory which makes two thousand chairs a day can afford to have a machine, but a factory which makes three a month cannot. Cheap buildings, cheap carriages, cheap furniture—there is more money in manufacturing cheap things because the demand for them is greater. Sometimes the defenders of the machine-made product hold that the machine could produce as good furniture as a craftsman if as good glues, wood, dyes, etc., were given it. Undoubtedly as good materials could be used. Why, then, are they not? If a machine does as good work as a man, if good materials are, therefore, the only things needed to make the machine product as good as the hand made, why does not some manufacturer supply this fatal deficiency? The fact is that manufacturers know that their product does not insure the investment. Given every advantage, the machine-made product still remains second rate. We could have no better proof of the inferiority of the machine-made product than this testimony of the man who had studied its value.

What, then, is the place of the machine? We commend the machine for making fairly beautiful things cheaper and more common. Machines can certainly do many things which are as yet done by hand—for example, fine hemming and hemstitching. But it is indefensible to defend the machine as a vehicle of art. A machine is not an artist. It is a slave. It is to make screws, saw boards, roll steel rails, dig sewers, scour knives—all the laborious and uneventful tasks which are done after the first few times without intellectual or emotional stimulus, it is to do. The buzz saw is not the enemy of art; it has nothing to do with art. Steam and electricity do not kill beauty; you will notice that they are in themselves beautiful and anything of which they are made is beautiful, but the things which they produce belong in the second class of production.

The whole argument of those who oppose the revival of the arts and crafts

comes to this: We admit that a machine cannot make a design, but it can reproduce a design perfectly. Let men, therefore, make the designs; let machines reproduce them. Even were it true that a machine can reproduce perfectly, what comes of this? Certainly for a time, many less people making beautiful things. There are many people who will handle materials with delight, who will never handle ideas. These people must seek other fields; the machine manipulated by two or three men would be doing their work for them. We do not ask what would become of these people. That question used to be asked ten years ago. The result must, of course, be an eventual increase of leisure for every man.

As men have more leisure, there will be many, who like those who are now hammering brass, and modeling pottery, and making mission furniture, will have an impulse toward making something beautiful. If the machines had usurped that field they would have to make designs. We should have, therefore, an infinitude of designs. We should have as much variety as we have thru the handicrafts. The machine would follow a new design each time. Men with the artistic impulse would be forever making nothing but designs. They would grow by creating designs and not by creating things. It would be existence thru a field glass, life over a telephone—this life of a craftsman whose creation had nothing to do with the handling of marble and jewels, ebony, ivory, mother of pearl, the glowing surface of copper, the fine, shimmering textures of silk and linen. Away with it! Away with it! Such a life to such a man would be an illusory, pale and bloodless phantom.

What then can be said for the hand-made product?

(1) That the value of any work of art lies in what it helps the man who produces it to become, as well as in what it helps those to become who enjoy it when finished; that if all those things now made by craftsmen, were made by machines, the greater means of culture would plainly become extremely limited; that such culture is necessary to the artistic sense of the entire race; and, finally, that the very ability of the artist to make

a good design depends upon his training in the craft for which his design is intended.

(2) That this danger is, however, not dangerous, since a machine can never do as beautiful or as perfect work as a man—(1) because of its inability to make the fullest use of its materials; (2) because the machine-made product is lacking in

perfection and adaptation to the person who is to use it.

Improve your machine? By all means. Salvation looks out that way. The machine means leisure, and leisure means arts and craftsmanship, and the making of beautiful things means finer living. Improve your machine, of course, to improve your man.

NEWARK, N. J.

## Inside an Old Ladies' Home

OLD age overtakes us before we realize it; the downward slope seems as gradual as the upward one, until we suddenly discover that childhood is left behind. After a life of more than sixty varied years, I awoke to the unpleasant fact that it was time for me to be laid upon the shelf. The loss of a good, paying position in a large publishing house, which I had filled for many years, and my inability to find another place after repeated trials and the discouraging rebuff, "Too old for the position," or "A younger person preferred," forced me to look the future in the face and have some anxiety as to my course of action. An influential friend suggested an "old ladies' home," but it took some months to decide upon the necessity of the step and to agree to the proposition. I had been used only to literary work, and was not fitted to be a housekeeper or to hold other situations, often capably filled by women getting on in years. At last, urged by the additional incentive of having my entrance fee of several hundred dollars paid for me by friends interested in my welfare, I consented to enter the home—with something of the feeling that I was attending my own funeral.

The home I live in is accounted a model one, and is really excellent as to situation and accommodations, with a sufficient endowment to have all the modern improvements for convenience and comfort. I was assigned a room on the third floor, with one dormer window,

overlooking a yard with trees and grass plots, divided by paved walks from the street. But the season was winter and the leafless trees made the prospect somewhat dreary. The room, clean and bright, held the conventional furniture—bed, bureau and mirror, washstand, small table and three chairs, one of them a rocker. The ingrain carpet was apparently new, and there was a comfortable supply of bed linen and towels.

In this institution each inmate is allowed to furnish her room for herself if she desires to do so, or to add anything of her own that may be suitable. Some of the old ladies' apartments are very cosy and pretty, large enough to contain a couch, desk, book shelves and pictures, and often plants on the broad window ledges, besides the numerous small articles of *virtu* dear to the female heart, and so often anathematized by the male in the family as "trash." But as this last evil, man, is an unknown quantity here, his existence disturbs not the serenity of the old ladies' lives. They can keep their treasures undisturbed. The matron occasionally complains of some venerable heirlooms as being dust accumulators. But she seldom interferes, save in very aggravated cases at the spring and fall cleanings. As in all places the surroundings are telltales of character, so here there is a variety that gives a key to the tastes and habits of the possessors.

It took me some time to become accustomed to the routine of the establishment. The meals, tho plentiful in

quantity, are not of the kind I had been accustomed to; and the table service and furnishings are of the plainest and most unattractive—thick stone china, abhorrent to the dainty soul. But in time one becomes accustomed to it. The morning meal is always oatmeal; very infrequently some other cereal; bread and butter, tea and coffee, with either bacon, sausage, scrapple, mackerel, hash and, occasionally, that composite dish, liver pudding; once in a while fried potatoes and, once a week, hot biscuits. Eggs are the Sunday breakfast dainty. The dinner is generally the best meal; there is always some kind of meat, two or three vegetables and rice. Rarely, and deliciously, dessert comes, usually on Sundays, which is cold meat day and, of course, on holidays. These desserts are usually rice, tapioca or bread puddings and, about once a month, pie of some sort. The suppers are somewhat unsatisfactory, consisting only of bread and butter with apple sauce or stewed fruit and—not very often—cheese or dried beef, and crackers or buns. Tea is the *sine qua non* at every meal; but sometimes we get coffee. Apples or oranges, or whatever fruit is in season, are provided now and then. No one need starve, even if the menu is not one that exactly suits a delicately nurtured taste. In the infirmary the meals are of somewhat different quality, better suited to the very infirm and the sick, who are well cared for by a competent head nurse and her assistants. In my opinion, it is the most admirably conducted part of this institution.

The Matron—spell her title with a capital or all in capitals—is the ever present genius of the Home, pervading its furthestmost recesses, seemingly omnipresent. One of the New England States claims the honor of her birth, and the characteristics of the Yankee shine forth as the result of her descent from the Pilgrim Mothers. Her experience of life in an institution has rendered her familiar with all the phases of the work. She is acute, managing, and a good reader of character on the general lines, altho she sometimes fails to recognize the nicer points in the making up of the women of real refinement whose lives it is her privilege to regulate. But to only

a few is granted this insight. Taking all things into consideration, the Matron is the right woman in the right place. She discharges her various duties circumspectly and well; she has proved her ability by having kept the good opinion of the managers—who are all women—for almost two decades. Her attire is always neat and suitable, with enough of “rustle” to command outward reverence. She has a sharp eye and an incisive voice, which can be heard all over the long dining-room with its numerous tables, when she says grace. It is at meal times she voices forth her displeasure, if any broken rules or any sins of omission have been discovered. She does it in an impersonal manner, with warning for the future, leaving it to the culprits to take home the reproof, or, as the saying is, “to wear the cap if it fits.” The rules of the institution are few and very easy to keep; but it is a constant commentary on human nature to observe how many of the old ladies take delight in finding excuses to evade them. A number of small services are put upon the active inmates. In spring and fall, there is sewing to be done for the house, such as hemming towels and making sheets and pillow slips, etc. Just at this time rheumatic fingers and poor eyesight are especially troublesome. There are restrictions put upon going out, and every one is privileged to take a vacation each year, to visit friends or relatives, if they have the means to do so.

There is a small chapel in the building, where services are held every Sunday afternoon and on one evening during the week. They are conducted by either ministers or laymen of various Protestant denominations, for the institution is unsectarian. A really good small library, with many of the new books and magazines, supplies mental pabulum for the household, and a daily paper is supplied; but many of the old ladies take the newspapers for themselves.

Each old lady has the privilege of making a little money by the work of her hands if she possess the skill and the opportunity, and many a one knows how to use the needle to make fancy articles dress dolls, to knit and to crochet. The work often finds ready sale with friends

or with the managers. It is written in the laws of the Home that a trifling percentage must be paid to the institution from the returns. The rule is not strictly observed. It is amusing to find out how often this small tax is slyly evaded or ignored. Two or three old ladies are very industrious in making a variety of household articles, knitting tidies, etc., ostensibly for purposes of charity; but, as their friends or patrons supply the material necessary for their work, I strongly lean to the opinion that the Bible maxim is carried out, and that their charity begins at home. Most of the workers, however, honestly pay the duty required, and there is always mention of the amount in the annual report.

With those who can work it gives a comfortable sense of being useful; some "siller in the pouch," is a great help to cheerfulness, and a promoter of personal dignity, as the Scotch minister knew from experience when he borrowed a "siller saxpence" to have in his pocket, on an occasion when he especially wished to impress his hearers with the force of his sermon.

Every small community like this resembles a miniature world where different phases of character make an interesting study for the sociologist. There are a few good, lively Christians, whose influence can be felt. They appear to be tranquilly waiting until they are called to their own place. No doubt time has softened the trials and disappointments of their past lives, and these last years are not unhappy ones for them. But, after a careful consideration, it is my opinion that the grumblers and fault-finders predominate, and jealousy and ill-feeling often exist without the slightest cause, save the unchecked evil spirit. Much charity must be exercised toward the unhappy and dissatisfied ones. Many of them have had trying experiences, and the old have a propensity to look back and remember blessings that have perhaps been slighted or never recognized before, while at the same time they miss those within reach. There is so much curiosity and gossip going on all the time that

I have learned by experience to avoid expressing the most colorless opinions on any person or subject. They are apt to be ventilated with "improvements" and often cause mischief and heartburning. I have learned to take with the saline grain all discussions concerning the character or actions of any one connected with this aged little world, where the smallest sayings, like children's snowballs, white and small, enlarge as they are rolled from place to place, and lose their pristine whiteness along the grimy, earthy road.

After much consideration and some experience in an Old Ladies' Home, it appears to me not unlike other situations in life. It has its cheerful side and its drawbacks. I am speaking now from the point of view of one who, in spite of more than three-score years, is active in mind and body. To such a woman the Home is a comfortable boarding house, where there is no anxiety as to weekly payments for food and lodging, and where within the four walls of her own room, she can find a *home*, and so attain a certain degree of happiness, or at least can accept with thankfulness in decent gratitude the state to which circumstances, or Providence has called her. No use speculating on "the might have beens"; accept the present and make the best of it. Is there anything more difficult than making the best of things that are innately antagonistic? The most trying of them all, to me at least, is to be constantly associated with the old and failing, the deaf and half blind, and with those whose infirmities are the source of repining, whose one idea is self—and they are in the majority. It needs an intercourse with the outside world and more youthful sympathy and companionship to keep from utter disgust of life on one hand, or the other, from falling into the same apathy and everlasting grumbling. Even the few cheerful souls are not enough to leaven this depression. It is hard to settle down to old age with only a respectable funeral as its *finis*, at the end of few or many years spent in an Old Ladies' Home.

# American Snobbishness in the Philippines

BY ELSIE CLEWS PARSONS

[Our readers will remember the article from Mrs. Parsons in THE INDEPENDENT a few weeks ago entitled "Penalizing Marriage and Child Bearing." The following article is the result of her experiences in the Philippines last summer, where she went with her husband, Congressman Herbert Parsons, as a member of the Taft party.—EDITOR.]

RACE snobbishness seems to be the source of much of the present discontent in the Philippines with American administration. There are in Manila—I shall speak only of Manila, where I had opportunities for personal observation, but the same conditions are reported to exist in the provinces, probably less marked, however—there are in Manila many cultivated and wealthy Filipino and Mestizo (*i e.*, Filipino-Spanish or Chinese) families who live in considerable comfort and luxury. Their houses are large and well, altho somewhat archaically, furnished. They have carriages, in some cases automobiles, jewels and lavish wardrobes. One or more members of a family have usually traveled abroad, and perhaps lived for some time in Europe. Between this native aristocracy and the Americans in Manila there is at present little or no social intercourse, altho the natives have a deep sense of hospitality and are devoted to social festivity.

It is not difficult to see at once that this barrier is raised up by the Americans, and, moreover, by the American women. I met American ladies who had never been inside a Filipino house. At the two entertainments given to the Taft party which the Filipinos to any extent attended, no resident American women danced with Filipino partners except in the case of one square dance, where the ranking American woman present was

officially bound to follow Secretary Taft's example, he dancing with the hostess and she with the host. Excepting three or four school teachers and the wife of one American official who was interested in introducing housekeeping classes into the school system, I met during the week that I was in Manila not a single American woman who expressed an interest of any kind in the welfare or progress of the Filipinos.

Impatience with and harshness toward native servants was the American housekeeper's usual attitude. One woman told me that she was so disgusted with her "boys" that when they didn't carry out her orders she threw things at their heads. This, of course, was an extreme case, but there is little or no attempt to *train* the much complained of "boys." It must be acknowledged that the climate bears very hard on the American woman, apparently harder on her than on her husband or father. She soon loses her color and her energy, not to speak of her temper, the more readily, probably, because her life is so fruitless and so ill adapted to climatic conditions. Late hours, badly chosen food and nothing more arduous than card playing do not fulfill what seem to be necessary hygienic conditions in the tropics, *i e.*, a certain amount of hard work or exercise, much sleep and much nourishment. Poor health, whatever the cause, is probably in

part responsible for the American woman's inertness in assuming the very plain obligations that meet her in the Philippines; but unintelligent and selfish race prejudice is only too plainly the underlying cause of her indifference and neglectfulness.

The entertainment of the Taft party furnished many illustrations of this neglect of native society. It was stated to me, and as far as I could I verified the statement, that not a single Filipino lady was invited to meet Miss Roosevelt or the ladies of the party at any of the dinners given in their honor. Some of the bachelor members of the unofficial party and a few of the younger Congressmen were assigned to Filipino families, but even in these cases, in the more or less public discussion of entertainment plans the feelings of the Filipinos were outraged by the open questioning of their means of entertaining the American visitors. One Filipino lady who has always kept an excellent table was told that if she wished to entertain two members of the unofficial party she must engage a Chinese cook. The statement was made in one of the American newspapers that it was hoped that Miss Roosevelt would not be seen dancing with any "gugu"—the American term of contempt for the Filipino. In looking over the program of entertainments Secretary Taft probably appreciated the exclusion of the natives from any important part in it, for he himself planned for the one native entertainment given to the American visitors, the most enjoyable and the most conformable to the usages of polite society, by the way, of all the festivities.

This social neglect of the Filipinos by the Americans is probably felt all the more keenly at present because of its contrast with the tone set by Governor and Mrs. Taft in the past. In their day the Malacañan receptions were attended by as many natives as Americans. Whereas, at the very crowded reception given at the Malacañan to the Taft party, but a handful of Filipinos were present, in spite of the attraction of the presence of Miss Roosevelt and of their greatly be-

loved ex-Governor. Moreover, it was said that even the Filipinos present had to be especially urged to come. The daughter of one of the most prominent native officials, a cultivated and distinguished lady, told me that under no circumstances would she go to the Malacañan, as she understood that she was not welcome there. She added that all her friends felt in the same way. In pointing out the contrast of past and present to me, another Filipino lady showed me with pride a photograph taken of herself with Mrs. Taft, both in Filipino dress.

As was seen in the past, much can be done undoubtedly by the ranking officials, and still more by their wives, in setting a fashion, so to speak, of respect and consideration for the natives; nevertheless, as Bishop Brent has recently pointed out, what is really needed in the Philippines, for the McKinley-Taft educational policy to stand any chance of success, is a higher type of American official—and not altogether humorously, may it also be suggested that it would be well if the character of a man's wife also played a part in his qualifications as colonial administrator. The experiment of forcing a people to pass in one or even several generations thru a social development that would normally require several centuries is, to say the least, an unprecedented and, therefore, uncertain undertaking. It certainly demands men and women of the highest moral and mental caliber, practical people, but people with faith and enthusiasm. With few exceptions, the Americans at present in the Philippines, in both official and unofficial life, are not of this type. The Filipinos who have been in America appreciate this fact, and herein is naturally another source of discontent with American occupation.

How to get the best type of Americans to go to the Philippines is the most urgent, in fact, the essential task of our present Philippine policy. Whether or not America can spare this type of American is, of course, another question.

WASHINGTON, D. C.

# Reminiscences of Webster and Sumner

BY IRVING ALLEN

OF the five illustrious orators who, fifty years ago, were residents of Boston—Webster, Everett, Choate, Phillips and Winthrop—it is probable that the fame of Daniel Webster will prove most enduring. He was the central sun around which his great associates revolved, with the exception of Wendell Phillips, who moved in an eccentric orbit of his own. Yet, in the matter of eloquence alone, Everett and Choate were both the superiors of Webster, whose long and undisputed reign as a monarch in the realm of American statesmanship, of oratory, and of diplomacy, was doubtless due in almost equal measure to his majestic intellectual endowments and to his unique and kingly personality.

It was not only the citizens of Boston, to whom his face and form were familiar, who stopped to gaze upon the great statesman with reverent admiration, but it is a tradition of London that even the coalheavers and bargemen of the world's metropolis looked with amazement on a simple majesty of manhood of which their princes and dukes had given them no conception.

There are many incidents in the public life of Webster of which I have a vivid recollection, but there is none that I recall with greater clearness than the famous Military and Floral Reception, at Boston, on July 9th, 1851. It was one of the many red-letter days in what was known in those times of a doubtful peace as "the City of Processions." I remember that it seemed to me that every garden and greenhouse in the neighborhood of the Capital had been despoiled to contribute to the *éclat* and splendor of the great occasion.

It was a time of the deepest and most intense partisan and personal excitement and bitterness. It was Webster's first visit to the city of which he had long been the idol since the 7th of March speech. The Abolitionists, under the brilliant leadership of Wendell Phillips, had poured on the head of the great

Whig champion all the vials of their philanthropic invective; even the muse of Whittier had evolved a diatribe as melodious as it was indiscreet and uncharitable, and of which in his later years the poet was duly and wisely ashamed; and this midsummer demonstration of the old loyalty and love for Webster was no formal civic or political function, but a spontaneous tribute from the people of the old Puritan City.

The entire State Militia was invited—not, if I remember rightly, ordered—to assemble in Boston early in the afternoon of the appointed day to participate in the city's welcome to the statesman it chiefly delighted to honor. It was a Summer day of intense and exceptional heat; yet every regiment in the two divisions was fully represented in the long and glittering array. The march under the blazing July sun, altho greatly abbreviated by reason of the well-nigh insupportable temperature, was fatal to at least three of the Massachusetts Militia.

I attended the funeral of one of them in Cambridge on the following Sunday.

Despite the terrific heat, Boston ordained for itself one of its own peculiar holidays, and the principal streets at an early hour were filled with enthusiastic citizens and visitors from all the neighboring cities and towns; but it was a striking and significant fact that scarcely a single representative of the African race was visible on the thoroughfares of Boston that midsummer afternoon; Webster's popularity with the colored people of Massachusetts, as with the Abolitionists, was already a thing of the past.

I forget just where the long line was taken up. The procession—which, with the exception of an extensive array of gentlemen on horseback, was exclusively military—passed through State, Washington and other principal streets to the Common, where Webster made a memorable and eloquent speech. I waited in a comparatively quiet thoroughfare at the West End, and had an admirable view of Mr. Webster.

The illustrious guest of the city was seated in a barouche opposite the Mayor, whose name I do not recall, and beside him sat his lifelong friend and associate, Edward Everett.

Webster's face was pale, and wore an expression of bewilderment and weariness. This was especially noticeable at a point where a very lovely young lady suddenly appeared on a platform or stage extended from one of the fine residences on the avenue—West street, I think—with a magnificent bouquet of exotics, which she presented with a graceful bow to Mr. Webster—happily with no attempt at verbal eloquence. The tribute was accepted with a simple "Thank you," and a majestic obeisance from the great statesman.

It is pleasant to remember that, whatever may have been the strength and the extent of adverse sentiment on the part of any section of the Boston public, nothing occurred to mar the splendid success of this final tribute during his life of the New England Capital to her personal and political idol.

Webster was then in his sixty-ninth year and had nearly reached the close of his marvelous career.

The next and the last time I saw him living was early in the year 1852 on the platform of Faneuil Hall.

The face of no great citizen of Massachusetts was more familiar to me than was that of Dan'l Webster; yet—and it is still to me a matter of deep regret—I heard his voice in public only on two occasions—at the Wyeth divorce trial at East Cambridge in 1848, when Mr. Choate was his formidable and victorious opponent, and at the time of which I have written, in Faneuil Hall. It was a speech in the nature of a defense of his attitude in and after the 7th of March address in the National Senate, and was delivered at the request of eminent citizens, chiefly of the great Whig party, of which Webster was so long the champion and chief.

It was shortly after the carriage accident at Marshfield, from which he escaped with no more serious injury than a broken arm. As he stood on the rostrum of the historic hall, where his voice had been so often heard in many a sacred cause, his face was drawn and pallid,

doubtless from recent suffering, and the injured limb rested in a sling of white linen.

As I recall this last appearance of Webster within the consecrated walls whose memories are indissolubly linked with his name and fame, his personal presence seems far more impressive and effective than any words he uttered.

Indeed, it is scarcely too much to say of the address itself that, so far from being either strikingly eloquent or powerful, much of it was absolutely dull and even commonplace. Unlike either Everett, Choate, Phillips or Winthrop, Mr. Webster, I think, rarely made accurate and careful preparation for an oratorical effort. The great Senatorial oration on which his fame for classic, and in its way matchless, eloquence largely rests, was never committed to paper—was not at least written out in full—until some time after its delivery; and the speech as we have it today, especially the thrilling and marvelous peroration, familiar to every schoolboy in the land, is essentially different from the words as they fell from the lips of the orator.

It required some great occasion—some impending and momentous public stress—some issue of vast moral or political import—to call into exercise Webster's treasures of gorgeous rhetoric, of withering denunciation, of splendid eloquence.

An inconspicuous mark is quite as unsatisfactory to Slander as it is to Death, and few great Americans have escaped the arrows of the ubiquitous and venomous vendor of scandal and falsehood. To him Everett was an aristocrat and a political trimmer; Choate—who, we are assured by his physician, easily succumbed to a Dover's powder—was an opium eater; and Daniel Webster was pronounced by a host of pious New Englanders, whose intellectual endowments were circumscribed within the periphery of a Franklin medal, a hopeless drunkard!

A well-meaning Boston clergyman assured the writer, with all the solemnity of perfect faith, that, on the occasion of the reception I have described, Mr. Webster was so far under the influence of liquor that he found it impossible to stand erect in his carriage! Heaven be

praised! I was able to nail that slander from my own absolute personal knowledge, standing as I was at the very moment to which the man referred within six feet of Webster's carriage.

Some readers of this paper may remember the launching of a vessel of some sort, somewhere in the forties—I think an ocean steamer—to which was given the name of the Massachusetts statesman. Mr. Webster had agreed to be present and to speak on the occasion, but was so ill on the appointed day that his law partner, the late John P. Healy, urged him in vain to remain at home. He had promised, he said, and would on no account disappoint his friends. It was widely asserted, and quite generally believed by the hosts who gladly credit any evil report against the great, that at the banquet on board the vessel Mr. Webster was so decidedly under the effects of undue potations that he had to be held on his feet during the delivery of his speech!

The simple truth was—and this I had from Mr. Healy's lips—that Mr. Webster's weakness was so great that he—Mr. H.—stood by his side all thru the address, his arm interlocked with that of the speaker lest his strength should wholly fail. He added that the sole beverage of which Mr. Webster partook thruout the afternoon was half a glass of Madeira wine! Ample material, however, for the facile scandal of envious or malicious inferiority!

After Charles Sumner's partial recovery from the effects of Brooks brutal assault, it was determined by the Senator's Boston admirers and friends to give him a public welcome on his return to that city. The time selected was an afternoon in the November of the year 1856.

Unlike the Webster reception, the tribute to Mr. Sumner did not assume the form of an extensive military display. The corps of National Lancers was accepted as escort, and was the sole representative of the State Militia. The remainder of the procession was composed of a long array of cavaliers, and gentlemen in open carriages. How well I recall the face and form of Longfellow as I saw him on that Autumn afternoon.

He rode alone in his own uncovered carriage or barouche. I even remember the unimportant detail that he wore on this occasion the vest-coat of ruby velvet, which was often at that date a fashionable item in a gentleman's apparel. The poet's auburn hair and full side whiskers were as yet untinged with gray, and his entire aspect seemed to me singularly youthful and jovial. Alas! it was soon after that festal November day that the sad mischance occurred that darkened the life and whitened the locks of Sumner's friend and our most renowned and beloved singer.

As on the day of the Webster demonstration, the streets were filled with a crowd of eager sightseers, and in some quarters there was no lack of enthusiasm; but it was often made evident that its source was sympathy for Mr. Sumner's personal sufferings at the hands of a slaveholder rather than especial admiration or affection for the man. Indeed, it is only truth to say that Sumner was never an object of personal regard or attachment to the mass of the Boston people. They respected his sincerity and admired the courage with which he maintained unpopular opinions and political tenets; but the aristocratic element in the nature of this champion of human freedom and honest hater of the slave system, and his too often brusque and haughty manners in private intercourse—especially with strangers—made him all thru his public career *persona non grata* to the great body of his constituents, and, I think, to many of his associates in the National Senate.

I have spoken of the conspicuous absence from the streets of Boston of our colored fellow-citizens on the day of the Webster "floral reception." On that November afternoon, as the cavalcade that escorted Mr. Sumner approached the State House, in a majority of the palaces of Beacon street "the windows were darkened," shutters and blinds remaining obstinately and ominously closed—while Belknap and Anderson streets poured forth their dusky and rejoicing hosts!

As in life, so was it with both these great Massachusetts statesmen in death. What reader who recalls the memorable 29th of October, 1852, will forget the extent and the evident sincerity of the

public grief on the day of Webster's burial?

There was public sorrow and a wide sense of bereavement when Sumner died; but the element of personal loss was somehow lacking thru all the outward evidences of mourning.

It is perhaps true that comparatively few of our greatest citizens—poets, prose writers, statesmen, orators, preachers—have been in any real sense magnetic men. To this rule Daniel Webster, Rufus Choate, and Phillips Brooks were pre-eminent and striking exceptions. It is my belief that the lovers of Webster for the simply human and manly qualities that so endeared him to neighbors and friends were wellnigh as numerous as the worshipers at the shrine of his majestic intellectual gifts.

As I saw the body of the great anti-slavery Senator lowered into the grave in beautiful Mt. Auburn, amid the tolling of the distant Cambridge bells, and the sad silence of his eminent associates, I felt that, solemn and affecting as were the hour and the scene, there was somehow lacking the sense of personal loss so

touchingly expressed by an old neighbor—a farmer—at the historic Marshfield funeral: "*How lonesome,*" he said, "*the world will seem without Webster!*"

I had, of course, no personal acquaintance with Daniel Webster; but I knew Mr. Sumner well, having been introduced to him in Washington by Mr. E. L. Pierce—in later years his biographer; and I often met him at the old Sumner mansion on Hancock street, in Boston. Mr. Sumner was a genuine lover of art, and there were many objects of exceeding interest and value in his Boston residence; among them I remember a miniature copy on ivory of the famous portrait of Beatrice Cenci, utterly unlike the numerous pictures of that lovely and most unfortunate woman.

It may be mentioned, as an illustration of the unique egotism so prominent in Sumner's character, that he carefully kept and frequently exhibited the coat worn by him at the time of the Brooks assault. I recall, especially, a set of solid gold knives and forks—a tribute from eminent Hungarians after Sumner's speech in behalf of their cause.

## Madonna Mia

BY ROBERT HAVEN SCHAUFFLER

I SEE thy face as on that calmer day  
When from my infant eyes it passed away,  
Above these futile cares and questionings,  
Above this pale of petty human things,—  
The trampled field of Time's capricious play.

Bright with more mother-love than tongue can say,  
Stern with the sense of foes in strong array,  
Yet hopeful with no hopefulness Earth brings,  
I see thy face.

O gracious guarder from the primrose way,  
O loving guide when wanton feet would stray,  
O inspiration sweet when the heart sings,  
O sweeter ministrant to sufferings,—  
Down all the long road—my Madonna—may  
I see thy face.

# Literature

## Life of Charles Lamb

It is a commonplace, whose richness and worth one realizes afresh with each new reading and experience, that one can never hear enough of Charles Lamb and his sister "Bridget Elia" (Mary Anne). It is always these personal authors that twine round our hearts, appearing less like stars in the sky than flowers in the field. And in this instance there is the double conjunction, the twin-blossom, of brother and sister, "united in their lives and not divided in their deaths," and kept unwithering in the admiring and affectionate remembrance of posterity.

They have been fortunate, also, in editors and in biographers, love has been lavished on their words and deeds, and has provoked not only better knowledge but fuller learning, for which we, followers, if not disciples, are duly grateful. Last, if not best, of annotators and narrators stands Mr. Lucas,\* advantaged on the shoulders of his predecessors, with the whole field of previous material before his view, and at immediate and minute command. Details, near and remote, of the least aid to the delineation of his subject, are accurately and indefatigably assembled, the scattered rays gathered with a master hand into a clear and pure illumination of these heroic yet pathetic figures, each obscured into the brightness of the other's life; the sister, so sane and sensible, and patiently respectful of herself and protective of her beloved younger brother; and Charles, compound of human frailty and fortitude, of mild wild life and wild mild literature, of Puck and Shakespeare and other elements (unspeakable, if indispensable) of humor and of power, irregularity and responsibility.

Never has more elaborate care been manifest in biography than under Mr. Lucas's most patient superintendence and competent companionship; the promises of the publishers are more than fulfilled at every point, for here is "recon-

structed the Lamb circle, welded together autobiographical passages from Lamb's essays and letters, and references to Lamb by other writers"—all other writers, one would think, and with an erudition paralleled only by the apparent ease of presentation—"in such a way as *to show in every light* the most fascinating and lovable figure in English literature." Lamb's relatives and "friends of whom little has been written"—for example, John Lamb "the vulgar brother" (Crabb Robinson), and the "several very different friends" who marred and made his life, but certainly made his literature—are "treated very fully; while something is said of every person named in the correspondence." And all this without bulk or trouble, confusion or voluminousness; while, as for tedium, the reading is always a delight. Insensibly we are enticed further and further, with ever gentle pleasure like straying down woodland paths and the continual little signs that orient us, in what is confessedly a difficult country, are so neat and complete and inconspicuous that there is no feeling of obtrusiveness or interference, only an amazed gratefulness at the evident though hidden pains of the surveyor and road maker.

The quotations, from the essays and the letters, are delicious and numerous, but too few; and the little insets of explanatory reference and delicate condensations of descriptive context are exquisite miniature of map or picture.

Everything interests us, tho the appeal is varyingly distributed thru the entire middle range of human feeling: tears and smiles, tempest and depression, chase each other like an April day thru the rapt reader's mood. There are trifles and futilities recorded, but life has these as well, and Lamb himself is flat or forced at times; but what moving pictures, high relief—by artistry of life and mind—of petty pleasures, dull occupations, common duties, with these uncommon people, hall-marked by temperament, character, destiny, as separate—precious in the simple life they lived!

\* THE LIFE OF CHARLES LAMB. BY E. V. Lucas. Two Volumes, with Fifty Illustrations. New York: G. P. Putnam's Sons. \$6.00.

The biography takes the form of an annual chronicle, with ready and exhaustive reference to all significant sources of information, illumined with delightful extracts of Eliana, and exquisite letters (some of the best, written in depression) from Lamb's sensorium or "nonsensorium." Indeed, this is a book to receive in silent gratefulness, with full appreciation of the author's labor and devotion, too deep for words; to read and re-read, to give and keep; a true companion and friend of all humors, to introduce us to another world of man than our familiar own, and an historic society, and two as radiant figures as ever passed, without pretense, within and then beyond the light of common day.

The one defect that must be mentioned—for evil lay even in Paradise—is the insistent preoccupation with Lamb's enslavement to drink and tobacco, mere personal failings, which bring him humanly most near to us also, but of which too much seems to be made. But this is a good fault, and indicates an honest and perhaps too well-informed biographer.

## Dunning's History of Political Theory

IT may sound paradoxical, but it is nevertheless a fact that in no other field of scientific activity is there so plentiful a lack of historical tradition as in the field of social-historical science. That theories should come and go is the fate of all scientific endeavor, but it is only in the social sciences that we meet with the phenomenon of the same theories appearing, disappearing, and reappearing again several times in succession without any modification in their leading features. This is partly due to the inequality of social evolution in different countries, even in different sections of the same country; partly to the varying interests of the different social classes, so that a theory which has served its turn in the interests of one class and has finally been discarded as no longer tenable, is taken up at some later time in the interests of another class, or is adhered to by the more backward elements of the same class; but it is also partly due to the fact that there is no adequate

history of the historical and social sciences, such as one can readily obtain for the natural sciences as well as for philosophy in the narrower acceptation of the term. One of the most pressing needs to the student of any branch of social science is an authoritative record of the theories already advanced concerning that branch of science.

Such a cyclopædic record cannot, of course, be the work of one man, however comprehensive his genius, but the combined and co-ordinated work of many men—an achievement worthy of a truly great "captain of industry." Meanwhile we must be content with such sections of the history of sociological thought as can be worked out by individual scholars. Among these partial efforts Professor Dunning's *History*\* is sure to take high rank. In its design and method this volume is a continuation of the "History of Political Theories, Ancient and Mediaeval," which was published more than three years ago, and was reviewed in *THE INDEPENDENT* for May 1, 1902. Nevertheless, we believe that it will not be superfluous to point out the exact scope of the work.

It is not merely a history of so-called political science. Professor Dunning is not of those who regard political science as a cause rather than as a result of actual political history. He therefore includes in his *History* theories that nowadays have no standing in political science, "many political doctrines . . . have had an origin and a career quite out of relation to any formal body of scientific dogma." His criterion of selection has been the actual relationship between any given theory and the current of institutional development, and the latter is treated as the enveloping atmosphere within which alone the former could have had its being.

But if this criterion has enlarged the scope of the work on the one hand, it has, on the other hand, precluded the adequate treatment of such theories as have had no immediate practical importance or were the psychological expressions of historical movements that

\* A HISTORY OF POLITICAL THEORIES FROM LUTHER TO MONTESQUIEU. By William Archibald Dunning, Ph.D., LL.D., Professor of History and Political Philosophy in Columbia University. New York: The Macmillan Co. \$2.50.

were doomed to defeat. In the former category would come such books as More's "Utopia," the first modern exposition of socialism, and Vico's "Principles of a New Science," the first modern scientific effort towards the formulation of a philosophy of history. In the latter category would come the theories and vicissitudes of the Anabaptists, the Laborites, and similar sects, which are barely mentioned by Professor Dunning, altho he bestows some little attention upon their English counterpart, the Levellers.

The space at our disposal forbids us from entering upon any detailed criticism of the work. We cannot refrain, however, from adverting to one most important point: the failure to explain historically the Hobbesian theories of the "state of nature" and the "social compact." Yet Professor Dunning's own admirable exposition supplies the elements of that explanation. The dogma that "man is by nature unsocial and the enemy of his kind," which "was in flat contradiction of the Aristotelian dogma which had been the accepted foundation of social and political science for centuries" (page 302), as well as that other dogma that "the parties to the [social] contract are individual natural men—not groups of any sort, not the 'people,' vaguely defined, and not any superior being or sovereign" (page 279)—neither of these dogmas could have arisen except in an individualist competitive society, to which even the primitive communistic conditions of life among the American Indians assumed a competitive aspect (page 271). Hobbes' "state of nature" is the civil society of his and our day, which can be curbed only by the sovereign political power created by the "social compact."

### More About the Civil War

MR. REED, in his *The Brothers' War*,\* contributes a notable volume to the discussion of causes and results of the great conflict. Tho Southern in its standpoint, it is informed with an exceptional spirit of fairness to the Northern attitude. It asserts that both sections were morally right, in that both fought for their best

interests as they understood them, and for the ideals which naturally grew out of these interests.

This dualism of right the author maintains by asserting a dualism of tendency in the formative processes of the national life. The separate economic interests of the South made constantly for a lesser nationalism—a sectional concretion—at the South, while the economic interests of the North made constantly for a larger nationalism, embracing every section of the land. So, that in spite of the equal sovereignty, conceded at the time, of the several parties to the constitutional compact, involving the right of secession, Northern feeling and opinion developed about the ideal of national unity, fixed and indissoluble. The North being the stronger coercion was thus the ordained and inevitable response to secession.

There is little in the volume concerning the war itself, but much about its leading figures, North and South. Webster is considered as the incarnation of the spirit of the larger Nationalism, Toombs of the lesser. The treatment of Webster is remarkable, coming from a Southern pen. His figure is made colossal, and even his defects are transformed into virtues. Calhoun and Davis are also painted on large canvases. Wendell Phillips and William L. Yancey are briefly contrasted as types of root-and-branch Abolitionist and Southern fire-eater. There is little of Lincoln and Grant, tho something of Chase and Seward. No inconsiderable skill in characterization is shown in these delineations, tho the language is often declamatory and extravagant. The attempt to canonize Toombs will doubtless prove unconvincing to most readers.

Thruout his book the author maintains a severely antagonistic, and it seems to us, a persistently unfair attitude toward the negro. He divides the race roughly into two classes—the lower and the upper—of whom the former number 95 per cent. of the total. For these he has nothing but opprobrium. They prove themselves, under freedom, to be shiftless, lazy, mendacious, unchaste and dishonest. The hard work of the South is passing out of their hands, and they are rapidly degenerating. Slavery, he thinks, was the greatest blessing that ever came

\* THE BROTHERS' WAR. By John C. Reed. Boston: Little, Brown & Co. \$2.00.

to the race, and freedom the greatest evil. It is enough to say that the data given by the author to show the present degeneracy of the race are at least counterbalanced, if not wholly overthrown, by other data of which he makes no mention. His particular remedy for alleged evils—the segregation of the race in a negro State—is unlikely ever to be realized.

Judged as a whole, no book we have recently read exhibits so many and such striking contrasts of manner and substance. Its economic bases are usually sound, tho they serve too frequently as starting points for extravagant assumptions; there are shrewd judgments set off against mere collocations of words, and there is restrained and measured expression mingled with wild hyperbole. Yet for all its shortcomings, it is a book well worthy a larger audience in the North.

The latest history of the Civil War comes from England. In contrast to so many British books on American affairs which show an incorrigible misapprehension of their subject matter, it is characterized by understanding, by impartial attitude and by thoroughness of treatment. It is written from a strategical standpoint, and campaigns rather than battles are its main consideration. Thus isolated engagements, even when notable ones, such as Pea Ridge, Brice's Cross Roads and Ball's Bluff, come in for but scant mention. But the battles occurring in campaigns of strategic importance are carefully treated in detail.

No reference is made to the Rebellion Records, with their exhaustive supplies of official data. But aside from these, the authors have drawn their material from a great wealth of sources, North and South. This material has been studied with patient care, and an attempt has been made to harmonize conflicting statements. Perhaps too ready an acceptance of Southern accounts of the overwhelming disparity of numbers of Northern troops is shown, but the authors recognize and admit the need of making discounts on this score, and on the whole give a fair approximation of

the relative strength of the combatants. We can give no better indication of the temper and attitude of the book than the following passage from the chapter entitled "Retrospect":

"The struggle had been colossal, a war of giants. No previous war had ever in the same time entailed upon the combatants such enormous sacrifices of life and wealth, and perhaps no previous war had ever been so completely decisive in its results. To the men of that day who saw the Southern Confederacy beaten to its knees after almost superhuman efforts and in spite of many a victory, the greatest marvel of all was perhaps that the South had held out so long against such enormous resources and overwhelming odds. Those who contrasted the total disappearance of the Confederate armies with the fact that the North had in 1865 over a million of men under arms might, indeed, feel wonder that the struggle had not terminated long ago. The utter collapse of the Confederacy caused men for the time to blind themselves to the tremendous power which the defeated combatant had wielded, and to ignore the enormous difficulties of the task which the victor had at last triumphantly surmounted.

"But to men of a later generation the wonder rather is that the North ever succeeded in the gigantic work of subjugation which had been imposed upon it. The conquest of such a vast expanse of territory, held by a nation in arms, has no parallel in history. The feat which the North achieved was a greater one than that which Napoleon attempted to his own undoing when he invaded Russia in 1812."

## Shinto

TWICE at least, in the history of Japan, has a mighty outburst of fruitful energy produced astounding results. In the eighth century art and architecture took forms which today amaze the critical student. In our day the world stands in wonder asking the cause of Japanese success in science and war. Was the generating force native or foreign? Japan being the soil, whence the seed? Was it Shinto, the indigenous religion and sum of the primitive civilization? Or, was it the contact of the Aryan intellect upon islanders of intensely esthetic and martial capabilities? Those who best know the facts believe in the latter view. The architecture and mature civilization of Nippon were made by Buddhism, which is an Aryan faith and purveyor of culture. The great art of Japan grew while the Aryan impulse lasted. It ran to weedy luxuriance and unoriginal tawdriness when this impulse

† THE CIVIL WAR IN THE UNITED STATES, 1861-1865. By W. Birkbeck Wood and Major J. E. Edwards. With Maps and Plates. New York: G. P. Putnam's Sons, \$3.50.

waned. Without the stream of Occidental influences, from Perry to Meckel, there could have been no Mukden victory.

Those who imagine that Japan's energies are wholly self-generative must read Mr. Aston's book on *Shinto, the Way of the Gods*.<sup>\*</sup> This is the ripe fruit of forty years of research and study in Japanese literature, language and history; for Mr. Aston is one of the three (including Satow and Chamberlain) who in the sixties, in Tokyo, laid the foundations of English scholarship in Japanese. This master of facts is very modest in theory and generalization. He shows the utter sophistry of Herbert Spencer's idea of the origin of religion. For Mr. Aston finds that ghosts have had very little to do with Shinto and that the Japanese knew next to nothing of true ancestor worship until they borrowed it as a system from the Chinese. In primitive Japan there was no family life as modern or Christian people understand it, while phallicism was certainly a vital part of the *kami* cult. Furthermore, from the time that the early Yamato tribes, with their mikado chief, began the conquest of the white, Malay and negrito races in the archipelago, they made the God-Way a means of conquest, incorporating its dogmas and ritual into their machinery of government. Thus, many of the most sacred festivals, now held in honor of the mikado, were originally for the sun-goddess. In other words, history demonstrates that mikadoism as statecraft usurped Shinto for political purposes. Aston confirms those native and foreign scholars, Satow, Kumi, Knox, Revon, who have shown how bald in elements and abused by government this rudimentary cult was. Of course, Japanese professors are punished as dangerous heretics for saying these things, which critical students know so well. Mr. Aston gives scholarly details of Shinto's general features, such as personification, deification of men, the functions of the gods, the mythical narrative, nature-deities, man-deities, ceremonials, his own translations of the rituals, the modern decay and sects of Shinto, etc. This is the book on Shinto (which it is redun-

ancy to call Shinto "ism"). There is no other. Nevertheless the final word perhaps remains to be spoken, for while Mr. Aston is strong on the Chinese and continental side, he almost ignores the southern and Polynesian influences, without which, we venture to believe, the abundant oceanic myths and marine outlook of the Kojiki narratives cannot be explained.

**The Man From Red-Keg.** By Eugene Thwing. New York: Dodd, Mead & Co. \$2.00.

In the *Man from Red-Keg* we are given the raw material for a great novel. The background of Michigan forest and farm is strongly sketched, the figures of men and women are lifelike, except that the bad editor of *Chips*, a backwoods *Town Topics*, Bartley, blackguard, black-mailer and all around rascal, is rather improbably bad. His career as scandal-monger and purveyor of malodorous gossip to the rural public is told at length in the 431 pages of the book and the manner of the telling is at once vivacious and veracious. The author is less happy in his delineation of good men—why is it so much harder to interest us in the hero who is honest and virtuous than in the villain who is neither? Even Victor Hugo chose a "man with a Past," in order to enlist our breathless interest for Jean Valjean's vicissitudes! Much of the dialog is badly written and deals in the baldest commonplaces, showing that ruthless revision and condensation would have strengthened the book, but we do get the atmosphere of the Michigan woods, of a country town and of live men with vital interests. They fight a good deal—these mighty men of ax and whip—they drink too much and swear loudly, their vices and virtues alike are strong and primitive.

**Fate of the Middle Classes.** By Walter G. Cooper. New York: Consolidated Retail Booksellers.

Mr. Cooper, who, by the way, is the secretary of the Atlanta Chamber of Commerce, sees much that is wrong in the present conduct of industry, and urges certain reforms, among them voluntary coöperation, a number of legislative measures for the protection of in-

<sup>\*</sup> *SHINTO (the Way of the Gods)*. By W. G. Aston. New York: Longmans, Green & Co. \$2.00.

vestors and an increasing degree of governmental control of distributive agencies. He is opposed to Socialism, and congratulates himself and the country that a reaction from that philosophy has already set in. He fails, however, to give any very convincing grounds for his belief in this reaction. He acknowledges and justifies the segregation of men into economic classes, and hails it as the forerunner of a coming integration and a final merging of classes. By classes, however, it is evident that he means merely industrial groups, and not what Socialists and radical economists mean by the term. By "middle classes" he seems to mean persons of moderate incomes—a classification useful enough in certain instances, but untrustworthy in dealing with the fundamental divisions among men in their economic life.

**The Teaching of Jesus Concerning the Holy Spirit.** By Louis Burton Crane, A. M. 16mo. Pp. xii, 175. New York: American Tract. Society. 75 cents.

Mr. Crane's attempt is to show that the teaching of the Bible about the Holy Spirit confirms the usual faith of the Church, that the Holy Spirit is a separate person in the Trinity. He, therefore, finds him in the Old Testament, but not distinctly shown, so that the doctrine of his personality would not be recognized if one could not look back upon it from the standpoint of the New. We might question this principle of exegesis, and doubt whether to the writers of the Old Testament the "Spirit of God" which came upon Jephthah is any more separable than the "spirit of Tilgath Pilneser" was separable from the King himself. In the New Testament the author finds the doctrine of the Spirit more developed, so he analyzes the teaching along the usual lines, altho we observe that he does not discuss the important passages, Matt. 1, 18; Luke 1, 35. We wish also that the printer had not twice misspelled the biblical name of Bezaleel. Such a volume as this will direct students of the Bible along a very important line of theological study, and will suggest further investigation to those who are able to pursue the subject. The relation of God to the human soul is involved, as also the entire

question of divine immanence which has of late years called out much discussion.

**Some Ethical Gains Through Legislation.** By Florence Kelley. (The Citizen's Library.) New York: The MacMillan Company. \$1.25.

What society has gained in the attainment of higher social standards thru correcting some of the grosser evils of the industrial life, and what further corrections seem immediately necessary, form the subject matter of Mrs. Kelley's interesting and instructive volume. The labor of children is her prime consideration. Under various headings she depicts the exploitation of the young drudges in homes and factories and mines, and relates what society has done or is doing thru legislation to ease their lot. It is a pitiful record of accomplishment at best. One State, Georgia, despite persistent and even heroic efforts on the part of reformers, has steadily declined to ameliorate in the slightest degree the condition of its child workers; and tho in other States a gain is made now and then, the number of employed children steadily increases, and their lot, as a whole, remains about the same. Mrs. Kelley draws attention to many specific abuses, in particular the corrupting of boys thru employment in the telegraph and messenger service. She gives a certain judge of a juvenile court as authority for the statement that one-third of all the delinquent boys brought before him had, at one time or another, served the public as messenger boys. A considerable part of the book is taken up with considerations of the legal and judicial aspects of remedial measures, and the appendices contain a number of noted decisions in test cases.

**Lady Bobs, Her Brother and I: A Romance of the Azores.** By Jean Chamblin. New York: G. P. Putnam's Sons. \$1.25.

The Azores Islands make a charming setting for this bright and interesting love story. The heroine, an unsuccessful actress, decides to give up the struggle for fame, and takes ship for these out of the way islands, to bury herself in obscurity. She meets there an old friend, Lady Bobs, and the lady's brother, George. The heroine and George form a warm friendship, which crystallizes into

love when he rescues her from a rock cut off by the rising tide. As they make their way to shore she is delighted to find a man who can swim without spluttering. He professes his love and is accepted. A large amount of interesting description and information regarding these unique islands is cleverly woven into the story.

### Literary Notes

It is hard to enlist the sympathies of the American people on the side of Douglas against Lincoln. Therefore, in William Gardner's "Life of Stephen A. Douglas," the reader is perhaps more interested in Lincoln than the main subject. As the author himself says, the history is more a record of facts than an attempt to analyze them. (Boston: Roxburgh Press. \$1.50.)

....The Reports of the National Educational Association, published by the association at Winona, Minn., comprise a volume of nearly a thousand pages, giving the proceedings and addresses of the convention at Asbury Park last July, and the separate list of members, and reports of the committees on "Industrial Education in Schools for Rural Communities," on "Salaries, Tenure and Pensions of Public School Teachers," and on "Taxation as Related to Public Education." Altogether they form a veritable cyclopedia of modern pedagogy and should be studied by all teachers, and especially by members of school boards. They are sold at cost to non-members of the N. E. A.

....Misrepresentative Men," by Harry Graham (Fox, Duffield & Co., \$1.00), contains amusing jingles about the characters now in the public eye. The caricatures by Malcolm Strauss are extremely bright and add fifty per cent. to the interest of the book. We quote the following:

"The jingling rhymes of Dr. Watts  
Excite the reader's just impatience;  
He wearies of Sir Walter Scott's  
Melodious verbal collocations;  
And with advancing years he learns  
To love the simpler style of Burns."

### Pebbles

VISITING PHILANTHROPIST: "Good morning, madame; I am collecting for the Drunkards' Home."

Mrs. McGuire: "Shure I'm glad of it, sor—if ye come round to-night yez can take my husband."

—*Harper's Weekly.*

LAWYER: "Were you present when the trouble began between the prisoner and his wife?"

Witness: "Yes, sir. It was two years ago."

Lawyer: "What happened then?"

Witness: "I attended their wedding."

—*Cleveland Leader.*

LINES printed in a magazine:

The night is dark. From the rill  
Tingles the call of a whippoorwill.  
Otherwise all is still.  
The stars in the skies are a-shine,  
They've been gleaming ever since nine.  
Oh, but the night is divine.  
I whisper my loving vow,  
Something comes. At last, it is thou—  
But no; 'tis a wandering cow.  
Gods! What is this you have sent?  
I'm tossed and tattered and rent.  
The cow, alas! was a gent!

—*New York American.*

THE little report, "A Glimpse Into Seward Hospital, Allahabad," has the following interesting letters of gratitude from husbands of patients:

Dear Sir:

My wife has returned from your hospital, cured. Provided males are allowed at your Bungalow I would like to do you the honor of presenting myself there this afternoon, but I will not try to repay you—vengeance becometh unto God.

Yours, noticeably.....

Dear and Fair Madame:

I have much pleasure to inform you that my dearly unfortunate wife will be no longer under your kind treatment, she having left this world for the other on the night of the 27th ultimo. For your help in this matter I shall ever remain grateful.

Yours, reverently.....

—*Bombay Guardian.*

### A HOWELLS NOVEL.

#### CHAPTER I.

John met Mary at a Hallowe'en party. They shook hands.

#### CHAPTER II.

Mary, at the Thanksgiving family dinner, though she ate heartily of turkey and pumpkin pie, was silent. "I wish that he——" she began, then checked herself.

#### CHAPTER III.

John sent Mary candy and flowers on Christmas Day. She wrote him a polite note of thanks.

#### CHAPTER IV.

From January to March the young man called steadily.

#### CHAPTER V.

In April the engagement was announced.

#### CHAPTER VI.

Theirs was one of the first of the June weddings. They looked happy enough after the ceremony, but Mary, as the carriage sped toward the depot, said reproachfully to John: "You promised me you would give only \$10, but I distinctly saw you hand Dr. Surplice \$20."

And under these auspices their married life began.

## Railway Rate Legislation

THERE is no controversy in Congress as to those parts of the pending railway rate bill which are aimed at the great evils that caused a demand for rate legislation. But there is controversy as to provisions of another kind. It is unfortunate that those parts which excite no opposition cannot be considered in a separate bill by both the Senate and the House. No one in Congress ventures to oppose new legislation against rebating and other kinds of favoritism in freight charges. No one objects to new laws designed to promote the enforcement of old ones against such evils. It is the proposed grant to the Commission of power to deal with the general, open, and published freight rates—not the unjust and oppressive secret rates to favored shippers—that has caused so much delay and recently been the subject of so many conferences. This is a proposition that should stand by itself.

Everybody is familiar now with the evils for the suppression of which additional railway legislation was suggested. The great common carriers have unlawfully favored certain shippers—individuals, firms, and corporations—at the expense of others. They have used their great power, secretly (for they could not in safety do this openly), to build up one patron's business on the ruins of another's. Sometimes it was done by the secret payment of prohibited rebates, sometimes by means of allowances to incorporated side tracks or terminals, sometimes by private car lines. Rarely could these violations of law be detected, and when detected it was extremely difficult, if not impossible, for the Commission and the Department of Justice to procure the punishment of the guilty. In a certain sense the laws were inadequate, having been framed by persons in sympathy with those who desired to break them. They also permitted intolerable delay.

Now, these were the evils for the eradication of which new legislation was needed and demanded—legislation against secret and unlawful rates, not

for the regulation of open and general rates, as to which there has been very little complaint. It was necessary that the agents of the Government and of the people should be enabled to detect the crime, that they should have power to inspect the railways' freight records and other books, that prosecutions should not be delayed, and that just penalties should be prescribed.

But the force of the great popular protest against wicked and unlawful favoritism in rates has been used for the support of a bill which not only deals with this evil but also provides for the modification and regulation of those general and published freight rates which are the same for all shippers; and this latter provision at once became the greatest and the overshadowing part of the measure. Railway companies and officers could not oppose the other parts of it, even if they desired to do so, because those other parts were so clearly just. But in this part they either saw or professed to see an attempt to take away their power to make general and open rates for traffic. And their opposition, with that of their representatives in the Senate, has thus far prevented the enactment of needed additional laws against favoritism.

We are not saying that all the open and published rates are just what they should be, or that in some instances such rates have not been unjust to certain localities. But secret and unlawful discrimination between persons was not involved in this branch of the question, and such discrimination in its various forms has been an evil far outweighing any feature of the general rates as to which complaint could justly be made. Legislative propositions relating to the general rates should have been kept apart from legislative propositions designed to prevent discrimination between patrons and to punish those guilty of such discrimination. If that had been done, the new laws needed for the suppression of the greatest of railway abuses would now be a year old. As it is, the provisions which, if standing by themselves, could long ago have been enacted, are tied up with a proposition of

different character, for which has been sought the support of all the righteous popular indignation excited by offenses with which it is not concerned. If the pending bill shall fail to become a law, or if it shall be enacted in a form of doubtful constitutionality, it will eventually be admitted that it would have been better to write this legislation in two bills instead of one.

### Our Too Clumsy Government

A SCHEME of government that has worked reasonably well thruout a century of astounding progress has claims to consideration. If, in addition, it has served reasonably well a heterogenous population of native and foreign born numbering eighty million or more, largely concentrated in cities and living by manufacturing industries, altho it was devised for a scattered rural and homogenous population of four millions, it may be called, all in all, a success. The American scheme of government is pretty generally looked upon as a success. Yet the American scheme of government might be improved.

The chief defect of the human intellect is limitation. Doubtless there are many things in the universe that the mind of man has not yet thought of. When they are discovered mankind will wonder how it got along before it knew about them. In the mean time we overrate the completeness and the excellence of our information, and the sufficiency of the inventions thru which we turn it to account. Especially in our political constitutions and in our legislation do we unconsciously assume a degree of finality which facts do not warrant.

An unfortunate consequence of this assumption is that we are led by it to put unnecessary obstacles in the way of progressive change. So sure are we that our constitutions and our laws are the final work of wisdom that we think only of preventing a too easy amendment, which we assume would mar their perfection rather than improve them. So we ingenuously contrive delays and difficulties for the innovator to contend with.

Already in our history we have had some conspicuous and costly object lessons upon the subject of constitutional

limitations; the Dred Scott case and the Income Tax decision, for example. Under a flexible plan of government, like that which Great Britain enjoys, the slavery issue could have been fought to a finish at the ballot box, and war, if it had then resulted, would have followed upon an unequivocal expression of the popular will, instead of upon a complete ignorance of what the popular will really was. And the question whether or not a great nation should obtain public revenue by a certain tax would be decided, in like manner, by an expression of the general will, and not by a legal judgment that a dead and buried generation had forbidden its posterity to do as it pleased in the matter, on peril of violating a sacred compact between the living and the dead, made by the dead without the consent of the living, for the mental satisfaction of the dead before they died. Examples like these, even if there were no others quite so significant, are serious reminders that inflexibility and consequent clumsiness in a plan of government are not excellencies to be venerated.

And we are likely to have other examples, even more illuminating. Recent decisions of the Supreme Court have hinted, if they have not actually said, that the constitution can be evoked by the coming billionaire and the trusts to stop popular movements aiming to take from the privileged classes opportunities of exploitation which they now enjoy. If the Supreme Court hands down the following piece of reasoning as a decision, what will the American people do about it?

Municipal ownership is socialism. Socialism is not a republican form of government. The constitution charges the United States with the duty of guaranteeing a republican form of government to every State.

Moreover the movement toward public ownership is balked by our State constitutional limitations upon municipal indebtedness. Why is a great city like Chicago fifty years behind an English city like Manchester in its development of civic enterprise and in economical provision for the comfort and convenience of its inhabitants? Do we need to assume that the people of Chicago are on the whole less intelligent than the peo-

ple of Manchester, or have we an all-sufficient explanation in the fact that Chicago is financially powerless, under the legal hand of the State Constitution of Illinois, while Manchester has full power to act, as a long-headed individual or a wisely managed corporation would act, in financing productive enterprises!

In the long run clumsiness in the machinery of government, like clumsiness in the machinery of a factory or of a railway, must yield to time-saving and labor-saving invention. But it is important to make the improvements soon enough to prevent the ruin of the business or of the State. There will have to be some important improvements in our American plan of government as a mechanism for carrying out the popular will, or, one of these days, something will happen worse than a hot box and a bad smell.

## Man and the Machine

MISS JENISON'S "Defense of the Arts and Crafts Movement" was written on a typewriter and set up on a linotype, nevertheless it is not a machine-made article. Judged by her own standard, it is a very artistic piece of work, for it is full of those minor imperfections which, as she says, distinguishes the beautiful from the merely perfect. Logic is to an argument what the try-square is to furniture, so if we point out certain flaws in her reasoning we are really calling attention to its artistic asymmetry. We think the arts and crafts movement is on the whole a good thing, and we hope that in time it will be supported, as it deserves to be, by arguments that are as solid as its furniture. At present the chisel is mightier than the pen.

On hearing craftsmen talk together about the inferiority of the machine, one is reminded of the sort of conversation which takes place between two pedestrians when an automobile passes, throwing dust and the smell of gasoline in their faces. They talk, then, of the value of walking as an exercise, its greater safety and the opportunity it affords for the leisurely contemplation of nature, yet notwithstanding the truthfulness of the remarks and the enthusiastic tone in which

they are uttered, each is suspicious that the other is insincere, secretly wishing that he were in the vanishing vehicle instead of trudging along the road. There is undeniably a joy in doing things for oneself, but there is a still greater joy in making other things do them—horses, slaves, machines. It is the delight of mastery, the conquering of material by the hands, by tools and by machines. A man's joy of work comes when he can use a tool as tho it were a finger of his hand, and a machine as tho it were a tool.

It is a pleasure to use one's own legs, a greater pleasure to drive a horse or two horses or four horses, and still greater to drive a forty horse power motor. Why does the farmer boy like to run the mowing machine better than to use the scythe? It is not so much because it is easier on his back, but because it is a more triumphant occupation. He is accomplishing more, and he feels more truly alive as he manages the horses, raises and lowers, starts and stops the sickle-bar, and keeps his ears set to catch the slightest deviation in the rhythm of each click and rattle of the machine he rides.

The essential thing is that the man be great enough to master the machine: when, as often in our modern factories, he is a mere attendant upon the machine, his work becomes slavery. Bigger machines continually demand bigger men to run them. The machine must be made to do man's work just as he wants it done, smooth or rough, even or uneven, regular or irregular. Miss Jenison finds fault with the machine because it does its work too imperfectly in the case of sheet iron and too perfectly in other cases. The first criticism may be justified, the second is not. For it is easier to have a machine do its work with artistic inexactness than with mathematical precision. It is often necessary only to loosen a screw and the product will resemble the best hand made. Photographers worked for years to secure depth of focus. They went to great trouble and expense to make lenses which will give an equally sharp definition to near and far objects. By and by it was suggested that they were on the wrong track: that a certain haziness and fusion of lines were more beautiful. At once, by a simple turn of the wrist, the matter

was remedied. The front lens was loosened up a bit and modern art photography was born. It is true that the adding machine in the bank does its work with mathematical exactness, but it need not be so. If desired, a machine could be constructed so that it would make a mistake in adding its 930th column of figures, and immediately reform and lead a life of exemplary correctness ever after. As for adaptation to the individual, it is true that factory chairs, made to fit the average man, are often ill adapted to the conformation of the exceptional; but, so far as we are acquainted with it, mission furniture is not made to fit any human being average or exceptional.

The art and crafts people are too much inclined to put methods above results, and to praise good intentions rather than achievement. So long as a man is making something for his own amusement no one has a right to criticise him, but as soon as he demands a higher price for it in the market on the ground that he had more fun making it, the public will challenge this method of valuation. In so far as training in handicraft teaches one to appreciate beautiful objects it is an excellent thing. But we have known some cases where "the clean, clear joy of creation" so intoxicated a man that he thought his own mud hut was better than somebody else's Parthenon. We would like to have more altruistic artisans, who know a good thing when they see it, even if done by another or by a soulless machine.

The lady who makes a purple cow on a sofa pillow has as much of the joy of creation as Michel Angelo when he carved his Moses; probably more, for she comes nearer attaining her artistic ideal. The shaky table people are altogether too numerous now and not in need of further encouragement in their mistaken efforts. And as for the Pianola, we are very positive that there would be more good music in this neighborhood if 199 out of the 200 who are now trying to play on the piano would use that ingenious machine. The chief value of the invention is that it affords an infallible method of distinguishing between those people who love to hear good music and care nothing how it is produced, and those who profess to love

music, when really all they admire is the manual dexterity and patient efforts of their personal friends. "An ill-favored thing, but mine own" was the feeling of Touchstone, but, then, Touchstone was a fool. We want to rid the earth of people who take delight in doing things poorly.

The claim of the superiority of hand-made products might pass unchallenged were it not that our suspicions are aroused by the fallacious and adventitious arguments advanced in its support. Instead of letting the products speak for themselves, they commend them upon other grounds than their own merit, such as their labor cost and their resemblance to antiques. Is linen made with uneven threads more beautiful than the smooth finish? Very well, then make it so, by machine if you can, by hand if you cannot, just because it is more beautiful, not because it is like that which our grandmothers wove. And don't compliment the dear old ladies on their superior artistic sense, for they probably wet the linen with their tears because they could not get it smoother. The modern craftsman esteems it a triumph of art when he can imitate the ancient craftsmen's blunders. And it is going a little too far when Miss Jenison holds the Lord responsible for the facial asymmetry of the Venus of Milo.

## Violence in French Churches

IF there is a senseless thing which the Royalist French Catholics can devise they can be depended on to do it. Their very position as Royalists, opposed to the Republic, is the nadir of folly. There could be no shrewder way devised to make the French people hate the Church than to tell them that religion is the foe to free government. It is their patent invention to make infidels. Who would not be an infidel if he was taught that religion is against liberty, equality and fraternity? In this country our religion teaches these rights and truths. But in France the Pope himself tried and failed to pound sense into the heads of these ultramontane Legitimists.

And now these same men and women, especially those that cling to titles that have come down from kings or emper-

ors, have seized the opportunity to make violent resistance to the new law which separates Church from State. There is a provision in the law which requires that a public officer shall take an inventory of the property of the churches. That looks innocent enough, and is innocent enough; but it has aroused bitter hostility, and there have been barricades in the aisles of churches, and fights in which blood was shed; and in order to carry out the law the police were compelled to call the firemen, and with streams of water to drown out the resisting crowds whom they did not wish to club into submission. To be sure, this did not happen in Notre Dame, under the direct control of the Cardinal Archbishop of Paris, who ordered that no resistance should be made; and the Pope, who shows the same good sense as his predecessor, has directed that the people shall submit to the law; so that we may hope that the scenes of violence may cease. And yet we cannot be sure that those mad French Catholics, who are more papal than the Pope, will do as they are bid by the Holy Father.

The reasons for the inventories are two. All the churches, and all their property, for which the State has hitherto paid financial support, are to be given over to boards of trustees, called associations, numbering from seven to twenty-five each, who shall administer the property for the purposes of the religion there maintained. It is proper that it shall be known what is the property that is passed over to these trustees, and that no part of it is withheld. That is one reason. The other reason is that much of this property, in the form of cathedrals, churches, paintings, statuary, brodered vestments, silver and gold vessels, etc., is of historical or artistic value, in which the State has an interest. No such object can, under previous laws, be sold without authority from the Department of Instruction and Fine Arts, and cannot at all be sold out of the country. The Government assumes, for the nation, authority to see that they are preserved, that historical buildings do not become dilapidated, and that priceless treasures of art are not alienated and lost. There has lately been much fear in France that her treasures in private possession should be

purchased by American vandals and taken across the Atlantic. Italy forbids any private person thus to expatriate his choice treasures, and now the French Government puts the same veto on the churches. To protect this property it must be inventoried, which is a very reasonable thing.

There are two grievances which these French Catholics might raise. One of them is that they do not wish the property put into the hands of trustees. But they cannot help themselves. In the words of John Milton to Salmasius, "*Si non lubeat rumperetur*"—"If they don't like it they can lump it." But it is not a bad rule. It is the common way in this country, and it would not be a bad plan if those American Catholic churches which belong nominally to bishops were held by trustees representing the people. At any rate, there is nothing in the plan that is in the least irreligious or anti-Catholic. The Church can with perfect ease accommodate her practice to this law.

The other grievance might be that unholy hands would be laid on certain sacred vessels in the altar. But this is carefully provided against. The officers are directed not to touch these sacred vessels; but it is stipulated that the priests shall open the closets, or receptacles, and let them be seen and enumerated without handling. If the priests will not do this, it is their petulant stubbornness which is responsible for the profanation.

But we do not anticipate much more trouble. Rome has spoken, the case is ended. Good Catholics will obey the law, and in doing so will obey the Pope. The law on the whole is not a bad one, if properly administered. What concerns us now is to learn whether the State will really take its hand off from the churches and give them liberty without interference or petty meddling.

### Not a Partisan Treaty

It may be that Senator Patterson has prevented a ratification of the Santo Domingo treaty by the very speech in which he declared his intention to join the Republicans in voting for it, but we hope not. The Democratic caucus suggested by his speech appears to have restrained one or two Democratic Sena-

tors who might have stood with him if no caucus had been held, and now it is said that not more than three Democratic votes for ratification can be had. Four are needed.

Such a question should never be made the subject of a partisan caucus ruling. Whether the treaty deserves to be approved or not, it is a national project and in no sense a merely partisan one. We think it well deserves to be ratified. Under the temporary arrangement which it is designed to confirm, the American collectors have already set aside more than \$1,000,000 to be used in paying the foreign debt. If we should now definitely withdraw, as we must if the treaty is rejected, this money would, in various ways, become the cause of disturbance, the effect of which our own country could not wholly avoid. In Santo Domingo it would excite fresh revolution; and the untimely wrecking of an undertaking so successfully begun would undoubtedly provoke that forcible collection of the debt by foreign nations which President Roosevelt has sought to prevent. Such collection would involve the holding of custom houses for many years.

Opponents of the treaty should not forget that joint fiscal control of Santo Domingo for the adjudication and collection of the debt was proposed to our Government by a foreign Power three years ago, and that our approval of it was then withheld. Our refusal imposed upon us an obligation, especially because it was soon followed by an agreement of our own with Santo Domingo, under which we began to collect \$450,000 a year for American creditors, while European creditors were getting little or nothing. The President has sought to fulfill that obligation. He should have the unanimous support of the Senate, within the limits of the pending treaty after it has been perfected by such amendments as may be required.

### City Improvement

THE architects have been holding a convention in this city, and they find something to approve and much to condemn. Cities cannot be abolished, but we may be sure that they will still con-

siderably increase in size. The problem now is what to do with them.

Inheriting them, we inherited with them a vast amount of antiquity; narrow streets, diversity of purposing, a crowding of poverty, and in general the most intense forms of degeneration. Streets have been widening and sanitation improving, yet we imagine that we have a great deal more to do along the line of wider streets, cleaner streets, and better shade. Our trees are not wisely chosen for the most part, and are at the mercy of sewers and wires. There is no reason why our streets shall not be four or five hundred feet wide, except that we have already built so largely on the restricted plan. Such streets can be made park like from end to end, and in this way bring into the municipality one of the best characteristics of the country. A few of our larger cities are already considering the better selection of trees, and the Government has issued a bulletin, which for the most part gives good advice. City trees should include those which can endure considerable annoyance from smoke and gas, and at the same time give a large amount of shade and shelter. Streets very much widened would afford an opportunity for stringing wires without denuding them of foliage and limbs. However, we anticipate the time is not far distant when these wires will be no longer necessary.

But the most palpable defect of the modern city is its jumbled ordering and lack of unity. Mansions are scattered without relation to art. Our public buildings of note and beauty are dropped in here and there, according to the whim of temporary rulers. It is a law of landscape art that each homestead shall express an idea, a unity of purpose and thought. This sometimes is fully achieved in the country; but even there it is altogether too rare. Fine things are planted simply because they are beautiful. There is seldom any individuality expressed in the creation of a homestead. In the city there is scarcely an attempt made to execute this law of unity. Mansions stand in rows, and the commoner houses in blocks. The owner rarely bears any relation whatever to his shell. Shops do not fail so badly as homes and public buildings. The

Municipal Art Society of New York City has been making some very interesting suggestions about civic beauty centers. They propose that all public buildings be grouped around parks. In this way the police houses, fire houses, public libraries, public schools, court houses, etc., would together constitute an idea, and would express to the citizens something rational. "To go thru New York it appals one to see the beautiful buildings that are spoiled, so far as effect is concerned, by association with other buildings, possibly just as beautiful, but of such a different style of architecture that they cannot harmonize."

The idea is taking strong hold of civic associations that each ward should mean something particular and definitive; that each street should have a language of its own, while the city as a whole should be coherent and unified. The idea is, of course, more easily applied to newer and smaller towns; yet we find that these towns are infinitely worse than the larger in their composite indefinableness. Each citizen works at independently, or neglects altogether, the social side of construction. We might learn an admirable lesson from an ants' nest, where every portion of the structure is perfectly correlated. The coming city will unquestionably work out this chaos, and establish a system of growth of a different sort.

The tendency is equally strong to widen out our cities to include suburban areas. Mr. H. G. Wells is probably right when he says that the corporate limits of even small cities, that is small in population, will be ten or twenty miles in diameter, absorbing not only adjacent villages, but suburban townships. This movement, which is the result of the increased use of the trolley, is rational, not only from the standpoint of unification, but to meet the country half way. It will not only favor unification of building and purposing, but, with the vast increase of rapid transit, it will foster the suburbanism which has become a feature of the age. It will work well with the widening of streets and the dissolution of the crowd. In fact, the crowd must go as thoroly as the chaos must be abolished. The skyscraper is an abnormal absurdity. It is the last strug-

gle of antiquity to control modern life and business. Wider streets and greatly extended suburbs, always including rapid transit, will give abundance of room for offices nearer the ground. There will be a combination or fusion of country life and city life, country freedom with city culture. With larger plasticity in our methods of building and homing new ideas will take root easily. The latest scientific information will be sought and applied. The telephone has created a unity of another sort, joining our homes and offices, so that we are planning together, as formerly we could not—even laughing and thinking over the wire. Mr. Howe is quite right, in his recent volume, that the city is the hope of real democracy. The political and social struggle that is just now going on shows a sloughing off of class divisions. The town school has become the center of country life, and the ward school seems destined to become a center of city life.

People will crowd less, will hurry less. The rage for piles of cash will wane. The present is a turning point. Fondness for conventionalism is yielding to Nature. While the country takes a large part of the crowd into the ample bosom of its valleys and glens, the city opens to take in the pure air, the trees, the flowers and the birds. If we are to believe Edison, we are not very far from the time when the last carload of coal will be distributed among our houses. Power will be generated at the mines, and distributed where it is needed for light and for heat. This will bring about an almost inconceivable change in the way of dust, noise, confusion and toil. Already a great deal of farm work is being done by power, sold at a cheap rate, from trolley plants. We have so long endured confusion and racket that we can scarcely conceive a city carrying on its daily business without a babel of sounds. Yet this can be greatly alleviated. We have pronounced the sparrows a nuisance, yet they are suggestive of what a properly grown city may include. With greatly widened streets, abated noises, purer air, and the departure of coal with its smoke the city becomes a very paradise for song birds. The robin, the grosbeak, the wren, and such winter birds as the chick-

adees and nuthatches naturally take to human residences. It is the unnatural stricture of the modern city which they abhor.

We have tried to sketch, without exaggeration, the drift and tendency of civic improvement. The country is growing more citylike and the city is growing more countrylike. Those who studied the model city at the St. Louis Exposition must have been impressed with the collaboration suggested between the various interests of a municipality—in the development of intelligent and moral, as well as physical, well being. The city, as an inheritance from antiquity, bringing along with it a vast amount of outlived rubbish and notions and methods, is to be displaced by an organism, complete in itself, and yet related to the surrounding country perfectly. We are feeling our way to the structure of such cities—with no more dust and noise and confusion than the average country village, with the slum and the skyscraper and the rows of mansions equally sloughed off. With democracy dominant, not only in the governmental *régime*, but in daily life, the city need not be the breeding place of degeneration, or the brooding mother of slum life. It certainly will become a totally different co-operative assemblage of human beings from what it is now.

### Penal Legislation in Great Britain

SIR HOWARD VINCENT has recently called attention to the great changes which have taken place in penal legislation in England within the last twenty years. Some of the most important of these are due to the influence of successful legislation in the United States, especially in Massachusetts. The establishment there of the probation system led to the enactment in Great Britain, in 1887, of the First Offenders' Act, a measure framed and fathered by Sir Howard Vincent. The Massachusetts act, however, was a more complete measure than the English one, since it provided for the appointment of probation officers. That provision was introduced in the original English bill, but was cut out by the House of Lords. The promoters thought it better to compromise and accept the

act with this amendment than to lose it altogether. The official returns now show that during the seventeen years that it has been in operation a hundred thousand persons have been saved from imprisonment. Reckoning the cost of their maintenance at ten shillings a week and the average sentence to be seven weeks, more than \$1,750,000 has been saved in prison expenses. A movement is now in progress to introduce into the law the provision of the Massachusetts act authorizing the appointment of probation officers.

This improved treatment of first offenders requires a greatly modified arrangement of prison discipline and the complete separation of different classes of offenders, particularly adults and young offenders. The latter are now put into prisons quite apart from older offenders. The Government has twice introduced a bill to carry this system even further—that is, to make imprisonment for light offenses mild and to extend the privileges of conditional liberation, while at the same time giving longer sentences to habitual offenders.

This year Great Britain has still further profited by American experience. The success of children's courts here has produced a profound impression. Public attention has been called by Sir Howard Vincent, Sir Edward Read and by the Howard Association to the pernicious results of having children brought into court in company with older offenders, and to the need of separate sessions of the courts, providing for a paternal rather than judicial treatment of such cases. Sir Howard Vincent's attempt to have a bill introduced this year which should embody our system was resisted and delayed by one member on the strange and inexplicable ground that it might lead to discrimination against the children of the poor. What was not accomplished by legislative act has been effected to an important extent by administrative measures. All the courts in London are now enjoined to hear children's cases as the first business of the day. Children are not to be taken into court while older offenders are being tried, and they are to be kept in separate rooms while awaiting trial. This step, of course, is but a negative one; it is, however, the beginning of

the children's court idea, and since ten thousand children are brought into the London courts every year it is in itself a reform of great importance. The petty provincial courts are not under the control of the Home Secretary, but he has issued to the chairmen of the courts of special sessions a circular describing the orders given to London police magistrates, and his appeal will certainly have influence thruout the United Kingdom.

## Close Communion and the Free Baptists

It is not strange that the *Examiner* should attempt to show that close communionism is not vanishing away in our Northern Baptist churches, since, under the editorship of Dr. Bright, it was the stout champion of that doctrine. A correspondent had written that "in practice 'open communion' is the rule in most churches"; but this the *Examiner* would deny. It says:

"We should say, on the contrary, taking the churches the country thru, that the great majority still cleave to the old ways, except, perhaps, in the one point of omitting what used to be stigmatized as the 'ironclad invitation.' It is, probably, the quite general disuse of this exclusive form of invitation in many parts of the country that has given rise to the impression that the churches discarding it are 'open communion.' But is this a fair inference? We think not. It is claimed, we are aware, that giving no invitation, but simply announcing that the Lord's Supper was about to be observed, is equivalent to giving a general invitation. But there is something to be said on the other side. It is pretty generally understood nowadays that Baptist churches are composed of members who have been immersed on credible confession of faith in Christ, and those churches that omit the giving of any invitation to the Supper assume that the well-known principle of the church as to membership will act as a bar, in the case of all right-thinking, well-bred persons, against intrusion upon a service to which they are not invited. If, now and then, a stray sheep from some other fold, or one belonging to no fold, vaults over the bar to partake at the feast, surely no harm is done, and the church does not thereby become 'open communion.' . . . A church puts itself in that category only when it formally adopts the rule that a general invitation shall be given, or, as an organization, unites with organized bodies of unbaptized believers in a joint observance of the Supper.

When a church does that, be it noted, it becomes, on this point, liberal—and lax—beyond all other denominations of Christians, beyond the uniform practice of the early

churches, beyond reason and common sense. No other denomination, except the small body of Free Baptists, no other churches, except in a few sporadic cases, invite unbaptized persons to the Lord's table. We do not think this ultra-liberal position a wise one for our Baptist churches to take, or one that can be successfully defended on Scriptural grounds; and we sincerely hope that the tribe will not increase."

This is a very serious position to take in this day of church fellowship, not simply because it denies the baptism of other Christians, nor because it says that such unimmersed communicants are ill-bred intruders if they remain to the Lord's Supper when attending a Baptist church, nor yet even because it fails to understand that the reason for the general omission of the "ironclad invitation" was to allow others to attend the service as is freely admitted; but because it is a notice to the Free Baptists, with whom there are negotiations now going on for union, that "their tribe" is not wanted. The committees of the regular Baptists and the Free Baptists have met, and are practically agreed that now there is no bar between them. Accordingly the Baptists in their State conventions have secured the withdrawal of the offensive letters of dismission to those joining a Free Baptist church. Under these circumstances this criticism of the Free Baptists would seem to be a notice to them that they are not wanted, unless they will come as individual churches into the Baptist local bodies, accepting the Baptist position and withdrawing their protest against close communion. This they will certainly not do. We trust that in this matter the *Examiner* does not represent the general position of the Baptist churches toward their Free Baptist brethren; and we further believe that there has been a much greater change in the attitude of the Baptist churches toward open communion than is represented. Even allowing that adult immersion is the only valid form of baptism, it would yet be very difficult to prove from the Scriptures that believers as yet unbaptized cannot sit at the Lord's table.

**New Mexico and Arizona** When we think of the rotten borough system that was introduced into the United States Senate by the admission of

Idaho, with a population in 1900 of 161,772; of Wyoming, with 92,531, and Nevada, with 42,335, each having two Senators for a population of no more than a third or fourth rate city, it is not strange that it was the immediate impulse of our people not to admit New Mexico and Arizona separately, but to require them to be united in a single State. But a second thought compels us to reconsider the plan; and we regret that party rule has forbidden a fair number of Congressmen to vote for what they did not believe wise or right. The people of Arizona do not ask for Statehood. They wish to remain a Territory until they can acquire promised population; but they do not want to be united to New Mexico, from which they are separated by mountains and language. We trust the Senate will consider the matter very seriously, and with perfect independence of party rule. Either Territory is large enough for a State, and New Mexico now has population enough. The Senate should add the amendment allowing the people of the two Territories to vote separately on Statehood.

#### Government Clerks

Secretary Shaw did not please the Government clerks at Washington when he told a thousand of them the other evening, when they had met to promote a pension and retirement fund, that he did not believe in their purpose, and that he believed that clerks should be compulsorily retired at the end of six years of service. Washington is a good school for them, he said, for four or six years, but after that they lose all their initiative and get fossilized. He is mistaken. Clerks do not enter department service for education, but for a livelihood. Not every one has enterprise and initiative. The average of such employees are average men and women, who need to make a living, and have the right to be satisfied if they can comfortably support themselves and make a modest provision for old age. They are not natural hustlers, or they would find something better in less than four years. The world is made up mainly of such good, respectable people, who want an honest living, but have not the faculty of setting the world on fire. They are peo-

ple to be directed, not to direct. Secretary Shaw's idea is very good for men of his gifts, but it is not for the mass of people. We believe in the purpose of the Civil Service Retirement Association, and would have them create their own pension fund, if the United States has less interest in its employed army of peace than in that of war.

#### Talladega College

Misleading statements have filled the Southern papers as to a reported rebellion in Talladega College, Alabama. It is by no means as sensational or as serious as the late trouble at Howard University, in Washington, which led to the resignation of the president. The facts were these: A white Southern man was appointed assistant to the agricultural instructor who manages the farm. Some of the very best and oldest students were excited over it and stirred up the others. They presented a demand to President Nyce that the man be immediately dismissed, as it was humiliating that they should be directed by a Southern white who was reported to be one of the "poor white" class against whom there is a deep feeling. The president refused to be thus dictated to, and referred the matter to the American Missionary Association, which supports the college. Secretaries Beard and Cooper responded that they could not give way to race prejudice against white men any more than against black. The trouble then quieted down, and most of those who had left returned, as the graduates of the college stood by the faculty. It was a hasty and unwise disturbance, but not unnatural. Those who are recovering their rights and protesting against their wrongs are apt to be sensitive.

#### Freemason Scholarship

We fear we did not sufficiently appreciate the profound Oriental scholarship of the French freemasons who opposed the nomination by the professors of the College of France of Père Scheil as successor to the veteran M. Oppert in the chair of Assyriology. Their intuition that a monk could not be a competent scholar, no matter what the pro-

fessors said, is now reinforced by the discovery that Père Scheil once made a bad mistake in reading a cuneiform text. They possibly have a department of Oriental learning hid away in their secret lodges, which has informed them what they would not have been expected to discover, that in 1896 Père Scheil published a paper to the effect that he had found in Constantinople a tablet on which was a letter from King Hammurabi mentioning the name of the Chedorlaomer of Genesis 14; and this discovery was used to argue that there was historical truth in the Genesis account of the raid of the army of Chedorlaomer and his allies against Sodom and the other cities of the Plain. But he had misread the text, as was later shown by Mr. King, of the British Museum; and instead of "in the day of the defeat of Chedorlaomer," it reads, according to King, "the troops commanded by Inuh-samar." We venture to add that it was ten years ago when Père Scheil made that mistake, and he was a young scholar then. Further, that the best scholars have made similar mistakes. Did not Rawlinson find the destruction of the Tower of Babel; and is there a single scholar that has not had to have his conclusions revised and corrected? Père Scheil has since that blunder done most creditable work, giving the world the most important records found in these years, especially the Code of Hammurabi; and even French radicals may consider the biblical plea, "Remember not the sins of my youth."

**Benevolent Annuities** One of the interesting developments of modern benevolence is the increasing frequency of gifts to our missionary societies on the annuity plan. A person approaching advanced years who wishes to secure a moderate income without danger or responsibility, and who is interested in some missionary cause, puts a sum of money—say two or five or ten thousand dollars—into the treasury of the society, as a gift to its work, and receives five or six per cent. interest on it until his death. He thus anticipates his legacy and has his income assured, and the society escapes all danger and expense of litigation on settlement of the estate. The society

makes such gift a special reserved fund, which draws interest, and is not paid over into the general fund until the death of the giver. A special illustration of this is in the case of the fine Presbyterian Building in this city, belonging to the Boards of Foreign and Domestic Missions. When it was built much severe criticism was passed by certain people on the enterprising business men who were responsible for the plan, because of the heavy debt upon it. That debt has just now been canceled; but nearly half a million dollars of it is provided for by annuity gifts, which cannot be released until the death of the givers. One of our missionary societies in this city, and not the largest, we observe, holds about \$200,000 in such a "Conditional Gift Fund." It is an admirable plan, and we commend it to those whose circumstances make it desirable, as it saves them anxiety and makes their money do good after their death.

#### White Disfranchisement

The campaign for Governor in Georgia hangs largely on the proposal to amend the constitution after the fashion of the Southern States which have adopted educational and grandfather provisions intended to exclude negroes and admit whites. "But there the people are afraid such an educational list will exclude whites as well as blacks. In a speech by Colonel Sam W. Small, to which the *Atlanta Constitution* allows a full page, the speaker says that in the seven States the effect has been to reduce the white suffrage. Mississippi adopted the plan in 1890, and the total highest vote since then has numbered less than half the number of white voters, of whom more than 30,000 have never registered. So Louisiana since adopting the amendment in 1898 votes less than half her white voters. After disfranchisement in 1901 the Democratic vote in Alabama has been reduced by 50,000, and 60,000 whites refuse to pay the poll tax, and are becoming more hopelessly disfranchised every year. In South Carolina 30,000 refuse to qualify and register; and in Virginia and North Carolina white votes elect a Republican Congressman.

A district or a State sends a man to Congress to represent it according to his best views of the interests of the people. For a member to allow himself to be bound by a caucus, so that he votes not his judgment, but the will of other men, is slavish, is cowardly. But that is what the Democratic Senate caucus has ordered members to do. Several of them think the President's course is right and wise on matters which are not political, but concerned with foreign diplomacy, and they proposed to vote as they believed. Thus Senator Bailey, of Texas, Democratic leader in the Senate, declares that he will read them out of the party. Such assumption is impudent and tyrannical. A caucus is a good thing to express party opinion, but no man ought to be its slave.

*The Contemporary Review* allows Mr. Emil Reich, who is, we believe, a former African missionary, to ask some rich Englishman to give from \$15,000 to \$25,000 to explore the mound ed-Dahariye, in Southern Palestine, which is, he says, the site of the ancient city of Kirjath-sepher, or Book City, where he thinks will be found cuneiform or Phenician portions of the Books of Moses which will knock all the higher critics silly. By all means let them do it. And while they are about it, why not send an expedition to Mugheir, the site of Ur of the Chaldees, to find Abraham's diary, or to Sippara, where will be found the priceless records of the antediluvian world which we are told that the Babylonian Noah buried before the Flood?

That Chinese boycott of things American gets worse and worse, and we are not surprised. It must be severe when so progressive a man as Yuan Shi-Kai, Viceroy of Chihli, and the ablest man in China, has been compelled, against his will, to dismiss Professor Tenney, whom he had appointed Foreign Director of Education in his province. This is a case where curses do not come home to roost on the pestilent Sand Lot fellows who provoked our anti-Chinese laws, but upon the best friends the Chinese have—the missionaries who are murdered and the

teachers who are doing their best to make them able to defend and protect themselves.

In view of the often and, usually, reckless charges made against the courts, it is agreeable to hear the defense of them made by Judge Alton B. Parker at a late dinner. He said:

"I have served in five different appellate tribunals and with twenty-six different judges, and in those courts there were strong divergencies of opinion, which we vigorously defended, courts in some of which there were Republican majorities, in others a Democratic majority. Never have I known one single instance in which the action of a judge was affected by partisanship or any other consideration than that of meting out justice in accordance with duty and law as he understood it."

The Laborites, as they are called, in the new Parliament, want the state to pay the members. But it is a serious question whether there would have been nearly fifty representatives of labor in Parliament if the members had had salaries which would have attracted the politicians. Equally, the Irish Nationalists would not, perhaps, have been able to keep as united if they had been paid by the nation. Nevertheless, the proper way is that in this country and in France.

The Toronto Board of Trade has adopted a resolution to the effect that the naturalization laws should be so modified that one who has been naturalized in any part of the empire should be equally a British subject anywhere else that the flag waves. Something like that we need. A citizen of Porto Rico or the Philippines, and even mere Hawaii, should have as full citizenship as one who lives in the United States.

The resignation of Dr. Rainsford, as rector of St. Thomas Episcopal Church, removes, perhaps, the most distinguished and most useful pastor in this city. The institutional work of that church is immense, and it has grown under his charge. The American Church has reason to regret that his ill health compels his resignation.

# Insurance

## The Mutual Life Insurance Company

THE policyholders of the Mutual Life Insurance Company cannot fail to be gratified by the financial exhibit of the company's condition at December 31st, 1905, put out over the certificates of Messrs. Haskins & Sells and Deloitte, Plender, Griffiths & Company, chartered and certified public accountants. These experts are appointees of the Truesdale, or so-called "house-cleaning," committee, entirely independent of the management, completely unallied with any interest in it, and, in justice to their own worthily earned reputations, reporting facts exactly as they find them. They make final certification to no item except upon their own actual knowledge, having handled and counted every bond, certificate of stock, every dollar of cash, and every legal instrument representing securities for money loaned.

From this report we find that the progress of the company during the unfortunate underwriting year of 1905 has suffered no diminution, the gain in assets having been \$29,882,795, the total standing on December 31st, 1905, at \$470,861,166. A gratifying change has taken place in the item of cash on deposit in banks and trust companies since the report of December 31st, 1904,\* a subject that was productive of much adverse criticism to all the life insurance companies that fell under the scrutiny of the late investigating committee. The 1904 report showed that the Mutual Life had on deposit and in its own vaults \$17,973,160, which fell on the same day a year later to \$9,270,513, and which we have no doubt will be further reduced as fast as the management can find safe, permanent investments for it. The hold of the Mutual Life on the affections and confidence of the people is illustrated in the item of premium income. It was fairly expected that the troubles of the year would find expression here in a reduced income, instead of which we find an increase of more than \$46,000, and in total income of about \$4,000,000. The amount paid policyholders in 1905 is

greater by \$1,158,910 than in 1904, while the total actual disbursements are nearly a half million less.

The condition of the company in respect to its relations to policyholders stands as follows: Total assets, \$470,861,166; reserve required by law to sustain existing outstanding policies, \$392,593,550; dividends due for distribution this year, \$2,850,000; contingent guarantee fund out of which future dividends are to be paid (surplus), \$75,417,607. This last item, indicative of the reserve strength of the company, is more than \$4,000,000 greater than the year previous.

The new president of the company, Mr. Charles A. Peabody, is a man of affairs, richly endowed with experience in managing large estates, a business man of integrity and possessing a keen sense of the responsibilities he undertakes, and may be fully trusted by the membership constituting the company to see to it that every man and woman in it gets a "square deal."

Asa S. Wing, the new President of The Provident Life & Trust Company of Philadelphia, has been for thirty-nine years in the service of the company, having begun work in 1867 as a boy of seventeen. He was promoted to be Actuary and afterwards became Vice-President and Actuary, and later the Vice-President of the Provident Life. Mr. Wing is a member of the Society of Friends and an overseer of Haverford College. For twenty-five years he has been an overseer of the William Penn Charter School, founded by Penn. The total assets of the Provident Life are \$58,696,148, exclusive of trust funds, or an increase of \$3,231,358 over last year's figures. The total amount paid for death claims since organization is \$22,519,758. There were policies representing over \$20,050,428 of insurance issued during 1905, and the total amount of insurance now in force is \$177,778,748. The other officers of the company are: T. Wistar Brown, Vice-President; Joseph Ashbrook, Manager of Insurance Department, and David G. Alsop, Actuary.

# Financial

## Steel Corporation's Quarter

As a rule, the condition of the iron and steel trade is a fair measure of general prosperity or the lack of it. The output of pig iron and of iron manufactures last year broke all records. Last week the report of the United States Steel Corporation for the quarter ending with December was published. Net earnings (\$35,278,688) exceeded those of the preceding quarter by \$4,000,000, and those of the corresponding quarter of 1904 by nearly \$14,000,000. Net earnings for the entire year were nearly \$120,000,000, against \$73,000,000 in 1904. A comparison by quarters is shown below:

| Quarters.    | 1904.        | 1905.         |
|--------------|--------------|---------------|
| First .....  | \$13,445,232 | \$23,025,896  |
| Second ..... | 19,490,725   | 30,305,116    |
| Third .....  | 18,773,932   | 31,240,582    |
| Fourth ..... | 21,466,633   | 35,278,688    |
| Total .....  | \$73,176,522 | \$119,850,282 |

It is noticeable that on December 31st the unfilled orders on hand were for 7,605,086 tons. This is a new high record, exceeding the highest in the past (three months ago) by nearly 1,750,000 tons. In this quarter \$9,000,000 was set aside from the surplus for the purchase of additional property and for improvements. The entire sum thus set aside in the year exceeded \$26,000,000, against less than \$2,000,000 in 1904.

## Currency Reform

At its regular monthly meeting, on the 1st, the New York Chamber of Commerce elected J. Pierpont Morgan vice president, in place of the late Marshall Field, and received a report from its Committee on Finance and Currency. This committee does not regard with favor Secretary Shaw's recommendation that national banks be permitted to issue taxed emergency notes to the extent of 50 per cent. of their bond-secured currency. "It would prove," the committee says, "a most hazardous experiment." It is true, however, as we have heretofore pointed out, that a method very closely resembling the one recommended by the Secretary has been quite satisfactorily used in Germany. The committee repeats the recommendations heretofore

approved by the Chamber, that the law restricting the retirement of national bank currency to \$3,000,000 in one month be repealed, and that the Secretary be empowered to deposit customs receipts as well as internal revenue promptly in the banks at a low rate of interest. Undoubtedly, both of these changes should be made. But while they would be clearly in the direction of currency reform, the effect of them would not be sufficient. A more extensive scheme of reform will doubtless be suggested in due time by the committee, which, upon the motion of Mr. Jacob H. Schiff, is to be appointed, and which, associated with experienced men from other cities, is to act as a Commission for the careful consideration of the whole subject. The report which this Commission is to submit to the President of the United States will surely be a most notable and weighty contribution to the literature of national finance.

OUR exports of manufactures, which exceeded \$500,000,000 for the first time in 1904, rose to \$571,410,000 in 1905.

....A list of selected bonds netting the investor from  $3\frac{1}{2}$  to 5 per cent. interest has just been published by the Guaranty Trust Company, of New York, and will be mailed free on application.

....Official figures compiled by the American Iron and Steel Association place the production of pig iron in this country in 1905 at 22,992,380 tons, which exceeds the previous high record (1903) by almost 5,000,000 tons.

....It is shown in *Bradstreet's* that in building operations in 165 cities \$711,123,741 was expended in 1905, against \$505,703,921 in 1904. In New York City, which furnished a little more than one-third of the entire output, the gain was 64 per cent. Building materials are at the highest prices on record, there having been a considerable advance in the prices of brick, lime and lumber in the last twelve months.

....Dividends announced:

Amer. Graphophone Co. (Common), quarterly,  $1\frac{1}{4}$  per cent., payable March 15th.

Internat'l Salt Co., quarterly, 1 per cent., payable March 1st.

Vol. LXI NEW YORK, THURSDAY, FEBRUARY 15, 1906 No. 2985

## Survey of the World

### The Railway Rate Bill Passed

In the House, on the 8th, the Hepburn Railroad Rate bill was passed by a vote of 346 to 7, just one year after the passage of the similar Esch-Townsend bill, against which seventeen votes were cast. The seven voting in the negative last week were Messrs. Littlefield, of Maine; McCall and Weeks, of Massachusetts; Perkins, Southwick and Vreeland, of New York; and Sibley, of Pennsylvania, all Republicans. Forty-six amendments were offered, but not one was accepted. The largest affirmative vote (119 to 146) was cast for an amendment providing that express companies should be subject to the orders of the Commission. Mr. Williams, the minority leader, hailed the passage of the measure as the triumph of a Democratic principle. Those Senators who oppose the granting of rate making power to the Commission will now strive to amend the House bill by attaching specific provision for a review of the Commission's orders by the courts. The bill says that an order of the Commission, naming a maximum rate, shall go into effect at the end of thirty days, unless suspended, modified or set aside by the Commission itself or by a court of competent jurisdiction. Opinions differ as to whether this is sufficient provision for a judicial review. In last year's bill the procedure for appeal to the courts was elaborately prescribed, and the paragraphs relating to this matter were written by Attorney General Moody. Some who oppose any amendment concerning appeals to the courts believe that enemies of the bill seek so to change it in this respect that the Commission's power will practically be taken away.

Much will depend upon the phraseology of an amendment relating to this question. In the Senate Committee there are sharp differences of opinion. Mr. Aldrich is known as an opponent of the essential provisions of the bill, and when he proposed, on the 9th, an amendment to include express companies, Mr. Dooliver and Mr. Clapp permitted it to be understood that this seemed to them to be a movement for delay. Mr. Clapp, it is said, left the room, saying he would return on the 16th, when a vote is to be taken. It is expected that an amendment in accord with the President's views as to a resort to the courts will be prepared, probably by Mr. Spooner or Mr. Knox, and that it will be acceptable to a majority of the Senate.

### Movement Against Railroad Combinations

The Commission's response to Representative Gillespie's resolution of inquiry concerning the parallel and naturally competing roads said to be controlled by the Pennsylvania Railroad Company has only suggested more questions, and the movement for an investigation has now become a formidable one. Mr. Gillespie said in the House that the response was so inadequate that he regarded it as an insult. He promptly introduced another resolution asking the President to direct the Commission to investigate and report concerning the alleged combination of all the railroads reaching the bituminous and the anthracite coal fields of the East, showing whether they were engaged in mining, and whether their rates were so made and their cars so handled as to put independent miners at a disadvantage.

Mr. Games, of West Virginia, then asserted that the coal business of his State was controlled by a combination of the Baltimore & Ohio, the Chesapeake & Ohio, and the Norfolk & Western (all said to be virtually parts of the Pennsylvania system), and that this control was exercised to the injury of independent mine owners. He read from official reports in support of his assertion that freight rates on coal had been largely increased since 1899, and that there had been a great increase of the dividends of the roads alleged to be in combination. In the Senate, two days later, Mr. Tillman, referring to the complaint of the Red Rock Fuel Company of West Virginia against the Baltimore & Ohio, read a letter from the Governor of West Virginia (a Republican), who said that the State was in the grasp of a Railway Trust, which governed the development of localities and the output and shipment of coal, and that the Pennsylvania road discriminated against the State in the interest of its coal holdings elsewhere. Senator Foraker said he hoped there would be an investigation, because such complaints went to the heart of the railroad trouble. A resolution, introduced by Senator Tillman, providing for an investigation, was passed by the Senate on Monday last. Senator Clay will move an amendment to the Rate bill forbidding railroad companies to engage in other lines of business. Representative Townsend says the Pennsylvania and the other roads mentioned appear to have violated the Anti-Trust law. He will ask the Attorney-General to proceed against them. At Harrisburg, Pa., the Pennsylvania House has passed, 166 to 3, a resolution asking the Attorney-General of the State to ascertain whether the coal railroad companies have not violated the provision of the Constitution which forbids them to engage in mining. President Baer, of the Reading Company, says the charters under which the business of mining is carried on were granted before the adoption of the present Constitution. —In Ohio, last week, the Legislature, with only one dissenting vote, passed a bill (now a law) limiting passenger rates in the State to two cents a mile. Several companies say they will make no contest, but will appeal to the next Legislature if

a fair trial proves that they cannot afford to make the reduction. Wabash officers say their company loses money now on passenger traffic at three cents.

✱

#### Canal Engineer Wallace's Testimony

Continuing his testimony before the Senate committee, last week, John F. Wallace, formerly Chief Engineer, said that his analysis of his year's work on the Isthmus, and the recommendations based upon it, were rejected by the Government, Secretary Taft saying that he had no use for the witness except as an engineer on the canal route. During his term, the employees were always properly housed and fed. Some clerks from New York or Washington complained, but they had expected to sit in hammocks and sip mint juleps. Chairman Shonts had criticised him for providing no entertainment for the men. He had (with General Davis and Minister Barrett) started to make use of the Young Men's Christian Association for that purpose, but had been checked by Secretary Taft's orders. The promise had been made that he should have a free hand and absolute authority on the canal route, but after the reorganization he felt that Mr. Shonts, who was not an engineer, was encroaching upon his field, and that he himself had become jointly responsible with Mr. Shonts and Governor Magoon. He had expected to be Director General of the work. Conditions became so annoying that he decided he would not stay to be humiliated, or to be forced to disobey orders. He encountered the influence of William Nelson Cromwell everywhere. Asked to explain why he regarded Mr. Cromwell as a dangerous man, Mr. Wallace said that Cromwell negotiated the sale of the canal property, brought about the Panama revolution, aided Panama in making investments, was on Panama's diplomatic list, and was interested in local public utilities, being the chief owner of the ice and electric light plant. He had been charged by the President with general advisory duties, but at the same time was urging the payment of the Panama Canal Company's claim of \$2,200,000. As counsel for the Panama Railroad Company he had (probably)

approved the declaration (after provision for the sale of the road had been made) of a dividend exceeding the year's net earnings by \$100,000, and the subsequent sale of \$250,000 in bonds for repairs. He had tried to tell the witness whom to hire and whom to appoint. He had arranged the witness's final interview with Secretary Taft. Mr. Wallace had desired to speak with the Secretary privately, but the Secretary insisted that Mr. Cromwell should be present. It seemed to him that the two had determined to discredit him and destroy his reputation. The Secretary was so angry that he almost crushed (not "cursed," as erroneous reports have said) the witness at that meeting. Owing to the presence of Cromwell and the Secretary's attitude, the witness did not give all the reasons for his withdrawal, but spoke of the offer of a position at double the salary he was then receiving. This offer he had not accepted afterward, because he had conditioned acceptance upon a satisfactory severance of his connection with the canal. Mr. Wallace said that the work should be done by contract and should be controlled by an executive committee of three—a Chief Engineer having absolute authority on the Isthmus, a Zone Governor, and a purchasing agent in the States. Now the Chief Engineer had a chain of five masters over him—a Zone Governor knowing less about the work than the Engineer, the Chairman less than the Governor, Mr. Cromwell less than the Chairman, Secretary Taft less than Mr. Cromwell, and the President less than the Secretary. No salary was too high for the Chief Engineer, but \$30,000 was too much for the Chairman if he remained in Washington.—Governor Magoon, in his testimony, commended the Zone judges. It appears that an American may be condemned and put to death in the Zone without trial by jury. The Senate has passed the House bill excepting alien workmen from the operation of the eight-hour law.

#### The Coal Miners

President Mitchell, of the United Mine Workers, arrived in New York on the 12th, with the leading officers of the three

anthracite districts. These and other members of the scales committee began to prepare the statement and the demands which are to be laid before the operators at the conference on the 15th. Varying reports are received from the bituminous and anthracite districts as to the views of miners. Those of the coal railroad companies are expressed by President Willcox, of the Delaware & Hudson, in a statement of considerable length, to the effect that wages now paid in the anthracite districts are all that the miners can reasonably ask for, that the award of the Commission was a very liberal one, that any changes desired should be sought thru the Board of Conciliation, and that his company must always comply with that part of the Commission's award which decided "that the industry must remain open to all seeking employment." The independent mine owners, of whom there are not so many as there were in 1902, will stand with the railroad companies. It is said that the anthracite operators have accumulated a surplus stock of 13,000,000 tons. Considerable influence against a strike has been exerted by Patrick Dolan, president of the Pittsburg District of the United Mine Workers, who voted at the recent joint convention in Indianapolis against a strike and for a reaffirmation of the present bituminous wage scale. In this he disobeyed the instructions of his district. Last week, at this district's annual convention, over which he presided, a resolution directing him to resign was passed. He held his place, saying that he could be ousted only by a referendum vote of all the district's members of the union. His opponents asked President Mitchell to come to Pittsburg. Mr. Mitchell sent Vice President Lewis and telegraphed his decision that the convention had power to remove Dolan. The latter then procured an injunction restraining the convention from ousting him. In a long statement to the public he defends his votes at Indianapolis and urges the bituminous miners not to jeopardize their increase of 100 per cent. in wages since 1897. It is stated by the union's officers that the funds on hand amount to \$2,679,000, and that a special tax of \$1 per week from each member until April 1st would add \$2,480,000.

### Testimony in the Smoot Case

The hearing in the case of Senator Reed Smoot, an Apostle of the Mormon Church, was resumed last week before the Senate Committee on Elections. W. E. Wolfe, who was recently dismissed from a professorship in the Brigham Young University at Provo, and who is no longer connected with the Mormon Church, testified that he had taken the endowment house oath twelve times and that the "seeds of treason were in it." This oath, he said, bound those who took it to "pray and never cease to pray God to avenge the blood of the prophet on this nation." Two other witnesses, William J. Thomas and John P. Holmgren, who had taken the oath, remembered that these words were a part of it, but Henry W. Lawrence, who was expelled from the Church many years ago, did not fully agree with them. He has held many Church offices and had administered the oath to several hundred persons. The words, "on this nation," were not a part of it in his day, but in his opinion all the teachings of the Church were of disloyalty to the nation. Wolfe also testified that another professor at the university, Benjamin Cluff, had been absent for some time in Mexico in order that he might contract there a polygamous marriage with a teacher in the university named Florence Reynolds; also that a young woman, a student in the university, had, in Mexico, six years ago, become the polygamous wife of a Mormon named Okey, with the consent of Stake President George Q. Cannon. He asserted that these violations of law had been known to Senator Smoot, who was a trustee of the university. Apostle John H. Smith had told him, he said, that the Church manifesto of 1890 against polygamy was "only a trick to beat the devil at his own game." John Wilson, another prominent Mormon, had explained to him that the manifesto enabled the Church to prevent the plural marriage of any man who ought not to have more than one wife, while it permitted certain worthy members to practice polygamy. In his opinion, there had been a very material increase of polygamous cohabitation since the admission of Utah as a State. Cross-examination of this witness drew from him the admis-

sion that he was asked to resign his professorship because of a charge that he had been drunk on a certain Sunday in January last. He had been a drinker for twenty years. He was not drunk on that Sunday, he said, but the charge would have been true if it had related to the following day. These troubles came upon him after he had refused to pay tithes. Another witness, Charles A. Smurthwaite, of Ogden, said he was re-proved in June, 1904, by President Smith for his connection with a salt company that competed with the company which the Church officers controlled. Smith threatened to ruin him. In April, 1905, he was excommunicated for saying that the Church ought not to be engaged in business and for denying Smith's authority as a prophet. The Mormon salt company reduced its price from \$8 to \$2 a ton. This killed his company's business. At the same time he could get no credit at the banks. The Mormon President, this witness said, received between \$1,500,000 and \$2,000,000 a year in tithes, but in the last twenty-four years had made no accounting as to his use of the money. Those who ask for the expulsion of Senator Smoot having closed their case, testimony on his side will now be introduced.

### Our Remote Possessions

A committee of prominent citizens of Hawaii, now in Washington, asks that three-fourths of the insular receipts from customs and internal revenue be expended in the island for public improvements. These receipts, said to be about \$1,200,000 a year, are now turned into the national treasury.—The Senate has passed a bill providing for the election, in Alaska, of a delegate to Congress, and there has been reported a bill appropriating \$150,000 for highways in the Territory.—Secretary Taft has been laying before the Senate committee which has the House Philippine Tariff bill all the arguments in favor of that measure. The committee is almost evenly divided on the question of making a favorable report. It is predicted in Washington that the Senate will increase the duty on sugar and tobacco from 25 per cent. of the Dingley rates (as provided in the House bill) to 50 per cent.—The suc-

cessful treatment, by army surgeons, of thousands of cases of the disease which causes a majority of the deaths in Porto Rico has suggested an application for a greater appropriation, in order that the work may be carried on in a considerable number of small hospitals. This disease, commonly called anæmia, is due to a parasite. In six months, by an expenditure of only \$10,908, the treatment has been applied to 18,865 persons, 5,997 of whom have been cured, while 12,628 have been so relieved that their complete recovery is expected. This work has been done at a central hospital and in its six branches. Dr. Ashford, the army surgeon in charge, now proposes that small hospitals, each having about fifty beds, shall be established in many places, that the work in them shall be directed by a medical commission, and that the school teachers shall be induced to assist by giving the needed sanitary instruction to the people. The soil appears to be the chief agent of infection. He asks for \$80,000, to be used in the coming year. This, he thinks, will be enough for the treatment of 100,000 patients.

**Church Union at Dayton** More than one hundred Congregational commissioners, over fifty from the United Brethren Church and over forty from the Methodist Protestant Church, chosen officially by their respective national organizations, met in Dayton, Ohio, the United Brethren headquarters, to inaugurate conditions for corporate union of the three denominations into a single one. Of these three bodies the Congregationalists have over 650,000 communicants; the United Brethren 260,000, and the Methodist Protestants 200,000. On coming together the Methodist Protestants, thru President Lewis, of Maryland, announced that they were ready to discuss nothing short of absolute consolidation. This was willingly assented to by the other two delegations, and committees of twenty-one from each body were chosen to formulate a plan of union. These were then divided into three subcommittees of seven each from each body, one on Faith, one on Polity, and another on Vested Interests: that is, mission

boards, educational institutions and publishing houses. Long and busy sessions were held, characterized by most kindly spirit and a readiness to yield unessential things until an agreement was made, which was approved, first by the full committee of sixty-three; then by the three denominational delegations voting separately, and then by the entire body. These conclusions were reached almost or quite unanimously. The statement of faith was approved not as a test of orthodoxy, to be used in heresy trials, but as the expression of the common faith of the assembled body. It was, in part, as follows:

"We, the representatives . . . United Brethren in Christ, and the Methodist Protestant Church, rejoice at this time to enter into union with one another, thru the grace of our Lord Jesus Christ, in the love of God, and for fellowship in the Holy Spirit. In this solemn act of faith and obedience toward the great Head of . . . do most humbly and confidently make confession of our faith and heartily renew the consecration of our lives to him and to the service of mankind.

"1. Our bond of union consists in that inward and personal faith in Jesus Christ as our Divine Saviour and Lord on which all our churches are founded; also in our acceptance of the Holy Scriptures as the inspired source of our faith and the supreme standard of Christian truth; and, further, in our consent to the teaching of the ancient symbols of the undivided Church, and to that substance of Christian doctrine which is common to the creeds and confessions which we have inherited from the past. But we humbly depend, as did our fathers, on the continued guidance of the Holy Spirit to lead us into all truth.

"2. We believe that God, the Father and Lord of all, did send his Son Jesus Christ to redeem us from sin and death by the perfect obedience of his holy will in life, by the sacrifice of himself on the Cross, and by his glorious resurrection from the dead. . . .

"6. We believe that according to Christ's law men of the Christian faith exist for the service of man, not only in holding forth the word of life, but in the support of works and institutions of pity and charity, in the maintenance of human freedom, in the deliverance of all those that are oppressed, in the enforcement of civic justice, and the rebuke of all unrighteousness. Possessed of these convictions, both as truths which we do most firmly hold, and acts of faith which spring from our hearts, we do, therefore, in the happy consummation of this union, and in the name of all the churches which we represent, commit ourselves, body, soul, and spirit, to the faith, love, and service of Him who made us and saved us, the Everlasting God, our Father, Redeemer, and Lord. To him be ascribed all praise and dominion, and glory, world without end, Amen."

The statement on Polity provided for autonomy of the local church, for district and annual (or State) conferences, and a General Conference. The presidents of the General Conference and of the annual conferences to give their entire time to the work; and for committees of pastoral supply to keep the churches supplied with pastors. A committee is to make a careful study of the plan for uniting missionary and vested interests, and these committees will report to an adjourned meeting of this conference within a year and a half.

#### The British Parliament

The question of the leadership of the Unionist party in the new Parliament has apparently been decided in favor of Mr. Balfour. Mr. Chamberlain, in a public letter to Lord Ridley, ex-Home Secretary, stated that the great majority if not all the tariff reformers in the House of Commons were perfectly ready to accept Mr. Balfour's general leadership, but that to secure their support Mr. Balfour should make an unmistakable declaration to the effect that tariff reform has not been dropped, but will remain in the party program. Mr. Chamberlain said that he did not think it would be necessary or wise in the tariff reformers to separate themselves from the party as a whole or from its general leadership, but that they might properly constitute themselves into a parliamentary group or committee for the advancement of their cause. In accordance with this suggestion, Mr. Balfour took occasion to make such a declaration in a speech at a banquet given to Alban G. H. Gibbs, who was recently elected from the City of London, but resigned his seat in favor of Mr. Balfour. He stated that the election indicated an increasing, not a diminishing, need of tariff reform, and that he looked forward to the industrial condition of Great Britain with great alarm, owing to the hostile tariffs of other nations. Retaliation was the best means of meeting these hostile tariffs, and, in his opinion, such a policy was not inconsistent with free trade. He appealed to the Unionist party to unite on the main question of tariff reform, leaving the details for settlement until the party is again in power. This speech, altho only a little less ambiguous and non-

committal than his previous utterances on the subject, will probably suffice to retain for him the leadership of the party in the House of Commons. A meeting of the Unionist party to decide upon its future policy has been called to meet soon. John E. Redmond has been re-elected chairman of the Irish Parliamentary party, and a resolution adopted reiterating the demand of the Nationalists for self government, and declaring that they would not support any party in Parliament that did not favor home rule for Ireland. Kier Hardie has been elected chairman of the Labor party. The Labor party has already drafted an education bill which is much more radical than the one the Government is likely to introduce. It provides for a complete system of free secular education and the abolition of all religious tests for teachers. Elementary schools are to be established everywhere by local authority at the Imperial cost, and secondary and technical education also must be furnished where required. One meal a day and medical inspection and treatment are to be provided free.

France is taking her time in calling Venezuela to account, but reports from Paris announce that the chastisement she contemplates is none the less sure from coming slowly. However this may be it is apparent that France and the United States are acting in perfect accord and the French Government is resolved not to play into anybody's hands by taking hasty action. M. Taigny, the French chargé, whose expulsion from Venezuela is the occasion, but not the cause, of the present rupture, arrived in the United States last week and proceeded directly to Washington to lay his case before Ambassador Jusserand. All the reporters could get out of him, at the dock, was a denial that he was the author of the *bon mot* in wide circulation in South America to the effect that Castro is "the monkey of the Andes." At Caracas, it is reported that Castro is preparing for war. He is impressing men into military service, buying ammunition and fortifying the approaches to the capitol. It is said a war with France would be very unpopular, but President Castro is so in-

trenched in power that he can probably force the Venezuelans to fight if he wants to. Despite all these alarmist rumors some way will probably be found to avert actual war.—Americans wishing to visit Venezuela must now secure a passport from the State Department at Washington before landing on Venezuelan soil. This procedure has not been required hitherto, and excites remark.

#### England's Big Battleship

The largest ship of war ever constructed was launched at Portsmouth, England, on February 10th. The official title of this latest addition to the British fleet is H. M. S. "Dreadnought," a name famous in the annals of the sea. The battleship will displace 18,500 tons, some 2,000 more than our six new ships of the "Connecticut" class. Her armament is peculiar in that she carries ten of the heavy 12-inch guns and no other guns, except some quick-firers for repelling torpedo attacks. Our new battleships have only four of the heavy guns, but a secondary battery of twenty of the 8 and 7 inch type. The cost of the "Dreadnought" is placed at \$7,500,000. All the details of her construction have been kept in strict secrecy, but it is understood that all the arrangements and plans are a result of the observation made by British experts in the recent war. Great Britain was the only Power which was allowed to have her naval attachés accompany Admiral Togo during his attack on the Russian fleet. It is claimed that the "Dreadnought" is invincible and unsinkable, that her guns will have a range of 25 miles and will penetrate 16 inches of armor. It is expected that she will render all other battleships obsolete.

#### The Algecirras Conference

Nothing of importance has transpired from the Moroccan Conference during the week. A deadlock between France and Germany has apparently been reached, altho neither party has brought a definite proposal in regard to the vexed questions before the Conference. Each is apparently waiting the move of the other and both Paris and Berlin dispatches prophesy that the Conference will break up without results because of the obsti-

nacy and unreasonableness of the opposing party. Even in the private and informal discussions between the French and German delegates, no definite issue has been raised on either the banking or the police question. It is understood that France has agreed to accept a joint mandate with either Spain or Morocco for the policing of the six cities where there are European residents, but will not agree to an international police system. The British papers are urging the United States as a neutral and disinterested party to proffer her services to maintain order. The Sultan of Morocco has accepted in substance the only thing the Conference has agreed upon so far—the suppression of contraband trade. The Conference is likely to break up at any time, but there is no fear of war resulting from its failure.

#### Italian Politics

The reorganized Fortis ministry has had a brief and uneventful life, for it received its first vote of confidence in the Chamber of Deputies December 17th and immediately upon the reassembling of the Chamber on February 1st a vote of lack of confidence was passed by a majority of 33. It was more an attack upon the individuals of the Fortis cabinet than upon their acts or principles, and it is not evident that the coalition of five factions which overthrew it have any better policies to propose. The principal charges made against the Government were its clerical sympathies and its failure to reform the tariff and to settle the railroad question. Last year the Chamber voted to have the Government buy and manage all the railroads in Italy, but as there is no money available for the purchase, and the railroads are in very bad condition on account of the strike of last year and the uncertainty of management this year, the plan has not been a success. The leader of the Opposition, Baron Sidney Sonnino, becomes Premier of the new cabinet, which is in the main conservative, altho it contains the Radical leader, Signor Sacchi, as Minister of Justice, and Signor Pantano, a Republican, as Minister of Agriculture. The new Minister of Foreign Affairs is Count Guicciardini, who is a descendant of the great Florentine historian, Francesco Guicciardini.

### Russia Becoming Quieter

Despite the spasmodic massacres and assassinations, the revolts in Russia seem to be dying out. Some correspondents claim that this is merely a lull, and that a vast peasant revolt will break out in the spring. The misery of the working classes caused by the war and the subsequent strikes is unprecedented even in Russia. A famine before the end of winter is expected, which would be a strong incentive to drive the peasants to rebellion against the wealthy landowners. —The attitude toward the Jews seems to be changing in some degree. A Jewish professor, Ravitseff, has been appointed to an important post in the University of Moscow. The appointment was sanctioned by M. Durnovo, the Minister of Interior. This, taken in conjunction with the announcement by the *Russ* that the council of ministers favors the removal of the restrictions upon the admission to higher educational establishments of Jews, who have completed middle school courses, indicates an amelioration of the policy toward the Jews. They have hitherto not been allowed to hold faculty positions. —An American engineer has presented a plan to the Russian Government for a canal from Riga to the river Dnieper. This would give Russia access to the Black Sea from the Baltic, and would undoubtedly develop commercial interests in the interior. The plan is being considered by a committee from the Departments of Finance, Commerce and Railroads. It is reported that an American syndicate has secured from the Russian Government a thirty-six year concession for railways in Central Asia on the condition of furnishing a guarantee of \$40,000,000 that Russia will be allowed to redeem the roads at the expiration of the concession.

### Danger in China

Dispatches and private letters from China indicate a state of unrest similar to that which prevailed immediately before the Boxer outbreak of five years ago, one of the causes of which was the educational and political reforms somewhat hastily promulgated by the young Emperor. Now that the Empress Dowager is going almost as far, altho not quite so fast, in the

same direction, the conservatives are again alarmed to see the venerable institutions of their country in danger, and the opposition takes the form of petitions of protest to the Throne and political intrigue and local rioting. This may also at any time become a rebellion like that of the Tai-pings against the Manchu dynasty for endeavoring to force foreign customs and laws upon the country over which they rule. It is questionable whether the Chinese Commissioners now in this country studying our institutions will be able to put into operation when they return the new ideas they may acquire. While Viceroy Tuan was being dined in New York by the missionary societies mobs were gathering in his own provinces to destroy the missionaries there. At Chang-pu, about thirty miles from Amoy, a band of well armed marauders attacked the English Presbyterians and the Roman Catholic missions and looted and destroyed them. The loss is estimated at \$50,000. The missionaries, three gentlemen and four ladies, escaped and took refuge in the governor's yamen. The mob then marched to Chang-chau, the seaport of Amoy. The residence of the Rev. Dr. Beattie, an American Presbyterian missionary at Fati, in the district of Canton, was also looted. The missionaries were bound and their clothes, watches and silver taken from them. Strong efforts are being made by foreign residents in Peking to induce the Powers not to carry out their plan of removing troops guarding the legations. In case of a foreign war the invasion of China would not be such an easy task as it has been in the past, for China has now for the first time a well drilled army of 200,000 men provided with modern arms. Viceroy Yuan Shih-kai, of the Chihli Province, invited foreign military critics to see his newly created army in their maneuvers of last fall, and all agreed that the Chinese soldier, in appearance and tactics, would compare favorably with their own troops. There is no way of telling in how far the anti-foreign riots are encouraged or deterred by the various Viceroys or the central government. Orders are reported to have been sent from Peking to behead the leaders of the Chang-fu mob and to punish severely all who took part in the outrage,

## The New President—What Will He Be Like?

Will he be ambitious  
Like Napoleon?

Will he be a student  
like M. Thiers?

Will he be a Man of War  
like Marshal McMahon?

Will he be a billiardist  
like M. Grévy?

Will he be stylish  
like M. Carnot?

Will he be ephemeral  
like M. Casimir-Perier?

Will he be a fine and frisky  
cavalier like M. Felix Faure?

Or will he be a peaceable  
sportsman like M. Loubet?

Cartoons from *Le Rire, Paris*.

## The New President of France

BY THEODORE STANTON

[The following article comes just in time to print three days before the inauguration of M. Fallières, as President of France, which takes place on Sunday, the 18th of February. Mr. Stanton, whose articles are familiar to our readers, has resided in France, off and on, since 1874, and has observed close at hand all the public characters and political events mentioned below.—EDITOR.]

NO President of the Third Republic has entered the Elysée Palace with a longer and more varied experience in public affairs than M. Armand Fallières. Before the year 1876, when he appeared at Paris for the first time, as Deputy, M. Fallières had been, during several years, Mayor of Nérac, one of the leading towns of his native Department, Lot and Garonne, and he had also served as member of the Departmental Legislature. This is the extent of political life in the French provinces. So, if the ambitious young man wished for further public honors, he must turn his steps toward the national capital. And this is what he decided to do. Nor did he show less good sense in the choice of the means for accomplish-

ing his object. In M. Fallières's first circular, addressed to the voters of his district, occurs this passage:

"Very blind is he who does not see that, after so many convulsions and misfortunes, what France needs most are repose, tranquillity and the being sure of the morrow, and that, in a land of universal suffrage, the republican form of government can alone secure these blessings."

When M. Fallières decided to link his future political career with the Third Republic, the Bonapartist Marshal McMahon was President, the National Assembly, still sitting at Versailles, contained an anti-Republican majority, the Count of Chambord was alive and active, and the Republicans were far from being united. It was not till three years later

that they were able to put their first Republican President, M. Grevy, in the Elysée Palace. In a word, when M. Fallières threw in his lot with the Republic there were very dark clouds on the horizon of French home politics.

Nor was the situation in his own Department more assuring than in the nation at large. The laurels of the Napoleonic empires were still green in the Lot and Garonne. The electoral body was very nearly equally divided between Republicans and Bonapartists. At his first election as Deputy M. Fallières was chosen by a majority under two thousand, and at the following election his majority was carried up to but a few votes over two thousand. However, his adhesion to the Republic did not a little to bring to the new Government all that backward part of Southwestern France, and that he had become, thereby, a popular leader in that region was clearly shown about eight years later, when, in October, 1885, the five Deputies of the Department were elected, not by the district system, but by general ballot, the electors of the whole Department voting for all five Deputies. On this occasion, M. Fallières led the list, receiving the highest number of votes cast.

These initial successes laid the solid foundation of M. Fallières's political fortune. Henceforth he had behind him a devoted constituency that has kept him in national political life from that day to this. Some of the ablest statesmen of France have had their career blasted for the lack of this unwavering home support. If M. Fallières, like M. Loubet, has attained the highest honor within the gift of the country, it is largely due to the fact that he has had to waste little if any time, effort or money to secure

re-election and has never had to seek a seat from strangers. Local pride in a favorite son rendered all such strain and humility unnecessary.

M. Fallières has enjoyed the advantage of another rather peculiar source of political strength which has had its share in keeping him in public office. Tho he has taken no part in the Félibre movement, whose center is especially in Provence, whereas he comes from Gascony, M. Fallières is an active member of the Southern Associations existing at the capital, such as the Cadets de Gascogne, the Lot-et-Garonnaise and La Prune. This last organization, by the way, has

just given a very successful banquet in honor of the new President. Heretofore, M. Fallières has been a frequent attendant at the meetings and dinners of these societies and always enjoys himself among his fellow citizens of the South. But the strength to which I refer springs rather from the fact that M. Fallières speaks with perfect facility Gasconese, which, I may say in passing, is not a dialect, but a well developed language, very rich

The Presidential Contest—Fallières Knocks Out Doumer.

in its vocabulary, exceedingly supple and full of color. When at home, it is always in this tongue that M. Fallières chats with the peasants and vine-growers who are his neighbors. During an electoral campaign, M. Fallières has, time and again, stumped the department or his district in the Gascon language, especially in the moor regions of the Lot and Garonne. M. Georges Leygues, the ex-Minister and Deputy, President of the Cadets de Gascogne, who has printed well-turned verses in this tongue and who presided with much wit and tact at the Prune banquet mentioned above, said to me during the festivities:

M. Fallières.

"An acquaintance with this language is exceedingly useful in our part of France. It brings together high and low and gives to a speech a freer and more familiar tone. Men of delicate taste—and such a man is M. Fallières—make much out of this situation."

M. Fallières had not been long in the Chamber of Deputies before his ability as a debater was recognized, and in 1879, within less than four years after his début, he began that long and wide ministerial career, referred to in the opening lines of this estimate, by being appointed Under-Secretary for the Interior. In the autumn of 1882 he was

made Minister of this same department, which, on account of its attributions and the excessive centralized form of the French National Government, is regarded as, perhaps, the most responsible cabinet position. That his first post should have been this one in itself shows the high opinion entertained of his powers at the very beginning of his public service, and fully explains why this service continued so long, with scarcely a break. And, furthermore, at the moment when this portfolio was assigned to M. Fallières, it was all the more important be-

cause joined with it was the portfolio of Public Worship, a delicate and thorny charge for a free-thinking republican in the days of the Concordat, when the Catholic clergy were excessively aggressive and not at all friendly to the Republic.

M. Fallières was now fully launched on his ministerial course, and honors came to him even in too much profusion. During a cabinet crisis, in January, 1883, M. Fallières filled, for a short time, at one and the same moment, four posts, being Prime Minister and Minister of Foreign Affairs, the Interior, and Public Worship. In the following month, in the second Jules Ferry cabinet, he tried a new department and became Minister of

Public Instruction. In May, 1887, in the first Rouvier cabinet, we find him back in the Interior, but at the end of the year, when the cabinet falls, he becomes Minister of Justice for the first time. In the spring of 1888, the life of this cabinet comes to an end, but at the beginning of 1889 M. Fallières is again a Minister and once more at the head of Public Instruction. In March, 1890, there is another change of cabinet, but M. Fallières is retained in the new combination, tho transferred to the department of Justice and Public Worship, where he continued till the defeat of this cabinet at the beginning of 1892, which closed his ministerial career.

During the dozen years that M. Fal-

New Gate of Elysée Palace at the End of the Garden.

Elysée Palace as Seen from the Garden.

lières held portfolios, he was Prime Minister, and Minister of Foreign Affairs, of the Interior, of Public Instruction, of Public Worship and of Justice, occupying some of these posts twice. The thoro knowledge of French governmental affairs which he must necessarily have acquired thereby was greatly augmented by the valuable and intimate acquaintance which he made, at the same time, with the leading statesmen of his party. Thus, M. Fallières had as colleagues in these various cabinets such notable Frenchmen as Presidents Carnot, Félix Faure and Loubet; Chief Justices Cazot and Mazeau; Ribot and de Freycinet, of the French Academy; Jules Ferry, Magnin, for many years Governor of the Bank of France; Constans, French Ambassador to Turkey; Leon Bourgeois, who headed the French delegation to The Hague Conference; and two of the leaders of the opposite schools of political science, M. Yves Guyot, the veteran free trader, and M. Méline, "the McKinley

of France." Several of these personages are still alive and still in public life, and some of them will doubtless be ministers again during the term of office of President Fallières. The important bearing of all this on the future politics of France need not be dwelt upon.

In this same connection, showing still further what a fine political training the new President has had, attention should be called to the fact that M. Fallières was minister during several of the most serious crises that the Third Republic has had to traverse. He was Minister of the Interior, the all important post under the circumstances when, in December, 1887, President Grévy was forced, much against his will, to resign office on account of the misdeeds of his son-in-law, and when there was a fierce struggle, which at one time threatened to degenerate into conflicts in the very streets of Paris, to prevent the choice of Jules Ferry as M. Grévy's successor, and when the excellent selection of the Congress

fell upon M. Carnot, it was to M. Fallières that the new President first turned to form the first cabinet of his presidency.

The year 1889 saw the apogee and the fall of General Boulanger, who endangered the very existence of the Third Republic. M. Fallières was a member of the Tirard cabinet, which, grasping the peril, did not hesitate to destroy the political power of the imminent dictatorship and drove Boulanger from France and to ultimate suicide.

In June, 1890, M. Fallières's faithful supporters in the Lot and Garonne transferred him from the Chamber of Deputies to the calmer atmosphere of the Senate, where, in the quiet performance of his new duties, he had largely passed from public view, when, in February, 1899, President Faure suddenly died. M. Loubet, President of the Senate, was placed in the Elysée, and M. Fallières became the choice of his colleagues for the vacancy. The wisdom of this selection received quick confirmation, for, a few weeks later, Paul Déroulède and a band of Royalists and anti-Semites, who had made an absurd attempt to overturn the Republic, were brought before the Senate, which was transformed into a High Court of Justice, were promptly condemned and sent out of the country as public nuisances. M. Fallières presided over these complex proceedings with great tact and decision, and once more proved, in a most conspicuous manner, that he is always "the right man in the right place."

When M. Fallières was called upon to direct the proceedings of this High Court he had only recently been chosen President of the Senate. But it is now nearly seven years since that event, and during this long period he has been constantly re-elected. So there has been time to take his measure in that capacity. Here once more, as in everything that he has undertaken, M. Fallières has shown himself to be a past master, which augurs well for the manner in which he will perform the duties of the new and high post which he is about to assume.

A distinguished Republican Senator who did not vote for M. Fallières at Versailles said to me the other day:

"Tho it is not a difficult thing to preside over a body like ours, I can assure you, quite

honestly, that M. Fallières has acquitted himself of his responsibilities most successfully, with a quiet but firm authority to which all Senators bow, ever displaying much kindness and courtesy toward all, and giving attention to all matters, great and small. He has never been found wanting, and has certainly shown himself to be a model parliamentary presiding officer."

Since his election to the Presidency of the Republic, M. Fallières has not occupied the presiding officer's chair of the Senate. Tho he is still the President of that body and will be till he enters the Elysée, his duties have been performed during the past month by one of the Vice-Presidents. But before this event, an observer in the galleries, about three o'clock any afternoon when the Senate sits, would notice that the double door behind the lofty President's chair was thrown wide open, liveried ushers drawn up in two lines from the door to the chair, and then was seen advancing from the back of the brilliantly lighted vestibule behind the door a portly gentleman in full evening dress, shining silk hat in hand, flanked by two ushers and preceded by a third. The distant roll of drums told that the President, accompanied by the commanding officer in full uniform and drawn sword, had just passed, between two lines of soldiers presenting arms, from his official residence adjoining that of the Senate Chamber. On reaching the vestibule the officer gives the military salute and the President makes a low bow in return. He then approaches his chair, the head usher shouts in a loud voice: "Monsieur le President," takes the hat from his hand, pushes the chair under him and he is finally seated. The President then gives a vigorous stroke to the handle of a large bell hung on two pivots, calls out: "*La séance est ouverte, Messieurs*" and the day's sitting begins. For seven years M. Fallières has been going through this ceremony several times each week, so that he will easily fall in with the etiquette of the Elysée.

It was at a sitting of the Senate that a good opportunity was given to study the physical appearance and manners of the new President. When he used to come in thru the door behind the chair, M. Fallières unquestionably made a rather strong impression. He is a little taller than M. Loubet and much stouter.

In fact, the only criticism to be made is a tendency to corpulency. M. Fallières is by no means so fat as Mr. Cleveland, but is much more portly than Mr. Roosevelt, and, like him, is always striving to combat this obesity, long walks being the common remedy.

M. Fallières has a big head, a large, good natured face and a self possessed bearing. He appears neither refined nor common, but half way between the two—a solid, simple, intelligent democrat. His head is set on broad, thick shoulders. His neck is too short, but when standing erect he carries himself so well that you do not notice this defect. When seated in the armchair on the high rostrum of the Senate Chamber this squattishness was more striking, especially when he leaned forward, with his two arms on the desk in front of him. Then the neck seemed to be drawn into the body like that of the tortoise, and the large head, well covered with thick hair, and the thick beard, tended to give to M. Fallières a sort of leonine look, as he bent forward in following the debate. In fact, there is much of the lion in the whole general make-up of the new President, and little or nothing of the cat, to whose svelt ways the typical Frenchman is generally likened.

Nor is M. Fallières an ordinary man mentally. A former colleague of his in two cabinets says this to me:

"Intellectually, Fallières is superior to Loubet and possesses finer literary instincts. Tho he is not a finished orator, he is a good speaker. He can think on his feet. He will not have to read his speeches, as did Félix Faure, and what he says will reflect a mind of no common mold. Tho bred a lawyer, also like Loubet, he has not made a reputation at the bar, for, again like Loubet, whom he so much resembles in many ways, he began practice in a small provincial town, and while in Paris has been too much absorbed in politics to plead. In France a barrister is great and known only when this greatness and renown have been won at the capital."

M. Alfred Naquet, a former Deputy, said to me the other day:

"The new President is personally a very agreeable man. He will always do the right thing, respect the Constitution, and, which will do no harm, will be very simple in manner and in his dealings with men. By nature he is moderate in politics. But he is squarely anti-clerical, and that is much. An honorable man—and Fallières is decidedly one—is somewhat bound by the conditions under which he

was chosen to the presidency. This will make him more radical than he really is. He is unquestionably to be preferred to his immediate predecessor, for M. Loubet has had a policy of his own, often hidden under a guise of simple good nature, that has not always been for the advantage of the country. Though not clerical himself, Loubet was subject to these evil influences thru his wife. Far less of this sort of thing is to be feared in the case of M. Fallières."

Ex-Senator Joseph Fabre, who knew M. Fallières in both Houses, has this to say:

"Taking into consideration all our public men, I cannot imagine a better choice than this one. Clear headed, judicious, well balanced, M. Fallières is good sense personified, and he has an excellent heart besides. As President he will be a model of a perfect democrat and a prudent patriot. Personalities like Roosevelt, Loubet and Fallières are a living refutation of that dynastic prejudice which attributes a sort of privilege to royal blood and considers courts to be the necessary school of chief magistrates."

A word about the private fortune, past, present and future, of the new President. In March, 1891, during a debate in the Chamber of Deputies concerning some rather shady financial speculations, M. Fallières, then Minister of Justice, said:

"I am nobody's tool, and if there are certain moments when one feels like congratulating oneself on one's poverty, it is when you are a member of the Government and certain financial transactions are brought up."

Tho M. Fallières has indeed never been a rich man and is not one now, when he quits the Elysée Palace seven years hence he will not retire poor. In fact, he has already laid the foundation of a snug little fortune, gained chiefly in the public service. A Deputy-Minister receives about 70,000 francs per year and is given a furnished house, which is heated and lighted. M. Fallières has held posts of this kind, as we have seen, during quite a term of years. He has been President of the Senate for just seven years, and been lodged in the Petit Luxembourg Palace, drawing a double salary as Senator and as President of that body—some 80,000 francs per year. He has not been bound to entertain very much and has not done so. A moderate estimate would place at about 250,000 to 300,000 francs the sum that M. Fallières has saved from salaries received from the State treasury since he arrived in Paris

in 1876. He now enters a post where the emoluments are, when compared with what republics generally pay their public servants, really princely. The salary and funds for entertaining amount together to 1,200,000 francs per year. Official journeys to foreign countries and the entertainment of crowned heads at Paris are met with a special appropriation. It is probable that the French President saves at least 300,000 francs annually, and in some cases the amount has probably been much larger than that. This is sufficiently proved by the larger scale on which the retiring Presidents live. Thus, M. Grévy, toward the end of his nine years' incumbency, bought a costly site in one of the best parts of Paris and built thereon a large private residence, and some two years ago M. Loubet purchased a rather spacious castle in Provence. So, when M. Fallières retires from public life in 1913, he will probably have put by a round two and a half million francs of State money. And yet there are Frenchmen—Republicans, too

—who think that the retiring President ought to be provided with a life pension.

I have left to the last, tho it is of the first importance in many respects, a few words about the President's wife. Madame Fallières will ably second her husband in his high position. She has had large and long experience in the fashionable duties of French official life and has shown herself to be a hostess of real tact and delicacy. She is a fine looking woman, who dresses with taste but simplicity. Her manners are affable and refined. Her carriage is most graceful, and, what is of prime consequence to her, she has an unmarried daughter, about thirty years of age, tall and winning, who is in every respect capable of being a second hostess at the Elysée. To complete this domestic picture, I should add that M. Fallières, like M. Loubet, has a full grown son, who can fill a useful part in the public life of both his parents.

PARIS, FRANCE.

## The Story of One Woman's Life

AT the corner is an electric light. My room is under the roof, where it slants so low that the ceiling comes right down to the half windows, and the windows themselves are but just above the floor. I like that peaked slant of my ceiling. I am grateful that there are two windows; they might have forgotten to put in that second window, and then this room would be indeed dark. It has no carpet; but that is of no moment, for the sun carpets it royally in cloth-of-gold and motes dance like golden bees in the beams. Days when the pain is bad I watch those motes. I wonder if the Wisdom that sees the sparrows when they fall has count of those dust motes that go up and down the well of His golden light in this room. It is but \$6 per month, this room; it has no pictures until night falls. Then that wall yonder is beautiful. For there's an electric light out in the night that glows to my window thru the great

tree; shatters its globed fire on that wall, and the wind goes in and out the tree, and the leaves make marvelous arras. Just on that one wall—a glittering quiver of shadow and shining the night long, while all the rest of the room is ghost dusk. Sometimes the wind bends the branches and the wall is swept of its umbrageous shadow; just the white line quiver. Sometimes the leaves are motionless, sable painted in the crystal fire that is never motionless. Sometimes, when the light goes dim, they are etched airy as a thought on the gauze of its whiteness. Always it has fascination; I never weary watching, studying, edge to edge, that white-fire broidery of my wall. Also, I forget to hear the pain beat in my pulses, the storm sob in my heart, when I am watching that light braiding its beauty. For a while I forget.

Nights, too, when the rain falls. When all the outdoors is music. The delicate

tap, tap of rain in the leaves, the tread of winds and soft clapper of branch against branch—I *love* it. All the sweets of sound that life has left in a soul seem in that antiphon of wind and rain and trees. Life's lullaby and epithalamium and dead march and dirge and dance, heart's-ease and heart's-break. Sometimes I cannot endure it, and I hide my head under cover; but my heart keeps tolling and song and my eyelids hold the white-etched mirage of my wall. Those are the nights when I cannot weep and I cannot pray, when I'm hung on the cross on the Hill of the Skull, and I count every bell and clock that tells in the hour; up the night to its mid and down its darks to the daybreak.

Then I go back to my father's house—I, from afar off of the years; go thru the gate; up the walk. Oh, I make it twice-long, that in-homing from gate to threshold! I lean over the lily-silvered pond and count the buds that will be open by moonrise. I lay cheek to the yellow roses that clamber to mother's window, and she leans out for me to kiss her lips across the briars. There's a patch of larkspur, blue as her eyes, down by the gate. I smell the sweet fern I trod on leaning up to kiss her. And I go down the yard to pick a black pansy—just one black pansy—and back to the threshold. And the great cedars there sob and sing.

But I never go in. Wildest night of storm and rain my soul is wandering the dark. I never go in. I cannot—oh, I cannot.

They said girl never had happier face than I. Ours was the handsomest place in the county, and I, they said, like a young princess.

And I—I that happy-faced girl? I look deep into her eyes, that woman the mirror shows, and I whisper to her: "Was it you? *You?*" But I see no pictures in the eyes that look back, tho I think maybe God will say when I stand before Him: "This woman for one night was the happiest woman I ever created."

When I hear that skirl in the tree-top out there I can scarce bear life's burden. But when I am dead they shall say, "This is the gladdest woman to be dead that ever died!" I shall be so *glad* to be dead!

It was in just that soft stilly way the

trees lipped together the night he married me. I remember the tremor of his arm as we stood and the glee that laughed in my heart, thinking he was frightened. It was a sleeper under the floor that gave way just where his left foot stood and made him tremble; so large the company gathered to hear us say "*I will*," and I thought he was frightened.

Just in that insistent, soft stilly way the winds sung in the cedars that night. And I cannot bear it—I cannot bear it!

Surely I was made for happiness. There is so big a capacity within for happiness. For sorrow. And happiness but met and passed me by and sorrow has housed in my heart all the long way. I asked so little of life—just to be happy. And I've gone a-hungred for it; starved, starved!

If but some one had told me I think I'd have believed; I *think* so. But for any man who ever had told a girl he loved her—to stand by and see her wed to a drunkard and breathe not a word of warning—I do not see how the Lord Christ could keep silence in His heaven, to see a young girl tricked to such marriage. He was brilliant; mother delighted to converse with him. Many the time he had said scarce a dozen words to me; brilliant *bon mot*, and converse with mother and father, and dropped a red rose in my lap as he rose to make adieux.

But before we reached half the night's journey end he was drinking—*drunk*. I did not understand, till the porter helped him away to his berth; and I sat staring at the stars and the sparks that made trail of red eyes in the night until daybreak.

His mother did not know. He was the idol of her prayers. I had to tell her after a while. I had to tell her that there were days when bread was all I had to eat—while my husband was sleeping, sleeping, and his child coming nearer, day by day, coming nearer.

He took me home; I begged so to go home to mother. I'd never written her, and so I could go back with my pride unshamed. Old Henry, the coachman, cried when he met me.

"O, little Miss Jane! O, little Miss Jane!" whimpered the old man. "Honey, is you come back."

He came. But it was father who held

me in his arms that long two days. Father, whose face laid itself down on my pillow by my face, who gathered me close to still those awful cries. It was father, always father, whose words comforted me as I listened as of one a long way off.

Still, I did not tell. Tell father the daughter he adored was wife to a drunkard? *Could I?*

And no one had preached from pulpit or fireside that it is shame, it is sin, it is *crime* to mother a child to a drunkard!

And soon there was another child coming.

Even his mother believed now. For she came in one day just after my husband had driven in from his night calls. He had fallen under his horse's hoofs, between the horse and the buggy, and I was striving to drag him from danger. He shouted, "I'll kill you if you don't go into the house," and she heard him. Almost the horror on her old face sobered him. She said not a word; just picked up the lantern and held it until he had stabled the horse.

Then, "Well?"

"Well, mother," he replied, peering down into that white, frozen old face.

"I am waiting to hear your apology to my daughter," said his mother.

Then, "Come, my child," said his mother.

Two days later my little daughter was born—my sweet, my comforter, my beautiful.

In Heaven, thank God; boy and girl are in Heaven; and I think, sometimes, when I lie in the dark and watch that white-fire broidery on my wall, I think I shall know the sound of the tread of their feet above all the footfalls of Heaven.

When the little dark-eyed daughter was laid in father's arms he said, "She is worth one of my best farms." But before I had gained strength to lift her to my bosom the farms were gone; the foundry, the store, were all gone. The homestead—the dear, dear home—all gone. And father, a poor man in his old age, went West to begin anew.

And I, leaving the boy in the old graveyard, went to the city.

I'd just one five-dollar bill and a week's board paid. And my baby girl.

I bought a pleating machine, and began life as a seamstress. Early and late and late and early, making for other women the dainty gowns I used to wear. Year by year. Then there came a long illness. Then the physician offered me place as matron in his sanitarium. Promised me a sufficient salary.

For three years I was matron, house-keeper; head nurse and assistant at all surgical operations; bookkeeper; marketer. But not a penny of salary did he pay me. I was timid. I had one small back room in which my daughter and I shared one bed, and when I asked for salary, he would reply my daughter's "keep" was in lieu of salary. Her "keep!" That is, to sleep in my bed and the mite she ate, were wages sufficient for my drudgery of toil! And he was an eminent man. A man the world did honor to. I had loaned him the little money my father's death left to me; not much, but money he was glad to borrow. Out of this sum of my own money he paid my daughter's school bills, deducting the school bills from the payments he made me on my loan to him—and the school and all the world thought he paid the bills from his own pocket! But the world never knew it was with my money he paid them, my loan to him, and dollar for dollar deducted from the payment of the loan back to me. The world did not know—and it thought, "What a big-hearted man!" Nor did the world know that for those three long years of hard toil as matron in his sanitarium I had never received one dollar of salary or wage—save and except my little girl's board!

Ah, well! But I think it will sound a bit queer to the world when at God's feet I tell my story on Judgment Day. A bit queer—when one little girl's board and her share of her mother's back room and bed are put into the balance over against those three years' hard work of a woman's life!

But she died, my darling. And I, her lonely mother; her lonely, arm-empty mother, I was glad. She was spared the hurt of life's living. She would never stand, as I stood, and hear the clods on a child's coffin. She'd never watch a child die. She'd never weep in the night when rains fell because of little hands

down in the ground under the wet. I was so glad, so glad. Life could never darken my darling's sunshine, never put thorns under her feet. Never, never, never! And He *carries the lambs*. So the dead baby boy with his father's eyes and the sweet little daughter were safe; so safe.

And I could wait.

But it was lonely.

The nights when my very flesh has agonized for a little hand warm in my bosom. She never went to sleep till a big, big girl, without her hand at my breast. My baby girl!

And the days when I sewed baby clothes for other women—O, the hurt then. I never saw humblest wife in the streets carrying her burden but I envied her. I, too, wanted once more to carry a child under my heart. I, too, wanted the long, holy months going motherward. Never a woman but I envied her fiercely. I was still young; the brown of my eyelashes still showed the gold glints of youth. And I made bride clothes. Diaphanous things, silken things, things for allurements, and the tangling of the strings of the heart. And I sung songs into them. It is not meet that babe clothes, bride clothes, be made and no songs sewed into the sewing of them. So, often, I pretended. Pretended to my very heart's last demandings of love, that it was I. Both the bride and the child-hallowed. I fooled life of much of its hurt by pretending I held the very full of its happiness, both hands brim filled. I prayed prayer and prophesied love's very ecstasy of prophecy into the child, and piled high my bride-altar fire to beacon love's lord. Pretending, pretending.

And now, I am just waiting. Waiting is not hard when you have reached the end of all waiting and you know the day and the hour are appointed.

These windows are so low that I cannot see to write if I sit on a chair, so I put cushion to floor and paper tablet to knee, and help the hours go on to their fulfillment, and when the rosy light is gone, in that breathless time before the stars come out and my room is palpitant with heart beats of the dear ones, I dream. Dream dreams and see visions. And go up and down the years and word for word say over again the sweet converse of long ago.

I presaged it. I thought it must be the first oar-beat of the summoning. And when the pitiful voiced physician said it I bent and kissed his hand.

"Child," he said, "what are you doing?"

"Giving God thanks," I whispered.

"When?" I whispered.

"Not long, my child, not long," said the pitiful voice.

"You will not let me suffer?" I pleaded. "Bend low to me and smile and say 'Good night, my child!' My father always leaned down with a smile, 'Good night, my child'—and then put me to sleep."

"Yes," the pitiful voice answered.

"I shall not suffer?"

"You shall not suffer."

"I want to go with a smile. I love a brave woman. I want just to slip thru the shadows and rest a bit. Put me to sleep—and when I waken I shall say the 'Thank you!'"

So, each night that I watch the white-fire broider my wall I think of that first night when I shall lie with all my narrow walls hung in the black velvets of darkness. And I wonder if I shall watch for the white-fire to flicker. If I shall be afraid of the stranger-dead about me. If I shall hear the dew's drip and the wind in the grasses.

If I shall be afraid.

# Heredity and Social Problems

BY G. ARCHDALE REID, M. B., F. R. S. E.

[It is manifest that modern knowledge of natural selection and of immunity has an important bearing upon many of our social customs and laws, and this borderland of sociology and physiology is now the center of much serious controversy. Since Dr. Reid occupies a somewhat extreme position on these questions we have asked Professor Giddings, of Columbia, as a sociologist, and Professor Conn, of Wesleyan, as a biologist, to comment upon it. We recently reviewed Dr. Reid's "Principles of Heredity," in which he develops his views.—EDITOR.]

IT is widely believed that the conditions under which parents live are a potent cause of variations in offspring subsequently born. Thus it is thought that parental ill-health due to disease, intemperance, bad sanitation, want, hardship, and the like tends to alter the nature of children in such a way that they are rendered innately degenerate; whereas contrary conditions tend to render them innately stronger and more vigorous than they would otherwise have been. *A fortiori*, such causes, acting continuously for many generations, are believed to lower or raise the standard of races exposed to them. We can easily test this question by appealing to facts within the knowledge of all educated men. There is very massive and conclusive evidence that the popular belief is erroneous. Offspring differ innately from their parents, are superior or inferior, but not as a rule because of any effect produced by the environment in which their parents lived. It must be noted, however, that I speak only of the general rule. Instances have been recorded which make it difficult to doubt that offspring are sometimes affected by the parental condition, but this can happen only *very* rarely—so very rarely as to be negligible in any consideration of general problems. One swallow does not make a summer.

Offspring invariably differ somewhat from their parents. More important still they differ among themselves. Thus, in a litter of puppies, kittens, or pigs, the individuals vary in size, strength, shape, color and disposition; one individual may resemble the male parent, another the female, and a third a remoter progenitor. These variations cannot be due to the condition of the parents, for in that case they would all be in the same direction.

They are therefore "spontaneous"; that is they have arisen quite independently of the condition of the parents. They have a *raison d'être* of course; but we need not pause to discuss it. For our purpose it is sufficient to know that children may be naturally superior or inferior to their parents in any particular quite apart from the good or ill health of the latter. By carefully and continuously breeding from individuals which display favorable spontaneous variations breeders improve their domesticated animals. This process is known as artificial selection. When Nature exercises the choice it is termed natural selection. In no recorded instance have breeders succeeded in permanently improving their varieties by merely altering the environment in which they exist. In itself this is strong evidence that the great mass of variations are spontaneous. But Nature supplies even stronger evidence.

Negroes on the West Coast of Africa have been exposed for hundreds, perhaps thousands, of generations to severe malaria. This disease is caused by a microbe which invades the body in great numbers and floods it with a virulent poison (toxin), in which, therefore, the germ-cells from which the offspring arise are literally soaked. Practically speaking, every negro suffers for a prolonged period from the malady and many perish of it. If ever the environment of the germ-cell, the good or ill health of the parent, is a cause of variation it should be in this instance. But neither the negroes nor any other races exposed to malaria are degenerate. The negroes, for example, are a tall and robust race. On the contrary, every race, exposed to the disease, is resistant to it precisely in proportion to the duration

and severity of its past sufferings; and this apparently is the sole effect that malaria has on any race. Plainly, the sufferings of the people have produced no racial effect; but the deaths of the people an immense effect. Natural selection has been at work; but obviously it can utilize only spontaneous variations. If the environment caused every individual to be inferior to his parents natural selection could have no scope for action. The race would drift helplessly to destruction.

Exactly the same is true of other diseases and every other adverse condition to which any race is exposed. Thus Anglo-Saxons who have suffered much from consumption are more resistant to it than negroes, who have suffered less, and much more resistant than Polynesians, who have had no previous experience of the disease and are exterminated by it. Extreme heat has not rendered degenerate the Arabs nor extreme cold the Esquimaux; they have merely been made resistant to heat or cold. Many races have been afflicted by alcohol for thousands of years. None have become degenerate. Some men are naturally more susceptible to the charm of alcohol than others. These, because they are more tempted, drink on the whole to large excess, and are so weeded out to a greater extent. As a consequence, every race, when possessed of abundant supplies of alcohol, is temperate precisely in proportion to its past experience of the poison. Thus West Africans, who have long possessed palm wine, the Jews, and other inhabitants of the wine countries of Europe, are very temperate. North Europeans are less temperate. All savages, who have had little or no experience of alcohol, are the most intemperate of all when afforded the opportunity. Every race, of which we have an historical record, and which is now temperate, was formerly drunken; for example, the Jews, Greeks, and Italians. The natives of India, who have longest used opium, are very temperate; the Chinese are less temperate; Burmans, Australasian natives, and Polynesians, to whom it has only lately been introduced, are extremely intemperate in its use. City life, particularly slum life, is very injurious to the individual. But it is

most injurious to the individuals of a race that has had no previous experience of it. Each succeeding generation of slum-dwellers presents a debilitated and puny appearance, and the mortality is immense. But there is not an iota of evidence that city children, if removed to better conditions, would be less robust than the offspring of countrymen, or that country-born children reared in the slums are more robust than the city-born children. Country blood, in fact, does not strengthen city blood. It weakens it, for it has been less thoroly purged of weak elements. Races that have been most subjected to the influences of city life are in no way degenerate. They are merely highly resistant to urban conditions. The Chinese and the Jews, for example, are, physically and mentally, particularly fine races. The grotesque legend that city families become extinct in four generations unless fortified by country blood is founded on the fact that migration and intermarriage between town and country is so great that no families purely urban for four generations exist.

There is absolutely no exception to the rule that adverse conditions tend to produce a protective evolution in the races exposed to them. Short of sheer miracle no explanation of this evolution is conceivable except that furnished by the doctrine of the natural selection of favorable spontaneous variations. All the world admits that races tend to become "acclimatized"; but, surprisingly enough, with this belief is combined a fixed notion that parental ill-health is a constant source of filial degeneration. How a race which becomes more and more inferior in succeeding generations can at the same time become more and more superior passes sane comprehension. Medical men are especially prone to publish statistics which purport to prove that consumption, intemperance, bad hygiene, indeed almost every adverse condition, are fruitful causes of filial degeneration. Their conclusions are supposed to accord with common sense. As a fact they are founded on a neglect of the phenomena of racial adaptation to the environment, and on a confusion of rare coincidences with regular consequences. "By this method of reasoning we might demonstrate any proposition;

since in all fields of inquiry there are a sufficient number of empirical coincidences to make a plausible case in favor of whatever view a man chooses to advocate."

Civilized men perish mainly of disease caused by living microbes or by narcotics such as alcohol and opium. The microbes of disease find their sustenance in man. Even malaria, which is carried by mosquitoes to considerable distances, and therefore infects sparsely tenanted districts, cannot be acquired in totally uninhabited regions. Naturally, the microbes of most diseases abound most where they can pass best from victim to victim. In the distant past, when our ancestors were wandering and scattered savages, microbic disease was not easily contracted. Only the most susceptible individuals perished. But, as the world grew more civilized, as men gathered into larger and more settled communities, as opportunities for infection increased, the stringency of selection waxed and evolution followed apace. Today we are able to dwell in cities and towns under conditions which would have been as impossible to our remote ancestors as to Red Indians. A mass of evidence exists which indicates that microbic disease originated mainly, if not exclusively, in the Eastern Hemisphere, where men had most and longest existed in crowded and settled communities. Seemingly, the European discoverers of the Western World met with no diseases except malaria. But they introduced many under the baneful conditions of modern civilized life. The work of extermination began at once. The aborigines could not immediately achieve an evolution, which the invaders had achieved only after the lapse of hundreds of generations and at a cost of uncounted millions of lives. Many fanciful attempts have been made to explain this decay of the Western aborigines; but the statistics of every bureau of Public Health in America, Polynesia and Australasia prove clearly that the low birth-rate and high mortality of native races are due solely to introduced causes of ill-health and death.

Here again we find a parallel between microbic diseases and alcohol. Wandering savages, especially in cold and temperate climates, are unable to manufac-

ture alcohol, except in small quantities, and in very dilute solutions. Only very slowly were the means of producing it perfected in the Old World. Time was thus afforded for a concurrent protective evolution. But to the New World the white colonists introduced concentrated solutions. The results were comparable to those which followed the introduction of disease. Racial sobriety has been attributed to many causes besides evolution. To education; but what is there in the education of West African savages, Jews, and South Europeans which renders them more temperate than North Europeans? To climate; but in all zones of the earth the only naturally temperate races are those which have long possessed abundant supplies of alcohol; South Europeans and Jews are temperate in all climates, even under the most wretched conditions, as in the East End of London. To potency of beverages; but those savages who are able to manufacture only very weak solutions are very intemperate when afforded the opportunity. To civilization; but North Europeans are more civilized, but more drunken than South Europeans and West Africans. To self-control; but West Africans and South Europeans can hardly be said to be more capable of self-restraint than North Europeans. Self-control is no doubt a factor in the causation of sobriety, but not a factor of commanding importance. Most moderate drinkers—the men and women we meet at dinner, for example—exercise little or no restraint. They drink, as they eat, to the extent of their desires. Beyond all question they are not tormented by the fierce craving which is the bane of the drunkard. If once we admit that alcohol is a poison and that men differ in their susceptibility to its influence, we must admit the action of natural selection and the existence of its corollary evolution.

Civilization implies a dense and settled community, which in turn implies the presence of microbic disease and alcohol. Only those races, therefore, are capable of civilization which have undergone evolution against these agents of elimination. Racial capacity to become civilized is physical, not mental. In Asia and Africa every white settlement has a native quarter, where the aborigines are slowly at-

taining a higher civilization; but no great city has such a section in the Western Hemisphere. Western aborigines are the victims, not only of the white man's cupidity and cruelty, but also of his philanthropic and religious zeal. The clothes with which we cover their nakedness, the dwellings, churches and schoolrooms in which we gather them, harbor the germs of our crowd diseases, the most lethal of which is consumption. In all the New World only those natives seem destined to survive who live remote in vast forests where, defended from white immigration by malaria, they may, like the Africans, undergo slow evolution.

It is impossible to avoid the conclusion that races are adapted and maintained in adaptation to their environments by the elimination of the unfit. The moment this elimination ceases the race tends to retrogress. Thus our choice breeds of animals and plants swiftly deteriorate if we cease to breed them with care. Thus also the black soldiers of the British West Indian regiments suffer extremely from malaria when serving on the Niger. In other words, offspring tend on the whole to be inferior to their parents. Every selective eliminating agency causes an evolution against itself only. It does nothing more. It does not strengthen the afflicted race in any other way. Consumption, for example, does not make the race more robust, nor more resistant to other diseases, nor more capable of enduring fatigue or cold. If, then, we could abolish the special evils of civilization, crowd-diseases, alcohol, and slum conditions, the result would be an un-mixed benefit. The race would lose its resisting powers by the survival of the hitherto unfit, but under the circumstances this would not matter. The possibility, however, of ridding ourselves of some of the worst of these evils—for example, consumption and alcohol—is very doubtful. Perfect sanitation in respect to consumption is quite impossible. The microbes are spread by every infected person, not only by expectoration but in the mere act of coughing. The disease is of long duration and is never diagnosed, nor even suspected, in its earlier stages. Segregation of sufferers, therefore, is impracticable. Science has not discovered, and, for reasons I need

not enter on here, will probably never discover a therapeutic cure. Sanitation may achieve temporary successes, but only at the cost of rendering the race less resistant. However much air and light we may admit to our dwellings, however much space we allot to them, we can hardly hope to render the environment so unfavorable to the tubercle bacillus as that in which Polynesian natives are being exterminated.

Similar difficulties beset the alcohol problem. We cannot rid us of sugar nor of the microbes which produce alcohol from solutions of sugar. Temperance reform has been attempted by scores of governments on hundreds of occasions, during thousands of years, and has never been successful except temporarily, and then only in very sparsely populated districts or under barbarous and autocratic governments. Successful legislation would of course be followed by an increased survival of the unfit, and we cannot guarantee immortal permanence to a mortal law. We have no guarantee that such a law, passed by a race which had undergone partial evolution, would not be repealed by descendants who had undergone regression, in which case the last state of the race would be worse than the first.

It seems probable, therefore, that the only hope of artificially lessening the evils resulting from intemperance and consumption lies in an enlightened public opinion, which will, at the least, strongly condemn the output of children by phthisical and intemperate families.

Insanity affords us an object lesson in the effects which follow the withdrawal of selection. Formerly people of unsound mind were treated with such harshness and cruelty that, practically speaking, permanent insanity or death ensued. Natural selection was very stringent. At the present day the greatest care and skill is lavished on the insane. Many people, weak minded or subject to temporary outbursts of insanity, who would formerly have perished childless, recover and have offspring. The result is an enormous and ever-growing increase in the numbers of the insane. Here, again, as in the case of consumption and intemperance, there can be no hope of amendment except

thru an enlightened public opinion, which will forbid the output of children from families in which any taint of mental unsoundness has appeared.

When dealing with a matter so large and complex as human evolution, it is difficult to be convincing in a short article. I am compelled to ignore an immense mass of evidence, and to leave untouched many questions of importance. Elsewhere I have sought to give more

adequate treatment to the subject. But even here I hope I have said enough to convince thinking men that before certain social problems of great magnitude can be solved we must plumb to the depths, and understand the phenomena of heredity and of racial adaptation to the environment. Mere well meaning zeal, however pure and ardent, can, if uninformed, do little but harm.

SOUTHSEA, ENGLAND.

# Race Improvement Thru Civilization

BY FRANKLIN H. GIDDINGS

PROFESSOR OF SOCIOLOGY IN COLUMBIA UNIVERSITY.

THERE is a common impression just now that the fate of our program of social reform is hanging in the scientific balance. So long as everybody believed that acquired characters could be transmitted to posterity, it was easy to become enthusiastic over the possibility of an indefinite improvement of mankind. If, for example, by developing a well organized scheme of popular education, we could not only store the mind of one generation with knowledge, but also expand the intelligence of generations unborn, we could hardly overdo our educational activity.

It would be idle to deny that the reform ardor which was fanned by this naïve evolutionism has been dampened by Weismannism. If the gains of the parents, made thru their own efforts, thru the discipline of life, and thru the good offices of their fellowmen, are not transmissible to offspring, do we not have to begin the work of civilization all over again as often as a man is born? Natural selection may slowly improve the quality of our gray matter or increase its amount, but what can we do by educational endeavor or by cleaning up our environment to help the good work along? Instead of wasting time and money on schools and sanitation, should we not rather turn our attention to a scientific breeding from selected human stocks, and, in our dealings with the unfit that must perish, follow Nietzsche's advice to

give them not a helping hand, but a merciful little push over the cliffs of perdition?

Many readers of Dr. Archdal Reid's contribution to this discussion will perhaps conclude that he has thrown enough facts into the heredity pan to lift humanitarian zeal hopelessly into the air. If it be true, as he alleges, that a race is made vigorous not by any amelioration of its environment, but rather by a high selective death rate, and that slums and alcohol, so far from producing racial degeneration, in reality create a resistant type, is not our whole modern program of social betterment a sorry piece of misconceived endeavor?

This question is, I think, not quite so simple as it looks, and I suspect that the longer we reflect upon it, the less likely we shall be to accept the conclusion that it is useless to try to improve the race by improving its environment. That, at any rate, has been my own experience.

Dr. Reid makes good his contention that the races or the classes most resistant to any given disease, stimulant or debilitating influence, are those that have longest been exposed to it. The susceptible have been killed off by it, and the race or the stock perpetuated by the relatively resistant has become more and more immune.

This fact, assuming it to be established, so far from offering discouragement is the substantial foundation upon which an

enlightened policy of amelioration may be reared.

A simple illustration discloses the true relation between heredity and any persistent social effort. Mr. Reid mentions the deadly effect of clothing upon those uncivilized races that for unnumbered generations have disorted themselves in nakedness. The wearing of clothes has no such destructive consequences for civilized man, and the explanation, in terms of Mr. Reid's own biological principles, of course is that civilized man has long enough been subjected to the once deleterious covering of his body to have become entirely resistant to it, just as he has become relatively resistant to alcohol and the measks. Individuals that could not endure clothing long since were gathered to their fathers, and the race has been continued by those that could stand this new physiological strain.

Moreover, if this is a true account of what has happened, we are warranted in assuming that, while the adoption of clothing by uncivilized races at the present time will, for a few generations, be followed by an abnormally high death rate, the future descendants of any conventionally adorned savages that do not happen to die will, in their day and generation, be like the Europeans and Americans of today—sufficiently resistant to the tailor, the dressmaker and the corset monger.

Pushing this reasoning a little farther, we arrive at some interesting conclusions. It is said that the philanthropy which makes life relatively easy for the sickly, the mentally unstable and those that are otherwise frail, and so enables them to perpetuate their kind, must result in race deterioration. So be it. Is that, then, the end of the matter? Assuredly it is not, if the struggle for existence is a fact. Degenerates will find themselves pitted against resistant or immune stocks in a thousand modes of competition, and by one or another route they will go to the wall. Philanthropy may delay their extinction. It cannot prevent it.

This, however, is not all. Two tremendous modes of social pressure have been developed in modern times, to which the civilized races are now adjusting themselves, and to which the uncivilized races will have to adjust themselves before long. These modes are universal education and a universal raising of the standard of living.

If the testimony of parents, teachers and physicians may be believed, universal education is putting a terrific strain upon the nervous systems of children, and especially of girls and young women. Apparently, it has already affected birth rates. Unless I wholly misapprehend, its relation to race resistance and survival is essentially like that of a new disease, or the adoption of clothing, to an uncivilized stock. It kills off the over-susceptible and leaves the resistant to perpetuate a breed that can endure a more and more strenuous intellectual life. In like manner, a higher standard of living, calling forth a fiercer activity, destroys the nervously unstable, and gives a free field to the sufficiently resistant, whose progeny will inherit the higher civilization.

If these points are well taken, the doctrine of race improvement thru natural selection only, and of increasing race resistance under long continuing attack or pressure, so far from yielding the corollary that civilizing effort—including educational activity—is useless, or worse, as a means of improving the human stock, seems to afford the very opposite conclusion. Natural selection is as inevitable as birth and death. The unfit, the physiologically non-resistant, must perish, and doubtless Nietzsche is right in saying that it is true mercy to hasten their end. Of all ways of inflicting such mercy and thereby improving the human breed, probably the least revolting is to increase the exterminating pressure of education and economic progress. The race of the future will be resistant, not only to alcohol and clothes, but also, let us hope, to laundries and colleges.

NEW YORK CITY.

# The Individual and the Race

BY H. W. CONN, Ph.D.

PROFESSOR OF BIOLOGY IN WESLEYAN UNIVERSITY.

THE article upon Heredity and Social Problems is certainly suggestive. There is no doubt that the study of heredity in the last twenty-five years has shown that the general belief in the influence of the environment upon later generations has been very much overdrawn. The recognition of the fact that the conditions that surround the individual have comparatively small influence upon the traits transmitted by heredity has produced a very great change in all conceptions of living nature. While this is true, it is a question whether the author has not exaggerated the facts. While it is true that selections acting upon what the author refers to as "spontaneous" variations must be the basis of evolution, nevertheless the environment of the individual cannot be wholly excluded. The breeder would never think of attempting to produce a new type by simply changing the conditions under which the old type lives, but he would no more think of trying to develop a high type by simply breeding, without paying any attention to the conditions under which his animals live. He would ridicule the idea of raising a fine type of animals from poorly nourished and sickly parents. The claim that city families tend to run themselves out may have been overdrawn; but this claim is not based upon quite such poor evidence as our author seems to think. Statistics have shown that in earlier centuries the death rate in cities has exceeded the birth rate. Under these conditions families living city life inevitably tend to run out. That the increase in insanity in modern years is due to the protection of the insane patients and hence to their leaving children who inherit their tendencies, is certainly not demonstrated, and there is probably far more evidence to indicate that the increase in insanity is due to the strenuous conditions of modern life. The author of this article is certainly right in claiming that the environment does not play the part in heredity formerly supposed, but he is probably wrong in giving the environment practically no part to play in the development of the race.

Granting, however, the general position of the author, we find that when we carry his principle to its logical conclusion, the results are quite revolutionary. If it is true that the development of a temperate race depends upon abundance of alcoholic drinks at its command, it would follow that the quickest way of making a temperate race would be to abolish all attempts at temperance reform, and to encourage drinking, thus bringing about as soon as possible the destruction of that portion of the race which has a tendency to yield to alcoholic stimulants. For the same reason we should encourage licentiousness and crime, for the purpose of bringing about quickly the destruction of that portion of the human race that yields to temptation. We should be obliged, too, in logic to give up all attempts at sanitation. We have believed that our health boards have accomplished much for the benefit of the human race; but assuming the logical outcome of the author's position, instead of attempting to stamp out epidemics, we should endeavor to encourage them, for the purpose of weeding out from the human race all those individuals with a tendency to take epidemical diseases. We should, in short, cease all attempts to repress vice and disease and let them take their own course.

Now, certainly such a position is revolutionary and repulsive. It is probable that the author would never accept these logical results of his attitude. They would completely alter the whole attitude of man to man. Nevertheless, just these conditions have represented the law of nature. If this is the law of nature, should it not be also the law for man?

This whole conception, however, fails to take into consideration one factor. With the lower races the *individual* does not count. The codfish produces its millions of eggs, sends them broadcast into the ocean and lets them take care of themselves. It is totally immaterial whether one or a million are destroyed in the struggle for existence. The loss of the one or the million offspring plays no part in nature's problem. The indi-

vidual is always readily sacrificed to the race. Under such conditions epidemical diseases rapidly kill off the weak individuals among lower animals and savages, leaving only the more resistant. The race is preserved at a high state of vigor and development progresses.

With civilized man, however, a new attitude has been assumed. Our biologists, who have studied the working of natural selection in the human race, have long pointed out the weakness of its action upon man. In the human race the individual is no longer regarded as an incident, and his sacrifice to the good of the race is no longer regarded as necessary. *The individual man counts.* If we look thru our laws, especially those aimed against over-indulgence of all forms of sensuality, we shall find that they are primarily adopted for the protection of the individual against the mass. Temperance reform will not so quickly

produce a temperate race as would the opposite course of encouraging all people to use intoxicating liquors, and thus rapidly weeding out from the race such as would yield to these temptations. But temperance reform tries to save the individual. So with the various attempts to control the passions of men. The quickest way to produce a vigorous race would be to encourage the indulgence in all that destroys the vitality. The race would thus be strengthened, but the individual would be sacrificed. Whether it is sound from a biological sense or not, it is certainly *the essence of humanity* that the individual has a value. Our laws and customs protect the weak from the encroachment of the strong and aim to give to the individual all possible rights. *Nature sacrifices the individual to the race; humanity sacrifices some of the good of the race to the rights and welfare of the individual.*

MIDDLETOWN, CONN.

## The Threshold

BY IVAN TURGENEV

[This poem in prose, written some thirty years ago, and suppressed by the censor, has just been published for the first time in the *Russkoye Bogatstvo* (The Threshold). Turgenev summed up the type of the Russian girl, who is ready to sacrifice everything for light and freedom and revolution. Herman Bernstein has made the translation.—EDITOR.]

I SEE a great structure. The narrow door in the front wall is wide open. Stern gloom is beyond the door. Before the high threshold stands a girl, a Russian girl. A breath of frost is wafted from the impenetrable gloom, and together with the freezing wave a slow voice is coming from the depth of the building.

"To you who desire to cross this threshold, do you know what awaits you here?"

"I know," replied the girl.

"Cold, hunger, abhorrence, derision, contempt, abuse, prison, disease, and death!"

"I know. I am ready. I shall endure all sufferings, all blows."

"Not from enemies alone, but also from relatives, from friends."

"Yes, even from them."

"Very well. You are ready for the sacrifice. You shall perish, and nobody,

nobody will ever know whose memory to honor."

"I need neither gratitude nor compassion. I need no home."

"Are you ready even to commit a crime?"

The girl lowered her head.

"I am ready for crime, too. . . ."

The voice lingered for some time before resuming its questions.

"Do you know," it said at length, "that you may be disillusioned in that which you believe at present, that you may discover that you were mistaken, and that you ruined your young life in vain?"

"I know this, too."

"Enter!"

The girl crossed the threshold, and the heavy curtain fell down behind her.

"Fool!" said some one, gnashing his teeth.

"Saint!" some one uttered in reply.

# The Wedding Day

BY ANNETTE KOHN

Oh joy, mine eyes behold today  
Unroll before me a new world!  
Thrilled through with rapture, (calmed by awe),  
Half filled with wonder, half with dreams,  
Like Eve in Paradise I stand  
Before my Adam—my dear mate—  
And none beside, save only God.  
My heart beats loud with strange high hopes.  
My pulses run in a new course;  
I am not I—but half myself,  
My soul out-leaping swift to be  
In union with my other soul  
That smiling waits beyond, to claim  
Me from henceforth its very own.  
My hands reach out for loving clasp  
To help me hold the new life's dawn  
And paint it into shining day—  
My lips a ripened harvest bear  
Of loving words and comfort rich  
For any hours that Fate may bring;  
My feet are ready for the path  
Where I see perfect roses grow.  
Hark! Peal on peal the wedding bells,  
The air with music made divine,  
And as I listen to the chime,  
I stand alive and all aflame  
With Love's eternal sacred fire  
That purifies and blesses all,  
While in a vision clear I see  
The angels stand with swords turned down,  
So we may enter Eden's gate,  
And find on earth a perfect heaven.

NEW YORK CITY.

For February 17th, 1906.

# An Ancient Empire in Quest of a Modern Government

BY ARTHUR H. SMITH

[Last week we published, by Mr. Smith, the author of "Chinese Characteristics," an article entitled "The Reason for the Chinese Commission," giving a general survey of the present political situation in China. This article takes up the Commission, which was in New York all last week, and its problems in some detail.—EDITOR.]

IT is customary to class the Chinese Empire with the "unlimited monarchies" of the world—if there are any such—and it is exceedingly difficult for an Occidental to comprehend by how

China is supposed to be ultimately governed by a "Grand Council," a body of somewhat uncertain composition and more or less recondite functions. For a century and a quarter there has been no emperor of first class ability, nor is it easy for such to be developed.

In the curious amalgam of Manchu and Chinese thruout the Chinese Government there are many embarrassments. During the crisis of 1900, induced by the sudden rise, spread and claims of the Boxers, the Manchu noblemen were repeatedly summoned to an imperial audience by themselves, and later to another in common with the Chinese officials of high rank. Since her successful weathering of the dangerous international storm of 1900-01, the prestige of the Empress Dowager has greatly increased. It was for the interest of all the Powers to adopt as a working theory the legal fiction that the whole Boxer escapade was a "usurpation" of the prerogative of the throne by Prince Tuan, whose son had been selected as heir apparent. Prince Tuan, of whom nobody knew anything before 1899, brought the empire to the verge of ruin, and was "banished" to the province of Kansu, where he lives in a species of public retirement, but as a political force totally extinct. His son soon showed his worthlessness and incapacity, and was deprived of his succession. During the four years since the return of the Court, whichever "party" may or may not be said to be "on top," there is no doubt that there has been a wonderful show of reform in China. Within much less than that period, while imperial decrees have been alternately blowing hot and cold—and sometimes, after the manner of faucets in the same bowl, running hot and cold water simultaneously—nearly every one of the Emperor's innovations of 1898 has

H. E. Yuan Shih Kai.

many limitations the Emperor is shut in. A really great ruler—like the famous K'ang Hsi, contemporary with and the equal of Louis the Grand, of France—will in time rise superior to these fetters of usage, tho he can never escape them.

been adopted by decree, often merely incidentally, sometimes tentatively, and again with a naïve frankness, implying between the Manchus and Chinese have been practically removed. They may now intermarry, Manchus may engage

H. E. Tuan Fang.

that this is what "we" have been aiming at all along.

The "New Learning" is definitely adopted thruout all China. The barriers

in trade (as they have always done on a small scale), and promotion in civil service is to be (theoretically) on the basis of merit, not rank, nor time of

service. Military officials have been freed from humiliating liabilities, the army is undergoing radical reformation. In the autumn of 1905 great military maneuvers took place on the plain near the city of Ho Chien Fu, one large army "attacking" Peking, the other defending the capital. Numerous military attachés witnessed this singular spectacle, the dawn of a new day in China, when great forces can be marshalled and handled, because they have been well selected, well trained and honestly paid, all of them somewhat novel conditions in the Celestial Empire. The master mind behind all this is Governor-General Yuan Shih K'ai, the most powerful subject in China, and by far its ablest son. During the early part of his incumbency of the metropolitan province of Chihli—in which Peking is situated—he was incessantly and fiercely attacked by the Censors, a body of men charged to see that the Empire receives no detriment, a function ordinarily understood to connote that, unless the Censor is "squared," the one attacked will be trampled on. But Yuan is much too strong for any Censor, and he understands how to use irrigating streams of silver in places "where it will do the most good," just as if he were an insurance company—as indeed he is. In fact, he might be termed the "China Mutual Life"—"you let me alone and I will not knife you. It cannot be long before, in the natural course of events, Her Serene Highness the Empress Dowager "mounts the dragon and ascends on high." What will happen *then* is known to God alone, but it is certain that, if he is alive, no adjustment can be made in which Governor-General Yuan Shih K'ai is not a central—possibly *the* central—figure. He is by all means the most intelligent Chinese now living, with a varied experience and the clearest possible perception of China's present helplessness and of the means by which it is to be overcome. On occasion of the last birthday of the Emperor, some five thousand scholars—boys and young men from the different Government schools in Tientsin were assembled, clad in uniform, with banners and drums, and were addressed by Yuan on the needs of China and what its young students ought to be able to do for their country. Chinese patriotism

has heretofore been mainly negative, but henceforth it must be reckoned with as a positive and a vital force.

Japan is now more than ever to be "the rudder of Asia." Many men in China dimly perceive, and a few men clearly recognize, that to occupy its new position China must, like Japan, pass thru a period of initiation. What seems most strongly to appeal to the Chinese are the results, while the processes are little considered. That self-concentration and self-abnegation for the sake of the future of which Japan is so unique an example is not yet comprehended in China, yet that is not saying or implying that it never will be. It is remembered that under certain conditions the Mikado promised "constitutional" changes and a Parliament. That China should follow in this line certainly seems a surprising innovation, and it *seems* so because it *is* so. It is quite possible that the members of the Chinese Imperial Commission themselves may know much more than they choose to tell, and at the same time quite likely that *they* do not fully comprehend the unique conditions in which they find themselves.

The Chinese-made bomb which was thrown at them on their first attempted departure from Peking, and which cost several persons their lives, may be said to be a punctuation mark, indicating China's entrance into "the storm-tossed sea of liberty." In a country so vast, with currents and cross currents so confused and confusing, it is not easy to measure forces. But we may reasonably set down the departure of this double Imperial Commission as one of the most interesting and significant events in the history of modern China. When one remembers the haughty insolence of the Manchu Court toward all Powers alike no longer ago than the seventies and the eighties, this cruise after light and leading seems to belong to a different age, as indeed it does.

The personal history of H. E. Tuan Fang, the Manchu Commissioner of this division of the compound embassy, is mainly interesting to foreigners for his protection of their fellow countrymen in 1900, altho he was ordered by telegram from Peking to kill them; and if they fled to pursue and then kill.

That a Manchu, who was only an acting Governor, should disregard such an order, shows him to have been a man of discrimination. "If you live, it was a mushroom; if you die, it was a toadstool"; and Tuan lived and flourished, until now he is at the summit of official promotion, and an important figure in the eyes of a curious world. His training for such an arduous task is exiguous. He knows no language but Chinese (and Manchu), has never before been on a vessel at sea, or been brought in contact with natives of other lands than China on any considerable scale. His associate, Tai Hung Chih, has never made any public record, as his functions have been connected with the Board of Revenue in Peking. He is a quiet and thoughtful man, and, like his companion, adjusts himself to his surroundings with that easy, inborn grace characteristic of the Oriental. The Commission is accompanied by numerous secretaries, who are its real eyes, ears, and mouth. Some of these men have been educated in this country. One of them, Mr. Shih, is a graduate of Cornell University, where his thesis was on China's foreign relations. All these men feel keenly the humiliating position in which their country has been placed by American treatment of Chinese, which does not even deign

to argue the question of treaties or of laws, but meets all Chinese with an imprecatory adjective. They feel the contemptuous violation of good faith, with which an American syndicate, specially favored because it was American, betrayed the interests of China, and sold out to Belgians, who were but an allo-tropic form of Frenchmen, who were but Russians in disguise. By this means, had not the Chinese forced the Americans to sell back to the Chinese Government the concession, a junction of the Pei Han [Peking to Hankow] and the Yueh Han [Hankow to Canton] lines in the hands of China's greatest foe would assuredly have split the empire. That this danger is averted is due to Japan, and not to us. Is it any wonder that China is doubly resentful? The Commission is composed of shrewd and able men, altho, for the moment, like Bre'r Rabbit, they "lay low and ain't sayin' nuffin."

Dinners and "functions" are all well enough, but if America is wise she will reverse the policy of contempt, apologize for the past, guard against an increase of Chinese coolies, but will welcome bona fide merchants and bid high for students. Unless we do this we deserve to lose both the rising trade and the good will of the new China that is coming.

## The Distractions of College Fraternities

[The following article is written by the mother of a fraternity girl in a well-known co-educational university of the Middle West. The article is strictly true, except slight changes to disguise the identity of the author.—EDITOR.]

EARLY in September my seventeen-year-old daughter Ellen, my little son Tom and myself found ourselves comfortably settled in a small house just in sight of the campus of one of the larger universities of the Middle West.

As my husband's business permitted him to be at home only a few days a week, and as our daughter was a trifle too young, we thought, to be launched in an institution where there was abso-

lute freedom of thought and liberty of demeanor, we had decided to change our place of residence temporarily, so that the rather high-spirited Ellen might not too early be deprived of paternal guidance and control.

Happily we were not strangers in our new abiding place, for we were fortunate in numbering one of the professors and his family among our friends.

Letters from several of the university alumni had heralded our coming to two

of the leading sororities in the college, so we had hardly gotten our little house in order before a variety of influences emanating from these societies began to be felt, and it soon became obvious that Ellen was not to be among the many supposedly unfortunate young women who are left unnoticed by "society" to plow their own way into the heart of college life.

The inter-fraternity contract, we were told, limited the "spiking" or "rushing" (terms covering all methods of competing for desirable new members) to ten days, and it was framed this year with a view to eliminating the more objectionable features and to minimizing the incumbent expenses. No fraternity, for instance, could give more than three large functions during the "rush," altho there was no limitation as to calls, drives, etc.

The "rushing" was not supposed to begin until Tuesday morning, when college opened. On Monday, however, a group of Alpha Gamma girls called and invited Ellen to drive with them later in the afternoon. During that time they obtained a promise from her that she would go with them in the morning to fill out her registration card.

The following is a list of Ellen's entertainments during the succeeding ten days, taken from her diary:

Tuesday Morning.—Alpha Gamma girls called to take me to sign up; they invited me to drive again in the afternoon.

Wednesday Afternoon.—A luncheon party at Mrs. F——'s, a Sigma alumnus.

Thursday Morning.—Drove with the Sigmas during chapel period.

Thursday Evening.—Big Gamma dance, at which all the fraternity men were present.

Friday Night.—Sigma dance.

Saturday Morning.—A number of Gamma girls called.

Saturday Afternoon.—Gamma reception to the resident alumni and freshmen girls being "rushed."

Saturday Evening.—Dance given by the Delta Nus (men's fraternity), to which many of the freshmen being "rushed" were invited.

Sunday Morning.—Drove with the Sigmas.

Monday Afternoon.—Gammas called.

Tuesday Afternoon.—Sigma reception to alumni and girls in the "rush."

Tuesday Evening.—Gamma dinner party to the girls they are "rushing."

Wednesday Afternoon.—The formal invitations to join their societies were sent out simultaneously at three o'clock by all fraternities.

We uttered a sigh of relief when Ellen at last put on the Sigma colors, for our little house had been undergoing a steady siege. Indeed, with the door bell and telephone ringing almost continuously, and with the buzz and chatter of young men and women constantly about, the peace and quiet of our little family circle had been invaded as never before.

"There will be an informal dance and jollification this evening," Ellen remarked, "and then all will be over and I shall settle down to hard work. But O, mother!" she continued, "I do wish I had something new; I am so tired of wearing the same dresses again and again; the other girls have so many more and prettier things than I."

This appeal was somewhat depressing, for Ellen was usually not inclined to be dissatisfied. She had been provided with two pretty evening gowns and a smart suit for street wear, which, along with plenty of simpler things for school, I had thought was all we could afford and sufficient to last during half the school year.

The next evening we gathered about the library table to have a cozy evening by ourselves. Soon the telephone rang. Would Miss T—— accept an invitation for a concert to be given in chapel the next evening? An hour later the telephone again rang. Would Miss Ellen assist Miss R—— (one of her fraternity sisters and a resident of the city) at a small card party, Thursday evening? Miss R—— wished to start early in the term to give a series of small companies, one every week, to each of her six favorite men's fraternities, the members of which had shown her great kindness during her three years at college.

In a few days there was another invitation to an amateur play to be given as a benefit for the athletic association.

Indeed, at the end of a second fortnight I could not see that Ellen's list of invitations had been materially diminished. There were football games, the big formal dances of both men's and women's fraternities in celebration of their newly won members; then the "spread" given by the "new spikes." Later came the big dinner, which was the chief annual function given by the Beta Sis, and next there was much talk of the

house party, the leading entertainment of the year given by the Phi Kappa boys.

"But when does Ellen study?" inquired my easy going husband, when I recounted to him the list of her pleasures.

By the end of the fifth week I was in despair. There was no obvious diminution in the going, and my daughter had lost five pounds in weight. The girl was anxious herself to reduce the number of her pleasures, but she did not know how. She had not been invited to nearly all the parties, but since she had gone to the Delta Nu and Phi Kappa dances, she was instructed by her fraternity sisters that she dare not refuse the Phi Betas or they would be offended and would not again invite her. I suggested various methods of cutting down the distractions, but as I was wholly ignorant of the fraternity social ethics and politics, none of my plans seemed feasible.

At last my patient husband solved the problem simply and decisively.

"Ellen may go to one dance a week," he said, "either on Friday or Saturday evening; to her regular fraternity meetings and some of the college functions, like lectures, concerts, etc.; she shall always be in the house by midnight" (these young people generally do not go to their entertainments until 9 or 10 o'clock), "and thenceforth she must arrange her program in accordance with this decree, from which there shall be no appeal."

Ellen's troubles were many during the next few weeks, and at last she frankly announced her father's ultimatum. By this time it is generally understood among her acquaintances that she is very unfortunate in having a most despotic father.

At Thanksgiving Ellen was among the enviable fifteen who were invited to the Phi Kappa house party.

The Phi Kappas are supposed to be the best men's fraternity here. As nearly as I can discern, their chief distinction lies in the fact that they are constantly making a supreme effort, collectively and individually, to be "sweller" than anybody else.

In all the students' gossip which we heard about the house party, the feature mostly emphasized was that this party

would cost the fifteen boys who gave it fifty dollars apiece.

The following is part of the program for the entertainment, which lasted a little longer than two days: Carriages were sent about in the afternoon to bring the young women invited to the fraternity house. Thanksgiving dinner at 6 o'clock. The house was elaborately decorated in palms, ferns and American Beauty roses, and the souvenirs at dinner were solid gold escutcheon pins. In the evening there was a minstrel show, after which delicate refreshments were served.

The young men went out for the night and the girls and their chaperones breakfasted alone. About 11 the young men began to drop in and at 1 they all had luncheon together.

In the afternoon there was a card party. There were handsome prizes and the score cards were hand decorated in water colors. Dinner was again served at 6, and there was a dancing party in the evening. The orchestra was brought from a neighboring city and the programs were hand decorated water colors. At midnight elaborate refreshments were served.

It is not exceptional, I am told, for fraternity men here to go into debt to keep up with the social tide, or to neglect to pay their small bills, for they are not usually the sons of rich parents.

Only a week ago some of these young people were discussing a student who is now working to pay his debts contracted last year, and it is commonly known that his father mortgaged his home to keep the boy here.

As for the young women who are the recognized leaders in the social scramble, their class records are not what most parents would especially desire. Several returned to college the second term on probation, on account of having done exceedingly poor work; one young woman had hysteria several times in class last term; another girl who was the social leader in her fraternity last year is now at home trying to recuperate a completely broken down nervous system.

The spirit of aristocracy developed among the fraternity students, in contradistinction to the "barb," or non-fraternity element, might be compared somewhat to that which existed between

the lords and peasants under the old feudal system.

There is much feeling, I am told, among the authorities and faculty, who certainly set good examples of "the simple life" against this acceleration toward expensive and rapid living, for the great majority of students come from poor families or from people with very limited incomes.

This race for luxury and display is, however, confined almost entirely to the fraternities, and the bond among them is so strong that it is nearly impossible for the authorities to approach them, for they very much resent interference or advice. Moreover, it is said that these conditions are not only common to this institution, but they are in a greater or less degree more or less typical of most of the larger colleges of the Middle West.

Another feature of student life here which often impresses the uninitiated as being not only marvelous, but droll, is the iron-bound code of social and political ethics which has been gradually wrought out.

At public gatherings the "barbs" and fraternity men rarely mingle. If there is a social function given to or by the student body, it is supposedly for the "barbs," and the fraternity people either do not attend, or go grudgingly and condescendingly, lending their presence for a short time only, just out of courtesy or sheer kindness of heart.

At fraternity functions only fraternity students are invited, and their formal entertainments appear to be regulated with a precision and ceremony equal almost to that at St. James's Court.

If, for instance, the Phi Kappa boys should give a party, the women of the various sororities who are acknowledged Phi Kappa girls—those who, it is understood, favor and assist Phi Kappa boys in every possible way—head their list.

"Not that any girl can avow herself a Phi Kappa and immediately be welcomed," a young man explained to me some time ago; "indeed, that might be her very undoing. She must not declare herself for us until she has been solicited by word or suggestion, and she would

not be sounded by any individual member unless she had been previously discussed and unanimously approved of by the fraternity."

The next point to be considered in this crucial matter of settling the list of guests is the exquisite balancing of the powers. If the "Phi Kappa" boys favor the "Sigma" girls, then there must be a predominance of "Sigmas" invited. Next the upper classmen proceed to choose the girls they wish to escort, and lastly, if there are any old maids or "ugly ducklings" they are assigned to the freshmen.

The dancing programs are then made out. Each man takes on an average of about six dances with the woman he has invited, and the remaining numbers are carefully filled out according to choice by the other men. As each young woman arrives, her list of dances and partners is given her; if she is pleased, well and good, if not, there is no means of protesting.

At elections for class officers, the staff on *The Gabbler* (students' journal) and *The Mustaches and Curls* (annual book), etc., etc., the fraternity people usually succeed in winning the majority of representatives, although the "barbs" greatly outnumber them. This is not due wholly to organization but to "superior methods" used.

Some time ago a number of young fraternity members recounted to me, with great amusement, their scheme of winning the last class election. There was a "barb" and fraternity candidate for each office. Blank slips of paper were distributed to each student upon which he wrote the name of the preferred candidate. The fraternity men had duplicated the slips and secretly distributed some extra ones among their own people. One girl boasted that for president she had cast six votes.

Such methods may seem very harmless and amusing to these young people, but they do not constitute good training in the duties of citizenship for those who are supposed to become our future social and political leaders or representative men and women.

# Four Hindu Cotton Merchants and Their Cat

BY JACOB CHAMBERLAIN, D. D.

[Dr. Chamberlain is one of the most distinguished missionaries in India, and has long been at the head of the Arcot Mission of the Reformed Church. He has written much on missionary subjects and is now preparing a Bible dictionary in the Telugu language. In his letter accompanying this article he states he once told the following story to his cousin, the late Justice William Strong, of the United States Supreme Court, who after a hearty laugh said that he thought the decision of the old Hindu sage would stand if appealed to the United States Supreme Court.—EDITOR.]

I FOUND one day a story in a Tamil book of a former century, which records the noted legal decisions of Mariátha Raman, "The Famous Old Sage," who acted as a kind of Court of Appeals in Equity Cases, in the realm of a certain native Rajah, long before the British sway was heard of in India.

Four cotton merchants, from different towns in the vicinity of Madras, journeyed down, about the same time in the cotton-picking season, to the cotton-growing country, some three or four hundred miles south, in the vicinity of Tinnevely. Each merchant purchased his year's supply of cotton separately, and baled it for transportation north. While they were thus engaged they fell in with one another. They were old acquaintances and, as the journey home was difficult and tedious, they formed a copartnership for the transportation of their cotton, a kind of syndicate. The cotton bales were all marked with the name of their respective owners, so that each would, at the end of the journey, have the cotton he himself had purchased, but the transportation was to be from a common purse.

Together they engaged forty native bullock carts, loaded their cotton, and proceeded on the journey, making from fifteen to twenty miles a day. When they had gone between two and three hundred miles, the monsoon, or rainy season, burst upon them unexpectedly early. When the monsoon bursts in that country the bottom seems to fall out of the country cart roads. They saw that they could not proceed further on their journey until the force of the monsoon went by, and that they must abide where they now were for a number of weeks. Building a temporary shed, of bamboo posts and rafters, with thatched roof, they placed all their bales of cotton un-

der it for protection, and forming a little room at one corner, of bamboo mats, they lived there to guard their cotton.

Hindu travelers must needs do their own cooking, unless they chance to find people of the same caste where they stop.

As the rain continued, with little cessation night or day, the field rats and mice were soon drowned out from their holes, and they took refuge in this shed, among the bales of cotton. Gnawing into the bales they found cotton seed enough for their sustenance, and thrived in increasing numbers. The merchants saw that they were doing serious damage to the cotton, and determined to rid themselves of the pest. One day, as all four had gone to the bazaar to purchase their supplies of rice and curry spices, they saw a beautiful cat belonging to one of the bazaar merchants, and reputed to be a great mouser. They determined to buy the cat, but bought it in sections. Ramaswámi, the senior one of the four merchants, bought the right fore quarter, Gópal bought the left fore quarter, Naráyana bought the right hind quarter, and Krishna the left. Each separately paid the owner for his quarter of the cat, for they agreed that, as with the cotton, each should be sole owner of his part of the property.

They took the cat back with them to their shed. It was fed from the common purse, and each one combed, and brushed, and stroked, and petted his own quarter of the cat, and that alone. It was, as reputed, a splendid mouser, and the cold carcasses of scores of rats and mice each morning witnessed to its prowess.

One day, as the rats and mice had become less numerous and more wary, the merchants were rolling over the bales of cotton while the cat dashed in and seized its prey. But, alas! as they rolled over

one bale, as the cat was in the act of springing at a rat, the bale came down upon the cat's right foreleg and fractured it. Poor Ramaswámi, who owned that leg, felt terribly about it. The rest did not seem to care, for their legs were entirely uninjured. Ramaswámi carried away the cat in his arms, prepared some delicate splints of split bamboo, set the leg as best he could, bound it up in cotton, and poured on aromatic healing oil. The cat went about the shed performing that arithmetical problem that puzzles some boys in learning addition when told to "set down three and carry one."

One chilly, raw day the merchants were cooking their midday meal; the cat was lying asleep in front of the fire; a spark snapped out from the fire and fell upon the swathed leg; the aromatic oil with which it was soaked was inflammable; it blazed up; the frightened cat undertook to run away from the blaze and ran in among the cotton bales; the bales took fire; in spite of all that the merchants could do the cotton, shed and all their goods were utterly consumed.

It would still be many weeks before the roads would allow them to proceed upon their journey, and Gópal, Naráyana and Krishna put their heads together and determined to make Ramaswámi, who was a very rich merchant, pay for their cotton that had been burned, because his leg of the cat had set fire to it. They immediately brought suit in the court of the country where they were against Ramaswámi for damages. The facts as above stated were clearly proven before the court. The distinct individual ownership of the different quarters of the cat by the different merchants was proven and was admitted. The court, after full consideration, decreed that, as it was clearly Ramaswámi's leg that had done the damage, Ramaswámi must pay the other merchants the value of their cotton.

Poor Ramaswámi felt that an injustice had been done him; it was by their united act that the cat's leg was broken; it was a spark from their common fire that had caused the blaze. Had not his cotton, too, been burned? Was not that sufficient loss for him?

Ramaswámi therefore presented a petition to the Rajah of the country, praying that the decree of the court, which he

considered unjust, might be set aside. The Rajah referred the case to Mariátha Ráman, "The Famous Old Sage," who lived upon the adjacent mountain, and asked him to review the case and decide what was just and right.

The records of the court below were sent up to him. It was distinctly proven that the four merchants had gone independently to the cotton country and individually purchased each his own cotton; that they had formed a pool for the transportation of the cotton, each retaining the ownership of his own bales; that on a certain day the monsoon had burst; that they had at once built a shed where they were, and placed the bales of cotton in it, indiscriminately, for protection; that they were providing their food from a common purse and jointly cooking their meals; that they had, on a certain day, bargained for and purchased each a separate portion of this cat, each paying the former owner for his quarter; that the cat had been engaged in catching the rats and mice that were preying upon the bales of cotton; that a bale of cotton, which they were jointly rolling over, had fallen upon the right foreleg of the cat and broken it; that Ramaswámi had acknowledged his ownership by himself alone putting it up in splints and pouring on aromatic oil; that a coal from the common fire had snapped out upon this leg while the cat was asleep; that it had blazed up; that the cat had rushed in among the cotton; that the cotton had taken fire from that leg and had all been burned. There was no dispute about the facts.

But the Old Sage said that the court below had not given due weight to one of the proven and admitted facts. It had been shown that Ramaswámi's leg had no power of locomotion of itself. Therefore, if it had not been for the other three legs, it would have burned up on the spot and done no harm. The other three legs had transported it in among the bales of cotton, and thus they had caused the loss of the cotton.

The decision of the court below was, therefore, reversed, and the other three merchants were ordered to pay Ramaswámi for his share of the cotton burned. This was the decision of "The Famous Old Sage."

# Literature

## British Portrait Painters and Engravers of the Eighteenth Century

ENDURING tho the delight in portrait art will always be, we have reached the time when even reproductions of the portraits of any particular epoch can only be hung pleasantly in rooms faithful to that epoch in design and furnishings.

book is a kindness, and for any student of the English school the handsome volume recently published\* will be a mine of wealth. In it are gathered many of the best examples of portraiture in that century which was so deeply interested in the pictorial side of character. These are reproduced by a fine photogravure process largely from mezzotints of the time, but often enough directly from the

Jean Jacques Rousseau.

From the original painting by Allan Ramsay, in the National Gallery of Scotland, Edinburgh. From "British Portrait Painters and Engravers of the Eighteenth Century."

By permission of Goupil & Co., of Paris.

We have learned historic styles, and are, in our houses, enslaved by their Beaux Art architects. Even if we possess a fine mezzotint of a Reynolds we are worried by its inappropriateness when hung in a salon in the style of François I. For those who live in modern chateaux and can afford the price of *editions de luxe*, to bind the eighteenth century portrait painters and their engravers into a

painting to allow us to get an idea of that particular part of the painter's handling which the mezzotint cannot help obscuring the delicacy of value rhythm.

\* BRITISH PORTRAIT PAINTERS AND ENGRAVERS OF THE EIGHTEENTH CENTURY. Kneller to Reynolds. With an Introductory Essay and Biographical Notes by Edmund Gosse, LL.D., Librarian of the House of Lords. Paris and New York: Goupil & Co., Manzi, Joyant & Co., Successors. \$50.00 paper; \$70.00 half Levant morocco.

The work is to be issued in two volumes, one—that now ready—covering the great English speciality in art from Kneller to Reynolds, inclusive; the other to begin with the work of Gainsborough and include Lawrence. A perfectly adequate introduction by Edmund Gosse is in this first volume. It touches upon the indifference of William of Orange to painting and the absence of all real encouragement and appreciation from the court in his time. The habit of perpetuating family interests by adding portraits in each generation to the family collection, which had been stimulated under the court patronage of the long line of great foreigners who had been painters to previous kings, kept alive a succession of native painters who carried on the traditions developed under Holbein, Rubens, Van Dyke and Lely. Kneller, the last of important foreigners, set a court style which influenced all Georgian work. Hogarth, however, was the first individualist of his century, and, as has been so often said, the most thoroly English in mind of all English painters. The book gives an interesting and concise account of him and his innovations of method and mentions the interesting fact that he inaugurated "one-man-shows" by exhibiting all of his works together, and holding a sale at which the eight originals of the "Rake's Progress" sold for £184 and the six of the "Harlot's Progress" for £88. Hogarth's "Miss Fenton as Polly Peacham" is delightfully reproduced, also the group of his servants. Other less well known painters—Jonathan Richardson, Charles Jervas, the Irish painter; Michael Dahl, a Swede—are represented among the plates and sketched in the text.

Of the works of Reynolds, a great many of the best are reproduced. Among these the plates are from mezzotints by a number of different engravers, so that we can judge of mezzotint variations in technique. For example, we have the Hon. Samuel Barrington, engraved by Earlom; a portrait of Bartolozzi, engraved by Thomas Watson; Lady Eleanor Compton, engraved by Valentine Green, and the "Lady Bampfylde," engraved by Watson, one print of which sold for £1,260.

The name of Bartolozzi among the en-

gravers is perhaps most familiar to general readers about art, but many of the other men are fully as interesting interpreters of their subjects.

A good idea of the seriousness of Allan Ramsay's work is given by the two plates from his "Rousseau" and "Flora MacDonald," and Highmore's portrait of Richardson, Doughty's engraving of Samuel Johnson, "The Earl of Haddington," by Aikman, to mention three of many interesting examples, remind us that with the names of Gainsborough and Reynolds and Romney we do not exhaust the list of truly successful portrait painters of the eighteenth century.

## Money and Banking

TEN years ago a work dealing in a comprehensive manner with the whole field of money and banking would have attracted wide interest. To-day other problems occupy the forms of popular attention, and even so ambitious a work as Mr. Conant's *Principles of Money and Banking*<sup>1</sup> will find most of its readers among those who have made a special study of economic problems. Hence the work is to be judged not merely with reference to its merits as a popular presentation of the important problems of money and credit, but also with reference to its adequacy to the task undertaken by the author—a systematic exposition of the evolution and nature of money and banking.

An examination of Mr. Conant's volumes reveals the fact that extraordinary erudition has been placed at the service of the reader. The histories of all nations have been made to yield facts for the reader's information; excerpts from the works of scores of illustrious and obscure writers on monetary science are set before him. Unfortunately, however, the facts are often of little importance; the excerpts are often very dull and commonplace. Rarely do they add anything to the author's independent treatment. Our impression is that by the elimination of useless material of this nature the work could be reduced to two-thirds of its present compass.

In his treatment of the theory of money

<sup>1</sup> THE PRINCIPLES OF MONEY AND BANKING. By Charles A. Conant. 2 Vols. New York: Harper & Brothers. \$4.00.

the author evidently endeavors to avoid all extremes. His method is usually to argue with great force against views that nobody holds nowadays, and to concede a measure of justice to all views that are difficult to refute. Exactly what his own view may be it is not always easy to ascertain; and when he does state his view clearly, his defence of it is frequently hazy. For example, in his discussion of the value of money Mr. Conant decides to limit the term money to standard coin—a perfectly defensible proceeding. His reason for excluding credit money, however, is that variations in the quantity of credit money do not follow with any precision the variations in the quantity of gold—a fact that has nothing to do with the definition of money.

In spite of its theoretical weakness the work has much to recommend it to serious students of monetary science. It furnishes one of the best available accounts of recent developments in money and banking; and in its method of dealing with matters which are still subjects of controversy it presents an open-mindedness and a freedom from animus which may contribute as much to ultimate agreement as would far profounder argument.

A sociological study of the recurrent agitations for monetary inflation was one of the few remaining methods by which a writer could claim title to conspicuous originality as a contributor to monetary literature. Such a study<sup>2</sup> has now been made by Professor Wildman of Central College, Missouri. It has long been the habit of economists to connect inflationist movements with westward expansion and the attendant development of land speculation, but no one has hitherto treated with such detail the economic conditions underlying the successive movements in favor of cheap money. For this reason Professor Wildman's book deserves a place in every library of American economic history. The author's analysis of the elements which made up parties is acute, altho not always such as to convince the reader of its accuracy. The introductory sociological study, however, appears unduly learned. The

remainder of the book would get on very well without any such formidable apparatus of sociological formulae.

Professor Cleveland has already established a reputation as a prolific writer in the field of private finance. His latest book<sup>3</sup> is an attempt to set forth the essential relations between the independent treasury and the commercial bank—the two pillars upon which the vast structure of American commercial credit rests. The chief impression one gets from Professor Cleveland's book is that the United States possesses a most wonderful and almost perfect financial mechanism which must be handled with extreme care if untold disaster is to be escaped. He has a number of minor improvements in view, but as these are not yet patented, he envelops them in a manner of exposition that defies pirating.

The extraordinary growth in recent years of the banking business of the trust companies renders exceedingly timely Messrs. Kirkbride and Sterritt's work<sup>4</sup> on this financial institution. The bulk of the book is devoted to a detailed treatment of organization and business operations. To those who are not directly interested in the technique of financial institutions, the chief value of the book consists in the incidental treatment of the relations of the trust company to the business community.

### Dante the Wayfarer\*

For nineteen years an exile from his beloved Florence, Dante never re-entered the beautiful city. A more perfect city he created beyond the stars for a lovely lady whom he had met and worshipped, one "who was in so great favor among men that when she passed along people ran to behold her." Had he entered Florence and been taken there, either at the grand palaces of the Bianchi or seated on that bare stone—"il sasso di Dante"—whence he loved to watch the Baptistery and the sunset behind it, it would have been for him "death by burn-

<sup>3</sup> THE BANK AND THE TREASURY. By Frederick A. Cleveland. New York: Longmans, Green & Co. \$1.80.

<sup>4</sup> THE MODERN TRUST COMPANY. By F. B. Kirkbride and J. E. Sterritt. New York: The Macmillan Co. \$2.50.

\* DANTE THE WAYFARER. By Christopher Hare. Illustrated. Imported by Charles Scribner's Sons, New York. \$2.50.

<sup>2</sup> MONEY INFLATION IN THE UNITED STATES. By Murray Shipley Wildman, Ph.D. New York: G. P. Putnam's Sons. \$1.50.

ing." It is known that he approached the city more than once, surveying it from tall hills, listening to the music of its streams, as they descended from the mountains, selecting, it may well be, with an austere eye the colonists whom he would ultimately invite to the strange byways of the *Inferno* already projected, and administering by anticipation the cautery to which they had condemned him;—or, again, with his long finger, touching on the breast the more select company whom he would eventually lead up the Mount of Delight to his adorable lady in Heaven.

He was not himself subjected to the process of fire, but there was no medieval scoundrel who, as a prospective inhabitant of the gloomy circles, escaped that stern eye. Who they were, and where they dwelt—what old castle or other relic of them survives—Mr. Christopher Hare makes it his business to find out. Dante the poet is guide, Mr. Hare being merely traveler, note-taker, and reporter. The reader is conducted into all parts of Italy, wherever the poet had paused to make a note—a divine note it is always, of purest poetic quality—of a tree, a fountain, a cataract, a desert, garden or monastery. The poetic note was generally brief. Sometimes it was only the far echo of a horn, winded thru long valleys and having many reverberations. The reader who loves his Dante follows the echo, and it is greatly to the praise of Mr. Hare that the reader does not find him tedious as a commentator. He is discursive; he loves to dwell on fine scenery, and is not too critical. But, above all, he has a note of reverence, so uncommon to these days, and so restful. From Florence to Arezzo; up the Alps by their loftier passes; on the Aemilian Way; in Verona; in Padua, for some wicked usurers whom the poet wanted for substructural purposes—particularly "one who bore a sow azure stamped on his scrip argent"; among the white marbles of Carrara; in Chiusi and Sinigaglia; to the stream Macre, that the poet may assure the Malespini of as brief a stay as possible on the "cleansing" hill; over the seas to Marseilles—a dangerous feat in those wicked, stormy days, and one deserving a considerable diminution of the days due to the hill of Purgatory:

"And thou that passest over the sea,  
Twelve thousand year is granted to thee."

Wherever we go with the bard and his entertaining companion we find that Dante tested every piece of metal he proposed to put into the decoration of his subterranean structure. Whatever was picturesque or musical in nature passed down the "giro" or up the "scala," and made itself immortal thru the poet's marvelous art.

Such a book as Mr. Hare's will be welcomed by those who, either by ship, or with Dante, have visited Italy; for all such come away from the land of the poet feeling a tenderness for the lonely man who was caught up midway the path of life,—*Nel mezzo del cammin di nostra vita*—to undergo exile, to feel

"the hour that awakens the desire of those who sail the sea, and melts their heart on the day when they have said farewell to their sweet friends; and that pierces the newly made pilgrim with love, if from afar he hears the chimes which seem to mourn the dying day."

### Weale's Reshaping of the Far East\*

This long-heralded book is by an English prophet. It is a British idea of the coming Oriental phoenix. Whatever is good will be according to the gospel of the British trader. Of course, it is hoped the United States will join in and form a true alliance in helping to establish the commercial cult. As for American missionaries, he says, they do not know anything about the matter, and, sad to tell, the American legations are ruled by missionary notions. There are also absurd busybodies who believe that some other motors beside shillings and dollars should have place in diplomacy.

Mr. Weale is a traveler and observer and the author of a clever book, "Manchu and Muscovite," in which he showed what all really familiar with the Far East knew so well, that Russia in Manchuria meant simply political occupation, aided by battleships and battalions, without any real commercial hold on the soil. Whether on springless cart or on the railway, he sees not only with the eyes of the present, but through the telescope of scholarship.

\* THE RE-SHAPING OF THE FAR EAST. By B. L. Putnam Weale. 2 Vols. Illustrated. New York: The Macmillan Co. \$6.00.

Hence there is hardly a dull page in either of his big volumes. He went thru Korea over the new railway laid with Carnegie steel, and he gives us a moving picture of the nation that is still practically a hermit. He calls the Korean metropolis "the pantomime capital," showing how that now it requires more than the old-fashioned double-headed and treble-headed intrigue to thwart the Japanese, even temporarily, since they have the upper hand so unmistakably. His picture of the Korean cabinet is that of a revolving kaleidoscope demonstrating that hopeless weakness of king and nobles, which make Seoul the danger spot of the Far East. It is clear, too, that until the grip of the Korean gentry on the vitals of the people is shaken off and the lazy louts are set to work to earn their own living, as the Japanese samurai were thirty years ago, there is no hope for Korea. The parasites are stronger than the moribund body politic.

Mr. Weale then goes on to outline in brilliant word-pictures the great war, its colossal mistakes and far eastern opinion about it, especially in China, where its results are a store of volcanic energies just beginning to burst forth. Like a good Britisher, he shows the wicked scheming of the French and the Belgians in doing all they can to get fat contracts. "The peculiar attitude of the United States" is a source of pain and grief to him, for how men like John Hay and McKinley could ever do such silly things as they did do—so utterly un-British—passes his comprehension. He wonders how Admiral Kempff, in June, 1900, should be so thoroly Washingtonian and American as not to participate in the wholly unjustifiable bombardment and attack in time of peace on the Taku forts. Mr. Weale is wholly mistaken in saying that "such blame should fall not on his (Kempff's) shoulders, but on those of the Washington administration," for the Admiral, without orders, had to act entirely on American tradition and practice, unchanged during a hundred years. The author is entirely off his base when he thinks that "Mr. John Tyler" is the founder of our policy in China—which was settled before Tyler was born. Indeed, thruout, he shows a lamentable ignorance of American history and

policy, all the more reprehensible because he urges so strongly that the United States should be a party with Great Britain and Japan in settling the Chinese problem. He declares that "a general attitude of commiseration for China is not only foolish but may become criminal." He pictures "the United States in the Far East as a species of side show, violently performing at irregular intervals." With his remarks as to the needed reform of our consular system in the Far East, we heartily agree, but we do not believe with him that there is any such thing as a Chinese nation "numbering four hundred and thirty million souls." There is a striking chapter on "China Arming." What fifteen months ago people might have laughed at, is now almost an accomplished fact, for the Far East "has ceased to be merely amusing," while the Chinese character "is too complex to be analyzed." He gives a good picture of the religious situation, both native and missionary. He thinks it a vain dream that China will ever be Christian in the ordinary sense of the word, but that Protestant missions can saturate the whole country with Anglo-Saxon ideals is quite certain. He believes that in twenty years time Chinese trade will be twice as great as it is now; in fifty years it will be portentous. The old Far East is rapidly passing away and the new Far East is being built up. It is therefore necessary to see with one's own eyes and to act quickly before the East sinks to sleep again. He urges that a great course of capable observers should stream eastward and behold the amazing opportunities that await wise commercial exploitation, to which we add our amen.

**The Study of the History of Music.** With an Annotated Guide to Music Literature. By Edward Dickinson. New York: Charles Scribner's Sons. \$2.50.

Professor Dickinson, of Oberlin, is equipped with the large knowledge and the judicious type of mind demanded for the successful accomplishment of the task he undertook in the preparation of this work; and the book is altogether the best of its kind that has yet appeared in English. Indeed, in its field there is probably no book in any language that can compare with this one in completeness,

suggestiveness, clearness and general usefulness for the student of musical history. Teachers as well as students will find it useful: and while intended equally for the general reader, a full bibliography books in English about music gives it a unique value as a work of reference. Its field is not that of the Dictionary of Musicians. Neither is it an elaborate history of the development of music, nor yet a mere outline textbook. It is rather a guide to the study of musical history, and its plan is to supplement a comprehensive, consecutive narrative by copious bibliographical references, pointing out the best critical commentaries in English on every phase of the subject. While his narrative of that history is necessarily condensed, it is by no means skeletonized—for Professor Dickinson has the gift of going straight to his point and saying much in a few words. His 390 pages are a marvel of compact information. It is all valuable and trustworthy information, too. He does not make dogmatic statements about disputed things, but outlines both sides where there has been controversy and refers to the best authorities on each. His style is terse and lucid and all his pages are interesting. The excellent work of the foremost American composers entitles them to more than the merely cursory mention they receive. It is to be hoped that Professor Dickinson will amplify his too brief treatment (only a scant page and a half) of Music in America in the later editions of his book, which are sure to be called for.

### Literary Notes

REV. H. VALETTE WARREN, who wrote of his experiences with Commodore Biddle in Japan, 1846, in our issue of November 2d, has published a poem on the expedition under the title of "Afloat With Old Glory." (Princeton, Ill.)

....Funk & Wagnalls announce that they have in preparation a new Bible Dictionary, in one large quarto volume, which is based on Guthe's "*Kurzen Bibelwörterbuch*." It will be in one large quarto volume, fully illustrated, and conservatively progressive, like Hastings's Bible Dictionary.

....The Egyptian Soudan had not been described beyond Khartoum until the Rev. J. K. Giffen wrote the story of his mission, founded 500 miles beyond that city. (Fleming H. Revell Company, \$1.00.) The study of African conditions is incomplete without some

information upon Southern Soudan, details only to be found in Mr. Giffen's book, "The Egyptian Soudan."

....Teachers who use the International Lessons in their Sunday School classes will be glad of the "Illustrative Lesson Notes for 1906," by John T. McFarland and Robert Remington Doherty, published by Eaton & Mains, New York, at the price of \$1.25. They are clear, conservative, practical, and helpful to the busy teacher.

....*Printers' Ink*, New York, publishes in book form, under the title of "Forty Years an Advertising Agent," the reminiscences which its founder, Mr. George P. Rowell, has been contributing to its columns. It is full of interesting personal gossip of the newspaper and business worlds, worth reading by any one who pays for advertisements, which means any one who reads them.

....The inaugural address of Mr. Edward T. Devine on the occasion of his taking the Schiff Professorship of Social Economy at Columbia University is published in book form by the Macmillan Company (75 cents). His subject is "Efficiency and Relief," and he discusses modern methods of increasing the industrial efficiency of the individual and at the same time of providing adequate relief for those who are of deficient wage-earning capacity.

### Pebbles

"WAS your wife angry when you got home so late last night?" "Angry? Why, my boy, the dear woman pelted me with flowers!" "But how did you get that black eye?" "Well, you see, she neglected to take the flowers out of the pots before she threw them."—*Cleveland Leader*.

HERE are the final cablegrams in an international romance: "Buenos Ayres. Ada Craufurd: Will you marry me now? Answer at once. Eugene Tulian." "New York. Eugene Tulian: Yes. Ada Craufurd." Of course you remember the story of the other girl who got a proposal by telegraph. She asked the clerk how many words she could send for a quarter. He said ten, and her answer was: "Yes, yes, yes, yes, yes, yes, yes, yes, yes!"—*The Boston Globe*.

HER parents named her "Marguerite," And friends and kinsfolk said: "How sweet!" But here I will relate to you What happened as she upward grew. Her elder sister called her "Meg," Her teasing brother called her "Peg," Her girlish chums to "Daisy" took; Plain "Maggie" satisfied the cook. And "Madge" she was to her papa; And "Margie" to her fond mamma; And "Peggie" in her grandma's voice; And "Magpie" as her grandpa's choice. With "Margery" her teacher's word, While "Rita" she herself preferred— Now, in this list of names replete, Pray what becometh of "Marguerite"?

—*American Motherhood*.

## The Tri-Church Union

HALF a dozen years ago scarce anything would have seemed more unlikely than a union of the Congregationalists, the United Brethren and the Methodist Protestants. They really did not know each other; they occupied different territories. Nothing had brought them together. When a dozen of the leading men in the United Brethren Church asked their bishops to inaugurate correspondence looking towards union with the Methodist Protestants and several other smaller bodies, it never occurred to them to think of the Congregationalists in this connection. But on seeing this proposal the Congregational Committee on Church Union asked why they should be left out. It was a startling suggestion, but it was considered, and acquaintance and correspondence began. Those smaller denominations were not ready, and, as it turned out, after some conference, the appointed commissioners from the Methodist Protestants, the United Brethren and the Congregationalists met in Dayton, O., last week, two hundred of them, and discussed the matter for three days. The improbable has happened. The commissioners of each body have agreed that union is feasible, and the outlines of a plan of union are agreed upon. It will be some two years before the National Conferences of the three bodies will meet, and meanwhile committees will perfect the plan. It will then be considered by the national bodies, and sent down to the State or other bodies for final action; but at present the union seems assured and only to await confirmation.

These are all rather strong bodies. The Congregationalists have nearly 700,000 communicants, and they are strong along the line of the northernmost States. The United Brethren number 260,000 communicants, and the Methodist Protestants about 200,000; and their strength is in the Middle States. The United Brethren were a split from the German Reformed Church, and the Methodist Protestants from the Methodist Episcopal Church. Both these Churches are in

methods and polity much like the Methodist Episcopal Church, but both make much of the liberty of the local church. The United Brethren have bishops, but they are only superintendents chosen to serve four years.

These two bodies and the Congregationalists have been quite unconsciously coming closer together in their methods. The Congregationalists have been developing a superintendency, under various names, and a stronger organization. On the other hand, these two denominations have been modifying their itinerancy and have removed the limitations to the pastoral term. Even so, it is a surprising thing that they should come together; yet what is surprising, now that in Canada the Methodists, Presbyterians and the Congregationalists are joining hands in one denomination, the United Church of Canada?

The difficulties in such a case are really serious. There must somehow be combined the substance of one with the essence of another. By some plan the fixed itinerant system must harmonize, or be made to co-exist, with the system, or want of system, by which a church has been in the habit of finding a pastor as and where it can. Quite as difficult, and a task for lawyers, will it be to unite, or distribute, property interests held by mission boards and publishing houses; but this is not beyond accomplishment by those who wish it.

The men who, loving their own denominations, with all their hallowed memories and sentiments, are yet willing to compromise their methods and even lose their names in the combined Church, deserve no little praise. Union requires the sinking of prejudice and any jealousy and the suspicion of advantage taken, and implies mutual confidence and some little concession. Perhaps the greater praise in such a union is due to the smaller bodies. But the spirit of union is in the very air we breathe; and when we come together we are surprised to find how near we already are and how much like us are those of the other fellowship.

This union will be momentous. It is

the most important union in this country since the two Presbyterian Churches, Old and New School, were united. It will be historic. It will open the way for other unions. There are a dozen smaller denominations that might well follow in the same union. There is no valid reason for their separation. Several are, we are glad to say, being drawn into the great Presbyterian Church, even as the planet Jupiter draws or swallows the comets into its mass. And is it at all sure that the three great Baptist bodies, with several smaller offshoots, are to be kept long apart? And when will the spirit of grace allow the dozen or two Lutheran bodies to coalesce? And is it beyond hope that the Presbyterians and the Congregationalists, with so much in common, may find some way to join their mighty forces into a mightier union? And how long will Northern and Southern Methodists, or Northern and Southern Presbyterians, harbor their mutual jealousies? Why cannot those who can unite in the presence of a common enemy in the foreign field, as in China and Japan and India, unite here in the sympathy of common service and love? Let this example stir up other Christian bodies to go and do likewise.

But where is the ecclesiastical statesmanship that will attempt such achievements, for which the time is now ripe?

### Three Bills in the Senate

To the Senate the House has sent the three bills which represent the leading recommendations of the Administration for legislation at the present session of Congress, and it is in the Senate that their fate is to be determined. Each of these bills as it stands is quite distinctly the product of a House Committee rather than of the House itself, for it had been decided that no amendments should be accepted, and it was well understood that nothing was to be accomplished by the House debates. Speeches were made for the pages of the *Congressional Record*, for the gallery and for the absent constituents of members. They had no effect upon the bills in hand. It was known by the speakers themselves that what they said could not change a word or a comma in the pending measures. This is not an

ideal way of making laws. Said one member who was about to vote for the Railway Rate bill: "The quicker we get rid of it the better, as it will then go to a place where it can be discussed and amended."

Methods of procedure in the Senate are not faultless, nor are all the influences by which the action of Senators is determined just what they should be, but in the Senate the door is open for debate that amounts to something, and for the amendment of bills that have not been subjected to the shaping influence of effective criticism.

In our judgment, the work of the House, or of its committee, in the case of the Philippine Tariff bill, was well done and should be accepted by the Senate. We fear that this bill will be changed for the worse by an unwarranted increase of the duties on sugar and tobacco. If this is done, it will be the work of selfish interests that inconsistently regard the islands as domestic territory for one purpose and as foreign territory for another—foreign, with respect to tariff protection of sugar and tobacco in the States, and domestic, in order that insular industries may be burdened by the high freight rates imposed by the application of our coastwise navigation laws to all trade between the islands and our ports. We do not believe that the proposed reduction of the tariff on imports from the islands would have an appreciable effect upon our sugar and tobacco industries. But it would help the people of the islands.

Oklahoma should have been made a State some time ago, either with or without the addition of Indian Territory. If this Territory is now to be joined to it, the interests and rights of the Indian inhabitants should be carefully safeguarded. We are not convinced that Arizona and New Mexico, either separately or in combination, should now be admitted to the union of States. By the last census, Arizona's population was 122,931, and New Mexico's 195,310. If they are to be considered separately, two seats in the Senate and a State's votes in the Electoral College should not be given in either case to so small a number of people. The two Territories should not be united against the will of one of them. Each should be

permitted to vote by itself on the question. We hope Mr. Foraker's amendment providing for such separate voting will prevail.

Opposition to the Railway Rate bill in the Senate is due to influences and motives of various kinds, some more deserving of commendation than others. The bill needs to be amended. So far as the proposed grant of rate-making power is concerned, the question now is whether amendments distinctly providing for a judicial review of the Commission's rate orders shall be so framed as not to make the Commission's action futile. The way should be open for appeal to the courts, but a final decision should be reached without delay.

What we should like to see, as we have said before, is a division of this measure, the grant of power with respect to general published rates in one bill, and in another all the Hepburn bill's provisions concerning rebates and other forms of discrimination, with something added to insure the detection of violations of the law and to make the penalties heavy.

There has been a popular demand for the prevention of discrimination or unlawful favoritism, whether shown by secret rebate payments or by means of such devices as private terminals and side tracks and private car lines. Such favoritism the President has repeatedly denounced in his messages and public addresses, pointing out the iniquity of it, and saying it "must be stopped." But the recommendation that the Commission be empowered to change the open and general freight rates proposed no remedy for the evils of which he had spoken so earnestly. There was no general complaint about the published rates, no popular demand for the exercise by the Commission of power to revise them. In this recommendation was involved an entirely separate question or principle. Legislation embodying it should be considered separately and should stand or fall on its merits.

The detection of unjust and unlawful favoritism, the prevention of it, the enforcement of statutes forbidding it, the provision of really adequate punishment for the crime, punishment for guilty officers as well as for their corporations—all this is another matter, and one that

calls for legislation of a severe and searching character in addition to the statutes now in force, legislation imposing fines which a railroad company could not easily afford to pay, legislation by the enforcement of which a guilty railroad officer could be sent to jail. In the pending bill the response to this call is not sufficient.

## Our Foreign Entanglements

It did not take long, after Washington's Farewell Address, for the United States to get entangled in Moroccan affairs; and we are there again. It troubles not a few people, to whom the Farewell Address is command for all time, and not a counsel of prudence for the time then being. Small children should not meddle in strong men's quarrels. Temporary conditions or jealousies may be a good reason why a nation, or a race or class may for a while properly fail to insist on all their equal rights or privileges. What was wise in Washington's day as concerned an infant people of only three million souls may be quite unwise, or even pusillanimous as concerns an adult nation of eighty million souls.

So we are in the Moroccan conference of nations now, with full rights, and entangled in all its perplexities or dangers. If there is risk of war and its alliances, we are in it; and the Administration was justified in claiming the right to take part in the council of the nations. In our early history we did the policing of Morocco alone; now we simply unite with other nations, which have great responsibility, in deciding how this policing shall be further done. We do it for the sake of peace, not war; but we certainly run some distant risk of complication if other strong nations are unreasonable and refuse a settlement of the trouble.

And yet what attempt to settle a quarrel has not its dangers? The peacemakers are always in danger of being attacked on both sides; but that is no reason why men should not try to bring together those that differ. What is arbitration but the entanglement of a third party? When President Roosevelt "butted in" at the Portsmouth peace conference he risked the ill will of both parties, but that was no reason for not en-

tangling himself in what was none of his business. The world applauds him for it, and honors and applauds our country for being able, thru its President, to bring to a peaceful conclusion a terrible war. Because we had a strong nation, and a strong President, we could do what a weak Power, like Switzerland, or Venezuela, or Hayti, could not have done. We are in a different condition from what we were in when Washington gave his advice, and he would advise differently if he were now living.

What is duty for an individual is duty for a state. The same obligations of courtesy, or justice, or helpfulness that rest on a man rest also on a nation. A child is helpless when he sees a thug assaulting a passerby; but a grown man is not helpless; he cannot say that he must not concern himself with other people's wrongs. There comes a time when a nation must say that wrongs in its neighborhood must cease, that dangerous broils must come to an end, that cruel oppression can no longer be endured. So we interfered in Morocco when our citizens, and those of other nations, were insulted and wronged. So we told Spain that she must give peace to Cuba or leave. We interfered exactly as a man interferes when he sees a child beaten by a ruffian in the street.

In the good time coming every nation, and especially every strong nation, will feel responsible for the welfare of every other nation. In that good time coming there will be a national police, and the nations will see to it that no one strong nation injures another weaker one. That is what universal arbitration will mean, which not only decides what should be done in case of a difference, but insists that it shall be done. There will be an international police force, ready to enforce the decisions of the international court and the international legislature; and that will be universal entanglement, in which the United States will be deeply entangled. Meanwhile, we must take our share in helping and maintaining peace, at some risk, with some entanglements, if we are to maintain the principles of Christian love, international as well as personal, and the dictates of decency, the *noblesse oblige* of our position as a first class power.

The London *Statist* suggests that the conclusion of the conference at Algeciras may be that, when France and Germany cannot come to terms as to how Morocco shall be policed in its seaport towns, the task may be put on the United States; because we can do it, and we have no ulterior designs to hold the territory. That is not likely to be the conclusion, but if it should be, there is no reason why we should refuse. We ought not to be afraid or unwilling to accept responsibilities which our position puts upon us. Similarly, President Roosevelt deserves praise for accepting the responsibility of securing peace and good government in Santo Domingo, and it is the duty of the Senate to be ready to do more and enlarge our powers of intervention rather than to do less. To refuse to help a weak people is not merely selfishness; it is cowardice. To give aid, to help peace, to secure good government where the people know not how to maintain it, is the highest Christian diplomacy and duty. But the national purpose must be benevolent and not selfish; and such we believe to be the real purpose of the American people.

### The Chinese Peril

AGAIN we have warnings, becoming more and more serious, of danger and massacre in China, threatening all foreigners, and especially those from the United States. Americans have already been murdered by mobs, just as they were at the time of the Boxer uprising; and no one can prophesy how far the present unrest may go. The development of Japan has informed China that she need not long submit to foreign insult. If Japan can humiliate the greatest European nation, why should mighty China submit to having her territory seized by Germany, France and Great Britain? If Japan can secure the right to try foreigners in her own courts, why should China have to submit to the indignity of seeing international courts in her cities? If Japanese citizens can come freely to the United States, why should there be a discrimination against Chinese citizens coming to America?

Not all these rights can China now properly claim. Especially is it not safe to transfer the authority of the consular

courts, which try their own citizens. But the serious wrong and indignity of the seizure of Chinese territory and the Sand Lot insult to Chinese self respect, ought to provoke resentment. We are sorry that Datto Bryan, in an address to Chinese dignitaries, should have declared that Americans must insist on Chinese exclusion. It was neither wise nor right. It will help the ill will, and no one knows what reprisals it may provoke. The best friends of China are likely to be the first foreigners to suffer. A Chinese of no little intelligence tells us that there is likely to be the greatest massacre of modern times, and that Americans and other foreigners in the interior should escape while they can. That may be a false scare; but there cannot but be anxiety.

When the boycott of American goods became general in China, a number of American and Chinese merchants—note that they were not missionaries—met to discuss the matter, and they agreed on what the United States ought to do. These were American merchants, men who understand the conditions, who knew what American commerce required, who understand better than the laborers' unions what international welfare demands. The American merchants and the Chinese guilds agreed on twelve points, as follows: That the "laborers" excluded by treaty of 1880 should be defined according to standard dictionaries; that all other regulations affecting Chinese exclusion should be agreed on by both nations before being put in force; that our Government accept our consuls' certificates as to those not laborers, and that they be admitted without molestation; that consuls give such certificates without delay to those not laborers; that medical examination of Chinese emigrants be made by physicians mutually appointed; that Chinese once admitted be treated just like other foreigners, with no special disadvantage; that Chinese passing thru this country be not molested in their transit; that registration of Chinese residents be no longer required; that Chinese laborers be admitted into Hawaii and the Philippines if those islands want them; that Chinese entering into ports and detained for inquiry be allowed to land and to have full privilege of defense and of correcting any flaw or error in

their papers; that any Chinese resident here be allowed to bring his wife and children; and that Chinese lawfully admitted here, but deported because of failure to register, be allowed to return if they prove to possess property here to a specified amount.

These provisions are just and admitted to be just by American merchants in China. They are less than might be properly demanded. They allow the prohibition of Chinese laborers to remain, so that Chinese shall not compete with Italian laborers. But Congress pays no attention to the matter. The President has, so far as he can under the law, softened down the rules applying the law, and that is all he can do. Meanwhile the excitement in China grows more intense. There is awakening a sort of Chinese patriotism, new to the people. Railroads and telegraphs and newspapers are spreading everywhere. A public opinion is growing up. Schools and modern education are bringing new ideas of rights and of wrongs. There is a passionate feeling aroused that China has been badly treated by Western nations, and that, with a new and well trained and equipped army, and with the example of what Japan has done, China cannot longer submit to these indignities. This passion is affecting the common people, those of the Boxer type, not only in Chihli, but also in the southern provinces. Hitherto one province did not know what another did. Most of China knew nothing of the war between China and Japan; but the telegraph and the railroads have changed all that. While the higher officials mostly want no disturbance, and know that China has not reached the condition of Japan, where she can protect herself, the common people, the mobs such as committed the late murders, will not be easily restrained. An outbreak may be terrible in its ferocity, but the result would probably be what it was at Peking at the time of the Boxer uprising, for China is not yet ready, and the Western nations would be at one, and probably would find Japan with them once more. We are glad that our Government is providing against the danger by strengthening our forces in the Philippines. We wish Congress would do more, and that the twelve requests might be granted.

## Our Greatest School Problem

SOME little while ago the teachers of Chicago undertook an investigation of child nervousness. This disturbance had become so apparent in the schools as to alarm the teachers. They declared it had passed from the stage usually termed nervousness to a malady, preventing intellectual development, and hastening physical as well as mental decay. The investigation brought out a report to the following effect, that the cause must be sought, first, in the packed relations of human beings; a very large proportion of the children having very little chance for physical individuality, sleeping, studying, breathing and performing all other functions in contact with others.

The second cause suggested is the impure atmosphere associated with city life. It may be said that many of the children under considered never breathe one breath of pure air in their lives. The struggle for a livelihood has also to be considered in conjunction with the struggle for an education. This brings the young, undeveloped child under the influence of incessant strain. While we feel a good deal of pride in the fact that all the children in America can attend public schools, and even make it compulsory, we have hardly begun to comprehend what this means to the children of poverty. It denies them that rest and recuperation which is absolutely essential to sound development of either body or mind.

The next point emphasized by our investigators is the damage accruing from incessant noise—night and day. This is a wear and tear upon the nervous system, without hindrance or compensation. We know that quiet, for a portion of the day at least, is absolutely essential to good intellectual work and physical wholesomeness. Yet these children are, many of them, living within a few feet of the rushing elevated trains, which not only batter upon their ear drums, but actually shake their tenements. It is easy to say that we get accustomed to the noises, and do not note them; but that they are a constant friction upon our nervous systems we are certain. A tenement house is subjected not only to these rackets, but it is rare that such a

house does not contain at least one drunken and profane occupant—a man likely at any moment to create a riot in the building. Babies are born under such influence, and probably a large proportion of them are killed outright by it. Those who live are wounded to the marrow.

Referring once more to the report, we find the excitement and dangers of the street are said to be greatly enhanced at present by the use of electricity. We suppose that this means that the use of electricity makes our streets so much lighter and daylike, that the influence which darkness generally exercises in quieting the senses, and inducing sleep, is debarred.

Lack of proper food, and late hours, are specified as combining with other influence to make the matter almost hopeless. One of our ablest educators, commenting on the report, says that a very large number of the children are always hungry during school hours. The stomach is incessantly quarreling with the brain while they are studying. He adds that the influence of the daily newspaper (the paper that falls into the hands of the poorest classes) is perhaps as detrimental to physical health and provocative of nervousness as all the other influences combined. These papers retail murders, robberies, assassinations, thuggery and brutality; and the children feed on these things. The result is an abnormality of mind and an excitability which becomes chronic.

What are we going to do about these things? Let us conceive for a moment what hope there is for London, with its seven millions of population; two-thirds of it congested. One-third of the population of New York is reported as dependent. We are just beginning to understand that a great city, like London, constitutes an alien factor in a nation; that it contains a savage degenerative force, pulling down the physical as well as the moral framework of human beings. Degeneracy may drop down several stages before it touches dissolution, and at any stage it may breed and multiply itself. It may shorten life; but it rarely kills at birth. Dr. Thompson, speaking of these degenerates, says:

"In every case almost every organ is dis-

eased; while nine out of ten of them are of inferior mental and moral, as well as physical, structure."

The one fact most clearly established is the inexorable tangling of physical and moral states of being. Civilization endangers the very evolution that constructs it by breeding a new barbarism in its vast cities.

We now wait for further applications of power to disintegrate these masses and break up the tendency to live as barnacles on the keel of civilization. The birth rate of London has decreased in thirty years from 36.55 to 28.04. In Shoreditch 171 children die out of every thousand before they are a year old; this is more than double the legitimate death rate. No American city has quite as bad a showing as London; but St. Louis reports sixteen people, six of them small children, living in a single room, 12 by 14 feet. Only one window and one door are in the room, the door opening on a porch overlooking a yard full of stagnant pools of filth and garbage. Bear in mind that these children are some of those gathered into our public schools. They, with others nearly as badly conditioned, constitute a large fraction of those whom our Chicago teachers describe as afflicted with "nerve malady." When Seth Low was Mayor of New York he set on foot investigations which revealed a state of affairs fully as bad as that of St. Louis. These conditions have been markedly undergoing improvement.

Yet the problem remains enormously heavy; what are we going to do about our school children, born, brought up and to be educated under such conditions? The passion to escape into country life is fortunately growing. It is going beyond the mercantile class, to gather up the professional people, the teachers, the preachers and the lawyers. Our school superintendents report that they find themselves quite as closely related to their clientage when living four or five miles out on a trolley line, with rural telephone and long distance connections. But the movement still lacks a good grip on the day laborer. Here finally will be the chief gain; when the drayman not only vacates his rent, but his whole family around him can work with their own hands in the soil, and are no longer the

victims of bad air and noise. There is not a question about it but that out into the country must go the vast bulk of city population—out among the birds and the brooks and the trees, where the conditions are equally favorable for health and a competency.

## A Revolution in Science

A REVOLUTION in political science such as free trade, a revolution in theology such as higher criticism, or a revolution in biology such as Darwinism, is not accomplished without great popular excitement and turmoil. Most educated people take an interest and not a few of them take sides in such a controversy, rightly suspecting that their own lives and happiness may be in some way implicated in the issue. But a revolution in physical science, such as the discovery of radio-activity, arouses in the intelligent public nothing more than a casual curiosity and not much of that.

Probably this is on account of the strange fact that people are diffident about taking part actively in the discussion of questions of physics and chemistry. The atom, altho it is much more complex than we suspected a few years ago, is still a very simple thing compared with an animal or a state, yet many people are quite ready to express opinions about the internal structure of these very complicated organisms and the methods of regulating it who would not venture to guess whether an atom has any internal structure or not.

It is, of course, a very fortunate thing that the number of persons willing to be non-combatants in the present revolution is so small. The field is thus left clear to those who are qualified to do some good there. War correspondents are a nuisance. Still, it is strange that people are not sufficiently interested to be even spectators of the intellectual revolution of which they are contemporaries. For the ten years 1896-1906, since Becquerel's discovery of the natural radio-activity of matter, will rank as one of the critical periods of the world's history, when the fundamental conceptions of the universe, which had prevailed since the dawn of reason, were suddenly and radically overthrown. About fifty years from now

people will be hotly discussing the philosophical questions involved in the discoveries now being made and their bearing upon psychology and theology; possibly also upon politics and finance.

A revolution in science does not mean, as is commonly believed, that scientific men suddenly discover that what they have been teaching is false. On the contrary, altho students are continually at work repeating the experiments of earlier days, it is rare to find false statements or even important errors in any of the observational and experimental work done since the methods of exact science have prevailed. The apparatus of a hundred years ago was cruder, the substances used were more impure, the measurements were less exact, but the chief difference between their work and ours is the way in which it is interpreted. We have today a better scientific perspective. So a revolution in science is simply a change in mental attitude. Perhaps a political revolution is essentially the same. A revolution in science results, not from the overthrow of supposed knowledge, but the sudden acquisition of new knowledge, just as the discovery of America destroyed the balance of power in Europe and compelled a century of readjustment.

Scientists have been longing for a new world to conquer. Now they have it—the world inside the atom. A few years ago they were bragging that a particle of matter too small to be seen or weighed could be detected by the spectroscope when volatilized in a flame. Now a particle a million millionth part of that—literally an atom—makes its presence visible if it is radio-active and strikes a fluorescent mineral. And inside the atom—we still, very absurdly, picture it to ourselves as surrounded by a sort of shell—there are from a thousand to 240,000 minuter corpuscles, which no more fill the space they occupy than so many grains of dust fill a room. Yet the motion of these corpuscles in their orbits or vibrations can be studied from the kind of rays they emit, the form of the eddies and waves they send out thru the ether.

Chemists dealing, as they supposed, with the permanent and unchangeable units of nature, paid no attention to the element of time. Now we must have a

chemical chronology. For it seems that some at least of the elements, like planets, animals and everything else, have a life period, and in some cases these can be calculated. It is estimated that radium is decomposing at such a rate that one-half of it is transformed into other elements in the course of 1,300 years. But this must not be understood to mean that all of it would disappear in 2,600 years. Uranium is probably also decomposing, tho at a much slower rate, one-half in 600,000,000 years. Pitchblende and other uranium ores in great variety and from many localities have been analyzed and are found to contain in addition radium, polonium, helium and lead in much the same proportions, so it is believed that these other elements are products of the decomposition of uranium, which had the greatest atomic weight, and that their relative proportion measures the ratio of their rates of decomposition. So radium is not only very expensive but is a perishable commodity.

The life history of radium has been quite successfully studied. The atom of this weighs about 225, and when it starts to break up—nobody knows why—it throws off at different but definite intervals a positively charged and radiant atom of helium, which weighs 4. This leaves an atom weighing about 205, which is nearly that of lead (206.7), so it is thought that lead is the result of the decomposition of uranium and radium, altho since lead is not radio-active and is found in too small an amount to be detected in any other way, its presence cannot be proved. Polonium is thought to be the last stage in the disintegration series between radium and lead.

Since galena and other lead ores contain a pretty constant proportion of silver, and since the amount of gold is so distributed over the earth that no sufficiently large quantity of it has ever been found to destroy its usefulness as a standard of value since the days of the Babylonian empire, the two monetary metals are perhaps, also, like radium, members of a disintegration series, which would account for their constancy.

Here we seem to be within sight of the realization of the dream of the alchemists, but Professor Soddy dashes our hopes by assuring us that even if we

could build up a heavy metal like gold from silver it would not pay, because the energy of hundreds of tons of coal would have to be put into an ounce of silver to convert it into gold. If we could get our energy from the decomposition of a heavier element like lead the gold would be a mere byproduct, because the amount of energy liberated in the process would be of far greater value than the gold produced.

In fact, the discovery of the existence of untold stores of energy all about us, even tho we do not know how to utilize it, has opened up new and dazzling possibilities for human progress, at least in the imagination. For the heat and power which are the basis of our life and civilization we may not be forever dependent upon the stores of coal, the power of rivers and tides and the heat of the sun, for the energy of the decomposition of an element is a million times greater than any form of chemical energy of combination known to man, even the heat of the oxy-hydrogen flame. A piece of radium the size of a pinhead if disintegrated all at once would equal the explosion of a hundred weight of dynamite. A piece of lead the size of one's finger tip would be sufficient to propel our largest ship across the Atlantic if we could get at its internal energy. But so far it seems that the decomposition of an atom is spontaneous and independent of external conditions. Neither by heat, shock nor electricity can we instigate, accelerate, retard or prevent it.

The new theories of matter resulting from these discoveries, for example, that inertia is an electrical phenomenon and perhaps changeable, opens a vista to the speculative philosopher as enticing as that opened to the imaginative engineer by these new stores of energy.

**Paul Laurence Dunbar** It is not to be pretended that the negro poet Dunbar, who died the other day only thirty-three years old, will take a top rank in the list of American poets, but he was the recognized chief singer of his race. It is not surprising that his race has produced so few, for the United States did not supply one for two hundred years after the settlement of James-

town. One in a twenty million people is as many as we can expect, even altho every fourth man and every other woman has the gift of rhyme. But it is to be noticed that Dunbar was pure black, with not a drop of white blood. His father ran away to Canada before the war, and his mother was freed by Lincoln's proclamation. He got a common school education and made his living by running an elevator at Dayton, Ohio, even after he had published volumes of verse. He was "discovered" by Mr. W. D. Howells. He was, for a short time, till his health failed, in the Congressional Library, at Washington. He had been seriously ill for several years before his death, which he anticipated in the lines published in *Lippincott's Magazine* last December:

"Because I had loved so deeply,  
Because I had loved so long,  
God in His great compassion  
Gave me the gift of song.

"Because I had loved so vainly,  
And sung with such faltering breath,  
The Master in infinite mercy  
Offers the boon of Death."

Much of his poetry was in the dialect he knew so well, but he wrote also in the conventional English; and published several short stories and five or six novels. His merit was that he gave melodious utterance to the feelings of black folk, and used their own peculiar vernacular as a vehicle of expression and made that vernacular classic. He found poetry in the black man's occupations and surroundings, in his loves and joys, in his disappointments and bereavements. He found a vein unworked and made artistic use of it in verse as other writers had done in prose, and he became, in the true sense of the term, a popular poet. It is observed that he did not require any infusion of white blood to give him a touch of genius.

**Harcourt on Socialism** It was Sir William Harcourt who said: "We are all socialists nowadays."

That is true in a sense. It does not mean that we want to divide up the rich men's property, like the sans-culottist who wanted Baron Rothschild to distribute his wealth to all the people, and to whom the banker offered two francs as his share of the whole. Nor does it mean that the

state should assume to conduct all the business now in private hands, and to tell every man what work he shall do. It means, rather, that the community is responsible for the welfare of all its members; that the state cannot afford to have a section of its people dependent and impoverished; that there shall be opportunity offered to all, and that the weak and aged shall be cared for. Already the social idea builds roads, lights and waters the streets, maintaining schools, distributes our letters, and does a multitude of other things. These are in the line of socialism, not political, but popular, which ought to be extended still further. We in America are behind the world in this thing. There is hardly a country in Europe that cannot give us lessons in the matter of public utilities and natural monopolies. There are four express companies holding up our Post Office Department. Why should not any citizen find a postal savings bank at his door? Why do our cities leave the franchises for lighting, heating and transport in the hands of individuals? It is submission to private greed, and nothing less. We want more socialism, not communism.

#### The Mitchell Case

Under this title the following fable is sent us by "W. M. W.," whose initials suggest a professor of Boston University, and the son of its ex-president:

Some stirring sergeants were at headquarters to complain of a scout.

"Is he loyal to the King?" asked the Generals.

"In word and deed."

"Is he trained for his work?"

"None better."

"With what, then, do you charge him?"

"In spite of admonition he points out hidden water springs and fields unknown to our foragers; worse yet, in showing our guides the way, he finds errors in our maps."

"Aha!" cried the Generals, with one voice, "a pestilent fellow, a menace to us all! By bringing more food and drink to view he imperils our discipline; by correcting our maps, ay, in the waver of a line, he invalidates them wholly. Seize him at sight, well-deserving men, and run him out of camp!"

In hasty zeal for God's house, we sometimes board up windows.

The trade unions of France want a law prohibiting the manufacturing and sale of absinthe, because it kills tens of thousands of people annually. More absinthe

is drunk in France than in all the rest of the world put together; and it causes, the doctors say, epilepsy, tuberculosis, madness and crime. Certainly, then, prohibit it. But is not that just what China wanted done about opium, for just the same reason, and the Europeans would not allow it? And is not it just as true that alcohol kills its tens of thousands in this country? Every country, or town, or other district, ought to be allowed, as in some States, to prohibit the sale of such poisons, including patent medicines whose principal ingredient is alcohol.

Baron Komura was defending himself for his course at Portsmouth, but he said no more than the truth when he declared that Japan was increasingly grateful to America, and that President Roosevelt had quickly comprehended when the true crisis of the war was reached, and had acted with noble unconventionality in proposing to Japan and Russia the holding of a peace conference; and that subsequently his unbiased intervention prevented a collapse of the conference. Japan is now learning that the peace terms were wisely accepted.

A terrible famine affects three of the northern provinces of Japan, with a population of 2,820,000 souls, the worst since the terrible famine of sixty years ago. The rice crop has almost utterly failed, in one province only thirty-three per cent. of the usual crop, in another fifteen per cent., and in a third twelve per cent. Japan is doing what it can to provide for the sufferers, and the foreigners have appealed for help. Any of our missionary bodies will transmit funds, and much is needed.

The Rev. W. D. P. Bliss wishes us to correct a strange error, by which, in his article in THE INDEPENDENT, he put Mr. Schwab with other multi-millionaires in St. George's Episcopal Church, in this city. Mr. Schwab is a Catholic.

We give our hearty congratulations to Congressman Longworth, and our best wishes to Miss Alice Roosevelt. What more need be said? The country, the world, wishes them joy.

## Developments in the Fowler Committee's Investigation of the New York Life

THE Fowler Investigating Committee of the New York Life Insurance Company made its initial report to the company's trustees last week. From this report it appears that a grand total of \$1,347,382.41 of the funds of the New York Life went into or thru the hands of Andrew Hamilton, from the beginning of his service with the company, in 1892, down to the end of last year. The investigators were unsparing in their criticism of the New York Life's "Bureau of Legislation," and of the way in which it was conducted. The report, however, does not rest content with mere criticism, but flatly recommends suits to determine the legality of payments amounting in total to \$1,074,774.80. The trustees of the company have adopted the report and its recommendations without dissent. The discrepancy between the last named sum and the total received by Hamilton is made up of the \$235,000 that ex-President John A. McCall paid back when he resigned, and \$37,607.31 to which Hamilton was entitled in the way of salary and expenses from 1892 to 1895, which is unquestioned. The Fowler Committee further reports that it has examined every available record bearing on the Hamilton situation and believes that it has traced all the payments that were made to or thru him, which was rendered particularly difficult from the fact that some of the payments were made thru the Paris office and by other intricate methods. The report of the committee is signed by all of its constituting members. They are Thomas P. Fowler, chairman, Norman B. Beam, Augustus G. Paine, Hiram R. Steele and Clarence H. Mackay.

## The Mutual Life and the Lawson Proxies

THOMAS W. LAWSON, who has recently been very active in the gathering together of proxies in the New York Life and the Mutual Life, is reported to have secured not less than 50,000 proxies in both companies. Mr. Lawson intends to make a

stubborn fight for the control of both institutions. Samuel Untermyer has been brought into the case, at least in conference over it, and Lawson claims to have secured the signatures of seventeen Governors to his petition for a general investigation of the New York companies. The subject has been laid before the President at Washington, and the actual mutualization of the companies will be sought after.

## Missouri Warns Insurance Companies

Warning letters to the presidents of more than sixty life insurance companies have been sent out by W. D. Vandiver, Insurance Commissioner for the State of Missouri. The purport of the Vandiver letters is to the effect that certain vital reforms must be effected by life insurance companies doing business in Missouri as a condition for the privilege to continue business in that State. The companies interested must give written promises to cease rebating. All advisory board contracts or other forms of special contracts must be at once abandoned. All illustration figures or books of estimates of future dividends must in future be prepared by the regular actuary of the company or be done away with altogether. Compliance with all of these requirements will be the price of the renewal of a license to continue business.

THE American Real Estate Company, of 290 Broadway, this city, in its annual financial statement just issued, shows assets of \$8,364,909.97. The surplus is \$1,285,047.03, which includes a capital stock of \$100,000. The bonds and certificates of the company amount to \$5,572,922.75. Messrs. Patterson, Teele & Dennis, certified public accountants, have examined all the assets and liabilities of the company, and certify to the correctness of the same. The real estate has also been appraised by the appraisers Matthew Anderson and John W. Hotaling. The officers of the company are: Edwin K. Martin, president; Dyer B. Holmes, vice president and treasurer; Edward B. Boynton, second vice president, and William B. Hinckley, secretary.

# Financial

## Railway Motive Power

THERE is nothing more interesting in the current record of railway activity, on its practical or physical side, than the rapid encroachment of electric force upon the field so long held by steam power. Of this we have spoken occasionally, in relation to some new indication of the general movement. It has been known for some time that electric power was soon to be used for passenger service on the New Haven road in the vicinity of New York, as it is to be on the neighboring lines of the New York Central, but the use of such power beyond the suburban limits was not predicted for the near future. The New Haven Company's general manager now says, however, that electric power will be used for the entire passenger service as far eastward as New Haven. All passenger trains between New York and Stamford will be moved by it before the end of 1906, and probably by September 1st. That change having been made, the use of electricity will then be extended eastward to New Haven. It may be inferred that in time steam power for passenger trains will be displaced by electric power thruout the company's extensive system between New York and Boston. The Erie is about to use such power for about 250 miles of its suburban service in New Jersey, and the work of substituting electric force for steam power on the West Shore road, from Syracuse to Rochester, 81 miles, was begun a few weeks ago.

Steam companies continue to meet the competition of trolley lines by purchasing them. It was intended that the Shaw syndicate's trolley road, from Boston to Worcester, should be prolonged to Hartford, and possibly to New York. But this project is now dead, for the New York, New Haven and Hartford (steam) Company, a few days ago, bought the Shaw syndicate's interests east of Worcester, these including a trolley line from Hartford to Rockville, and another at Stafford Springs. Two-thirds of the trolley mileage in Connecticut is now owned by this prominent steam railroad company. The New York Central will soon have a continuous electric line from Albany to Niagara Falls, paralleling its

main lines and including the trolley systems of Schenectady, Utica, Syracuse and Rochester. It became known last week that control of the Public Service Corporation's extensive trolley system in the northern counties of New Jersey is to be transferred to the Pennsylvania (steam) Railroad Company. By and by all the trolley lines worth having will be owned by the present steam companies, and electric force will be the motive power for all the railway passenger service in the thickly settled parts of the country.

GOVERNMENT reports show that the volume of our internal commerce in 1905 was much larger than in any previous year.

....Journals of the iron trade report that January's output of pig iron was 2,095,797 tons, which makes a new high record.

....According to the *Financial Chronicle's* returns, gross earnings of the railroads in 1905 showed an increase of \$152,000,000, or about 8½ per cent.

....B. L. Allen, the fourth vice president, has been elected third vice president of the Knickerbocker Trust Company, of which Charles T. Barney is president. The new fourth vice president is William Turnbull, for many years connected with the dry goods house of Messrs. Knower & Turnbull.

....Herbert L. Griggs, president of the Bank of New York, points out in a published letter that the cash reserve of the combined trust companies and banks is 24 per cent. in St. Louis, 22 per cent. in Chicago, and about 16 per cent. in New York, where the percentage ought to be larger than in either of the two other cities. He is in favor of the bill pending at Albany, which, by requiring trust companies to keep a cash reserve, would partly correct the discrepancy.

....Dividends announced:

N. Y. Cent. R. R. (R., W. & O. Div.), 1¼ per cent., payable February 15th.

Niles-Bement-Pond Co. (Preferred), 1½ per cent., payable February 15th.

Niles-Bement-Pond Co. (Common), 1½ per cent., payable March 20th.

Niles-Bement-Pond Co. (Common), 1½ per cent., payable June 20th.

# The Independent

Vol. LXI. NEW YORK, THURSDAY, FEBRUARY 22, 1906. No. 2986

## Survey of the World

### For a Canal With Locks

On Monday last, the President sent to Congress the majority and minority reports of the Canal Board of Consulting Engineers and of the Commission, with letters from Secretary Taft and Chief Engineer Stevens. The Board voted, 8 to 5, for a sea level canal, but 5 of the 6 Commissioners, with Secretary Taft and Mr. Stevens, prefer a canal with locks. The President agrees with them. In his judgment, he says, the disadvantages are fewer in the case of a lock canal, and the advantages very much greater. The law seems to contemplate the construction of such a canal. If Congress, he adds, directs that a sea level canal be made, that plan will be carried out; otherwise, the waterway will be one with locks, and the summit level will be at an elevation of 85 feet. In the report of the majority of the Commission the arguments for and against each of the two types of canal are fully considered. The majority say that a canal with locks will be a better canal than one at the sea level, because "(1) it provides greater safety for ships and less danger of interruption to traffic, by reason of its wider and deeper channels; (2) it provides quicker passage across the Isthmus for large ships or a large traffic; (3) it is in much less danger of damage to itself or of delays to ships from the flood waters of the Chagres and other streams; (4) its cost of operation and maintenance (including fixed charges) will be less by some \$2,000,000 or more per annum; (5) it can be enlarged hereafter much more easily and cheaply than can a sea level canal; (6) its military defense can be effected with as little, or, perhaps, less difficulty than

a sea level canal." The difference in first cost and in time for construction is also considered. For a sea level canal the estimates are \$247,000,000 and 12 or 13 years; for a lock canal, \$139,705,000 and 9 years. Mr. Stevens's reasons are substantially in accord with those of the majority of the Commission. He would prefer a high level lock canal to one at the sea level, even at the same cost in time and money.

### The Hepburn Railroad Bill

There is almost an even division in the Senate's Interstate Commerce committee on the question whether the Railroad Rate bill recently passed by the House shall be amended with respect to provisions for a review of the Commission's rate orders by the courts. A vote upon all pending bills was to have been taken on the 15th, but it has been postponed until the 23d. Among the President's advisers there is a difference of opinion. It appears to be admitted that the House bill provides for nothing more than action by the courts upon the question whether an ordered rate is confiscatory, and therefore at variance with the Constitution, altho last year's bill provided for a review to determine the justness or reasonableness of such a rate. No legislation could deprive a railroad or a shipper of the right to a decision as to the confiscatory character of an order, but it is said that an ordered rate might be unjust or unreasonable without being confiscatory. It is reported that Attorney-General Moody opposes any broadening of the House bill in this respect, and that Secretary Taft and Senator Knox are on the other side. Conflicting statements as to the President's

attitude have been published, but one appearing to be authoritative was given to the press on the 18th, the substance of it being that the President, preferring the House bill, held that provision should be made for a court decision (on appeal) as to the question whether an ordered rate is confiscatory or not, and as to nothing more; that is to say, that the courts should not be empowered to go further and to pass upon the justness or reasonableness of an order not confiscatory. The contest in the Senate will probably be upon this point.—The formal debate in the Senate has been opened by Mr. Lodge in an elaborate and notable address which has excited much comment. The evils complained of, he said, were (1) discrimination between persons (unlawful favoritism by means of rebates and various devices); (2) excessive general rates, and (3) discrimination between localities. Evils of the first of these classes were the greatest, and Government rate-making could not be a remedy for them. For the suppression of these evils, existing law should be strengthened by restoring the penalty of imprisonment (repealed by the Elkins act), by empowering the Government to inspect the accounts and in other ways to obtain evidence, and by making the statute applicable to private car lines, private terminals and sidings, and all other similar means of discrimination. There were few complaints as to our general rates, which were the lowest in the world. Reviewing the experience of foreign countries in Government rate-making, he asserted that the effect of it upon general rates had been to make them higher and inelastic. The effect here, he thought, would be the same. As to discrimination in rates between places, the experience of foreign countries showed that Government rate-making might easily cause injury by substituting discrimination due to political or sectional influence for discrimination due to economic forces. If interference with such alleged discrimination should be tried at all, it should not go beyond prescribing a maximum, "with the most absolute protection against hasty or prejudiced action thru provision for an appeal to the courts." There should be ample provision for a review by the

courts not only as to the question whether an ordered rate is confiscatory, but also as to the question whether it is "just and reasonable." This, he said, was the policy of the President, and for a proper bill embodying it he intended to vote, but with reluctance, because he had the gravest doubts as to the wisdom of Government rate-making, even in its most limited form. But Congress could not go too far in legislating against the intolerable abuse of rebate favoritism, thus avoiding "that worst of all disasters, Government ownership." He repeatedly insisted upon the importance of leaving the way open for judicial review as to the reasonableness of a rate. Mr. Lodge has been regarded as an intimate friend of the President. Correspondents of prominent journals assert that the President in conversation with Mr. Dolliver and others has since said that Mr. Lodge's definition of his policy was incorrect with respect to the scope of the judicial review for which provision should be made.

#### Attack Upon Railway Companies

The movement against the railway companies shows increased force at Washington and in State legislatures. In Congress, Mr. Tillman's sweeping resolution for an investigation of the combination of the coal roads and their alleged discriminations was passed unanimously by the Senate, and is pending in the House. Long statements from Governor Dawson and ex-Governor White, of West Virginia, have been published, asserting that the Pennsylvania (by means of the Baltimore & Ohio and the Norfolk & Western) controls the coal business of that State, owning enormous areas of coal land, and oppressing independent operators. Freight rates on coal, they say, have been more than doubled since the railroad combination was made. Independent shippers will not appeal to the State courts, owing to their fear of retaliation by the roads with respect to their business interests. Representative Hughes tells the same story. Governor Dawson intends to call a special session of the Legislature for railroad legislation. The reading of a memorial on this subject in the House at Washington was prevented, last week,

by a vote for adjournment. This memorial undertook to prove that the coal industry of Pennsylvania, Maryland, Virginia and West Virginia is absolutely controlled by the Pennsylvania and New York Central roads, with other roads which they virtually own, and that independent mine owners in West Virginia were at the mercy also of coal companies controlled by Senator Elkins, ex-Senator Henry G. Davis and Senator Gorman, who is Mr. Davis's cousin. The Virginia House has passed a bill for a passenger rate of 2 cents a mile. In Wisconsin the Secretary of State has asked the Railroad Commission to order a 2-cent rate. The Pennsylvania Legislature, in most cases by unanimous vote, has passed several resolutions aimed at the railroads. One provides for an inquiry as to a combination of the coal roads and their alleged violation of the Constitution by owning mines; another appoints a committee (of which an officer of the miners' union is to be a member) to examine the Reading Company's books; another asks that the special session be continued to pass a 2-cent rate bill. The Secretary of Internal Affairs has instructed the Attorney General to sue the Pennsylvania road for a violation of law and of the Constitution in exacting a deposit of \$10 whenever it sells a mileage book for \$20. Speaking last week in support of his resolution, Senator Tillman made a sensational address, denouncing the companies, asserting that they were known by Attorney General Moody to be in unlawful combination, and saying that the Hepburn bill was a sham. The people foolishly looked to the President for protection, he continued, but the President's chief advisers were Senator Knox, for years the counsel of the Pennsylvania road, "head devil of the program of monopoly," and Elihu Root, adviser of the magnates responsible for the "devilment." [Mr. Knox here said that he had never been employed by the Pennsylvania.] Mr. Tillman reviewed the President's relations with Paul Morton, "who had resigned with a confession of rebating on him," and then been promoted, placed with "his nice, clean record in charge of hundreds of millions of the savings, so to speak, of widows and orphans, and made

head of the life insurance organization in New York which had been the stamping ground for as dirty a lot of thieves as ever walked God's green earth." In his opinion, railway "devilment" could be prevented only by sending some railway millionaire to the penitentiary and putting stripes on him.—An important decision of the Supreme Court was announced on the 20th, relating to railroads that carry and sell coal taken from their own mines. The case was that of the Commission against the Chesapeake & Ohio road, to enjoin the carrying out of a contract for the sale of 60,000 tons of West Virginia coal for delivery at New Haven at \$2.75 per ton, while the price of such coal at the mine, plus the published freight rate, was \$3.92. By a unanimous decision of the court the company is now perpetually enjoined "from taking less than the rates fixed in its published tariff of freight rates, by means of dealing in the purchase and sale of coal." This affects all the coal railroad companies by making it impossible for a company lawfully to sell its coal at prices in which sufficient allowance is not made for the published freight rate and the ruling price at the mine.

#### The Treaty With Santo Domingo

It is now thought, in Washington, that the treaty with Santo Domingo is dead, or, at least, that it cannot be ratified at the present session. Four Democratic votes are needed, in addition to those of all the Republican Senators, but it appears that the only Democrats who will vote in the affirmative are Messrs. Patterson and McEnery. All doubt as to the attitude of Mr. Clarke, of Arkansas, has been cleared away by his signed statement that he intends to obey the decision of the recent caucus and vote in the negative. If any other Democrat regards the treaty with favor, he is restrained by the action of the caucus and by the disagreeable experience of Mr. Patterson. It is pointed out that in a Senate of 90 members a treaty can be defeated (thru the agency of a caucus) by a minority of only 21, because that is the number required to make the decision of the minority caucus binding with respect to the action of the 31 Senators whose

opposition is sufficient to prevent ratification. The sum thus far deposited in New York by the American collectors, for the benefit of Santo Domingo's foreign creditors, exceeds \$1,000,000.—President Caceres has been induced to withhold his resignation for a time. Leonte Vasquez, Minister of Justice, says it is the purpose of his brother Horacio, the President (his cousin), and himself, with their supporters, so to reorganize the government that the civil and the military branches of it shall be clearly separated in order that revolutions may be prevented.

#### Washington Notes

Miss Alice Lee Roosevelt, eldest daughter of the President, and Nicholas Longworth, Representative in Congress from Cincinnati, were married in the East Room of the White House on the afternoon of the 17th, by Bishop Satterlee, of Washington. A thousand guests had been invited. Following the ceremony, Mr. and Mrs. Longworth received in the East Room, and the President and Mrs. Roosevelt in the Blue Room. The wedding gifts were almost innumerable, and among the givers were the rulers of European and Asiatic nations. The value of them all is said to exceed \$250,000.—By a vote of 38 to 14 the Senate has passed the new Ship Subsidy bill. Five Republicans (Messrs. Spooner, La Follette, Dolliver, Burkett and Warner) joined the Democrats in the negative. It is not expected that the bill will be passed in the House at this session. It provides for a naval reserve of 10,000 from the merchant marine, to be paid by annual retainers; for a subsidy of \$5 per ton to cargo vessels in the foreign trade; and for the establishment of thirteen new contract mail lines. Expenditures for ten years under this bill would be about \$57,000,000.—George H. Beavers, formerly Chief of the Bureau of Salaries and Allowances in the Post Office Department, who was indicted with many others in 1903, for conspiracy to defraud the Government, pleaded guilty last week and was promptly sent to the penitentiary in Moundsville, W. Va., for two years. Six untried indictments against him will be dropped. Beavers was indicted jointly with George E. Green, of Bingham-

ton, N. Y., formerly a State Senator, who is soon to be tried. Exposure of the postal frauds was followed in 1903 by 43 indictments. Eleven persons have been convicted and final disposition of 24 indictments is still to be made.

#### Tariff War Probably Averted

Altho the new German tariff goes into effect on March 1st, the imposition of its maximum rates upon imports from this country will probably be deferred for one year, owing to the German Government's desire to avoid a tariff war and to give us ample time for making a reciprocal agreement. The new tariff has maximum and minimum rates, and the latter are granted only to seven European countries, which have given similar concessions to Germany in treaties recently negotiated. Even these minimum rates are higher, in most cases, than the old ones upon our principal exports to Germany. The maximum rates are very much higher. Our Government has taken no steps to offer tariff concessions in return for the minimum rates, because the Senate is unwilling to ratify any treaty of tariff reciprocity. It appears, however, that Germany is willing to accept, for a time, certain modifications of our regulations concerning the invoicing and appraisement of imported German goods. These regulations her merchants regard as vexatious and unjust, and they can be modified without new legislation. The proposed modifications relate chiefly to methods of making valuations and of reappraising in case of undervaluation by the German exporter or the American importer of German goods. Germany asked that the hearings in cases of alleged undervaluation should be open, in order that the importer might cross-examine the witnesses against him, but the President was convinced by Secretary Shaw that such a change could not safely be made, because the evidence needed by the Government could be obtained only in confidential proceedings. On the 18th, a bill giving the lower rates to this country for one year was laid before the Reichstag by the Imperial Chancellor, who had said at a private conference to parliamentary leaders who opposed this concession that the political situation made it most desir-

able that Germany should be on good terms with the United States. The passage of the bill is expected.

### Labor Questions

At the conference in New York, on the 15th, between the presidents of the anthracite coal railroad companies and the leading officers of the miners' union, no final action was taken. Mr. Mitchell, president of the union, said that the miners had not yet formulated their demands. Thereupon the whole matter was referred to a joint committee, each side being represented by seven men. This committee will report to the full conference. The meeting was a peaceful one, and both parties appeared to be in a conciliatory mood. It is expected that the miners will demand an eight hour day, an increase of wages, recognition of the union in a trade agreement, and some reforms in the methods of the Conciliation Boards. There is no indication that the operators will grant any one of these demands, except the last.—President Charles H. Moyer and Secretary William H. Haywood, of the Western Federation of Miners, with G. A. Pettibone, formerly a member of the executive committee, were arrested in Denver on the 18th, charged with having been accessories in the murder of ex-Governor Steunenberg, of Idaho, who was killed by a bomb on December 30th last. It is said that Harry Orchard, who admits that he killed Steunenberg and is now in jail, has made a confession that involves the arrested officers in this crime and in a plot to assassinate Governor Peabody and Chief Justice Gabbert, of Colorado, and that also connects them with the murder of fourteen non-union miners by an explosion at Independence, Colo., in June, 1904. The three men were at once taken to Idaho and placed in prison there. It is asserted by the prosecuting attorney that he has evidence enough to convict all of them.

### Marking Cuban Battlefields

Thousands of Cubans were present, last week, at the unveiling of the monument at El Caney, erected in memory of the American soldiers who fell in the siege of Santiago. Lieutenant General Chaffee, who presided, spoke of the

army's achievements and of the good government now maintained by the Cuban people. General Andrade, who represented President Palma, expressed the gratitude of Cuba. In any emergency, he said, the United States could rely upon the Cuban republic as a military or commercial ally. In attendance were two companies of Cuban artillery, two of Rural Guards, and a battalion of United States marines. After the ceremonies, the members of the visiting Commission were entertained at dinner by Cuban officers, and a ball was given by the two clubs of Santiago. Another monument has been placed on McCalla Hill, at Guantanamo, and dedicated to the marines who fell there. Still another marks the first landing place at Daiquiri.—The Liberal party, in convention, has adopted resolutions asserting that the recent national election was vitiated by dishonesty and intimidation, and demanding a new one.

### The Germans in Africa

It is not true, as reported, that the rebellion against German rule in Southwest Africa has been crushed. The work of pacification in the north of the colony is making good progress, and order has so far been restored that farmers and others are able to resume their normal pursuits. The situation in the south, however, remains unchanged, and there is no prospect of a cessation of the military operations so long as the Hottentots, with Morenga at their head, remain at large. Count Götzen, the Governor of the colony, has presented a report as to the occasion of the outbreak. He says that "Colonial wars will always attend a colonial policy," and that dissatisfaction is inevitable among savage tribes with the progress of civilization. In this case the military forces were insufficient, and the witch doctors stirred up the people. Among the various innovations introduced by the civilizing power which were particularly resented by the natives are enumerated the restrictions imposed upon slavery, the hut tax, the ordinances for the preservation of woods and game, the compulsory repair of roads and highways, the tax on beer, the compulsory cultivation of a larger variety of ground crops, and, finally, the system of compul-

sory education in European schools and of compulsory work on European plantations which had been introduced in certain districts. Count Götzen seems to regret that international agreements prevent the importation of brandy and spirits, which, in his opinion, constitute the sole effective inducement by which the native can be persuaded to work. The introduction of the universal system of compulsory native labor requires a far larger staff of officials than the budget would allow. The natives do not see why they should be compelled to labor, or be forced to pay a hut tax. Meanwhile, in German East Africa, as well as West Africa, there is trouble near the northeast end of Lake Nyassa. There has been severe fighting, in which a German captain has been killed and his native troops massacred. The situation is reported as grave, and strong reinforcements are called for, or all northern Nyassa land will be in rebellion.

#### The Opening of Parliament

By a piece of laudable self-effacement on the part of one of the Conservative candidates for a seat from London, Mr. Balfour, defeated in the district for which he had chosen to run, is now seeking a seat in Parliament, and has been recognized as still the titular leader of the Unionists. But this is because Mr. Chamberlain had refused to take the position, and, still further, because Mr. Balfour has absolutely committed himself to the substance of Mr. Chamberlain's position. Henceforth, he is pledged to a tariff on foodstuffs, and a general preferential tax in favor of colonial products. The small body of Free Trade Unionists, led by the Duke of Devonshire, whose organ is *The Spectator*, are delighted that Mr. Balfour has at last distinctly made his choice; hitherto he has been on the fence. Now, says *The Spectator*, all sophistries and evasions have been swept away, and there is free space to reconstruct the Unionist party on a free trade basis. The chance for Chamberlain's policy before the people does not at present look bright. A change might be expected with hard times, but business is now extremely good, and the conditions are not favorable to the substitution of protec-

tion for free trade. Inded, it is not likely that the question will come to a head for a long time, as the free traders are now in an immense majority in the new Parliament. And yet it is by no means a fact that protection was the principal or only question before the voters, and it can only come before another Parliament. It is understood that the first considerable question will be that of religious instruction in the schools. A bill will be introduced, and doubtless passed, which will take from the Church the power to appoint teachers for any schools supported by public money; and the Anglican Church papers are loaded with discussions of what shall be done. They anticipate the necessity of supporting their Church schools, just as Catholic parochial schools are supported here. When it comes to a vote the Conservatives will get no help from the Laborites, who are quite as bitter against the Church schools as are the Nonconformists, of whom there are 180 in the present Parliament, a much larger number than ever before.

#### The King's Speech

King Edward himself read the King's Speech to Parliament. It referred feelingly to King Christian's death. That portion which excited most interest, and, perhaps, surprise, was that which related to Ireland. It said:

"My Ministers have under consideration a plan for improving and effecting economies in the system of government for Ireland, and for introducing therein means for associating the people with the conduct of Irish affairs.

"It is my desire that the government of the country in reliance upon the ordinary law should be carried on, so far as existing circumstances permit, in a spirit regardful of the wishes and sentiments of the Irish people, and I trust that this may conduce to the maintenance of tranquillity and good feeling between the different classes of the community."

This evidently means less than home rule, which Mr. Redmond, speaking for the Nationalists, said was the only thing that would satisfy the Irish; but as a step in the direction of "devolution" it is likely to be accepted until full home rule and a local parliament are allowed. There was the promise of a bill to settle the religious schools question, but this was fully anticipated. A change of policy was outlined for South Africa. The inter-

mediate stage of representative government in the Transvaal has been withdrawn, and there will be a new constitution drawn up, allowing fuller self government. Equally, in the Orange River Colony, a constitution will grant representative self government. No further licenses for the importation of Chinese coolies will be granted until after the new constitution has been accepted in the Transvaal and the local parliament has had time to act. As to the Moroccan Conference, the language was colorless, but hopeful. In the absence of Mr. Balfour, who is contesting his seat in the fish market region of London, Mr. Chamberlain had to speak for the Unionists, and he expressed the hope that the Government would support the French, and that France would be allowed to represent the Powers in maintaining order. He spoke with great vigor and was heartily applauded. The King's Speech referred gratefully to the conclusion of peace between Japan and Russia, "due to the initiative of the President of the United States."

#### Chinese Conditions

Rumors of further massacres in China have not been confirmed, and from mission boards and other sources it is reported that nothing especially alarming has yet appeared. And yet there is no little anxiety. The threatened danger is made the occasion for the decision of the Russian Government, if we may believe reports, to leave the greater part of the Russian army in Manchuria. It may be, however, that doubt as to the loyalty of the army, since the disturbances at Vladivostok and elsewhere, is in part the reason. Generals Linievitch and Kuropatkin have been recalled, and will be in disgrace, it is said, because of their failure to quell the disturbances with severe measures. Japanese public opinion anticipates trouble, and the journals have been urging the Government to ask the Powers to warn China of the danger to which she is drifting, the United States being particularly asked to do this. A reason for Russian anxiety in the East is in the fear that China will sanction emigration into the Russian Amûr of immense bands of Chinese; and also that China will try to

overthrow the Russian influence in Chinese Turkestan. The guards of the foreign legations in Peking have been increased by an additional German field battery. Our Government has published reports as to the extent of the boycott in China. In the southern provinces the boycott is general and severe, American trade having very nearly been destroyed even as far as the Straits Settlement. Even if Congress should grant all that the Chinese ask it would take years to regain the lost trade. In Northern China the conditions are not nearly so bad, but the boycott is extending. It is true that during the year the amount of American imports has increased, but that was due to the opening of Manchuria. The Standard Oil sales have been almost entirely stopped, due to the effect of trade competition to develop the boycott. The student class and the commercial guilds are using terrorism and threats against the merchants, who regret the movement, which, it is declared, the Chinese Government could squelch if it really wanted to try.

#### The Hungarian Parliament

Great interest has attached to the expected meeting of the Hungarian Parliament, owing to the failure of negotiations with the representatives of the Hungarians in their interview with the Austrian Emperor. It was understood that the Emperor would dissolve the Parliament on its first meeting and order a new election. This he has done, but it had to be done with force, soldiers being called in to clear the building. But the lower house had already hastily agreed not to accept the rescript of dissolution and had adjourned to meet the next day. When the resolution not to receive the rescript was announced the military officers came in and read it, but the members had passed into the galleries and elsewhere. The reading was a mere formality. The reader's voice was drowned by abusive shouts from the galleries and the singing of the Kossuth hymn. Then the police and troops cleared the galleries, corridors and offices. There was no resistance or disturbance, everybody moving to the exits in a most orderly manner. The doors were then

locked and sealed by the authorities to prevent a meeting Wednesday, if it is attempted, which is threatened. The House of Magnates accepted the rescript, which the president read. The dissolution is a shrewd device of the Austrian Emperor, and will much disconcert the Hungarians, under Kossuth and Apponyi, as the rescript provides for universal suffrage, which the Hungarians do not want, as the present law is very favorable to them. The Magyars constitute less than half the population of Hungary, yet they hold all but about 60 of the 453 seats in the Hungarian House of Deputies. This is caused by the restricted suffrage and the arrangement of electoral districts, and the fact that only the Magyar language can be used in Parliament, except as the 40 Croats may use their tongue. Under the new provision it is believed that Germans, Rumanians, Croats, Serbs and other representatives of the races will be chosen, and the power of the Magyar element much reduced.

#### The Russian Cabinet

The Russian crisis, at present, is as to the power of Count Witte to retain the confidence of the Czar. The conflict is between him, as the friend of constitutional methods and the Duma, and Minister of the Interior Durnovo, who is the apostle of absolutism and the sworn enemy of the Duma. It seems extraordinary that both can remain in office. It is reported that Witte offered his resignation three times last week, but the Czar refused to accept it. The reason may be the sympathy of the Czar with Witte's reforms, or it may be that it is absolutely necessary to borrow money, from France or elsewhere, to the extent of \$400,000,000 during the next two years; and the French bankers will not lend the money unless the Duma is called, and the Duma endorses the loan as well as previous loans. The bankers also have faith in Witte, and would have him retained in power. But the Czar, who will not relieve Witte, equally refuses to remove Durnovo. The result is that four other members have resigned. One was Minister of Communications, who had just returned from an examination of the railroads, and who reported that it was im-

possible to maintain an efficient service while the police were jailing the best and most intelligent of the railroad operators, and that he quits his post in disgust. The Minister of Commerce has severed his connection with the bureaucracy and will come out as a full fledged parliamentarian. The leadership of the party of commerce and industry, one of the most important factions of the constitutional monarchist federation, has been offered to him, and he will be its candidate for the National Assembly. The Minister of Agriculture resigned because his project for selling land to the peasants was turned down. It is reported that Witte has discovered and foiled a plot hatched by Minister Durnovo and Generals Trepoff and Bogdanovitch to incite the people to murder the Liberals and Jews. He went to the Czar with the facts and made a stormy protest, seeking the removal of Durnovo, but without success. The latter has taken the dangerous step of instructing the provincial authorities to levy the taxes forcibly. The Duma is still set to meet April 28th, but it is said it will be immediately prorogued. In all the parties there is a steady movement toward a more liberal position.

There is no special trustworthy **Morocco** news from the Conference on the Moroccan situation at Algeciras, but a plenty of meaningless rumors and conjectures. There is no sign that France and Germany want the United States to act as mediator, as has been suggested. France originally suggested that she and Spain receive a double mandate to organize a police system for Morocco. This proposition Germany rejected on the ground that it would give France a preponderance throughout Morocco, and proposed instead that the Sultan organize a police with the help of instructors from nations of the second rank, which would be supervised by the diplomatic corps at Tangier. This, in turn, was rejected by France. There the deadlock stands. The interview of the German Emperor, at Copenhagen, with the representative of France at the funeral of King Christian gives rise to the hope that an agreement will be reached outside the Conference.

The long reign of Christian IX, late King of Denmark, bids fair to be paralleled by his son, the genial King of Greece, who has already reigned forty-two years. His son, Constantine, can hardly hope for a long reign. But he has already left his mark in the administration of various affairs of the realm. Realizing the weakness of his army, in 1897, he delayed as long as possible taking the field as Commander-in-Chief. He had as hard a task as can fall to a commander. Outclassed by the Turks in quantity and quality he saved his right flank from being turned by skillfully retreating. His report, published after an interval of a year or more, told with unflinching veracity that he virtually had no real army. He has a happy home life. His wife, Sofia, sister of Emperor William of Germany, is sweet and stately at the same time. Their home life is a pattern to all royal families. They have heirs to the throne of much promise.

The Crown Prince of Greece

# The Olympic Games

BY THE CROWN PRINCE OF GREECE

[The following account of the program of the approaching Olympic Games, which are to be held in Athens from April 22d to May 2d, of this year, has been prepared for us under the direct supervision of the Duke of Sparta, Crown Prince of Greece, President of the Committee, and is published with his authorization.—EDITOR.]

UNDER the head of athletic sports will, in the first place, be given a series of five flat races, sprints of 100, 400, 800 and 1,500 meters, the series to close with the grand Marathon Race, covering a distance of about 25 miles. It will be run on the road stretching from Marathon to Athens. Competitors must have completed their twenty-first year to take part in this event.

Then there will be hurdle races, jumping, pole vaulting, throwing the discus (both in the Greek style and in the ordinary way), putting the shot, etc. There will be the hurling of the javelin and wrestling in the Greco-Roman style, a tug of war between teams of eight, and rope climbing, hand over hand, against time.

The gymnastic display will be very complete, and added interest will be given to this part of the program by the admission to these competitions of teams of at least eight members.

There will be matches of lawn tennis and football. But in this last sport Association football will alone be admitted. Both Rugby and American football are excluded.

It is expected that fencing will be very brilliantly represented. There will be bouts with foils, swords and sabers, and matches in which teams of four—each team to be made up of the same nationality—will compete, both with swords and sabers.

The nautical sports should be full of interest. Here will be swimming matches of 100, 400 and 1,600 meters; diving

from a height of from 4 to 12 meters, and a number of rowing events, some of which are rather out of the common. Thus, there will be a race of pair-oared gigs, two oarsmen and coxswain, over a straight course of 1,000 meters; another over a course of 1,600 meters; gigs, four oars with coxswain, over a straight course of 2,000 meters; man-of-war's gigs, six oars, over a straight course of 2,000 meters, and finally, a race of man-of-war's long boats, maximum sixteen oars, over a 3,000-meter course.

The section of shooting is very complete in our program. Here are the numbers:

1. Any recognized army rifle, 300 meters, standing or kneeling.
2. Gras army rifle, 200 meters, standing or kneeling.
3. Any rifle, 300 meters, standing or kneeling.
4. International teams. Any rifle, 300 meters. Standing, kneeling and prone. Teams of five of same nationality.
5. Any recognized army revolver, 20 meters.
6. Army service revolver, modèle Chamelot-Deloigne 1873-1874, 20 meters.
7. Any revolver, 25 meters.
8. Any revolver, 50 meters.
9. Duelling pistols, 20 meters, with deliberate aim.
10. Duelling pistols, 25 meters, at command.
11. Sporting shotgun, clay pigeons, singles.
12. Sporting shotgun, clay pigeons, double.

The bicycle races will take place on the track at Phaleron, just south of Athens, on the coast. Among other events under this head will be a paced race of about 12 miles, but motorcycles will not be permitted to be used. This section of the program will close with a

grand race, without pacers, over the high road from Athens to Marathon and back, a distance of about 50 miles.

I may close this brief account of our program with a few remarks concerning some of the general regulations governing these Olympic Games.

In the first place, amateurs only are allowed to enter, and our definition of amateur is that which prevails generally

in the world of clean sport. The amateur is allowed to accept his traveling expenses while abroad. Competitors who desire to participate in the games must be qualified as amateurs by recognized authorities. There will be prizes—cups, medals, diplomas, etc.—awarded to the first, second and third winners in each event.

ATHENS, GREECE, FEBRUARY, 1906.

## Baron D'Estournelles de Constant

BY HAYNE DAVIS

[Benjamin D'Estournelles de Constant is the leading authority in the world on arbitration. He was a member of the First Hague Conference, and is now one of the French Members of the Hague Court. He is organizing the representative men of every nation into an International Federation, whose motto is, "My Country's Good Thru the Peace of the World," "*Pro Patria per orbis Concordiam.*" The Arbitration Group in the French Parliament, organized by him, has enabled France to conclude many treaties of arbitration, thru the exchange of visits by delegations from the French and various other European parliaments. Baron D'Estournelles has invited a delegation of one hundred from the United States Congress to visit Paris and make a tour of France as guests of his group. We have not heard of their either accepting or returning this courtesy.—EDITOR.]

AFTER the Interparliamentary Union, at its thirteenth session, had accepted the principle of the American proposals made at Brussels, namely (1st) an International Congress or Council to convene periodically for discussion of such international questions as current events make paramount, and (2d) jurisdiction for the Hague Court over questions included in treaties of arbitration, I felt constrained to see Baron D'Estournelles, the great international Senator of France, who has been preparing Europe for the acceptance of those ideas. He had been prevented from attending this memorable session of the Union, which took place in the same city in which the council of war that

resulted in the overthrow of Napoleon at Waterloo was held only ninety years ago.

I left Brussels on the 13th day of September, the anniversary of the passage of the "Resolution of St. Louis" by the In-

Baron D'Estournelles de Constant.

terparliamentary Union, which called for the second Hague Conference, to consider, among other things, the advisability of establishing an International Congress to convene periodically. Upon my arrival at La Flèche, the railroad station half an hour from Baron D'Estournelles' home at Creans, I was surprised to find that the district represented by the International Senator of France is intimately

associated with the International King of France in Shakespeare's time, the King

who created modern France, and who conceived and elaborated all the details of a world wide political organism which the twentieth century is to form and perfect.

Here, in the center of the main square of the city, is a statue of Henry the Great. One block away is a fine building, now used as a school for sons of army officers, but originally built by Henry, and part of it being the home in which his mother lived.

On the way to the Château of Clermont-Creans — D'Estournelles' country home—we passed a place that once belonged to the Duke of Sully, the Prime Minister of Henry the Great, and the only member of his cabinet to whom he dared disclose all parts of this grand design.

For some time Baron D'Estournelles had been putting forward the idea of a Union of Europe, somewhat vaguely, and had been taking practical steps along definite lines for drawing France and par-

ticular nations closer together, with the result that there are now several general arbitration treaties between France and other European nations, and that an opposition to his Internationalism began to make itself heard. This was while he was a member of the lower House of the French Parliament. The seat for his district in the Senate becoming vacant, he made a campaign for it last year on the issue of sound internationalism and narrow nationalism, and was elevated from the House of Deputies to the Senate of France by the people of this district, because he has had the wisdom and the courage to take an advanced stand in the direction of realizing the grand design of France's greatest king. A century ago France and the United States, born of the same movement of ideas, co-operated together for establishing political liberty for individuals, in North America, in South America, and then France became the St. Paul of this new dispensation in government, preaching and practicing its

Clermont-Creans. Château of Baron D'Estournelles de Constant.

In the Garden of Clermont-Creans. Miss Jones, English Secretary; Marguerite D'Estournelles, Baron D'Estournelles, Mlle. D'Estournelles, Baroness D'Estournelles, Arnaud D'Estournelles.

principles in the very precincts of the proudest monarchies. Having maintained herself against the conspiracy of all Europe to stamp out these principles by force of arms, France was now honoring and strengthening the man who is to take a leading part in the realization of political liberty for nations, by executing the grand design of her greatest king. The essential idea of this grand design had just been made a part of practical world politics by members of the United States Congress and of eighteen other national parliaments. And on the very scene where Henry the Great and Sully the faithful worked out all its details a century ago, I found this great International Senator of France forging the tools for its actual execution. His workshop is full of historic interest.

In the front yard, and only a few feet away from the château, I found an ancient fort in a perfect state of preservation, and separated from the road by the moat, in which the water from the Loire is still seen. It was here that the desperate, prolonged and victorious stand against the English was made, which

saved France from English dominion and England from the almost inconceivable difficulties involved in trying to govern France from beyond her own borders.

On the other side of the château, and only about fifty or one hundred steps from it, runs the Loire, which divides Northern from Southern France, and has been the scene of many events full of deep, of romantic interest.

This retreat on the Loire gives him a refuge from the political turmoil of Paris and also access to sources of wisdom and strength for fulfilling his part in the world's political work.

He admitted me into his sanctuary, and showed me the weapons he has been forging and laying aside for use at the proper moment—all weapons of the mind, clearly discerned political and economic truths, ready for placing in the hands of an organized army of fine intellects, when the moment for action comes.

Henry the Great proposed to execute the Grand Design by "Force of Arms." Baron D'Estournelles proposes to rely on the force of principles, faithfully pre-

sented to the people of his age and country. And he is planning and organizing his army—the Arbitration Group, the Committee of International Conciliation, composed of the representative men in every walk of life in every nation, the International Review, etc.

The night before I left the chateau at Clermont Creaus I asked Baron D'Estournelles the following questions, and have his permission to publish his replies, which were given over his signature:

Question. Is it desirable, in the interest of justice and of peace founded on justice, that a body of men be continually studying questions of common concern to all nations, and that they be freed from all other business cares?

Answer. Yes, greatly desirable, and more and more urgent.

Question. How often should they assemble together to discuss and agree upon improvements that are ready for realization in the body of international law and in the method of its administration?

Answer. This is a detail.

Question. Should they assemble at one place always, or would it be better that they meet in the various capitals of the world in succession?

Answer. In various capitals; that would be the best way to advertise and acclimatize the institution.

Question. If their resolutions are limited to declarations of general principles for the conduct of international intercourse, would it not be desirable to have them acknowledged as binding rules of the law of nations, unless they are vetoed by some nation affected, thus putting national inertia on the side of progress?

Answer. Certainly, if possible.

Question. Is there any better way of selecting such a body of men than for each nation to select its own members in the way it may choose, and to pay them for their services?

Answer. Yes, each nation ought to choose her way of selecting them.

Question. How many members would you consider desirable from each nation?

Answer. This is a detail.

Question. Would it be well to create such a council as soon as nations doing one-half of the world's international trade agree to appoint and pay representatives in it?

Answer. This may be a good idea. Never wait too long for the others when you want to start a new idea.

Question. Will France join the United States in such a Council, regardless of what other nations may do in regard to the same?

Answer. I wish they would follow, and I would certainly advise it. I suppose all foreign countries, and especially France, would be rather embarrassed to refuse if the United States proposed to appoint such an International Council. This council, of course, being

for study and not for execution. In any case, the United States Government would have, once more, all the moral benefit of such an initiative, and possibly public opinion would press upon the other governments and oblige them to follow. I would certainly advise the French Government that way.

*St. Estournelles de Constant*

He says Roosevelt is afraid of nothing on account of its magnitude and shrinks from nothing on account of its difficulties; and that such an Executive is needed for the initiation and effectual performance of this necessary work in world politics.

He thinks the German Emperor is another man worthy of carrying this idea into actual effect. This is the political work that belongs to the most daring Executive of our day. The Czar has the honor of having taken the initiative for creating the Hague Court. Roosevelt started its wheels going and called the second Hague Conference. Japan is covered with glory, France and England have centuries of achievement which History will weary herself telling about. The new German Empire has but just come on the scene, and one great act of the world's political drama is yet to be played in the organizing of all the nations into one body on a proper basis. Napoleon wanted to do this, but could not do it one hundred years ago. The German Emperor could do it now, but not by force, and Roosevelt could do it. The world will watch them as this movement passes from judges and lawmakers to the executives of the world.

With such men as D'Estournelles in French, Appongi in Hungarian, LaFontaine in Belgian, Stanhope and Cremer in English, Horst and Lund in the Norwegian, Beckman in the Swedish Parliaments, and others of the same character in every national Parliament, waiting anxiously for some executive to declare for this plan, in order to begin a war, with him as leader, on its behalf; with a Russian National Parliament in process of formation, and a Chinese commission in Europe and America studying ways and means of adapting European and

American constitutional government and Western organizations to Chinese needs; with all the world in a disturbed formative state of mind, this seems the psychological moment for some Executive to declare for a plan, which when fully executed will do away with the European menace to Asia and the Yellow Peril to Europe.

The Baron is a small man, probably not more than 5 feet 5 inches in height, but you do not think of size when talking with him, but of high aspirations, of world-wide interests, of profound and practical ways of advancing toward their

the world's political conflicts, that he saw the necessity of substituting law for war, before permanent prosperity could take the place of periodical devastation. He renounced the brilliant diplomatic possibilities opening before him, made his way into the French Parliament, and began the ascent to a place of power at Paris, in order that he might become the maker of his nation's laws and policies, instead of the executor of laws and policies made by others.

His home is itself a miniature of what he hopes to see accomplished on a world-wide scale. Accord, concord, co-

By the Church at Clermont Creans. Baron D'Estournelles, Marguerite D'Estournelles.

realization. With him, as with all wise men, you cannot escape from facing the practical way of attaining anything which you hold up as an ideal. His life is a remarkable instance of seeing a great light and persistently pursuing the road that leads to it.

Standing on the summit of aspiration for all men's good, he saw what must be done, and instead of remaining in the clouds of contemplation he came down into the midst of men, faithfully to fashion a structure "according to the pattern shown to him on the Mount."

It was when he was Ambassador of France at London, the seething center of

operation between all nations and particularly between the great nations is foreshadowed at Clermont-Creans. His secretary is Miss Jones of England. His two-year old and therefore best beloved child is in the care of a German lady. Clearly there is no bitterness at Clermont-Creans toward either the ancient or the modern enemy of France. He looks to America for the solution of life's problems. It is quite natural therefore that the mistress of Clermont-Creans (Baroness D'Estournelles) should be an American.

While I was there a communication came from the great French Socialist,

Jean Jaures, who can carry a French Assembly as Mirabeau used to do. In it he suggested this idea of America's taking the lead in a world-wide effectual plan for substituting law in the place of war. This was not accidental or trivial. It proves that the same spirit which sent these American Congressmen to Brussels to make this proposition is working in France, everywhere, to ensure its acceptance. A Revolution or an Evolution is preparing to sweep the whole world in its grand movement.

There is bound to arise an International Congress whose jurisdiction extends to the furthest limits of human intercourse—the outward symbol and ef-

fectual arm of a political body, composed of all nations, perfectly preserved as individuals, but fitly joined together as members of one world-wide organism.

This is what the International Senator of France is preparing the way for. It is this light to which he is looking, thru the gloom which still hangs over beautiful France, after so many centuries of striving to realize the highest idea in all things. Thru world-wide political organization in the right form France and all nations will enter upon the era of individual security and world-wide peace and plenty. Baron D'Estournelles will be rightly recorded as one of the great factors in the realization of this great work.

NEW YORK CITY.

## A Southern Woman's Impressions of New York City

BY MRS. L. H. HARRIS

PERHAPS nothing is more offensive to the Southern people than the impressions which Northern visitors often receive of the South. I do not know who is to blame, whether it is the prejudiced mind of the visitor, or if possibly there really is something wrong with our manners, morals and institutions; but I do know that it is very like laying a fuse across Mason and Dixon's line when some Yankee, gifted with the critical spirit and the missionary instinct, comes down here to see what is the matter with us and to propose a remedy which is utterly foreign to our tastes and to the emergencies of the situation. In any case, I do not think there has been enough reciprocity between the two sections along this line. Doubtless the North would not have gone as far wrong as it has gone in many directions if the South had showed the same chastening rod spirit toward it that we have endured for fifty years. Our only excuse is that circumstances placed us in an awkward position for such a business. We have

been too much embarrassed explaining and defending our virtues to attempt the more arduous task of imparting them to the North in the same proportion that we have been obliged to receive offensive moral benefits from that germinating region of impractical ethics.

But chances change, and the time has come when we can afford to do some missionary work among these people, and it is a duty which the author of this article is resolved never to shirk.

I visited New York city not long ago, and it is my purpose in this article to give a sincere impression of what I saw and felt, with the hope that it may lead to some social contrition and to a little sense of kinship. What I have to say does not apply to the "Four Hundred," for I did not meet them. All the people I met were well bred and respectable, and most of the rest seemed to be doing the best they could. But they gave the impression of being strangers to one another and of preferring the lonesomeness of that position. I did not see, during

the whole period of my visit, any one meet another whom he knew or at least was willing to recognize on the street or in any public place. This is not the case in the South. The writer lives in the most fashionable residence portion of a large Southern city, and we all trust one another enough, morally and socially, to speak when we pass on the street and to exchange neighborly courtesies between times. It is bucolic, of course, but, after New York, I have come to think that it is better to be bucolic than to be dead to one another. Besides, it is natural, and that is what shocked me about the people there. They have no natural relation to each other, but it is merely political, intellectual, or ethical. I suppose, of course, that fathers and mothers are related to their children, but this is unavoidable. I refer to a broader sense of kinship which appears to be lacking.

At one time during my visit I was in a large building, where every flat was occupied by distinguished scholars, college professors and other delightful people. But none of them ever spoke to the others, and the implication was that they did not wish to know one another. If it had been a tenement house east of the Bowery, where one could not know whether his neighbor was a thief or a gentleman, I could have understood this childish reserve; but where everybody was good, honest, and even famous, what did it mean? Was it simply nervousness, the hermit protest of fine souls hard pressed by the contention and confusion of a great city's life? A well-known author told me that he had drawn his pistol to shoot his next story neighbor (who was an equally distinguished lawyer, by the way!) when he saw him climbing the fire escape to his apartment at two o'clock one morning. That was an unconventional way, to be sure, for a man to arrive at his own residence, but think of the unexpected fierceness, the savage sense of self-preservation developed in the heart of a writer, who is the author of some of the most tenderhearted novels published in this country, by so trivial an incident as the confidential ascent of an inebriate neighbor. In the South we don't expect robbers so much. If we saw the legs of a man on the fire escape outside our window at such an hour, we would have

known at once that they belonged to the lawyer on the next floor. We would not have thought of robbers until we had considered the probable condition of our friend.

Another thing—a Southern city of 125,000 inhabitants will not furnish on an average more than 500 or 600 people a night to places of amusement, but I gather that everybody who possibly can goes to the theater in New York, if not often, at least several times every season. This is the way they manifest their interest in human nature, watching it kick its high heels before the limelight, where it sings, laughs, weeps and kisses, to be seen of men. I reckon they take turn about doing the settlement home work and arranging their church and political affairs, but they must all have acquired a theatrical taste for human emotions. And this set me to thinking. What is the romantic standard of life in New York? In the first place, how would a young man find time, amid so many distractions, to fall in love? And if he did, how would he court the woman? In novels of New York life it is almost always done at week-end house parties between luncheon and dinner, behind the scenes of amateur theatricals, and in other artificial surroundings. But it must be a very sad thing to be obliged to make love to a woman according to the opportunities and customs afforded by the life of this terrible place. The man could send her hothouse flowers in the morning, and he would go to the theater with her in the evenings. Sometimes, I suppose, the poor things walk in the park, which is a pathetic substitute for a country lane, where all courtships should begin and end. The point is, that the temptation to flank the dear situation with some outside diversion would be almost irresistible in a place where so many diversions are created apparently for the purpose of helping people forget. And the result would be that two such lovers could never be as near all-in-all to one another as if they had loved and married in some quiet place. And the trouble is that they may not even desire to be all-in-all to one another. They are not as close to begin with as nature and love allow, and so it is easier for them to come apart. This, I think, is one reason why more people

living in cities ask for divorces than those who live in the country or in small places. There are so many refuges for the offended heart that it is easier for them to hold out against one another.

But returning to this matter of cruel impersonality which the people there show to one another: On the street cars they continue their occupations, or do anything rather than take a silent, well-bred interest in one another. I am not a vain person, but I am a human being, blood-kin to every other human being of my own race, and the most wounding thing I ever suffered at large was riding day after day across that city in cars with men who were writing books, mumbling lectures or sermons, or casting up their accounts; with women who were making little darning-needle notes in ugly, serviceable looking blank books, and with every one of them rushing in and out as if they were in a rage. I did not see any one killed, but I do believe if such a thing had happened the survivors would have gone on without casting the mercy of a glance upon the poor remains. That, I take it, would have been the newspaper reporter's business and everybody would go on about his business, being sure of the details in the afternoon paper.

When we passed along the streets, my friends showed me the places of historical interest, the fine buildings, the art galleries and monuments, but no reference was ever made to the people who were spinning around us like beads upon a mighty beaker. I even felt that it would be bad form, conversationally speaking, to notice them as individuals, altho it is perfectly proper to discuss them as "masses," "classes," etc. At last I ventured to express some curiosity about the people of the city, and my friend at once replied, "Yes, we will go down on the East Side and see them some night." And he was no fool, either; he was a distinguished man who had lived in New York several years, but he unconsciously proved that it is possible for people to make so many concessions to conventions and to the great composite image of humanity as to obliterate any incisive impression of a separate personality. The ten thousand phantoms on Fifth avenue, all dressed

alike and showing the same kind of hurry, or pride, or weariness in their faces, had ceased to impress his jaded mind. They are the automatons of the city's civilization. But real, live human beings, I understood, were still to be found on the East Side—bedraggled, hungry, ignorant, wicked, but untamed, and capable of protesting their type and individuality, with their fists, if necessary.

And it is astonishing how the fever of the terrible place affects even the facial expression. A man, who showed himself to be phlegmatically capable of happiness among the Connecticut hills all summer, wore such an alert, harassed look when I saw him on Broadway that it was difficult to recognize him. Another, who had manifested the geniality of a healthy baby in the country, turned into a sort of growling tomcat at his office in New York. And I saw one poor woman who was not delivered from the savage, restless spirit of the place even in the quiet country, where she spent a desperate vacation, hurrying up and down green lanes and fretting at the stillness. All her ideas continued to run according to the electric railway system, but nothing she knew or felt coincided with the place she was in. She belonged to the city just as lightning bugs belong to the dark. She had artificial notions of hygiene and a morbid craving for pavements, poor soul. She was indifferent to any shining the moon could do, but what she wanted was a button at the head of her bed, so that she could flood the room at will with electric light.

All this is sad enough and bad enough, but it is not the worst. And I tell the rest with the same desire to mend matters which Northern philanthropists have when they groan over Southern frailties. And if I have misunderstood, drawing too broad an inference from too short an observation, it is no more than they have done sometimes when they have made a "flying trip" through the South and returned home with enough honey of scandal about the condition of things down here to make two large volumes.

The fact is, they have a race hatred in New York which surpasses anything we can do in that line. It is not the loud-voiced, savage-minded perversity we

have in the South by that name, but it is the cold, implacable aversion which the Gentiles there feel toward the Jews. They are very quiet about it, and do not like strangers to notice it. And they are extremely well bred in the way they show it. It is a polite antipathy. That is to say, when the Jews buy homes and move on a fashionable residence street, the Gentiles sell out and move off. I was told that a select boarding-school for girls went into the hands of a receiver when Jewish girls were accepted as pupils. Gentile patrons withdrew their daughters, then the Jews also deserted. This is exactly what would have happened in the South had a negro girl been enrolled at one of our women's schools; but why should it happen in New York, no matter to what class or color the pupil belonged, and especially if she was a Jewess? For the Jews are probably among the best people of that city considered morally, industrially, intellectually and ancestrally. And, strange to relate, this aversion seems stronger in the elder people, New England abolitionists, for instance, who have been maudlin in their sympathy for the Southern negro. When I asked one of them why he disliked the Jews so, he spread out his hands and exclaimed: "Oh, they are so insufferable!" "But how?" I asked. He merely wrinkled his old Socratic nose and looked disgusted. My impression is that he considered me a person lacking in social delicacy or I could never ask such stupid questions. But being determined to learn the difference between race hatred in the North and the kind we have in the South, I persisted:

"But you allow the Jews freedom of speech, of office, you even receive them socially upon occasion, you reward their scholarship, and confess their virtues!"

His reply gave the clue to the everlasting difference between the Northern and Southern mind on this subject.

"Oh," he exclaimed, with the air of a man who gives a home thrust, "we do not persecute people because we do not like them as you do in the South!"

For my part, I should prefer persecution to this deadly repulsion, which is apparently founded upon a good social conscience. Race hatred is at least intelligible in the South, but it is esoteric in

New York and in the North generally. We exclude the negro because he is black, because he is weak morally, inferior mentally, and because we do not like the jungle ape from which he so recently ascended. Doubtless he will improve in a thousand years or so, but now he is evidently not a suitable ingredient of any race except his own. No such argument will hold, however, against the Jews. The only difficulty is that they are often embarrassingly more capable than Gentiles when they come into competition with them; they have the best, most authentic ancestry of any people in this world, and their pathetic lack of self-respect in the little matter of "butting in" comes from age-long ostracism. It's the only way they can get in! They naturally seek Gentile associations because they are tired of their own type. There is an awful sameness about it, because we have condensed them into it by the same environment so long. And they are weary of begetting themselves over and over and of hearing themselves talk from generation to generation of jewels, furs, money, the law and the Talmud. And the aspiration they show for Gentile variations of mind and spirit is commendable. But it is a sad commentary upon the best of human nature that the very people who have set an impossible standard of race toleration for the South should be so averse to doing the square thing at home. Personally, I would rather have every Jew in New York for my kindred than one negro.

And finally, the people in New York are abnormally clever. They have to be in order to survive one another in the terrible competition of living. Down here we have less energy against one another and more kindness. It is not conscious, ethical kindness, according to the laws of a charitable association, such as they have among these hag-ridden people, but it is a genial peace of mind we have because we know that our neighbor will not get up before sunrise in order to get the best of us at a bargain. He also loves his ease, and we can trust him on that account. But in New York I gather that the competing spirit is a mistaken idea of aspiration. It is possible there for a woman who has no need to work, no desperate obligation to be wise,

to study herself into a state of nervous prostration in an effort to know all that is to be known on a given subject. It is a regrettable and insidious form of mental greed, which detracts from, more than it adds to, the richness of her nature, because the motive is not a good one. I met a clergyman who was making a life study of insects, of the evolution of matter, and of astronomy. He put his conscience into it and worked very hard.

"What good does it do to wear yourself out learning these things?" I asked him.

"I take pleasure in knowing that I know them," he replied.

"Would you learn everything that is to be learned if you had the time and the capacity?" I asked.

"Yes," he replied, feeling that he had given a moral and elevating answer. Being in the most charitable of all vocations, he had become an intellectual glutton and did not recognize himself as an encyclopedic monster of comparatively useless information along the way he had to go. For when I asked him what use he made of his studies in the ministry he gave this illustration:

"I prove the miraculous conception of

Jesus thus. For instance: There was a time when nothing was in existence. Then God created the heavens and the earth out of this nothingness. Well, if he did that, he could call a soul into existence that had not been begotten according to the usual processes of generation."

I do not know if he learned this from the study of insects, or of astronomy, or of the evolution of matter, but I do know that he was the pastor of a New York church. There is such a thing as being a learned fool. When a man has only a few faculties it is not commendable to spatter them over too wide an area. And I fear that much of this sort of thing goes on in New York. I know the general impression prevails there that everybody ought to do as much as he can, learn as much as he can and impart as much as he can. Really, it all depends upon who he is. The more "do-less" some people remain the less harm they accomplish. My final impression of New York is that too much is going on there. The people are *too* clever and *too* enterprising. It is not healthy, and it does not tend toward sanity or morality.

NASHVILLE, TENN.

## The Only Valentine We Get

BY LA TOUCHE HANCOCK

WRITTEN ON RECEIVING THE USUAL NOTICE ON FEBRUARY 14.

Now swains their loving strains indite,  
Or paint the sufferings they can't write!  
Two bosoms burn with amorous fire,  
Or else the youth and maid expire,  
Transfixed with little Cupid's darts  
In their dear pinky-colored hearts!  
But you and I are past that age,  
For we have long since turned the page,  
When we were only twenty-one,  
And used to worship Venus' son!  
We don't expect a valentine!  
We get a courteous "decline,"  
Or else this trying intimation:  
"Accepted—pay on publication"!

BROOKLYN, N. Y.

### Grand Opera

Mr. Heinrich Conried has made good his threat of leaving the Hub out of his wheel when he begins his operatic tour on March 19th. The failure of Boston to support what is, so far at least as the singers are concerned, the best opera company in the world, is one of the inexplicable mysteries of the time. But the New England metropolis is singularly exclusive otherwise. Wilhelm Gericke seems to quite suffice for all its needs in the conductorial line; for when Felix Weingartner and Walter Damrosch, together with Joseffy, invaded his orchestral monopoly, a few weeks ago, their backers lost, so it is reported, \$1,800.

The cities that will be visited by the Conried Opera Company are Baltimore, Washington, Pittsburg, Chicago, St. Louis, Kansas City, San Francisco and Los Angeles. Fifteen operas will be sung in those eight cities. Four of them are by Wagner: "Tannhäuser," "Lohengrin," "Walküre" and "Siegfried." The others are "Hänsel and Gretel" (which has had several more performances than any other opera in this year's list), "The Queen of Sheba," "Carmen," "Figaro," "La Bohème," "Don Pasquale," "Faust," "Marta," "Tosca," "Pagliacci," "Lucia." Among the singers to be heard are Mmes. Abott, Abarbanell, Alten, Eames, Jomelli, Sembrich, Weed, Fremstad, Homer, Walker; MM. Burgstaller, Caruso, Dippel, Knote, Reiss, Campanari, Dufriche, Goritz, Mühlmann, Scotti, Van Rooy, Blass, Journet, Rossi and Plançon.

It will be noticed that Mme. Nordica, who may safely be called the greatest living dramatic soprano, is not in the above list. This may explain why, in place of "Don Giovanni," "Figaro" is on the touring repertory to represent Mozart. In this city the success of "Don Giovanni," which was revived by way of celebrating the sesquicentennial of Mozart's birth, was one of the pleasant surprises of the season; to no one more so than to Mr. Conried, who announced only one repetition of it, but found the demand for seats so great that two repetitions have already been granted, with more, probably, to come.

The first performance was far from perfection. It would have gained by having a Mottl at the conductor's desk and several more rehearsals; but vocally there was much to admire and praise, and the audience was remarkably enthusiastic. It has been said of Mme. Sembrich that she is among singers what Mozart is among composers. It has also been said, with equal truth, that Zerlina is Mozart's typical character. As Zerlina, therefore, Mme. Sembrich could not fail to give delight, while Mme. Nordica gave a splendidly dramatic impersonation of Donna Anna. Mr. Scotti's Don Giovanni and Mr. Journet's Leporello also were on a high level, altho Mr. Journet's Leporello was not so irresistibly funny as Edouard de Reszke's used to be. It is characteristic of Mr. Conried that, altho he had intended to give this opera only once, he provided new scenic effects. At the close, following the example of the Royal The-

are in Munich, Don Juan's palace collapses, and over the ruins the audience gets a glimpse of the moonlit graveyard, with the statue of the murdered governor.

Of other recent performances three call for special notice—those of "Il Trovatore," "Die Meistersinger" and "The Gypsy Baron." Ten years ago, and, still more, twenty years ago, "Il Trovatore" was "all the rage" and "Aïda" was neglected. Today "Aïda" is the most popular of Verdi's operas and "Il Trovatore" is neglected. Now, while "Aïda" is undoubtedly Verdi's masterwork, "Il Trovatore" also deserves at least three or four performances a year. As long as Mr. Conried can command a cast including Mmes. Nordica and Homer, MM. Knote and Campanari, it will be likely to get its deserts. It is a pleasure, also, to record the fact that Wagner's comic opera is still on the top wave of popularity.

An eminent German critic, Wilhelm Tappert, once declared that, altho Mozart is the reputed prince of melodists, there is more melody in "Die Meistersinger" than in all of Mozart's operas combined. Be that as it may, it is certainly Wagner's most melodious opera, an opera well calculated to turn the few remaining scoffers into enthusiasts. The parts of Eva and Magdalena have been sung by greater artists than those in his year's cast, but Knote as Walter, Van Rooy as Sachs, Goritz as Beckmesser, Reiss as David, Mühlmann as Kothner, make an almost unprecedentedly strong cast.

For the manager of the Metropolitan the most important event of the season was the production, on February 15, of Johann Strauss's "The Gypsy Baron," for this one performance added over \$20,000 to his bank account. Every one of the great artists in the company, excepting Mme. Nordica (who was indisposed), took part in this performance, which, at double prices, drew one of the largest audiences of the season. The propriety of producing an operetta on the grand opera stage need not be discussed here; opera—especially Italian opera—is not such a highly artistic thing as to exclude such an experiment. Most of the old fashioned operas are, as Wagner remarked, "concerts in costume"; and in giving a concert in costume at the

end of "The Gypsy Baron" Mr. Conried was therefore merely following operatic usage.

## Visiting Conductors

Mr. Felix Weingartner, of Munich, has been leading Mr. Walter Damrosch's New York Symphony Orchestra to new victories in a march almost across the continent and back. He has conducted four concerts in New York in the course of the month, repeating two programs. He has again shown that he is a serious and conscientious musician of rare interpretative skill. He never exploits self, but expends all his energies in doing honor to the composer in hand by proclaiming his message in the clearest, most beautiful manner possible with the means at his command. He still has much to learn, however, in the art of program building.

Dr. Ernst Kunwald, of Frankfort, presided over the New York Philharmonic concert of February 10th. He is a thoroughly good conductor, tho not so impressive or so magnetic as some of his predecessors. But the main thing disclosed by his ministrations, as compared with those of the other foreign conductors heard here in the last season or two, was another proof of the essential fact that in the Philharmonic players New York city has an orchestra of such high excellence as any city in the world might be proud of. Some of the individual players are not of the first rank, it is true, the wind choirs too often sound with faulty and uncertain intonation; but as a whole the band, gigantic in size and of unparalleled power, volume and muscularity of tone, is skillful, sensitive to the wishes of any competent leader, and gratifyingly responsive.

## Mr. Franko's Mozart Concert

At the beginning of the month many musical organizations in many parts of the world were celebrating the 150th anniversary of the birth of Mozart, which fell on January 27th. The most conspicuous observance of the anniversary in New York was the second for the season of Mr. Sam Franko's Concerts of Old Music, given in Mendelssohn Hall on February 1st, the whole program of

which was made up of music by the "immortal boy"—music which, tho old as men count time, is yet ever fresh with the charm and joyousness of youth. The most diverting novelty on Mr. Franko's program was the "Peasant's Symphony," an amusing musical parody that is seldom performed. It satirizes the amateur composer and the blundering country musician in a vein of droll and most ingenious waggery. Many persons in the audience at Mendelssohn Hall were at first shocked, amazed and bewildered, but the joke was appreciated before the end was reached and its fun thoroly enjoyed. The performance, not only of this but of the whole program, at the hands of Mr. Franko and his associates was admirable. This is the sixth season of his concerts of old music played as it was written to be played, and the encouragement of his efforts which this means is most laudable.

## A Great Pianist

The third concert of the season by the Russian Symphony Orchestra was notable for the improvement shown by the band under the leadership of its able young conductor, Mr. Modest Altschuler, who is striding steadily forward in his art, for the co-operation (thru the courtesy of the Philharmonic Society) of Mr. Vassili Safonoff, most magnetic of conductors, and, above all, for the first appearance in America of Mr. Josef Lhevinne, pianist, of Moscow, where for several years he has been a pupil of Mr. Safonoff's. With Mr. Safonoff at the conductor's desk, Mr. Lhevinne played Rubinstein's fifth concerto (in E flat), a big and a difficult thing, which it is hard for the performer to imbue with feeling or temperament. He played it as Rubin-

stein himself would have delighted to have it played, and he won an instant and brilliant success. Indeed, the revelation of his powers was, in the field of solo performance, the biggest sensation of the season. Not that Mr. Lhevinne plays in a sensational manner; he does not. He plays with consummate artistry.

Of robust build, with massive shoulders and powerful arms, Josef Lhevinne appears the embodiment of muscular strength, and he displayed a leonine power not possessed by any other visiting virtuoso for many years. His technic is exceedingly brilliant. He is always sure of himself. His work in octave pas-

sages, especially, is a thing to marvel at. He has a wide range of dynamics, an abundance of temperamental energy and a fine, massive touch, but it can be as soft as silk when occasion demands.

And, priceless beyond all these things, he can make his instrument sing. Mr. Lhevinne is the best pianist Russia has sent out to conquer the music loving world since Anton Rubinstein. He is Rubinstein's legitimate successor, and it is not unsafe to predict that he will repeat, if he does not surpass, the achieve-

Josef Lhevinne.

ments and triumphs of that master, for he is now a musician of the first rank.

## Pennsylvania Academy of the Fine Arts Exhibition

If there were any doubt that the most prominent characteristic of American painters is their color sense, it would be dispelled by a survey of the 101st annual exhibition of the Pennsylvania Academy of the Fine Arts, which opened on January 22d and will close on the 3d of

March. The walls are absolutely joyous with their bouquet of tender color, and the pictures have been hung pretty generally with a view to preserving this beautiful harmony. The true tonalists—not the old Munich tonalists in bitumen—are given an entire gallery, especially and daintily decorated to receive their works, wherein are exhibited five of T. W. Dewing's exquisitely refined poems in paint; five of Dwight W. Tryon's lovable landscapes; three by Abbott Thayer, and two landscapes and a portrait by their master, the late James Abbott McNeill Whistler. This remarkable collection, the delight of all artists, is loaned by Mr. Charles L. Freer, of Detroit, the same gentleman who has offered his collection of works of art to the nation, upon certain most reasonable and proper conditions, that make it incumbent upon Congress to accept the gift without hesitation. If nothing further were known of Mr. Freer's collection than this exquisite sample, it should be sufficient to guarantee its prompt acceptance.

In a rapid survey of the exhibition it will be impossible to do more than glance at a few of the 1,006 numbers exhibited, a hundred and a quarter of which are sculpture, representing 400 artists, which number, it is needless to say, could be cut in half with manifest advantage, for not only is the number too great to be properly displayed in the galleries of the Academy, but a more rigid rule of acceptance would make the standard higher and key the artists up to doing and sending only their best. And this rule could be applied to some of the great names, as well as to less known and unknown ones. The two canvases by John Sargent are as unworthy of his master hand as were the pot-boilers he painted when on his hurried trip to this country some few months ago. The two exhibited are portraits of Mrs. Mathias and of Mrs. Alexander. Something of the same nature might be said of William M. Chase. What a wonderful fellow Chase is, and in nothing more wonderful than in his ability to paint superlatively bad pictures as well as superlatively good ones. To the former class belongs his painting of "The Sisters" and to the latter his portrait of Dr. Sparhawk Jones,

while between the two and nearly up to the last named comes his portrait of "Miss Frances V. Earle." But "The Sisters" is positively funny. There are two of them in a seated position, but if seated upon anything it must be the clouds, for the airy nothingness of their support is negatively apparent, while the rolling of the clouds is all that can account for one sister being poised away above the other. The tawdry tissue paper costumes are in accord with the general poverty of the painting, its one redeeming quality being its charming tone. Nor is Miss Beaux at her best in her work exhibited this year. Her portrait of a young boy is an excellent figure, well painted, but unfortunately placed upon one of Miss Beaux's favorite toboggan-slide floors, so that the child is in danger of slipping out of the canvas. It is odd how little attention Miss Beaux pays to perspective. Her portrait of President Drinker, of Lehigh University, has been painted several years and has the weakness and the strength that belonged to her paintings of the period. It is a pity that such a consummate artist as Miss Beaux showed herself to be in her portrait last year of Mrs. Phelps Stokes should ever allow herself to fall from grace.

The best picture in the exhibition is the portrait of Miss Eleanor Hyde, by Edmund C. Tarbell. It is delightful in color and tone, in feeling and character; it is restful in its simplicity and convincing in its sincerity. It is true the painter is to be congratulated on his model, but then not every man, even with such a model, would have made such an accomplishment. Tarbell exhibits two other pictures, "The Golden Crescent" and "Girl Crocheting," each very charming, especially the latter, which is an old master in modern dress. The late John Twachtman is represented by half a dozen of his most characteristic works, unfortunately not hung together, one of which, "Sailing in the Mist," has been acquired for the Academy's permanent collection. His "Niagara" is the only attractive pictorial rendering of the subject I have ever seen. Horatio Walker has a group of five pictures covering nearly a score of years and showing very interestingly the changes and progress in his work. Frank du Mond has two

beautiful paintings, "The Bathers" and "The Net Mender"; Colin Campbell Cooper two of his familiar and well painted street scenes. Mary Cassatt a most effective "Mother and Child," the painting of the baby's flesh being most admirable; and Carl Newman two fine studies of the nude, notwithstanding their impressionistic handling. Boldini's portrait of Mrs. Harry Lehr attracts much attention as a past master's *tour de force* and is an interesting example of the no longer fashionable Spanish-French school. Fine landscapes and marines are exhibited by Schofield, Redfield, Carlsen, Groll, Child Hassam, Dearth, Metcalf, Charles H. Davis, Alden Weir, Alexander Harrison, Woodbury and others. But with 400 artists contributing over a thousand works it is impossible even to mention the names of many most worthy of recognition, let alone to discuss their works. It must be sufficient to say that this is unquestionably the finest exhibition of American art ever held in this country and portends exceedingly well for the future artistic development of the American nation.

### The Architectural League

The most important of the month's events, and, in its educative influence on the public, the most important art exhibition of the year, is that of the Architectural League. This year, perhaps more than ever before, there is noticeable a largeness in the interests and a growing

sanity along special lines. Buildings are becoming more truly monumental, and sculpture for them, tho not so well represented in this exhibition, is keeping pace, while painted decorations, especially for Western cities, are becoming not only numerous, but more and more interesting. There seem to be fewer things

from the craftsmen than usual, tho the Grueby pottery is represented by a group of garden pots and decorative tile friezes, two by Leboutillier, called "Oxen" and "Autumn," exhibiting almost every quality obtainable in tile designing, and there is much pottery, charming in color and glaze. At last a thing of beauty in automobiles is offered to us in the design by William L. Welton, which shows a car in which every line evolved by necessity is treated decoratively. Even the hoarse sound of the horn is to issue from the mouth of a Mercury-like head, which forms a sort of prow, and the steering gear is like an ancient victor's staff.

A glass case in one of the side galleries contains twenty-two pieces of wrought silver and

enamel work by Mary Norton and Helen Mills, showing us again within how small a compass great beauty can be attained. The panel with the figure of a priest in gorgeous robes walking thru a quiet garden at even is a beautiful piece of color work.

The architectural project of greatest interest to New Yorkers is that of the great new terminal for the New York

Josephi's Miniature of Mrs. Post. In the Exhibition of the American Society of Miniature Painters.

Central Railroad. The architects, Warren & Wetmore and Reed & Stem, show five renderings of the various views of their monumental design. It promises to be massive and moderate and pleasing in its lack of the encrustations of subordinate details, which some other large buildings have to carry. Reed & Stem are also the architects of the St. Paul Auditorium. Carrere & Hastings show their designs for the office buildings for the Senate and House of Representatives in Washington, and photographs of the beautiful Murry Guggenheim house at West End, N. Y. Cass Gilbert has a large exhibit, showing his Capitol buildings for both Wisconsin and Minnesota, the Festival Hall for the St. Louis Exposition, the New York Custom House, and other smaller buildings. For his structures were made some of the best decorations shown in the exhibition;

loes about the heads are modeled in wax and then treated in the general scheme of beautiful color. The decoration will doubtless be carried out in colored plaster, or, like Sargent's Boston decorations, partly in colored plaster affixed to the canvas. Photographs of a decoration by Mr. Blashfield for the Iowa Capitol show a most interesting treatment of the "Westward" idea. Kenyon Cox shows a full-sized cartoon of "Agriculture" for the same building, splendidly virile and interesting in its present form. It is a pity that he will have to finish it, for in that process doubtless he will reduce it to his usual level of mediocrity in color. Albert Herter exhibits a ceiling for the directors' room in the National Park Bank, in which Progress is followed thru streaks of limelight by Peace and Prosperity. It is somewhat unfortunate that the color is sensational, as the figures

Design for an Automobile, by William L. Welton, from the Architectural League Exhibition.

those four by La Farge on phases of the Law, of which only photographs are here—these giving no idea of the greatness of the originals executed for the Minnesota Capitol; and those four notable groups by French for the Custom House, symbolizing "America," "Asia," "Europe" and "Africa."

There are many designs for college buildings, country residences, etc., all showing the developing care for the complete environment as part of the design. There are few designs for churches; the two or three good ones are not very good.

Of the mural decorations, a surprising number are better than ever before. Most truly decorative of all is the big "Sketch for a Fragment of Decoration in St. Saviour's Church, Philadelphia," by E. H. Blashfield, a group of adoring angels, in which all the parts which are pure pattern and the foreground details and ha-

themselves have much beauty. Doubtless in position this design will gain in interest.

A new figure among decorators is Everett Shinn, who shows photographs only of decorations in the house of Clyde Fitch, which look like excellent designs in the Rococo manner, very luscious in ornamental effect. They include door and over-mantel panels, ceiling and a top for a piano. Red chalk drawings for them are able and charming.

The President's bronze medal offered for a decorative design to symbolize "Peace After War" was awarded to Hugo Ballin. Louis Vaillant has this year added some hitherto missing quality of color in his work. His circular panel for a library is a great advance over his former work. Lichtenauer's dreary imitation of Chavannes hardly deserved the end wall of the south gallery.

Benson's panel of decorative realism called "Pomona" is a fine thing.

Sculptural works are not numerous. Bitter's design for a monument to General Von Steuben is commonplace, and Martiny's caryatides for Senator Clark's house are as vulgar as the setting they are to have. Evelyn Longman has two

## Other Exhibitions of the Month

Twenty-seven landscapes by Henry W. Ranger were shown at Cottier's during the month and exhibited this vigorous and always interesting painter in every one of his moods. He is always strong, always a bit of a materialist in his joy in Nature's appearances, but his work

Colored Binding, by Chivers, in Translucent Vellum, in Scribner Exhibition.

memorial reliefs of large size, knowing in technique, but slight in character. Borglum's ascetic St. Clement for the Cathedral of St. John the Devine is perhaps the most important thing in point of conception, while Lucy Perkin's little "Melancholia" is very big in feeling. Antonin Skodik won the Avery prize of \$50 for a design for a wall fountain.

will count as important in comparison with any school of landscape.

One of the keen delights prepared for us by Mr. MacBeth was a little collection of drawings in pastel, watercolor and pencil, by Abbott Thayer's young daughter, Miss Gladys Thayer. These were of especial interest in showing a point of view and a set of sensibilities to color

very different from her father's. They were all very young in handling and sometimes a little awkward in placing, the studies of flowers especially, but such delicacy of appreciation with power enough to convince us of it are rarely seen outside of Japanese art. The four landscape sketches were very true in values and distinctly promising, and three portrait heads showed sincere study and keen observation of character.

With these were shown two portraits and two landscapes by Mr. Thayer, not among his best works.

For two weeks the Society of Miniature Painters showed 142 works at Knoedler's. A group of thirteen pictures by Miss Theodora Thayer, who died since last year's exhibition, were set apart as a memorial, but would in any case have been set apart as showing far and away the best things there. On the whole, the exhibition was not of great interest, so many people having been painted on ivory who should never have been painted on anything, and the artists having all too often failed to do justice to the sitters who were possessed of charm.

The recent celebration of the Franklin Bicentenary makes very timely the collection of Franklin portraits, busts, books, newspapers, Poor Richard Almanacks, rebuses and memorials in the way of contemporary ceramic portraits of Franklin, medallions, Staffordshire statuettes, paintings, drawings, plaques, snuff boxes, cameos, miniatures on copper, together with certain of his manuscripts, autograph letters, and broadsides, that were shown at the Grolier Club from January 26th to February 24th, inclusive.

An interesting exhibition of some new and uniquely decorated bindings by Cedric Chivers, of Bath, England, opened at the Scribner establishment on Fifth avenue, on February 3d, and continued until the 10th inst. The bindings received the gold prize at the St. Louis Exposition. The distinctive feature of the Vellucent bindings lies in the skilful use of vellum that has been so treated as to be transparent, which has been superimposed upon colored designs. The black and white reproduction of Evelina gives no suggestion of the delicate beauty of the Chivers binding in its soft pinks, reds and yellows.

## The Boston Orchestra and a New Symphony

The first performance of the latest symphony thus far given to the world by Gustav Mahler was given last month in New York by the Boston Symphony. Mahler today occupies a position almost unique among living composers as an avowed and persistent writer of symphonies—most of his fellow musicians are casting their creations in other forms than that of the symphony. He was born in Kalischt, Bohemia, in 1860, and was a pupil of Anton Brückner. He is director and also conductor of the Vienna Opera. He has been known for several years as one of the ablest musicians of his time and as a man of remarkably strong individuality. Thruout the music loving and music practicing countries of Central Europe he is regarded today as standing in the forefront of living composers, beside Richard Strauss (whom, by the way, he considers not as a rival but as a pioneer and leader who has opened a path for him and his colleagues).

The symphony brought to our attention by Mr. Gericke last week is Mahler's fifth, in C sharp minor. It is a work of vast dimension, lasting a full hour in performance. It displays the composer's command of all the resources of modern orchestral writing, and it divulges his skill as a symphonist much better than did his fourth symphony, the only one heretofore heard in New York. Mr. Gericke is to be thanked for bringing it to performance, and it is to be hoped that he will repeat it at no distant day.

## The Drama

Several excellent plays have been produced in New York since our last dramatic criticisms were published. None, however, were quite up to the Marlowe-Sothorn Shakespearean revivals. Sarah Bernhardt in her repertory, Shaw's "Man and Superman" or Barrie's "Peter Pan." The most meritorious productions of the month were the following: "The Fascinating Mr. Vanderveldt," "The Duel" and "Mr. Hopkinson," a London farce. There is no doubt that "The Duel" is bound to be discussed a good deal from now on. The purpose of the play is to

show "the duel" of two brothers, one an unselfish priest and the other a high-minded but atheistic physician, who fight for the Duchess De Chailles, the priest for her soul, the doctor for her body. People who like to hear interesting conversation on important themes will receive an intellectual stimulus from this play, altho it smacks somewhat of a tract. Mr. Otis Skinner, who takes the leading part, is more actor than priest. Miss Fay Davis, who until recently was Ann in "Man and Superman," has an unreal-to-life *rôle*, but does as well as circumstances allow. The physician brother, perhaps, fits his part the best. The play is of the religious problem variety, and ends with forced conventionality by the degenerate husband of the impressionable duchess dying, and the physician obtaining her as his wife thru the intercession of the brother. The play is without action and untrue to life, but is well played and will make people think.

Mr. Alfred Sutro's new play, "The Fascinating Mr. Vanderveldt," is the best type of the modern society problem comedy. The playwright's wit flashes at times so brilliantly as to remind one of

Bernard Shaw, while his humor suggests Augustus Thomas. The characters of the play are taken from English high society; Lady this, Marchioness that, the Colonel back from Africa, and the villain with Parisian immorals, are all in the cast. Miss Ellis Jeffreys plays Lady Clarice Howland, the true-hearted young widow with an exuberant sense of humor. The part suits her better than anything she has ever attempted in this country, and her acting from beginning to end is fresh, genuine and delightful. She did not overdo a single line, and was as natural as real life. Mr. Frank Worthing, as the fascinating Mr. Vanderveldt, also had a sense of humor, a very unusual accomplishment for a stage villain; and in the places where the conventional playwright would have made him hiss "s' death" between his clenched teeth, Mr. Sutro made him turn an epigram. The theme of the play is susceptible of coarse treatment, but there is nothing in it to offend a fastidious taste, and we can recommend it as the best play of its class that has been produced here this season.

"Mr. Hopkinson," an English farce,

Stage Setting from Fourth Act of "Gallops."

which ran for 200 nights in London, has been imported for production at the Savoy. The old idea of Samuel Warren's, in which a poor and ignorant clerk who suddenly comes into immense wealth, as worked out in his famous "Ten Thousand Pounds a Year," is the *motif* of R. C. Carton's "Mr. Hopkinson." A highly polished, if somewhat corrupt, society, the individual members of which are strictly *au fait* according to the standards of the smart set, constitute foils for Mr.

Hopkinson, who is a typical London "Bounder."

The philosophy of the cockney and of the costermonger, when contrasted with that of high society, affords many farcical situations, and the movement of the play never drags. A long run is confidently predicted, for which the outlook is good.

"Grierson's Way" is a tragedy after Ibsen—and not a very long way, either. As in "Hedda Gabler," everything inexorably ends in death and black despair. Henry Miller, who takes the leading part, is remarkable as the self-sacrificing hero, while

the rest of the support is more than excellent. Altho the play is in no sense immoral, it is not suited for very young people.

In writing "The Little Gray Lady," Channing Pollock has voluntarily handicapped himself by dispensing with fashionable costumes, fine scenery and a hero. It is a backyard romance and most of the characters are employees of the Treasury Department in Washington. The plot is a patchwork greenback. From this material Mr. Pollock has evolved an interesting play, with well defined persons and some good scenes.

Miss Dorothy Donnelly, as the spoiled and scheming daughter of the boarding-house keeper, shows more talent than she did as Candida. The story is supposed to end happily, that is, the little gray lady is married to a man whose redemption is as doubtful as the bill he fabricated.

Richard Harding Davis's new farce, "The Galloper," contains nothing particularly novel or striking in the way of jokes, characters or situation, but it is unnecessary to say that it is amusing, since it has Raymond Hitchcock in the chief rôle. The scene is laid in Greece during the war with Turkey, and American war correspondents and Red Cross nurses are the material of the mix-up. It is musical comedy without music, but not entirely without, for the audience will not let Mr. Hitchcock off without a song before the curtain.

"The Vanderbilt Cup" is something new in musical comedy. The automobile craze furnishes the center and periphery of the plot, if it could be said to have a plot, while a real automobile race, which actually takes place on the

stage, when the automobiles are going faster than a mile a minute, is breathlessly exciting. The humor of Miss Elsie Jannis and the whistling fat man are especially good, and those who are not above an evening of continuous laughter cannot afford to miss it.

David Gray's "Gallops," as presented at the Garrick, introduces the hunting community on Long Island. The brilliant red of the hunting coats worn alike by actors and ushers lend a dash of color to the play. The action drags somewhat in the first act, but reaches its apogee in Act II, after which it partakes

Mr. Otis Skinner in "The Duel."

of the nature of a gentle river in its flow. A delightful and very subtle line of sentiment runs thru "Gallops," and in the hands of Charles Richman this feature of the play is exceedingly well brought out.

"The Bishop," a three act comedy by John Oliver Hobbes (Mrs. Craigie) and Murray Carson, is a clean and wholesome play. While not wildly hilarious, it forms a most pleasing evening's entertainment. Ambrose, Bishop of Rance, in addition to caring for the spiritual welfare of his diocese maintains a print shop for the dissemination of good literature among the masses. Incidentally, he tinkers their clocks and watches, with the result that he usually buys new ones to replace them. The Bishop's nephew, Francis Hericourt, a susceptible young

man of three and twenty, is trying to decide between the Church and the world for his vocation. He is helped to his decision by the Duchess of Quentin, a charming young widow, tho not in the way which both he and she for a time expect. The other factor in the case is Barbara Arreton, a young girl to whom Francis is virtually betrothed, and whom he finally marries. The good Bishop has his hands full in straightening out the tangles of the young people's affections, but he succeeds in doing it to the satisfaction of all concerned. Mr. Thompson impersonates the Bishop with grace and dignity, while Miss De Wolfe, as the Duchess, is altogether charming. The other parts, while not above criticism, are, on the whole, well taken.

## Must We Apologize for the Country?

BY E. P. POWELL

AUTHOR OF "THE COUNTRY HOME," "OLD FARM DAYS," ETC.

NOT long ago the *Atlantic Monthly* gave us "An Apology for the Country." It was notable for asserting the right of the countryman, in these days, to contradict the civilian as much as he pleases, and take his own place, and relative place, in the world. An outer-land man is no longer needfully outlandish; he has the telephone and daily mail delivery, quite as much as the inhabitant of Philadelphia or Boston. All highly polished words still have at their root *urbs* or *civis*; but the meaning has faded out, and we are as likely to go to John Burroughs's woods, to find civilization and courtesy, as to look for it in the twistings of city streets. Just at present there is a growing sentiment that it is the town which constitutes the real wilderness, and that a cultivated mind cannot gratify its love for society, apart from the fields, brooks, birds, and all that we have wrapped up in the word *country*.

There has come about a great stride toward equality of privilege. Back-

woods places there still are, but the chances also are that, as fast as they are found out, they will be made over into summer resorts, where golf links and conventionalism displace Nature. On the other hand, our cities have solidified, until it is said that only two persons in the world are known to all New Yorkers—that is Murphy and Jerome. An interesting census was a few years ago taken, and among the religious statistics it was found that in New York city there were several hundred persons who had never heard of Jesus Christ. The country has its drawbacks, but no such narrowness as the life lived in the house-walled streets. It is hard to conceive how humanity could have achieved any more complete exclusion from every natural privilege than is fulfilled in the denser parts of London, New York, Chicago and Philadelphia. London has as many residents as a dozen of our States, pressed and packed into the space of a single county.

The literature that is satirical on coun-

try life, and that which finds it rude and brutal, used to be written for country readers; it is now hard to find readers who enjoy it, or endorse it, either in the city or in the country. Publishers say that it does not sell. Tom, who worked his way up from the farm, and became mayor or alderman of some city, is no longer a very attractive character in country school books. Tastes are changing. The farm wives who went crazy from isolation are now gossiping over the rural 'phones or watching for a daily chat with the free mail carrier. "How much increase in your mail?" I asked one of these blue coated fellows. He replied: "There are four times as many daily papers taken as two years ago; and of letters the increase is very much larger." The Man with the Hoe is now the man rising from his knees to stand erect.

Lifted by toil of centuries, he leans  
Upon his hoe; and gazes on the heavens  
The glorious light of ages on his face.  
Lo! here the power, that shall ere long exalt  
All other power, all force—the dull red clod,  
To serve man's wit, and wait upon his will!  
He leans upon his hoe! and looks abroad  
O'er realms God lifts him to subdue!

However, while the ills of country life are not by any means as serious as those of city life, there are enough of them to be counted with. It will hardly do to induce folk to quit compacted and conventional city life until they are ready to lead individual existences and take the consequences. I have seen men completely whipped off the farm by quack grass, and have seen locusts drive the people before them like sheep. A hard freeze in Florida turned over half of the orange growers out of the State. The country is not the place for people with undeveloped wits. The successful farmer must have more scientific knowledge than any other citizen. Weeds are honest plants, out of place; but while out of place they are hard to deal with. Just now we have a dozen Asiatics in our fields that are a thousand times more perilous than the coolies. We have also two or three native weeds that stand up to us in the open field and outflank us as if we were Russians. Old Humphrey says:

"Ye purslane is another word for per-

sistence. Ye weeds do call out of us good quantities, and make test of us. So it is God's judgment day is all ye time. If ye be men the weeds will soon find it out; but if cowards, they will soon have thrustured you out of house and home."

The country has too many problems for an uneducated man. To thrive on the land one must know what the land is, and he must have that knowledge of plants and animals which is practical for everyday life. There is no room any longer for those who do not keep pace with the revelations of science. It is hard to conceive anything more helpless than the farmer who knows nothing of the legumes and bacteria, and the possibility of making soil of a fat sort out of poor sand or solid clay.

The problem of hard work in the country is equally staggering to a great many—hard work and dirty work. They wish to move into the town to get rid of labor. They still educate their children along the lines of least resistance. They wish them to be so taught that they may pass out of the ranks of laborers and become ladies and gentlemen. The only answer to these folk is, that we have got to reverse our whole conception of work. Amusement is the most wearing employment of human beings. It kills quicker than hard toil; and next to amusement, comes the *ennui* of having nothing at all to do. The whole structure of the human being means work. The hands are our glory because they are the fore feet of animals, exalted to the achievements of art. The brain never does anything nobler than to devise tools for the hands. Amusement demands longer hours than farm labor requires, and it turns night into day. The amelioration of labor is, however, rapidly taking place. Machinery does most of the really severe work of the country, while the introduction of electricity as a power will do more. Trolley plants will soon lend us surplus power to light and warm our houses, and enough over to do a large share of our barn work and household work. Let Biddy beware.

The consolidation of little district schoolhouses into large town schoolhouses has done a great deal intellectually, and, we believe, also morally, for the advantage of country people. Still,

schoolhouses are hard to reach. One woman writes:

"You have said a good deal in *THE INDEPENDENT* in favor of country homes. Why not tell the whole truth? My children have to go two miles, in all seasons, to reach a schoolhouse; and more than one morning last winter the thermometer was 5 to 10 degrees below zero when they left home, at seven-thirty in the morning. There are three farms hereabouts for sale, and foreigners are constantly picking up the best that can be found. We have to lose our only real neighbors, and get along with those who do not even understand our language. Of course, all this is a curious and interesting sociological study for you people who do not share in the trials; but how about taking a personal part in solving such problems? I am not blind to the fact that a change is coming about. The towns are beginning to carry children to schools; but then the town gets its money only by taxation. In the long run we pay for what we get."

There is a real bottom to this complaint, yet every year ticks off a lot of progress. In my boyhood I waded thru snow, two feet deep, for half a mile, to reach a little district schoolhouse. I do not believe it paid half as well as it pays the children nowadays to climb over difficulties in getting to the town schools. These better organized schools are able to employ a higher grade of teachers than could be secured for district schools, and the buildings are infinitely more comfortable than the hovels by the wayside, half heated by stoves, where we used to take our turns in getting warm. I am afraid there is a good deal of truth in another complaint that, with all the progress made in country life, we have not kept up with the improvement in our teaching ability. Many of our teachers are intellectually of a lower grade than their pupils, and they are very uncertain and wobbly in their grip of the rudiments of learning. A critic writes:

"Spelling, geography, grammar, arithmetic, are never with them positive knowledge, but rather matters of chance and guess; of course, the work done leaves the children badly trained. They are for the most part, however, admirably equipped to teach handwriting. However badly spelled and ungrammatical their written language might be, the writing was invariably neatly and legibly—often beautifully—executed.

Writing comes under the eye; spelling appeals to the memory. The typewriter in our schools will go a long way to reverse matters—making the spelling much better, perhaps at the expense of handwriting. The real point seems to be

whether our boys and girls are learning to think more clearly, investigate more carefully and cultivate purer sentiments. In this respect we think the country school may have the advantage. It certainly will when our normal schools are evolutionized, to send us teachers that comprehend Nature better than they comprehend the contents of a dry goods store.

The problem of help is one not so easy to dispose of. This is really our severest trial. Those classes who would naturally constitute the hired element are still herding in the cities. They have lost the instinct which made them prefer country pleasures to the communism which they secure in tenements. Still this problem is sure to solve itself before long. The better classes, moving into the country, are gradually creating a different sort of hiring element. Wages are good, and new foci are being created for those who must have their companions near them. A good deal more is being accomplished along this line, by the development of agricultural sentiment among our young people. Grangers and farmers' clubs are filling up with the brightest and best of our young folk; those who a few years ago drifted sharply toward the cities. Country homes are popular; agriculture is growing more and more attractive. The work done by Mr. Burbank and that class of men is giving a positive fascination to horticulture. More money now can be made from gardening than from manufactures. Perhaps, on the whole, we owe a debt also to Mr. Wagner and his co-workers for helping to create a sentiment for simpler life. At any rate, while wages are going to be much higher than farmers used to pay twenty years ago, there is going to be a decided increase in that sort of help which brings brains as well as hands. Farmers, as they make more from their land, must learn to co-operate more freely with their hired help. College boys are slowly turning to agriculture in preference to overcrowded professions.

Lack of neighbors is no longer a difficulty of serious importance. Country houses are all tied together by rural telephones. It is astonishing how rapidly this work has gone on. In the most re-

remote districts you find yourself in close association with the towns, and have long distance service if needed. The farmer can talk for five miles around, to every house; and they all know each other—which is more than can be said for five rods in the city. Each one knows the other's needs, and sickness is never neglected. The doctor is called and consultation secured within five minutes after an accident. Women especially make use of these 'phones, and, without the formality of the old fashioned visit, are really in constant communication with their gossips—we use this word in the pleasant and genuine sense. In fact, the city presents to-day no sort of social life so genial and complete as that which is furnished in the country.

Winter is the only other trouble which we can think of for which the country must apologize. The snowbanks really are a trouble; and a blocked-up country road is a hard thing to get along with. Yet, after we have said the worst about the bitter cold and the piled snow, we know that winter is welcomed by the country home-maker for many things, that cannot be accomplished so well without runners. Ice can be cut, logs drawn, crops of a bulky sort hauled to market—not to speak of the delights of sledding and sleighriding. My remedy for cold weather is migration. Why not? We are thru with our harvesting, and ought to be thru with our husking by November 1st. Instead of hibernating thru the winter, start for the South; just as the birds do. You can get to the heart of Florida—as far at least as the truck farming districts—for thirty dollars from New York. Own a little home down there, of ten or twenty acres; costing one hundred dollars; the house costing perhaps two hundred to three hundred dollars more. You do not need a costly house in that climate. One thousand dollars will build what you would pay three thousand dollars for at the North. Grow two crops of lettuce between November 1st and April; take a clear profit of twice what your expenses are for travel and at the same time escape the severities of winter. You can eat all the oranges you care for, all the grape fruit, guava, loquats, figs and other tropical and sub-tropical fruits, right thru January and

February, beginning on your peaches and pears and plums and cherries a little later. Strawberries can be had almost any time, while the birds sing every day and the bees work in January as if it were July. Better yet, you will widen your experiences, and live not only longer but larger lives. This is not a mere dream; hundreds are doing it and thousands will learn to do it.

It is a curious sociological revolution that has sent the people into the cities and now is sending them out again. Had the old farm life remained, undisturbed, steady and unprogressive, nothing could have come of it but perpetual stability; and we should never have had our railroads, telegraphs, telephones, trolleys and machinery with steam power. Socially everything would have been nearer equality. Boston would have remained nine days distance from Washington. It would have taken an Oregon Senator two months to reach his seat. In fact, a federated republic could hardly have existed over the whole continent. Concentrated wealth was necessary; millionaires must be created captains of industry. The city has done its big work. It has spanned the continents, tunneled the seas, annihilated space—and it needs no apology. Now for distribution; now for a new country. The tide flows outward, and we need no apology for the country.

We shall need a good deal, however, of housecleaning. Nine books out of ten that have dealt with country life, for the last half century, have been smart books, talking jocosely of the farm and the farmer and of country life in general. Thoreau was just as far away on the other side, and perhaps Burroughs, giving us a poetical version of *The Book of Acts*. We have no reason for leaving the city for a country home, unless we understand country work, or are willing to enter with spirit into its problems. Then again the education in our public schools must have a vision toward the valleys and the hills. The boys must be made to realize that smartness in business and the piling up of wealth is not the chief end of life. We believe that in this direction also the country affords the better opportunity for making fine boys and girls.

We thank *The Atlantic* for its rather

rambling and terribly discursive suggestion of an apology for this life with the trees. We are sure that man could never have originated anywhere but in a garden—by creation or otherwise. Moses knew better than to put Adam in relation to mortar and bricks. These things came about after the fall. We are not making light of theology, for we see only a fine inspiration in that life "Eastward in Eden." That our first parents did not appreciate it is provoking. Our Babel building has been expensive, and has led us thru a lot of bad experiences. But now we are going to Burbank the world; and it will once more be full of new plums and new dahlias and new daisies—bigger, sweeter, hardier; and mankind, we hope, will be better satisfied to stay in the garden. It was not

possible to make Burbank first and Adam later—more the pity.

A friend, looking over my shoulder, says:

"Indeed, but this is all true, yet it is very strange that it is true. It is hard to realize. The people in the country comprehend it as little as those in the city; but the country has all the advantages of which the city used to boast, and yet more. The charm of it is that the revolution has only begun."

We are beginning to find out the secrets of nature and the wonderful things hid from the foundation of the world. But my wife, listening to the discussion, reminds me that in the country there are no opportunities for shopping. This is true—nevertheless, I am not yet inclined to apologize for nature.

## Municipal Ownership a Blessing

BY JOHN BURNS, M. P.

[John Burns is one of the best known labor leaders of the world, and is the first representative of Labor that has ever held office in the British Cabinet. The following article was obtained by Mr. Kellogg Durland, when Mr. Burns was traveling incognito in this country several weeks ago, and is printed as an interview.—EDITOR.]

THE increase in the "social sense" which the universal demand for municipal ownership symptomizes is one of the most hopeful signs of the day in America and thruout the world. Cheap, popular, publicly owned rapid transit is the best way to disperse the ghettos of poverty, the slums of misery and the Alsatias of vice. The basis of a happy life is unattainable so long as railroads, ferries, traction and electric light companies are used as, under present conditions, they often are, against social advancement. The home, which is the cradle of character, can no more be solved by the tenement dwelling than city architecture can be improved by a duplication of flat-iron buildings. Mount Kisco is a slope, not an elevation, and till municipal ownership of street railways, with a deliberate social object in view, is attained, the workers of the lower East Side, the West Side and other congested quarters

must remain in that circumscribed pit of Tophet in which limited space, high rents and restricted company tractions now confine them. Men and money, like manure, are no good in heaps. They putrefy. They are only good when scattered over fresh fields and pastures new.

The greatest agency—indeed, the only agency—is city tractions owned by the city, carrying the citizens, taking the town to the country in the evening, bringing the country to the town in the morning.

Municipal ownership as usually tried in Europe, particularly in Great Britain, has been a counter attraction to drink, a healthy diversion from vice, and has shown the people a more excellent way of personal and national life. The bread of municipal ownership has been cast upon the waters, and has been returned to us, not after many days, but almost immediately. In industry it has made

against Sam Parks on the one side and Farley on the other. It has infused the embittered car driver and conductor with a proportionate dignified and civic sense of duty to his neighbors who employ him. The municipal car man has reciprocated his share that municipal ownership has brought to him by greater efficiency, civility and loyalty to his employers, the traveling public. The poor and lowly it has helped by reducing dis-

Federal and civic development will be the extent to which it kills boodle, destroys graft and eliminates from public life and service the petty corruptions that mortify the flesh in the body politic of America, without the cleanliness and the purging of municipal life that can only come from the moral exaltation that communal pride in public property alone brings. America will be confronted with the greatest problem that ever lay

John Burns.

tances and saving them from physical fatigue, which, rather than endure by living in the suburbs, when they had to walk, they forfeited for the squalid banalities of slumdum. I know of no section which has lost by municipal ownership in England. Even the dispossessed and generously compensated shareholders have profited by the great increment of social happiness that public tractions has brought to all those cities which had the courage to enter upon it.

The chief contribution that municipal ownership will make in America to State,

athwart the upward path of a democratic people.

Under municipal ownership there is no one to offer bribes, because there is nothing to sell. The occupation of the thief is gone, because the receiver has disappeared. Any doubts as to the greater cheapness and efficiency of municipal ownership are disposed of by the incontestable fact that in Great Britain—under municipal ownership—roads are better, the staff more loyal, because more contented, and the amazing cheapness of traction is proved by the fact that the

average fare of electric car passengers in London is under two cents, while over fifty millions of people ride as one cent passengers.

The effect on housing has been the disappearance in ten years of eighty thousand one room tenements, a corresponding increase in larger tenements and a diversion to common parks and heaths of the women and children, who by traction alone, without injury or loss to any one, now secure, as an everyday right, what, thru company ownership and dear fares, was an occasional and fatiguing privilege.

The educational value of municipal ownership on all classes of a community in Europe is most marked. It is the seminary to the statesman, it is the school to the political economist, it is the college to the reformer, it is the polytechnic to the labor leader. On a smaller, but equally useful, scale the larger duties and obligations of government are learned, and as America fifty years hence will possibly have two hundred millions of inhabitants, it is about time that the assimilation of these millions, the co-ordination of these masses, the directing leadership of this host should be provided with civic guides, municipal philosophers and neighborly friends, so that the path of the greatest community of free men should be not only straight, but clean, and till some field of apprenticeship for this stewardship for the leaders of the future is provided, America's future will be not the conscious ordering, but a sordid welter and an undignified scramble for mere money, which is the present creed of the corrupting boodler. Municipal ownership destroys this species and in so doing discourages and renders impossible the sad revelations that your insurance scandals have revealed. Appetite grows by what it feeds upon. The seed of corruption dropped by the political agents in elections, in defense of their franchise and to extend their power, becomes a seed-plot from which is reared the upas tree of state defilement. President Roosevelt realizes that it may reach, if it has not already done so, Federal political life. Why be wise after the event? Prevention is better than cure, and surely American opinion, after having read the "Shame of the Cities," might save

itself another book called "The Crime of the Republic." Both can be avoided thru the trade union, the labor leader, social idealists, city merchants, the governing aldermen, the men and statesmen, all uniting in a movement that experience unanimously testifies in Great Britain is the greatest ameliorative agency, as it has been the greatest moral force that fifty years of brilliant, continuous and glorious success has secured the Anglo-Saxon people. America is not cursed with that heritage of snobbery, feudalism and convention that Old World communities have had to contend against. Its immunity from these disabilities gives it greater power than it ever dreamed of, and yet public utilities lie across its continent a fallow field trodden only by privileged monopolies, and denied to the citizen without toll, exaction and fraud. If democracy is to justify itself, as I hope and believe it will, it can only do it by the municipal ownership equipping the American people with the one thing they supremely lack as compared with Europeans, and that is cleaner, purer civic life, without which personal wealth is a mockery, national resources a misused gift and their constitution a thing of paper.

It is said that the municipal employee may become a serious and dangerous influence, when the source of his income is owned by the community in which he is a voter.

This fear seems to be a stumbling block to a great many well meaning and sincere people. My answer to it is this: The test from experience is all the other way. As a rule, municipal employees have been modest in their claims, reasonable in their demands, and, as an invariable rule, municipal labor has been singularly free from strikes and other disturbances. At the worst, these must always be in a minority. The employees of a municipality never have any difficulty in getting, without threats, as a right, what now is occasionally wrested from the private companies by sacrifice, pain and disturbance for the whole community. In a word, municipal ownership, apart from being good for passengers, best for cities, cheapest for the poor, is the line of least resistance for the solution of industrial problems, is the

way that wisdom directs and necessity compels. The extent to which municipal ownership prevails in any country is the standard of class co-operation by common means for common ends.

The car barn vote introduces into politics the interested "pull" to an extent that is impossible under municipal ownership, because the usual political differences operate with men under municipal ownership, and thus create an electoral equipoise which is impossible so long as

men's employment depends upon votes, as it too often does, under company rule. The danger of the municipal employee is a bogie which is always raised in America, which we have buried for all time in the old country. To their credit, they rarely, if ever, abuse the position that municipal ownership gives them, and if they were inclined to do so against the community, the community in turn has always a better, a simpler and more peaceful remedy than now prevails.

LONDON, ENGLAND.

## The Call of the Winds

BY IVAN SWIFT

I FAIN would laugh with all the laughing world,  
And let the relic memories be furled  
With banners of crusades, and laid away  
With tomes and trumpery of the older day;  
With crooning history, Time's romance, be done—  
Let ages die and wake the "On and on!"

And yet, in dreaming hours, despite my will,  
Past friends and fading pictures linger still.  
Old wars with all their wrongs, and czars and kings  
With all their crimes and ancient clamorings,  
And troubadours, and pirates of the sea—  
Seem still to mock our lauded liberty.  
Somehow, when I would tempt the trembling strings  
I find them fraught with hymns of buried things—  
I hear the cadence of the awkward flail  
And Indians moaning on the bison trail.

The clanking enginery of modern strife  
Profanes the obsequies of sweeter life.  
There's grandeur in the press of steam and steel,  
But heart beats in the throb of oaken keel!  
And on the winds a runic wail of doom  
Pursues the shattered sail and trembling boom  
Of one-time stately ships. Their ghosts of grace  
Swing off in funeral pomp, and in their place  
The squadron hounds of fretful Commerce bay  
Their greed of wealth and ruthless pride of prey.

A golden glory filled the sea and air  
When Turner saw the failing Téméraire!  
No harmonies contest the sunset fire,  
The fondest fancies haunt the Autumn pyre;  
So, when the Muses seek the tender theme,  
They find the treasure passing toward a dream!

# Literature

## The Prophet of Nazareth

PROFESSOR Schmidt has produced the most notable work on the life of Jesus ever written by an American scholar.\* For insight and penetration into the character of the Nazarene no life of Christ in the English language, save possibly "Ecce Homo," is at all comparable with it. The book will certainly find international recognition as an important contribution to the criticism of the Gospels, and indeed of the entire New Testament.

Such a work was to have been expected from Professor Schmidt. His articles, under the captions "Son of Man" and "Son of God" in the "Encyclopædia Biblica," marked him as a critic of great discernment and as a scholar of wide and thoro learning, and his contributions to the new International and Jewish encyclopedias, the *Journal of Biblical Literature* and other publications have been of high value. The impression from these writings is of an indefatigable student, of astounding diligence and exhaustiveness in research, of careful judgment and great powers of objectivity, of entire freedom from traditional influences, and of very unusual originality and independence of opinion. Such impressions are well borne out by the present work on the *Prophet of Nazareth*. One marvels at the wealth of references, not only to recent German and French authorities, but also to works in Dutch and Italian, Danish and Swedish, and, what is especially pleasing, writers of earlier ages, whose very names will be new even to many who have followed the battles of Biblical criticism. That which especially qualifies Professor Schmidt as a writer on the life of Jesus is his familiarity with Hebrew and Jewish literature, and particularly his competence in the Aramaic dialect spoken in Palestine about the time of Christ. This enables him to go back of the Greek Gospels to the Aramaic documents, which unquestionably were used as sources in the process of the composition of our Gospels, by which method he has produced some rather startling results.

Unusual scholarship is not Professor

Schmidt's only qualification for treating the life of Jesus in a manner interesting and profitable to the men of this age. It is not by accident one thinks of Seely's "Ecce Homo" in reading this work. Seely was a man of entirely different training, and his method and plan and purpose were all entirely other than those of Professor Schmidt. Yet there is in both a passion for the Nazarene, a burning of the heart within at the thought of his words, his deeds, and his manhood. In each case a man of highest culture and learning has been set on fire by the personality of the ages, and there is a union of accuracy of estimate and energy of enthusiasm which instruct and thrill alike. If any one has taken up the *Prophet of Nazareth*, and thrown it aside after the first few chapters as far-fetched, fanciful, "destructive criticism," let him pursue his examination to the concluding chapters on "The Historic Influence of Jesus," "The Present Problem," and "The Leadership of Jesus," and he will find the parallel with "Ecce Homo's" tribute of love abundantly justified. It would be difficult to say where in modern books the essential spirit and message of Jesus is brought more intelligently into touch with the problems and the burdens of present day men than in the chapters named. In those pages the delver in monographs and antiquated literatures gives way to the keen, sympathetic, far-seeing man of to-day, informed as to the latest social movements and feeling to the quick the upward striving of humanity, and the writer becomes himself a prophet as he brings out from beneath tradition and creed the figure of the Nazarene, purely human, but the spiritual leader for these times. No one who is interested to know the teaching of Jesus on moral, social and religious questions, and certainly no one who affects to teach others in these matters, can afford to neglect the latter chapters in the *Prophet of Nazareth*, and that irrespective of what he may think of the criticism of the earlier chapters.

For Professor Schmidt is a thoroly radical critic. He admits no statement which he can reasonably doubt, and he pleads in one place that if his researches

\* THE PROPHET OF NAZARETH. By Nathaniel Schmidt. New York: The Macmillan Co. \$2.50.

had led him to believe that no such person as Jesus had ever lived, he would have frankly stated his opinion and the reasons which compelled him thereto. But, on the contrary, he believes that we can know, not only that Jesus lived, and about what time he lived, but also the general course of his career and the chief elements of his teaching and his life. He rejects the miracles imputed to Jesus except cases of exorcism, as legendary and unhistorical. He thinks that Jesus was the son of Joseph and Mary, born in ordinary wedlock. He holds that the Nazarene instituted no sacraments, claimed no special authority over the Sabbath or over the beliefs of his brother men, and no privilege beyond that of any man, even in the forgiveness of sin. He rejects the account of the triumphal entry, argues that Jesus was crucified by the Jews, not by the Romans, and treats the resurrection in an appendix.

The subject considered most at length is the meaning of the term "Son of Man," already handled by Professor Schmidt in a very able and thoro article in the "Encyclopædia Biblica." The view that Jesus never used this term in a distinctive Messianic sense, and consequently that he did not regard himself as the Messiah, but lived and died simply as one of the prophets, has yet to win its way to general scholarly acceptance. The phrase "Son of Man" is found eighty-one times in the gospels, and it is clear that the Evangelists believed that Jesus used it and that he designated himself the Messiah by means of it. It is a very considerable critical task to prove that this use does not go back to Jesus himself, and we doubt if Professor Schmidt has yet accomplished it. His explanation of several passages does not seem satisfactory—for example, the interpretation of the answer to the scribe: "Foxes have holes, and the birds of the air have nests, but the Son of Man—*i. e.*, man—has nowhere to lay his head," as meaning merely that "man's life is full of danger and uncertainty." The sense requires a reference to Jesus' own situation, not to that of man in general. However, this discussion of the meaning of "Son of Man" is perhaps more promising for the understanding of Jesus than any other phase of present criticism, and the fullest presentation of the newer and radical view is found in this volume.

The Christ of the creeds, the Christ of ordinary evangelical Christianity, has disappeared for the author of the *Prophet of Nazareth*. "Jesus would have been utterly bewildered by the Nicene Creed," he declares. Yet the religious attitude of this critic to Jesus is not very different from that to which worshipers of the divine Christ have been led. "To have come under his spell is to be his forever. To know him is to love him." The man who so speaks, and who declares that the "thought of Jesus may, in numerous directions, become a stronger force in the life of the world than it has yet been," has not rejected Christianity nor cast off the Christian attitude toward the founder of our faith. For those who want a wordy paraphrase of the Gospels, with a bit of Josephus and the Talmud here and there, there are already "Lives of Christ" in sufficiency; but for those thoughtful men who have been led by a process they could not prevent to put aside the value of miracles as evidence to faith, there is now Professor Schmidt's strong assertion of the fitness of Jesus unto spiritual leadership, and for this we cannot be too grateful.

### Holland Old and New

ONE should appraise travelers' books on any country according as they are for the rapid tourist or the philosophic student—a "quick lunch" or a leisurely dinner. Of the latter, Bryce, DeTocqueville, Guicciardini are models. In the former class are myriads. The one sort dies quickly, the other lives on. Mr. Lucas's *Wanderer in Holland*<sup>1</sup> is of the very best of the ephemeral class. It certainly does not rank with the abiding literature produced by men who look into causes and go down to the roots of things. That is the reason why it is and will be so speedily popular. The text is literary, chatty, easily read and quickly enjoyed. The book is a storehouse of excellent half-tone illustrations and delightful word-pictures. Lucas is a collector. He quotes well. He knows his Motley thoroly. One in reading is tempted to forgive the American's virtuous partisanship of William of Orange—to whom, as Fruin tells us, the popu-

<sup>1</sup> A WANDERER IN HOLLAND. By E. V. Lucas. New York: The Macmillan Co. \$1.75.

lar title of "Silent" was given posthumously. The author does not seem to know how much has been done in Dutch history since Motley, a half century ago, covered about forty years of the Dutch story and sent forth a distorted picture of Maurice and Barneveldt. All the better, perhaps, for a readable book which tastefully and enjoyably pictures what in the Netherlands is external and visible, Mr. Lucas is not profound, while delightfully showing the English touch on the low countries. He is literary to excess and admires Dutch art; but, that Holland, apart from dykes, dams, windmills and peasant costumes, was a pioneer in civilization and taught the noblest civic science and arts to the English-speaking nations and moved the world for good—of this one gets little idea from Mr. Lucas.

Profoundly serious and exceptionally valuable is Dr. Morton Dexter's study of the origins, environments, vicissitudes and spiritual development of the Pilgrim Fathers.<sup>2</sup> In this volume are gathered the fruits of two generations of reverent and critical research. Three Dexters have made the noble book. Dr. Henry Martyn began and nearly finished his congenial task. At his death Prof. Franklin B. continued, and now Morton Dexter has rewritten and edited the whole, adding considerable material obtained by his own long and unwearied researches on both continents, and in English and in Dutch. Space does not permit us to do justice to this scholarly work, which is a credit to American literature. It is to the last degree trustworthy. With its appendices of names and persons and liberal index, it contains very nearly if not everything known about the Separatists who began in the old world a new England and beyond seas founded the Pilgrim Republic. Superb is the chaste restraint of this final editor and author, for, with all his affluence of material, fine critical sense and temptation to depart into collateral branches of inquiry, he holds himself strictly to his theme. He proceeds on Professor Jowett's principle that "We must interpret an ancient writer by him-

self and by his own age, and not by modern notions . . . neither must we measure him by our standards of right and wrong." This work is absolutely unique in thoroughness and accuracy, while the author's conclusion is bracingly catholic—"nobody can monopolize" the Pilgrim history.

## Sea Tales

GIVE the average sea story to a sailor, and he will express the wish that he might get that particular land lubber on any craft, from a ferryboat to a windjammer, and teach him the difference between a marlinspike and a keel-plate. So many books have been turned out, written in country towns, with Webster's dictionary open to the illustration of a full-rigged ship, in order to include the proper number of nautical terms, that it is refreshing to get a true story<sup>1</sup> of the sea, written by a man who knows his ground, and can take the reader where he can actually feel the heave of the ocean, be buffeted by the winds and taste the salty air. As the hero of his book he introduces Scotty, a former deep-sea sailor, now reduced to a barge hand. In this seemingly monotonous life plenty of excitement enters in. The first story, "The Dollar," is one of the best, where Scotty, because of stealing a dollar, becomes a hoodoo, and for over five years fails to reach land. Every ship either sinks or Scotty falls overboard on approaching his destination and is picked up by an outward bound ship. The dollar turns out to be a counterfeit. These first few stories are the best. The author then rambles off into weird fields of magnetism and imagination. As a whole the stories are very readable. The settings and plots are often impossible, but we must excuse that under a "prose license." In some details he might be justly criticised. In "The Mistake," for instance, he allows a man, whom he describes as "young, strong and a swimmer," four hours to swim two miles, and "the sea was smooth." He also allows his hero one minute to swim 100 feet upward from a sinking torpedo boat. Surely

<sup>2</sup> THE ENGLAND AND HOLLAND OF THE PILGRIMS. By Morton Dexter. Boston: Houghton, Mifflin & Co. \$3.50.

<sup>1</sup> LAND HO! By Morgan Robertson. New York: Harper & Brothers. \$1.25.

such a hero could make more progress than two feet a second.

Picking up another volume of sea stories, of exactly the same general appearance, one encounters narratives of an entirely different character. There is even more familiarity with the details than in the first book, and Mr. Connolly has at his command the power to make one unsteady of voice if reading aloud. "Dory-Mates" is not a new plot; two men have often been allowed to slowly die of hunger and cold on the Newfoundland Banks for the reader's gratification. But in this story, of an old trawler and a young boy cast adrift in a snow storm, there is an element of pathos, irresistible. Martin, the old trawler, a man of iron will and muscle, rows for six days and six nights to the coast of Newfoundland. He takes off piece after piece of his clothing to save the boy from freezing, but to no avail. He will not take the clothing back and continues at his racking work, with fingers frozen to the oars, until he lands the boy's body for Christian burial. The doctor, after amputating his entire ten fingers and toes, exclaims:

"God help you, you're ruined for life." "Aye," the trawler replies, "ruined I am Ye'll never fish again, Martin, nor reef a sail. But the last thing you did in your life—maybe Jack Teevens will remember it in another world, that out of love for him you stood by his boy—were a full dory-mate to him—and at the last gave him a Christian burial."

### The Florence of Landor\*

Looking down upon Florence from the foothills of Fiesole, the Villa Landor possesses romantic as well as historic interest. In its neighborhood Catiline, it is believed, fought his last battle, setting the back of his forlorn army against the Fiesolean heights. Boccaccio walked its groves of olives and gathered his company for the Decameron on confluent streams that ran brawling down to the more sedate Mugnone, where Dante, at an earlier period, lived. Galileo, Michael Angelo, Machiavelli, each in his day undoubtedly plucked blossoms from the

banks of the little Affrico, pleasant stream, which exhausted its waters in 1831, on the thousand vines and fruit trees, "myrtles, pomegranates, lemons and mimosas," which that year began to flourish under the hands of its new owner, Walter Savage Landor.

In this externally beautiful home, where, as he said, the author of remarkable Imaginary Conversations had "the best water, the best air, and the best oil in the world," Landor spent some reasonably happy years; then, lacking the assuaging oil of a gentle spirit, the "beautiful home" ceased to be such to him, or even to seem such to those who came within sound of its sonorous airs. Landor left the villa to his children and wife, stayed away twenty-three years, and returned, an old man, only to find his unassuageable temper still rasped by the members of his family; then he went down to Florence to die and be buried by others. A man, says Mrs. Browning, "of excellent, generous, affectionate impulses, but the impulses of a tiger now and then."

Miss Whiting makes this tempestuous life on the hill her occasional theme for some 317 pages, finding in it, however, little that was not transcendently lovely. Many men of eminence who admired Landor always, and loved him as well as they could, came to see him on the hill, to enjoy there his robust conversation, and many ladies learned to wreath roses about his very robustious walking-stick. On of the sanest of these ladies was our American, Miss Kate Field, in whose journals and letters Miss Whiting finds many choice pictures of the poet's later days. The historic Florence also gets the friendly attention of an admiring visitor, who, taking advantage of Landor's long absence from the old city, gives to its picture galleries, its palaces and wonderful towers what might be called "absent treatment" in many chapters, devoted to a period when Florence was not the Florence of Landor.

**On the Field of Glory.** By Henryk Sienkiewicz. Boston: Little, Brown & Co. \$1.50.

Other novels seem juiceless and other heroes bloodless after reading *On the Field of Glory*, wherein armies march, parade and shout, with flags flying and

\* THE DEEP SEA'S TOLL. By James B. Connolly. New York: Charles Scribner's Sons. \$1.50.

\* THE FLORENCE OF LANDOR. By Lilian Whiting. With illustrations from photographs. Boston: Little, Brown & Co. \$2.50.

in the glisten of sun rays reflected from a million points of burnished steel. We have again the splendid swordsmanship of the incomparable "Pan Michael" handed down to a worthy successor who can fight five duels in rapid consecutive course and come off without a scratch. These Polish nobles fight and love and live with an intensity not to be found elsewhere, and so many hand-to-hand conflicts leave the reader rather breathless and his eyes dazzled by the sharp gleam of flashing swords. We miss Zagloba, the fat knight of the earlier trilogy, but may console ourselves with some new friends—the priest, an ex-soldier, whose warrior-heart beats strongly under the cassock of his later profession, and Pan Serafin, a gentle and gentlemanly soul whom we leave, like the younger men, on the way to the "field of glory" to fight against the Turk, their hearts aflame with love for Poland. The love theme is alluringly human, vivid and vital, as are its hero and heroine. It is eminently proper that Sienkiewicz should this year have received the Nobel Prize for "the greatest work in literature of an idealistic tendency," for his Polish romances, in spite of the brutality of the characters and their crude morality, are written for a higher purpose than the amusement of the public. They are written, as he said in closing his great trilogy, "for the strengthening of hearts."

**Cache la Poudre.** A Romance of a Tenderfoot in the Days of Custer. By Herbert Myrick. New York: Orange Judd Co., \$1.50.

It is very unfortunate that those who are filled with the laudable desire of putting in book form their recollections of pioneer life in the Far West should so often think it necessary to put them in the form of a novel, which they have no special qualifications for writing. Now, Mr. Myrick knows a great deal about the West and has diligently collected a lot of material of historical value, but he has spoiled it by diluting it with a trashy romance. If he had published only his notes and pictures the book would have been worth more. The excellent photographs of bucking bronchos and roundup scenes will be best appreciated by those who know by experience how diffi-

cult it is to take them. We are glad to see that Mr. Myrick's next book will be a real history of the Battle of Little Big Horn. There has been too much romance written about it already, and most of it by those who pretended to give sober fact. It is time now that the few living men who know the truth about it should tell it.

**In the Heart of the Canadian Rockies.** By James Outram. New York: The Macmillan Co. With Maps and Illustrations. Pp. viii, 466. \$3.00.

To the growing army of amateur mountaineers, Mr. Outram's book on the Canadian Rockies will be a welcome addition to the literature of their sport. Mr. Outram is an enthusiast in his subject, and, tho he lays no claim to scientific or exact knowledge of geology or botany, he is a close and accurate observer, and he is able to record his observations in a manner intelligible both to the scientist and the layman. Mr. Outram's close acquaintance with the Canadian Rockies was the result of an enforced rest from mental occupations—a rest which certainly did not prohibit the most strenuous physical exertions. Mr. Outram does not unduly boast of his achievements; but it is easy to see that it was frequently no easy task for his companions to keep pace with him either in straight walking or in ascents and descents of a more difficult character. The description of the railway journey from Ottawa to Banff is graphic and attractive, and forms probably the best guide-book of this route in existence. Canada is already the pleasure ground for thousands of Americans, who flock to the Muskoka region and to the beautiful Acadia country, and the shores of that wonderful inland sea, the Bras d'Or. In Mr. Outram's opinion, the Canadian Rockies offer even greater attractions to the lover of beautiful scenery than are to be found in Eastern Canada. The Switzerland of the West—Switzerland vastly enlarged—is to be found north of the American boundary line. The noble peaks and cañons of California and the icy fastnesses of Mt. Shasta and the Cascade Range offer each some of the splendid features of Swiss scenery; but to find combined and wondrous glacial fields,

the massing of majestic ranges, the striking individuality of each great peak, the forest areas, green pasture lands, clear lakes and peaceful valleys, one must cross the line into British Columbia. Probably no sport is so healthful, so free from all objectionable features, and at the same time so fascinating as mountain climbing. It has its dangers and its fatalities; but in the case of the Canadian Rockies these have been remarkably few—hardly a greater percentage than ordinary street accidents in a busy city. They may be accounted as little in comparison with the access of health and joy which has come to many thru this sublime form of victory over nature. If Mr. Outram's book adds one to the lovers of this sport it may be accounted sufficient justification of its publication.

**The Professor's Legacy.** By Mrs. Alfred Sidgwick. New York: Henry Holt & Co. \$1.50.

In *The Professor's Legacy* Mrs. Sidgwick has succeeded in writing a very German story. It is rather the fashion for fictitious wills—that is, wills drawn up by novelists—to leave embarrassing bequests of orphan girls to young but severe guardians, who are requested or commanded to marry their wards forthwith, and the results of such testamentary match making are often perplexing in the extreme; but in German-made romances there are some peculiar features. The ward is invariably a very young girl just out of school, desperately afraid of her priggish and predestined mate, inclined to dare a timid, girlish rebellion, but also desperately in love with him unknown to everybody, including her own sweet, immature self. The husband is blind, preternaturally so; everybody is blind; he is inclined to be jealous, exacting, and at the same time freezingly respectful to his bride; others make love to the neglected girl. Most of the leading characters are extremely unhappy in an atmosphere of a tension so strained that the least breath of common sense from any quarter would break it, and a thunder shower clear the air of all misconceptions and misunderstandings. The lack of straightforward common sense among people in books is lamentable, but if they had it or exercised it, there would be no

story. *The Professor's Legacy* is a pretty one; and the legacy herself, albeit a perplexing and disconcerting gift, with long red plaits and long green eyes and no sense at all, wins her way and the hearts of men as well as the interest of the readers of her story.

**The Angel of Pain.** By E. F. Benson. Philadelphia: J. B. Lippincott Company. \$1.50.

Mr. Benson can write a good story, and he does. *The Angel of Pain* is a good story, and it is something more. Yet we wish he would leave out the occult, which weakens his latest novel and its immediate predecessor, "The Image in the Sand." We do not like the grotesque figure of Pan trampling thru the pages and leaving the mark of his goat-hoofs upon every third chapter. He is simply horrible and revolting, and that he is a symbol of the Pain inherent in Nature does not make his presence any more acceptable. If Pan were away the strength and tragic intensity of the situations in which the purely human people find themselves would gain incontestably. A man has just four friends—his mother, his sweetheart and two men, one an artist, the other a modern "hermit," who lives in the forest and can make the birds come to him, perch on his finger and sing. Sundry fashionable people flit about these five characters, appear and disappear, and count for as much or as little in their lives as do most of the people we know in our own. The strain of mysticism is not pervasive, but is kept distinct, and we hear only once or twice the flute of Pan as he pipes to himself by the river at the end, but two of the four friends are left, yet every experience of each has enriched or developed the soul, which is watched by an angel with "relentless hands, but tender eyes and pitying mouth," who "sits by, with the screws and levers of the rack under her control," and thru the terrible ministry of the Angel of Pain, one by one are the characters made quite perfect, if less human than before. The Epilog is a mistake; far finer than this banal ending would have been the "love that hath no earthly close," but loves on because it must fulfill its nature, and finds in serving the beloved a sweetness rarer than reward. We cannot comprehend a

love that would or could shrink from a dear face disfigured by an accident—at least, we should call it by another name. A mother would not shrink, nor can we conceive a wife doing it. Women, as a rule, do not fall in love with faces, nor hate disfigurement.

### Literary Notes

THE Dial Company, of Chicago, announces the publication of a new magazine under the patronage of the Dial Company, entitled "*What's in the Magazines.*" The publication is intended to be a guide and index to the contents of the current periodicals. It is published monthly by the Dial Company at 5 cents a copy.

....*The Winged Wheel*, published by R. F. Downing & Co., of this city, as an organ for their international express business, has made its appearance, Volume I, No. 1, being dated February, 1906. The publication is edited by Mr. H. A. Talbot. The office of *The Winged Wheel* is at No. 32 Broadway.

....*A Garland of Children's Verses*, by Lillian Morey Wells (Mrs. Ogle), of Brooklyn, N. Y., published last Christmas, has proved an excellent seller and Mrs. Ogle will immediately issue a second edition. The verses are full of an imagery which must appeal strongly to the children for whom they are intended.

....The Essex House Press announces that it has discontinued American representation and that all subscribers will in the future be dealt with direct from the Press office in London, which is located at No. 16 Brooks street. The last publication to issue from the Essex House Press is Browning's "*The Flight of the Duchess*," with a frontispiece by Paul Woodroffe and colored initials by R. Binns. The publication is limited to 125 copies at £2 12s. 6d.

....The fourth edition of "*Who's Who in America*" for 1906-1907 has just been published by A. N. Marquis & Co., Chicago (\$3.50). It is in such common use as an address book and has been made the foundation of so many sociological articles that nothing more than the announcement of the new edition is necessary. The book-buyer for every public library, however small, should put it at the head of his order list. It has been enlarged by the addition of 2,786 new names and now contains 16,216 biographical sketches.

...."*Sir Joshua Reynolds, First President of the Royal Academy*," by Sir Walter Armstrong (Scribner's, \$3.50), is a welcome reissue in a "popular edition" of a sumptuous art book of a few seasons ago. It is probably the best book that has yet been written about Sir Joshua, for tho the author's endeavor to "paint the great artist as a consistent human being" has resulted in a portrait that is decidedly disillusioning, his presentment of Rey-

nolds's character is, perhaps, more just than the pæans of the hero worshippers; and his critical opinions on Reynolds's art are worthy of the most careful attention; on that subject Sir Armstrong is one of the foremost of living authorities. Twelve plates in photogravure and forty half-tone reproductions make the volume a beautiful one to own.

### Pebbles

FLO was fond of Ebenezer—

Eb, for short, she called her beau.  
Talk of "tide of love"—great Cæsar!  
You should see 'em, Eb and Flo.

—*Cornell Widow.*

Eb and Flo they stood as sponsors  
When Flo's sister was a bride,  
And when bride and groom receded  
They, too, went out with the tied.

—*Yonkers Statesman.*

When their first child came—a daughter—  
The nurse, for a larger fee,  
Went to someone else who sought her,  
Leaving Eb and Flo at sea.

—*Chicago Record-Herald.*

Daughter's given name was Cooper—  
"Coo" for short; and when she grew,  
Her beau's name was William Hooper..  
You should see 'em, Bill and Coo.

—*Cleveland Leader.*

Next there came a second daughter—  
Name: Hemina—and she saw  
And wed a man whose name was Hawley.  
You should see 'em, Hem and Haw.

—*Milwaukee Sentinel.*

This happy couple, Eb and Flo,  
Then named their third little daughter,  
To be in keeping, don't you know—  
Minnehaha, Laughing Water.

—*Springfield (Mass.) Union.*

Next came triplets, heaven bless 'em!  
Ebenezer looked quite grave,  
Then quoth he to his Floretta,  
"This looks like a tidal wave!"

—*Boston Post.*

When these cherubs of the sea  
Had the colic, yes, all three—  
Eb and Flo both lost much sleep,  
Rocking the "cradle of the deep."

—*Grafton C. Allen.*

The triplets now are cutting teeth,  
And, alas, it hence befalls  
That in Eb and Flo's life voyage  
There are many grievous squalls.

—*Rex. H. Lamoman.*

Eb had shown a greed most stony,  
Licking up the golden sand;  
Flo, with rattling alimony,  
Can't regret their busted strand!

—*Brooklyn Eagle.*

And the sea weeds of the relict  
(Flo a widow, understand!)  
At the summer beaches signal  
That a craft is now unmanned.

—*New York Commercial.*

## Washington and the World's Peace

GEORGE WASHINGTON was the leading man in that grand and successful stand, made by progressive Americans of the past century for liberating the people of the present from domination by the people of the past. This domination took several forms:

1. Hereditary office holding.
2. An established Church, which was only another way of perpetuating the thought which had gotten possession in the past.
3. Perpetuities in property arrangements.

Having made good their claim of right to be independent of England, these grand men constructed a ship of state which was designed especially to free the present from the past. To ensure this they put in one plank called "No perpetuity in property arrangements"; another on which this was written: "The United States shall not establish and Church or pass any law to prevent a Church from forming and developing itself"; and another which said: "There shall be no hereditary officers on board this boat." They launched their ship on the stormy waters of the world just as the century was closing, confident that their boat would outsail those which were manned by men hereditarily chosen, and which were constructed of established Churches, suppression of speech, perpetuities in property, etc. The century has justified their hopes. Nearly every other ship of state has been constantly substituting officers chosen by their fellow passengers for the hereditary officers; and many nations are now trying to pull out the rotten established Church planks and to put in good substantial ones made of freedom of thought and speech in religion and everything else.

The success of the ideas which Washington espoused has indeed been amazing. And yet the main thing he stood for is not fully realized. He wanted due voice for the people of the present in all their affairs. This has been achieved

here in America in so far as domination by the past is concerned; but the people of today in every nation are deprived of due representation in their international affairs by the people of the other nations simply because each nation claims the right to dictate to all the others in the interests which are common to all. Americans elect Representatives to the Congress at Washington; the French to the Parliament at Paris; the Germans to the Parliament at Berlin; the English to the Parliament at London, and so on. Each of these Parliaments passes finally on matters which concern the people of all other nations. And their acts necessitate an occasional war as the only means whereby other people can express their wishes, or make the right prevail, in such matters.

Up to the present time we have to ballot on our international matters with bullets. But on this anniversary of Washington's birthday we are happy to present to our readers the proposition by Baron D'Estournelles for an International Council of State, to be organized as soon as France and the United States will agree to it, and the proposition by Mr. Bartholdt, in the form of a joint resolution of our House and Senate, instructing the American delegates to the second Hague Conference to stand for transforming that Conference into "a permanent body to meet automatically and periodically for the purpose of codifying international law, and bringing it up to date, and for discussion of questions which may be of common concern to all said nations." These two propositions are really a declaration in favor of liberating the people of the present from domination by people now living in other parts of the world, by providing a council in which they may discuss and vote upon the questions of common concern. One requires the assent of all nations, the other proposes going ahead, along these lines, as soon as two nations agree. Both are in fulfillment of the work begun by Washington, and look to the full realization of the principle of due representation in all our affairs.

The United States would do well to carry out the suggestion made by Baron D'Estournelles, in this way: Let a Council of State for Foreign Affairs be created, composed of our ex-Presidents, for life, and of six members for a term of years, two to be named by the President, two by the Senate and two by the House. This would give each of the great parties one member on the council from each department of our life. Pending similar action by other Governments, this council could act (along with such men as might be specially named at the time) as American delegates to future conferences at the Hague. They could visit South America, also Asia and other parts of the world at suitable times; and by doing so they could see things not now seen either by our ministers abroad or by our State officials at home. The increasing complexity and importance of our foreign affairs call for such a body as soon as it can be created.

And we venture to suggest to our arbitration group in Congress that this is an auspicious moment for creating it. A Democrat would become first president of this council created by a Republican majority. Roosevelt would become a member *ex officio* (upon the expiration of his term of office) and its second president.

Really, this is the place for our ex-Presidents and now is the time to recognize this.

The advantage of proceeding along this line is that it meets our need at the moment, and provides for *individual action by each nation in taking the steps that lead forward.*

## The Cry of the Children

WE do not need to have to read Mr. John Spargo's book on "The Bitter Cry of the Children" to have some things to say on the subject, for all of us have heard, and we hear, the cry of the children.

Mere hardship, as it is known to a sparse rural population, does not harm the children. Probably it does them good. The food of the hard-working farmer's family may be plain, but usually it is nutritious and sufficient. There is plenty of life in the pure open air, and

to run barefooted four or five months in the year is to most healthy boys a joy. Even getting out of bed at five o'clock of a bitter winter morning, to build the fires and rouse up the sleepy cattle, is not so bad if the prospect of a fierce snow-ball fight at recess lends excitement to one's forecast of the day. And this is the sort of hardship that the self-made man too often thinks of and sniffs at when he is appealed to to help along the movement for the restriction of child labor and a better housing and nourishing of the thousands of children that live huddled together in the crowded slums of our great industrial centers.

For the hardships of these modern children of a machine-made civilization are of a different sort from those of even the poorest country boy. Thru long hours they work in foul air, unrelieved by rollicking fun in the wide out-of-doors, their tender nerves and muscles are kept at tension and their little brains are stunted before they have fairly begun to grow. At night they sleep in breathless, overcrowded rooms, and too often they do not have enough to eat. Sometimes this is because their ignorant parents, tho paying for food a sum sufficient to provide adequate nourishment, buy the wrong things. The death rate among children thus ground in the mills of prosperity is appallingly high, and those that survive to adult years become a dwarfed, stolid element in the population, unfit for the privileges of a free citizenship, and fit material for the fomenter of class hatreds.

Even the children of the city poor that are fortunate enough to be sent to school, too often are unfit because of their debilitated state to profit by the opportunities for mental growth that the community provides for them. There is too much evidence to be ignored that thousands of children that have slept all night in a sickening atmosphere go to the school room breakfastless, to be put thru the useless exercises of a mental gymnastic that cannot awaken their torpid brains.

It is well that the teachers thruout the land are at last alive to the absurdity and the cruelty of these conditions. The National Educational Association wisely gave up a whole session last summer to a discussion of this evil and of possible

remedies. The interest awakened will not diminish. The educational forces henceforth will work with such organizations as the National Child Labor Committee to press the issue home to the conscience and the intelligence of the people.

It will be an infinite pity if the measures that must be adopted for ameliorating the condition of the children shall be restricted not only by selfish commercial interests but also by an influential element among the intellectual classes, in the erroneous belief that "interference" by the state with the relations between employers and employees and between parents and children, is a dangerous extension of public activity. There still lingers a curious fear of a "coming slavery" of socialism, assumed to be immeasurably worse than any evils that we now endure. The notion that everything which is done at public expense for the poor inevitably diminishes their own providence and self-respect is a very old one. It is amply justified by experience so long as economic opportunities are open to the poor to provide adequately for themselves and their children. But circumstances alter cases and empirical rules. Nothing quite so surely destroys the ambition and resourcefulness of the poor as sheer hopelessness, and that is the state that too many of them live in to-day. Moreover, the poor feel not humiliated but exhilarated with self-respect and hope when they are beneficiaries of a system that they regard as theirs by right; a public system, maintained by citizens, among whom they wish proudly to count themselves, and by taxation, to which they know they contribute far more than their rightful share in the enhanced prices of all the necessities of life.

Equally as fallacious as the fear of socialism is the growing apprehension of the biologically minded, that all efforts to save the weak from destruction must impair the quality of the race. This fallacy was sufficiently exposed in the discussion in our columns a week ago, but there is a phase of it which our contributors did not mention, and which ought not to be overlooked. A generation once born into the world will certainly not be worse as the progenitor of generations yet to come just because, during its own life-

time, it lives healthily and in comfort rather than in misery. If betterment of the environment cannot directly improve the race it can at least make decent and happy the life, while it lasts, of the millions already born. That this worthy work, duly performed generation after generation, cannot in the slightest degree interfere with nature's plans of race improvement thru natural selection, was convincingly shown in the discussion by our contributors last week.

## Subordination and Subornation

EVERYBODY has been interested, and properly interested, in the wedding at the White House. Columns on columns of the daily papers have told every incident and every phase of every incident which observant and sensitized reporters could describe. One or two points less commented on may give the text to comment.

It was mentioned, at the time when the service was rehearsed beforehand, that Miss Roosevelt did not choose, as so many brides now do, to request the minister to omit the word "obey" in the promise given by the woman. It was further noticed that when the service was performed, if we may so express it, the minister, in this case a bishop, repeated in so low a tone that he could scarcely be heard, that portion of the service in which the public is asked to speak if any just cause is known why the two parties should not be married; and then that the man and the woman, in view of "the dreadful day of judgment when the secrets of all hearts shall be disclosed," are required to confess it, if either of them knows of "any impediment" why they "may not be lawfully joined in matrimony."

Old forms hang on after they have long become unmeaning or obsolete. Old creeds are repeated by those who do not believe them. We sew buttons on our coats behind when we have ceased to wear swords; that is, we do so in our fashionable attire, when we put on style; and even so Churches retain formularies in marriages or funerals which we would never think of constructing if they were to be created today. They have acquired

a certain sacred ancestral flavor; and fashion, which is always senseless and belated, requires us to repeat what has lost its meaning, or even insults our tastes, our intelligence and our moral sense.

Take this promise to which nothing but belated fashion compels the bride to give her assent: "Wilt thou obey him, serve him, love, honor and keep him?" She says "I will." But the man makes a very different promise: "Wilt thou love her, comfort her, honor and keep her?" Where he makes his first promise to love and comfort, she makes hers to obey and serve. Then, as if this were not enough, the woman must repeat the words after the minister, promising to "love, cherish and to obey," while the man repeats only the promise "to love and to cherish." Under this belated and vicious formulary the primal duty of the wife is submission, obedience, subordination, corresponding to the duty of the husband to provide support.

We cannot be surprised that this distinction and this vow of obedience were put in this ancient form of marriage. It was composed by men, to accord with an early and barbarous notion of the relation of the sexes. Women were slaves, as they are still in this "Order of Matrimony." It is based not on a theory of equal partnership, but of subordination of the slave to her master. The principal argument to justify it is that women take it, and even ask to be married by the form which includes it, not because they like this vow of subordination, but because they like the sounding style that attaches to a church procession and floral fashion.

We do not so much blame the unthinking girls who take on themselves a vow which they never intend to keep, as we do the celebrants who impose it. With some girls it has become a joke to mumble "*go gay*," where they are supposed to say "obey." They have no intention to obey. They expect and intend to be equal partners in marriage, to love and honor and cherish just as their husbands promise to; and that is enough. They take on their lips the word "obey" in a heedless, meaningless way, because they have to as part of a set ceremony. But the ministers who impose it are not to be

so easily excused. The occasion is the most solemn in which people can engage. The vow which the parties are required to take is an oath in the presence of God, more solemn than any judicial oath. The woman must swear before God that she will obey and serve. It is the minister who requires her to make this oath. He knows that, in these days, she will not and does not intend, and ought not to intend, to accept the position of subordination which the vow expresses. He, then, is guilty of nothing less than subornation of perjury, unless, which it is not easy to assume, he accepts the savage theory of feminine subordination, and believes the woman accepts it. It is amazing that sensible men, in these days, continue with serious faces to repeat and require the words.

But it is part of a general system of dishonesty which too far prevails in church formularies. Articles are kept in creeds, and ministers are required to declare their belief in them, and pledge their adhesion to them, and then are compelled to explain them away so as to satisfy their consciences. These pledges are put in forms of ordination; and those are lucky candidates whose assent is made in general terms. The older a creed is, the less it ought to be imposed. The best creed—if we must have one—is the last one made. The best creed of all is that which tells what the person himself believes to-day, and the worst is that which tells what a man must believe.

No civil marriage form requires that either party contracting it shall promise to obey the other. It is only the Church that lags behind the intelligence and civilization of the period. The Church should teach honesty. It should be as decent and moral as the State.

### Is Suffrage a Right or a Privilege?

THE question whether we should speak of the right of suffrage, or only of the privilege of suffrage, is one that seems to require answer. We have been in the habit of assuming that suffrage is a right, and that the right is implied in the principles of the Declaration of Independence; but of late we hear it again and again asserted with great

emphasis that it is only a privilege to be bestowed on certain classes, as, for example, men of property as against the impecunious, or men of education as against the illiterate, or men as against women. Is it a right or only a privilege?

Doubtless there are conditions and limitations that make it the privilege of certain privileged persons. It is clear that the right of ruling, which is essentially the same thing as the right of suffrage, cannot always include everybody. Infants and idiots are non-privileged parties. There may well be certain conditions of society in which a large class of the people are so besotted in ignorance that they are not competent to tell what is good for them, and when others with superior powers and training are properly accepted as rulers, while it is their business to obey, just as children do. The exercise of suffrage, of the power to rule, implies a certain degree of competence, and of the recognition that they possess it on the part of those who would vote and rule.

But if, in the case of a degraded and ignorant society, a certain privileged minority exercise the suffrage, their privilege is equally their right; and this brings us to the principle involved. As education and culture increase among the people, the right of suffrage extends. It may reach the whole mass of the people, and then what was the privilege of the few before becomes the right of the many now. After this there is no question of privilege, only that of right. It would then be an injustice, a crime, to forbid the competent man to exercise his right. He should demand it, and, if necessary and hopeful, fight for it.

The one question of doubt is as to when the culture is such that the right should be claimed. The view taken will depend on the balance of aristocratic or democratic sentiment in a man's mind. Some will hold that no man is competent to help rule the state unless he has so much money, or so much learning. Others hold—and we agree with them—that in such a country as ours, with its general intelligence and the association of the comparatively few illiterate with the literate, it is better to hold that all our citizens have sufficient intelligence to be able to express an opinion as to what is

good for them. If so, privilege is gone, and there is only the universal right of suffrage. We are aware that, for special reasons, some of our States limit the suffrage to those who can read and write, but in most cases the real reason for the limitation is not to secure saner legislation so much as it is to maintain a racial or political control.

It is not well to propound or defend an aristocratic theory of suffrage. It is well to trust the people, and to be quick to extend rather than to limit the right. Be it remembered that it is not law, but competent manhood, on which the right rests. A competent man would have the moral right to help rule, even if the law did not allow it. The world's future is with the rights of democracy. Austria and Russia are now claiming universal suffrage as rights. Indeed the theory of privilege has no future; it is going and is almost gone. It is now held by doctrinaires who will not be able to enforce it except in a limited way. The rule of property suffrage is almost extinct in this country—it survives in Rhode Island. The rule requiring the voter to be able to read and write was intended to shut out certain nationalities in Massachusetts, but there it touches almost nobody; while in other States it is accompanied by an aristocratic sentiment against education of the illiterate class, of which Governor Vardaman is the exponent. It is still safe, and always will be, to speak of suffrage as a right.

But we will be asked, Is woman's suffrage a right? Woman's suffrage is just like men's suffrage. It becomes a right whenever intelligence as to their interests reaches women, and they have the desire for it. There are conditions of society in some lands in which women are willing slaves, obedient to their masculine masters, and in which the suffrage is properly the privilege and right only of men. In such a society generally only a part of the men properly have the right to rule in the State, tho all rule in the family, slaves ruling slaves; the rest are both ignorant and slavish. But the time comes when women look beyond the harem. They refuse to submit to the Kaiser's dictum that they confine themselves to the three K's, *Kirche, Kinder, Kuche*; they go to school, to college;

they read all that men read; they know all that men know; and then the right of suffrage is theirs just as soon as they want it. We need not compel them to exercise it, if they prefer to delegate their right to their men folks; but it is theirs and awaits their claim.

Suffrage is a privilege, in a backward, belated state of society. It is a right here in the United States, in this twentieth century; and the denial of it is a mere academical curiosity, where it is not a mischievous excuse for lingering aristocratic partiality to certain citizens and vicious exclusion of others.

## Reform Laws in Pennsylvania

WHEN the Philadelphia boss and his associates sought by an infamous gas contract to obtain a few millions of ready cash for their other corrupt projects, they excited a popular revolt, the beneficial effect of which was soon to be seen, not only in the city, but thruout the State. The overthrow of the ring and the exposure of its crimes in Philadelphia were followed by a memorable reform victory at the State election and by the Governor's call for a special session of the Legislature. This session ended last week, with a remarkable list of reform statutes to its credit.

Very interesting transformations have taken place. A Legislature that had enacted a "ripper" law designed to rob Mayor Weaver of his powers and to transfer them to the Philadelphia ring, has now repealed that law. A Governor, who was formerly an admiring disciple of the late Senator Quay, and who had defended his own approval of the "ripper" act by arguments admitted to be those of the head of that ring, has now promptly approved the repeal of it. But this was only a small part of the good work done by a converted Governor and a transformed Legislature.

When one considers the recent benighted political condition of Pennsylvania, its lack of such election laws as other great States have long had in use, and its apparently contented acceptance of corrupt boss rule for many years, it seems almost incredible that at this brief special session so much was accomplished.

First, an act providing for the personal registration of voters in cities. This, if enforced by an honest municipal Government, must put an end to the use in Philadelphia of voting lists carrying 80,000 names fraudulently placed on them, the padded lists by means of which the ring now overthrown maintained its supremacy. The act appears to provide all needed safeguards and penalties. Second, a law for uniform primary elections thruout the State on certain dates, with provision for direct nominations. It was by the manipulation of primaries, sometimes held secretly and even a year before the election, that the old State ring controlled nominations for State offices. Names of candidates are to be printed on the official ballots in response to the petitions of qualified electors, the required number of signatures ranging from 10 to 200, according to the importance of the office to be filled. Third, a corrupt practices act, modeled upon the English law. It defines the purposes for which campaign fund money may be expended, forbids contributions by corporations, and requires every candidate and every political committee to file a sworn detailed account, with vouchers, within fifteen days after a primary or a general election. An audit may be had upon the application of five electors. The penalties are severe, including imprisonment.

Fourth, a civil service law for the municipal employees in Philadelphia, providing that appointments and promotions shall be made only according to qualifications and fitness, to be ascertained by examinations under the direction of a bi-partisan Commission. Fifth, the repeal of the "ripper" act, which transferred the power to appoint (in Philadelphia) the Director of Public Safety and the Director of Public Works from the Mayor to the Council. The first of these officers controls the police and the firemen. Sixth, an act to prevent the collection of political assessments from municipal employees in that city. Seventh, one forbidding municipal officers or employees to take an active part in political campaigns, to attend conventions or to serve as members of political committees.

In addition, the State Insurance Commissioner and the Secretary of the Commonwealth are no longer to be paid by fees. Pennsylvania's Insurance Commissioner was, until recently, the Philadelphia boss, and at this special session an investigation revealed the scandalous history of his administration. The State's great surplus, exceeding \$10,000,000, has been farmed out to selected banks for the use of politicians. Just before the November election the failure of the Enterprise National Bank, followed by the suicide of its cashier, showed how a deposit of \$1,000,000 in this comparatively small institution had served the purposes of Pennsylvania politicians now living in New Mexico. A bill aimed at this practice was passed at the special session.

These new laws are enduring evidence of a political revolution. Without exception, they are the fruit of the reform movement in Philadelphia. Such opposition as was shown at Harrisburg was easily and quickly overcome, and when final action was taken, the negative votes were very few or wholly lacking. The converted Governor rejoices with Philadelphia's courageous reform Mayor, and is heartily praised by the newspapers which he was formerly accustomed to denounce and which then were never weary of making him ridiculous in their cartoons.

We have said that all this progressive and beneficial legislation is due to the revolt against the ring in Philadelphia. Who are the men and what are the agencies that deserve the thanks of the people for what has been done to enforce honesty in the municipal government and in the government of the State?

Naturally, one thinks first of Mayor Weaver. With his name should stand those of his professional counsellors, Judge Gordon and Secretary Elihu Root (one a Democrat, the other a Republican), and of the energetic leaders of the reform organizations.

But no one striving to apportion praise justly for this great work should forget the press of Philadelphia. With one or two exceptions, the newspapers of that city have, from the beginning, earnestly, vigorously and continuously attacked the thieves, held up the hands of reform leaders and advocated the enactment of

such laws as have now been given at Harrisburg to the city and the State. The reforms that have taken Philadelphia out of the clutches of a corrupt and powerful ring, and that promise to redeem Pennsylvania from machine rule, are very largely due to an honest and fearless press.

Probably the decision of Congress will be in accord with the recommendations of the President, Secretary Taft, all the Canal Commissioners but one, and Chief Engineer Stevens, and the Panama Canal will be made with locks. It would cost at least \$100,000,000 more to make a sea-level canal, and the time required would be longer by from four to six years. Interest upon the additional sum invested would largely increase the annual expense account. Many of us, in considering the ideal excellence of a canal without a double stairway of locks, have not realized that a lock canal on the Isthmus might be more easily navigated, as the Commission points out, than a canal at the sea-level, because, for a great part of its course it would be much wider. The dams will make lakes in which, it is said, ships will move for nearly three-quarters of the entire distance, and these lakes will be, of course, very much wider than a cut at the sea-level could be made by an expenditure of \$247,000,000, or, perhaps, by spending twice that sum. A sea-level cut on the Isthmus must, for a great part of the distance, be so narrow that accident to one large ship might close the canal. It will always be possible to make a canal there at the sea-level if the American people shall decide by and by that they ought to have one. At present, however, in the light afforded by the official reports, they prefer, we think, to see a lock canal in use nine years hence at a cost of \$139,000,000, rather than to wait thirteen or fifteen years and spend \$247,000,000 for a canal of the other type.

The movement for reforming football at last seems destined to accomplish something. It is not impossible that a practically new game will be evolved, combining the snappiness and

open play features of the English sport with the team work and science of the American game. But in the zeal for reform the Rules Committee seems likely to draw the line wider than ever between the amateur and professional. We confess to being so stupid as to see little or no difference between an amateur and professional athlete, provided both play the game fairly. In large measure the prejudice against the professional is a relic of that aristocratic feeling which holds any form of trade or money making degrading and ungentlemanly. The truth is, that if our colleges and universities would keep their athletes up to a rigid standard of scholarship and make them attend fifteen recitations a week we should hear very little of the evils of college athletics. Hence to prohibit all freshmen and students in the graduate schools from playing on a "varsity" team, as Yale, Harvard and Princeton now threaten to do, or to brand a man as unfit to engage in sport with gentlemen who defrays his college expenses by playing baseball at a summer hotel instead of waiting on the table, is unfair, undemocratic and absurd. If we really want to purge our athletics of the evils of so-called professionalism, let us have fewer eligibility rules and more students who are compelled to study. The spectacle of an athletic team arbitrarily disfranchising students whom the Faculty have admitted to the privileges of the university is one to excite the humor of the irreverent. Professionalism in colleges consists not so much in accepting money as in excessive devotion to sport.

#### Germany's New Tariff

It may reasonably be expected that the German Government's bill giving to the United States for one year the benefit of the new German tariff's minimum rates will speedily become a law, altho the agrarian interest will make a wry face over it. Our Senate will ratify no treaty of reciprocity, and the Kaiser is unwilling to provoke a tariff war. In the course of a year it is possible (but scarcely probable) that we also shall have maximum and minimum rates to bargain with, or that the Senate will be induced to consider a new commercial

agreement. While all due credit should be given to the Kaiser for his friendly attitude and for what he regards as a temporary concession, the truth is that if the new tariff should be enforced against us, and retaliation should follow, Germany's loss, or the losses of the German people, would be much greater than our own. We could much better afford to be deprived of German manufactured goods than the German workingmen could afford the loss of American provisions and grain. Our exports to Germany of raw materials (mainly cotton) free of duty would suffer little reduction, but a retaliatory duty here on German manufactures would be practically prohibitory. While Germany would feel the effect of a tariff war more keenly, both countries would suffer injury by reason of it, and we are glad there is to be no such war. It is great folly for nations to indulge in such contests. To reach some mutually beneficial agreement that will prevent controversy hereafter should not be a difficult task for statesmanship at Washington and Berlin.

#### Petitions Against Smoot

The case of Senator Smoot drags its slow course along, and a multitude of petitions are still being received against his admission signed by women. A distinguished American preacher, well known for his advocacy of women's suffrage, once heard a woman make a long and rambling talk in his prayer meeting; and at the end of it he simply said: "Yet I believe in woman's suffrage." We recall his remark when we see these petitions. It is as improper to send petitions to the Senate asking the members to refuse to allow him his seat as it would be to send such a petition to the Supreme Court in a case brought to it for decision. The action of the Senate in this case is purely judicial, not legislative. They are to decide on the law and Constitution, whether he is properly a member, and no urgency by any one should have the least influence on a Senator. What we think, or what any other man or woman thinks as to Mr. Smoot's right to a seat, should have no effect with a Senator. He must judge the constitutional matter himself, according to

his best judgment, and should not in the least consider an acre of petitions from his State.

#### The Idea of Providence

It is a curious explanation of the spread of religious unbelief among the workingmen that Paul Lafargue gives in a German Socialist journal. He says that it is natural for a capitalist, or the farmers or small shopkeepers to look to providence for good weather, or as the source of their possessions; while the workingman owns nothing but his hands, and feels that it is his own labor, and no gift of heaven that supplies his wants. He sees no Heavenly Father giving him his daily bread, however much he may pray for it. It is the phenomena of nature, says Mr. Lafargue, that makes the countryman believe in specters, witches, magic and divine interventions, none of which the workman sees from his factory windows. This is more ingenious than convincing. The one thing in which one sees the intervention of providence, and which calls for prayer, where one is most helpless, is the matter of sickness and health; and this is common to all men. Really, it is difficult to see that farmers or merchants depend less on their own labor or skill than do factory hands. Each have their hard times, which they cannot prevent, and each have the sense of the necessity of labor for success. The reason why the organized workingmen have less use than any others for the church, if such is the fact, may be because they are organized, and their Sunday meetings take the place of church meetings, and draw them thus from the church. A still further explanation is in the fact that the churches are supported by the money of rich men, who are regarded as their natural enemies.

#### Simplified Printing

Not only simplified spelling, but simplified printing is desirable. Few appreciate the amount of extra labor and space that comes from our using two letters for a single sound in such words as *the*, *this*, *that* and *thru*. An enthusiast, with whom we much sympathize, urges that a form much like the Anglo-Saxon letter which has been re-

placed by *th* be used for that combination, and he would use it alone for *the*, inasmuch as more than half the cases in which it appears are in that word. Thus, in President Roosevelt's last message to Congress, with its 27,500 words, the new letter would have been used 4,300 times (2,200 times for *the*); and the reduction in space would have saved a long close column. The proposed new type is perfectly readable; but convention and prejudice die hard, and we have no immediate expectation that it will be adopted. First, we have got to have an agreement with dictionaries and school books as to how sounds shall be indicated for pronunciation, and that is something on which scholars are now working. The following is a passage from Mr. Roosevelt's message:

In the long run the one vital factor in the permanent prosperity of the country is the high individual character of the average American worker, the average American citizen, no matter whether his work be mental or manual, whether he be farmer or wageworker, business man or professional man.

#### Baptist Open Communion

Scarcely had *The Examiner* told us that THE INDEPENDENT never did or could understand the Baptists, and that they still held to their old position on close communion, when three large churches on the West Side in this city, which had been holding evangelistic services together, a Baptist, a Presbyterian and a Methodist church, held a communion service together in the Baptist church. Dr. Hartley, pastor, and the Presbyterian and Methodist ministers took part at the tables. Let it be understood that the two latter ministers and their church members present had been sprinkled, not immersed, and that, too, in their infancy, not on confession of their faith. That looks like coming together. Will the Baptists of this city or State withdraw fellowship from Dr. Hartley and his church? Not a bit of it; only *The Examiner* may withdraw fellowship, and that is not official or ecclesiastical; indeed, we doubt if it is even an unofficial organ of the belief and practice of the Baptist churches. Accordingly, we are content to be told that we do not understand the Baptists. We have never understood them so well, or

admired them so much, since the days when Prof. W. C. Wilkinson was writing a series of articles in our columns years ago, to prove that the Bible command, "Be baptized," is addressed to the believer, and cannot be imposed by the parents on the child.

**Dunwoodie** Great events, full of significance, are entirely overlooked and hardly yet hinted at in the daily papers. One such is the withdrawal from the Sulpician order of five professors in charge of the St. Joseph's Catholic Seminary of the archdiocese of New York, who now become diocesan priests, under the authority of their Archbishop, and no longer subject to the head of the Sulpician order. This St. Joseph's Seminary, at Dunwoodie, is the largest and best equipped institution for the training of Catholic priests in this country, and this secession from the rule of the order is full of meaning. It seems that one of the professors had written a book on biblical matters which did not meet the approval of the authorities of the order at Paris and which he was forbidden to publish, but to which the Archbishop of New York gave his imprimatur. The questions of so-called higher criticism were involved, and it may have been thought that some of the Abbé Loisy's heresies had been accepted, inasmuch as some of the professors had been his pupils. The Old and New Testament departments are in the hands of Fathers Driscoll and Gigot, and a work of the latter scholar on Biblical criticism, in two volumes, was republished in a single volume, with certain passages omitted to which the superiors of the order had made objection. By this withdrawal these five teachers will no longer be subject to the rule of the order at Paris, and cannot be removed except at the will of the Archbishop. The Catholic teachers have learned the hard lesson taught when the Christian Brothers were removed and sent to the ends of the earth because they attempted to teach Latin and Greek instead of the vernacular. We have here an illustration of the increasing independence in the Catholic Church, and the determination to insist on larger liberty and less tyranny by absentee landlords of the faith.

### Religion in American Schools

It is curious how utterly American experience as to the absolute separation of Church from State in education is misunderstood in England. Dean Stubbs, in a letter to the *London Times*, quotes a letter from the late Dr. Donald, of Boston, who was successor of Phillips Brooks as rector of Trinity Church, and who said:

"I fear you will finally be compelled to adopt the theory of purely secular education such as we have, but it is a bad theory, for while it works in respect to educating the mind and in imparting secular knowledge it utterly fails to train the pupils morally. Our children lack and conspicuously lack the temper of obedience and respect for law. They also show a certain unsensitiveness to the fundamental principles of right and wrong which I can explain only by the fact that they are receiving no religious instruction and precious little religious influence."

It is such statements as this which mislead opinion in England as to conditions here. If this is a fair statement of fact, it is to be considered that Boston, for which he speaks, is a Catholic city, and that nowhere are the parochial schools better organized or more fully attended. But we do not believe that the American children either show unusual unsensitiveness to moral obligations, or that they have less religious teaching than children in England or France. They only get their religious instruction in another way. The United States is probably the most religious country in the world; and yet our public schools are secular, and we trust the Church to teach religion.

### The Chinese Army

Events anticipated in China raise the question what power the Chinese Government has to put down any popular rising which might attempt to massacre foreigners. It is not generally understood how rapidly the Chinese army has been developed, especially under the influence of China's greatest living man, Yuan Shi Kai, Viceroy of Chihli. There are provincial armies being developed which are not ready to be absorbed in the National Army. This latter is in a high state of efficiency, but is not yet large. There are six divisions, each division having 6,048 infantry, non-commissioned officers and men, 864 in the cav-

alry, and nine batteries of 6 guns each. These, with the commissioned officers, engineers, transport and medical corps, bring the strength of each division up to about 12,000 men, or 70,000 men in the six divisions. They are well trained and well armed, and the Mongolian horses are very satisfactory and hardy, tho small. Last November military experts from the leading nations were invited to observe the military maneuvers of this army. The maneuvers were after the style of those in France or Germany. The Blue army represented a hostile force that had landed near the Yangtse River and was marching on Peking; the Khaki army defended the capital, and 30,000 men were in the two armies. The battalions of the army of defense marched for days to meet the attack, and the foreign visitors were simply amazed at the admirable provision made and the excellent discipline. They agreed that already a strong army has been created, and one which in ten years will include thirty-six instead of six divisions, or half a million trained men, including reserves. There are 900 young men in the military schools of China, and 100 are sent every year abroad. These are from the families of governors and men of high rank. Already China is nearly ready to defend herself against foreign aggressions or internal dissensions, and in ten years or less she will ask odds of nobody. We see no reason why a new Boxer uprising is to be feared, altho there may be local disturbances.

President Roosevelt is said to have indicated his desire that no wedding presents should be given to his daughter by foreign nations, but the notification came too late, after the French gift had been provided for, and then others could not be refused. We wish such international presents were not the custom—they may be burdensome, if not annoying. The Princess Ena is soon to be married to the King of Spain. Is it the duty of the United States to give her a wedding present; and from what fund shall it come? Must there be a Congressional appropriation, or is there a contingent fund which needs no legislative approval? The matter has elements of awkwardness, confident as we are that

this case was exceptional, and that the gifts were evidence of the greatest good will.

The fighting and the wander-years are for the young men who must hustle, and we are not surprised when they settle down to a more quiet and not less useful service. Such is the case of Mr. John W. Baer, who has for fifteen years been traveling the country over in the service of the Christian Endeavor Society and the Presbyterian Board of Home Missions; but who now accepts the presidency of Occidental College, Los Angeles, Cal. Yet, even so, he will not lose the strenuous life. We have had another illustration lately of a young man who has been active for several years in persuading Presbyterian and Congregational churches to adopt foreign missionaries, and who has now concluded to go into the secular business of directing immigration into the wheat lands of Western British America.

It is not an exactly agreeable thing to hear such truths as Sir Chentung Liang Chang, the Chinese Ambassador, told an interviewer the other day. He said, speaking of the concessions to foreigners hitherto granted:

"We shall attend to our own affairs in future; and we hope the outside world—the Christian world—will permit us to do this. When I reflect that all of Christendom is an armed camp, I am convinced that we are more peaceably and neighborly inclined than is the Christian world."

Paganism to the front, morally; Confucius teaching the Christian nations.

Patrick Crowe, by an amazing acquittal, has escaped punishment for his undoubted crime in abducting Mr. Cudahy's child. No one doubted his guilt, and least of all the jury that acquitted him after 17 hours and 29 ballots. It was the prejudice against the Beef Trust, with which Mr. Cudahy is connected, that made the jury glad he had suffered and unwilling to punish the man who had stolen his boy and forced him to pay a ransom. Such action is as infamous as it would have seemed incredible.

# The Insurance Conference

BY RUFUS W. WEEKS

[Mr. Weeks is the newly elected Vice-President of the New York Life Insurance Company, and President of the Actuarial Society of America. He has just returned from the Insurance Conference at Chicago, and we are glad to present to our readers his timely views on the subject.—EDITOR.]

THE National Conference of Life Insurance, just held at Chicago, was no perfunctory affair; on the contrary, it was full of vital and suggestive interest, and worthy of study in more aspects than one. Called in the name of President Roosevelt, and consisting of a few Western governors, a few attorneys-general, and thirty State insurance superintendents, it was dominated by a group of a half dozen of the latter from the Central West. These men are vigorous politicians of the clean type, who have attained insurance superintendencies on their way upward, and are now acting for the people as exorcisers of graft from life insurance.

The Governor of Minnesota, rugged, shrewd, incisive, made an energetic chairman, fair to all parties, yet not disabled from furthering rapid action by the conference in the sense desired by the strongest. The Governor of Iowa, handsome and oratorical, voiced excellently the attempt of the people to find their way to clear ideas on a subject heretofore little thought of. This way appeared to be to assume, first, that all expert judgments are worthless because dictated by the corporations, and, next, that the plain citizen has but to give voice to the intuitive notions which spring from his innate honesty, to instantly decide what is right and what is wrong in the practice of insurance. The result is, quite naturally, that he finds more of wrong than of right in present methods.

The first attempt of the people, as represented by the conference in this new field, is, as might have been expected, crude; for so must surely be characterized the notion that the way to cure the evils of life insurance is by abolishing its most successful phase. "Deferred dividend" is the bugbear of the moment, altho intrinsically it is a form of insurance as laudable as its canonized rival, "annual dividend." The situation is somewhat as if the people in its anger with the beef trust, and thinking that the

canned goods branch of the trade contained most graft, should therefore begin reform by forbidding the beef trust to sell canned meats—confining it to meats in form to be immediately consumed—regardless of the fact that many of the people themselves want the canned article. It would seem from the action of the conference that as to life insurance the people collectively condemn and would forbid what the people individually want—a paradox such as might be presented if drinking men were to vote for prohibition, or poker players to wax stern in condemnation of gambling.

The reformers who ran the conference represented "public opinion"—they spoke for "the people," and this with entire sincerity. It is the fact that they do represent the mobile part of the people—the part which has got under way; but, after all, that part is only one of the great classes which compose the actual population of the country. The conference did not represent the wage-earning working class; the interest of that class was never referred to, nor did the conference take up "industrial insurance." But such an omission as this is a matter of course, so long as the working class seems not to care whether public men represent its interests or whether they do not. Further than this, tho, the reformers at the conference ignored the interests of three-fourths of the population above the ranks of the workers—that three-fourths which consist of the women and children; no anxiety was expressed as to whether a greater or less number of these helpless beings would be protected against poverty resulting from the loss of the breadwinner; evidently this was a matter of no importance in the minds of the members as compared with the cardinal demand, which was to stop the graft of the companies upon policyholders. In fact, then, the interest really represented by the conference was that of the voting males of the middle class of our population—the small business men and the farmers, who

are the main mass of the insured in the regular companies.

The majority of the members were not, at the beginning and of their own accord, in favor of the abolition of "deferred dividend"; yet at the crucial moment the report of the steering committee, which had for its first article that very abolition, seemed to be receiving a unanimous vote, qualified only by timid attempts on the part of a few to express a gentle opposition. A spectator watching this event could not but be stunned by the feeling that he was in the presence of a real driving force from outside, which made every single advocate of abolition tenfold stronger than any one man of the other side. What was this driving force? What but *the uprising of the middle class*, come at last in the guise of a consumers' revolt? It is the same force which one might have seen in another place in Chicago, coercing Federal officials into the attempt to imprison the beef barons. This force may accomplish little at this stage of the game, as regards either insurance or beef; but behind it there is the rude determination of the middle class masses to make the things they have to buy cheaper thru the power of their votes; and as the mightiest of human forces—class interest—is thus being let loose, vast changes must result—doubtless for good.

Toward the close of the conference I remarked to a member that the weightiest consideration, from the point of view of the State, had not once been thought of—and that was the question, by what methods the largest possible number of prospective widows and orphans could be shielded from want. His reply was instant, and threw wonderful light on the situation: "*You can't use that argument with the people; you insurance men can never convince the people that you are making them do right!*" Yet it must be said that the spirit of the middle class, as shown in the life insurance revolt, is not devoid of what is admirable. Certainly its entire indifference to the welfare of the working class is not amiable; still less amiable is its failing to have any collective care for its own widows and orphans; but, on the other hand, its stern devotion to honesty is impressive and inspires in the beholder some share of its own conviction of its virtue.

If the mind of the conference may be taken as a picture of the middle class mind of today, there is revealed a curious mixture of the old and the new, of collectivist and individualist traits. Along with that strange blankness to collective responsibility, which is betrayed by the failure even to imagine action of the class all together to secure universal support for its widows and orphans—a blankness which is a trait of the competitive individualism of the past—contrariwise appears an unexpected disposition to trample on the precepts of individualism by denying the right of initiative henceforth to insurance men, and imposing upon them exclusive kinds and even forms of contract dictated by the State. An interesting situation this—a phase of unstable equilibrium in ideas which cannot endure. Is it possible that the middle class mind is about to socialize itself? To suppose that would be to indulge the imagination too far.

NEW YORK CITY.

## The Mutual Committee's Affairs

It became generally known last week that dissensions in the Mutual Life's self-investigating committee had reached an acute stage. In consequence of this Mr. Stuyvesant Fish has refused to serve longer on the committee and has announced his resignation. This action was taken when it became known that the committee's requisition made upon the management for certain desired information of comprehensive scope had practically been refused by the president of the Mutual.

The Fish committee was organized some time before the New York Life investigating committee, but thus far but one of its reports has been made public. Its other reports, the last of which at least recommended that suits be instituted against the McCurdys, have been suppressed by the Mutual's trustees, altho one suit has now been instituted. It seems to us unfortunate, in view of the necessity of re-establishing confidence in insurance companies generally, and in the Mutual in particular, that the interrupted work of the committee should not have been permitted to continue to a finish.

## Survey of the World

### The Rate Bill in Mr. Tillman's Hands

Owing to sensational and unexpected action in the Senate's Committee on Interstate Commerce, the Railroad Rate bill recently passed by the House has been reported to the Senate without change. It comes before the Senate, however, without the approval of a majority of the committee's Republican members, and by their votes it has been placed in the hands of a Democrat, Mr. Tillman, who is regarded as the bitterest personal and political enemy of President Roosevelt now in Congress. Thus it comes about that, in a Senate having a Republican majority of nearly two-thirds, the most important measure of a Republican Administration, approved by an almost unanimous vote in the House, apparently has the standing of a Democratic bill, and has been committed, by the votes of influential Republicans, to the management of the author of the most sensational attacks upon President Roosevelt that have been heard in the Senate. The action of the committee was preceded by many conferences at the White House and elsewhere, designed to cause an agreement as to amendments providing for a judicial review of rate orders. It appears that Senator Crane acted as an intermediary between the radicals and the conservatives, and that Senator Knox, in response to requests, prepared an amendment which Senator Aldrich and his associates approved, altho it was not acceptable to Attorney-General Moody. The President, however, was not inclined to favor any amendment on this point. On the 21st it was announced that he would concern himself no longer with the negotiations, but would rely

upon his veto power, if necessary, for an expression of his views. On the following day Mr. Knox introduced in the Senate his amendment as part of a complete bill. It permits a suit to "test the lawfulness" of a rate order, and allows proceedings to be instituted by a shipper or a railroad company in the Circuit Court sitting as a court of equity, to determine whether the rights of the complainant have been violated, "but in no other way" is "the lawfulness of the order to be questioned." At the meeting of the committee on the 23d, many amendments were offered and rejected. Mr. Dolliver then moved that the bill be reported. This motion was carried. Mr. Aldrich (on the other side) moved that it be reported by Mr. Elkins. Whereupon Mr. Tillman objected, saying that Mr. Elkins's hostility to the bill was known. Mr. Dolliver added that it ought to be reported in friendly hands. Then Mr. Aldrich said that, as the reporting was really to be the work of Democrats, a Democrat ought to have charge of the measure, and therefore he moved that it be reported by Mr. Tillman. Mr. Elkins moved that the reporting member should be Mr. Dolliver (who represented Republican approval of the bill). Those voting for Tillman were Messrs. Aldrich, Foraker, Kean and Crane (Republicans) and McLaurin (Democrat); those for Dolliver were Messrs. Elkins and Clapp (Republicans) and Newlands (Democrat). On the original motion to report the bill, those opposing had been Messrs. Aldrich, Elkins, Foraker, Kean and Crane. The Democrats had joined Messrs. Dolliver, Clapp and Cullom (whose vote had been telegraphed from Florida) in the affirmative. Press dis-

patches report remarks made in anger by several of these gentlemen. By some the action of Mr. Aldrich was characterized as "a shabby trick" designed to confuse the situation and to humiliate Republican supporters of the bill. Mr. Aldrich is said to have wished Mr. Tillman joy as spokesman for the White House (where Mr. Tillman has not been seen since his invitation to a dinner was withdrawn, four years ago, after his assault upon Mr. McLaurin in the Senate). Mr. Foraker is said to have been delighted, because the bill was "where it ought to be, in the hands of its friends, the Democrats." Mr. Tillman took the matter seriously. "If it is intended," said he, "to make this thing a farce, with me as the clown, somebody will be disappointed." His purpose was to work earnestly for the bill, and for certain amendments which he had in mind. It appeared from his remarks that, as to essential points, he agreed with the President, who was reported to have said that the Senator was "an honest man and a hard fighter." On the 26th Mr. Tillman reported the bill, saying he would prepare a written report hereafter. Mr. Aldrich explained that a majority of the Republicans in the committee declined to support the bill because it lacked adequate provision for review by the courts, altho if such provision were added, Mr. Foraker would still oppose it. He promised that those whom he represented should cause no unnecessary delay. Reports from the White House say the President is pleased because the bill is at last before the Senate.

#### The Movement Against Railroads

The Tillman resolution, from the Senate, providing for an investigation concerning the coal railroad companies, was amended in the House committee by the addition of the similar resolutions of Representatives Gillespie and Campbell. In this form it was adopted in the House by unanimous vote, and the Senate concurred. It provides for a thoro investigation, by the Interstate Commerce Commission, as to the control of coal mines or oil wells and oil companies by railroad companies; the alleged combination of the Chesapeake and Ohio, the Baltimore and Ohio, and the

Norfolk and Western with the Pennsylvania company; the effect of this combination upon the soft coal trade and upon the interests of independent mine owners; the distribution of cars, and, in general, all the alleged combinations and discriminations which have been the subjects of complaint. It is said that the Commission will ask that an appropriation of \$100,000 be made for expenses. In the brief debate, Mr. Townsend said that the action of his committee was due to a settled conviction thruout the country that the railroad companies owning or controlling great coal fields and oil deposits were unjust to consumers and independent owners and were seeking to establish monopolies. Mr. Grosvenor said the resolution was aimed at great evils. Congress was not so childish, he added, as to think that a certain great railroad man's puerile statement that his company did not own a majority of shares in a certain other company was really an answer to the charge that these companies were in combination. Mr. Mann, of Illinois, saying that he did not oppose the resolution, pointed out that the proposed investigation would exempt many officers and corporations from prosecution. —Conflicting opinions as to the bearing of the recent decision of the Supreme Court concerning the Chesapeake and Ohio's freight rates for its own coal have been published. The decision does not prevent the owning of coal mines by a railroad company. Assistant Attorney-General McReynolds, who represented the Government in the case, says the fundamental principle is that a company cannot be a dealer in commodities which it transports, unless it is getting out of the traffic its full freight rate. A company must not discriminate in favor of itself as a shipper. This would be unjust to other shippers of similar products.—The New Jersey House has passed by unanimous vote a bill increasing the taxes paid annually by railroads in the State from \$1,200,000 to about \$5,000,000.—The New York, New Haven and Hartford company has reduced its passenger rate upon its lines in the western part of Connecticut from about 2½ to 2 cents a mile. It has also decided to increase the wages of its train employees.

### Reform in Pennsylvania

The first election of Councilmen in Philadelphia since the beginning of the revolt against the ring took place on the 20th, but not all the Council seats were to be filled. Of the seventeen members of the Select Council and fourteen members of the Common Council chosen, seventeen are reformers, whose presence will distinctly improve the character of the municipal legislature that was so clearly under the domination of the ring when the gas contract was brought forward last year. Leaders of the City party (the reformers) are encouraged by the vote for the two magistrates, as the candidate of the old Republican organization received 10,000 votes less than were cast for the candidate nominated by the combined City, Lincoln and Democratic parties. The reformers elected 1,900 local election officers, who will be assisted in contests hereafter by the new personal registration law. Women have taken an active part in the reform movement, and thirty women were elected to be directors in the local school boards. It is reported that Israel W. Durham, the deposed boss, is dying in California. It was due to him that the beginning of work on the filtration plant was delayed for more than a year, at the time of a typhoid epidemic, and the completion of the filtration beds has recently been delayed by the discovery of frauds involving him and his associates. There were 2,300 cases of typhoid in the city last week, and the Mayor is urged to prevent any further delay.—In Pittsburg the old Republican machine was broken, on the 20th, by the election of George W. Guthrie, candidate of the Citizens' and Democratic parties, to be Mayor for four years. His opponent, Alexander M. Jenkinson, had, it is said, the support of Henry C. Frick, the Pennsylvania Railroad and other corporations. Many persons were arrested for illegal voting. In the adjoining city of Allegheny, which will probably become a part of Pittsburg in April next, the Republican candidate was elected over the candidate of the Good Government party. In the interest of the latter the churches were kept open, and hundreds of women prayed in them for his election, while many others in automobiles were carrying voters to the polls.

### The Panama Canal Inquiry

William Nelson Cromwell, who arranged the sale of the Panama Canal Company's property to the United States, testified before the Senate Committee in Washington last week. It will be remembered that John F. Wallace, formerly Chief Engineer, asserted that he was to give up his place mainly because he encountered Mr. Cromwell in connection with all his dealings with the Government and regarded him as a dangerous man. Mr. Cromwell explained that his law firm had been counsel for the Panama Railroad Company for twelve years and had served the last of the French Panama Canal companies in the same way for nine years. In 1904 he had been appointed general counsel for the Panama Republic and legal adviser of its fiscal commissioners with respect to the investment of the money received from the United States. He had succeeded in buying all the outstanding shares of the railroad company for our Government and at the request of the President of Panama and Secretary Taft had assisted in solving the currency problem on the Isthmus. He had never received a cent for his services in behalf of our Government, and he had no financial interest in Panama. He had not desired to be present at the memorable interview between Mr. Wallace and Secretary Taft, but the Secretary had insisted that he should remain. The experience had been painful to him, because Wallace was his friend. Mr. Cromwell read letters addressed to him last year by Mr. Wallace, in which the latter thanked him for his counsel and spoke of his wisdom and tact. Senators Morgan and the witness could not agree. At last the Senator angrily said: "I will deal with you on the floor of the Senate." To which Mr. Cromwell replied: "That is the only safe place to do it."—It is said that the committee will probably report in favor of reducing the number of Commissioners to three and of requiring them to reside on the Isthmus.

### Mr. Roosevelt to the Miners

At the beginning of the present week no progress had been made in the negotiations between the anthracite miners and operators. The miners' committee of seven had finished a statement of the

union's demands and a copy had been sent to President Baer, but it was said on Monday that it had not been laid before the operators' committee. There were indications, however, that a strike at the bituminous mines would be averted by a restoration of the wage scale of 1903, which would involve an increase of  $5\frac{1}{2}$  per cent. There was published on the 27th the following letter (dated on the 24th), received from President Roosevelt by President John Mitchell, of the miners' union:

"I note with very great concern the failure in your late convention on the joint inter-State agreement to come to a basis of settlement of the bituminous mining scale of wages. You in this business have enjoyed a great industrial peace for many years, thanks to the joint trade agreement that has resulted in the action of your successive conventions.

"A strike such as is threatened on April 1 is a menace to the peace, business and general welfare of the country. I urge you to make a further effort to avert such a calamity. You and Mr. Robbins are joint Chairmen of the Trade Agreement Committee of the National Civic Federation, and it seems to me that this imposes an additional duty on you both and gives an additional reason why each of you should join in making a further effort."

A similar letter had been sent to Mr. F. L. Robbins, of Pittsburg, who had been in conference with Mr. Mitchell in New York. Mr. Robbins had been saying that he could not see how a strike at the bituminous mines was to be averted, but there were reports that the bituminous operators had offered the increase of  $5\frac{1}{2}$  per cent., and Vice-President Lewis, of the miners' union, had asserted, in Indianapolis, in the 25th, that this increase would be granted. Mr. Mitchell said that, because of President Roosevelt's letter, there would be a joint national convention.—The Chicago Federation of Labor asks the President to veto the bill, recently passed, which excludes alien labor in the Canal Zone from the operation of the eight-hour law.

#### The President's Daughter in Cuba

Mr. and Mrs. Nicholas Longworth arrived in Havana on the 22d, accompanied by the new Minister of the United States, Mr. E. V. Morgan, and were received at the landing place by a committee of the Cuban Congress and by official representatives of President Palma, who welcomed Mrs.

Longworth as the "daughter of Cuba's friend." That evening the distinguished visitors were guests of honor at a reception and ball in the palace, which was elaborately decorated. On the following day a committee from the city Council presented to Mrs. Longworth an address, making her "the adopted daughter of Havana." The visitors were also entertained at official banquets and special performances in the theatres. On such occasions Mrs. Longworth wore the necklace given to her by the Cuban Congress and people. The following letter from President Roosevelt has been published:

"MY DEAR PRESIDENT PALMA—I desire to thank you and thru you the Cuban Congress for its touching and generous memento of the marriage of my daughter. Beautiful as was the gift, the sentiment which prompted and caused it was still more beautiful and more to be valued.

"Neither yourself, Mr. President, nor any other citizen of Cuba can rejoice more than I at the marvellous progress and prosperity of the Pearl of the Antilles since it took its place among the independent nations of the world. The Cuban Republic has maintained peaceful relations abroad and order at home. It has shown a most generous spirit toward its soldiers who fought for its independence. It has provided ample means for education. It has constructed public works, and under these conditions has naturally seen its great natural wealth develop and its people progress by leaps and bounds.

"I congratulate you with all my heart, and thanking you and them, and desiring all possible blessings in the future for you and them, believe me sincerely your friend and admirer of your country,

THEODORE ROOSEVELT."

#### No Tariff War

Last week the German Reichsrath accepted the proposed agreement to continue for a year the present tariff regulations with the United States, in hope that our Congress may take action on the tariff within that time. Chancellor von Bülow declared that the United States had no right to the most favored treatment from Germany, but that he desired no tariff war and hoped for a change on our part. A Lutheran newspaper is unwise enough to reveal what it says von Bülow told the leaders of the Reichsrath in private session. He said in effect:

"We should be morally and economically right in beginning a tariff war with the United States, and in allowing our general tariff to come into force. We need, however, not only American cotton, but American support, or at

least America's benevolent neutrality, in the world theater.

"We wish to avoid splendid isolation, and to have the republic as a rear guard whenever England and France make a joint assault on us. Hence the interchange of professors, hence the amiability of the Emperor and Prince Henry of Prussia, and hence also the compliance with the wish of the Government at Washington that the provisional arrangement be extended for a year, instead of concluding a commercial treaty."

The tariff war between Austria and **Servia** has been settled, and will give peace, it is hoped, to that troubled country. Since the assassination of King Alexander and Queen Draga, in June, 1903, Servia has been under the ban of the Powers, which refuse to have full diplomatic relations so long as the murderers are not punished, and are even in power. It is now clear that King Peter had no antecedent part in the plot which led to his elevation to the throne. The King was unpopular, and two rival parties were trying to secure the succession. One party was supported by Russia, and desired to put a Grand Duke on the throne, while the other party was Austrian and had a Montenegrin prince in view. The latter party carried out their design quite too thoroughly, by assassination in the excitement of the affair, and this made it impossible for them to put their candidate on the throne, and they had to compromise on Peter. But his position has been most uncomfortable, and now the conditions have become strained, and an effort is making to secure his resignation, so that no little anxiety has existed, which may be relieved by the commercial pact with Austria. The crux of the present difficulty was in the demand of Austria that Servia should make no tariff agreement with Bulgaria until after the agreement had been made with Austria, and then that the treaty for commercial union with Bulgaria should not be concluded. It is likely that the agreement reached with Austria had this provision. Servia and Bulgaria are trying to come together and thus strengthen each other against the attempted rival control of Austria and Russia. In an address last Friday Mr. James Bryce expressed regret that the Austrian opposition to the Servo-Bulgarian treaty was apparently successful,

but expressed the confident hope that they would be brought closer together.

#### **Persia and Turkey**

The Persian Legation at London states that the report published a few weeks ago of a rising of the merchants and mullahs of Teheran against the Government and the granting of a constitution by the Shah was somewhat exaggerated and inaccurate. The proposed "House of Justice" is to have purely judicial functions, and there were no merchants concerned in the affair, which was merely a dispute between the mullahs. Nevertheless, further rumors of a revolutionary movement in Persia continue to reach Europe, and the fact the Shah has recalled the Persian Minister at St. Petersburg and other trusted advisers is regarded as confirmation. The Shah is said to have addressed a numerous assembly in favor of liberty of speech and freedom of the press, in opposition to the reactionary court party. The dispute as to the boundary between Persia and Turkey remains unsettled. The Persian Ambassador has demanded the evacuation of Lahidjan by the Turkish troops and compensation for the depredations of the Turkish cavalry. A Turkish commission has been sent to the disputed territory. —The revolt in Arabia does not seem to be so completely quelled as the earlier reports of Turkish successes would indicate. An expedition against the fortress of Shakara was apparently a failure. Marshal Ahmed Fezi Pasha returned to Sanaa with a few prisoners, but without dislodging the rebels, and he was compelled to leave behind four siege guns. Riza Pasha, the former leader of the Turkish troops, was killed in the assaults and Yussuf Pasha was wounded.

#### **Fears in South Africa**

The difficulty in Natal is not likely to be serious, altho some think that further troubles may arise after the crops are gathered in April. The Government has lately changed the taxes upon the natives from the hut-tax to the poll-tax. This levies it upon the young men, wandering about, who have no kraals of their own. A small settlement of Christianized Kaffirs, said to belong to what is called the "Ethiopians," declared that

they would resist the new levy. Police were sent to collect it, but they were ambushed, and an inspector and a trooper were killed and a third man wounded. Immediately it was reported, and feared, that all the natives were ready to rise, but this is not shown to be true. Indeed, the Government has acted with prudence, and no further outbreak has occurred. Our readers have been informed as to what this Ethiopianism is. Hitherto the native Christians have been under the direction of white missionaries. But with their increasing number there has been more desire, as is always the case, to be independent of such rule; and this feeling was increased by the coming of missionaries from the African Methodist Church in this country, who organized native churches under native pastors, and doubtless did a good work. But this independence was much feared, and all the more when the Anglican Church took a branch of the Ethiopian Church under its wing. The African Methodist Church here has sent its bishops to visit the work, and has declared in the most solemn way that there was nothing political in its action, but the white people refuse to believe this, and the Government has refused to allow the Ethiopian ministers the right to celebrate marriages or to enter the northern provinces. In Natal the natives are forbidden to meet for religious worship at any place where a white missionary is not in charge. The missionaries of the American Board have protested against this rule to the Government, but thus far without avail. Natal has a native population of over 900,000, while the white race counts less than one-tenth of that number; and the Zulus are a fine strong race, and growing in culture and wealth. In Cape Colony three-fourths are colored, nearly all Kaffirs. In the Orange River Colony the natives are twice the number of the whites; in the Transvaal they are three to one, and in Rhodesia fifty to one. If we take in also the German and Portuguese possessions, in the region south of the Zambesi the natives outnumber the whites five to one. There is always the fear that some leader may arise to bring on a terrible war, such as has devastated German West Africa. The assurance of peace rests on care not to outrage the sense of justice by acts of

oppression, and to yield to the people rights of property and part in government as they become advanced in civilization. There is no little discussion in the Transvaal over the proposed constitution. The question has been over the basis of representation. The majority of the population is Boer, and if population is the basis the Boer element will control the British population in the local parliament. But if the number of voters is the basis, the British in the cities and the mines, so many of whom have no families, will be in control. In all South Africa the parties are divided on race and language, the Dutch against the English, and were the Dutch parties united in the various colonies, and the South African Parliament in the Transvaal elected on the basis of population, it is believed that they would control the situation, in which case the Chinese importation would cease, much to the dissatisfaction of the rich men who run the mines. It is evident that the mines of the Rand are attempting to rule South Africa.

✱

**Japanese Economics** The industrial condition of Japan depends on its diversified industries and their intelligent development. The population is about 46,732,000, and is increasing by about 500,000 a year. There is thus danger of congestion, as Japan is not a large country, and is one of those most thickly populated. But now there is abundant room for the overflow in Formosa and Korea. Both are practically undeveloped and will supply abundance of food. The famine in northern Japan, to which President Roosevelt has lately called attention, shows what is the danger of a people who depend wholly on crops which may fail. But Japan is depending more and more on her manufactures, which will allow a larger population, while it requires that food shall be brought from abroad. That would, as in the case of England, be very dangerous in time of war, should an enemy attempt to cut off the supply of breadstuffs by sea. Yet the extent of the coast line is so great that a blockade would be practically impossible. The independence of supply for factories would require that Japan begin to raise cotton in Formosa, just as the British are bring-

ing their cotton from Egypt and other colonies. Not yet is labor so educated in Japan that it can compete with European or American labor, altho the wages paid are less. A Japanese economist declares that the Japanese do not have the skill, the perseverance or the conscientious work found abroad, while the small factories ignorantly conducted are wasteful, and the business methods lack integrity and skill. As yet there is very little of that combination which with us is taking the place of competition. What is needed is industrial education and the instruction that labor is most honorable. New responsibilities have come with the war, and plans have been drawn up to hasten the payment of the total war debt within thirty years.

#### Various Matters

Still the Moroccan Conference at Algeciras continues its deliberations, and the side discussions at Paris and Berlin have persistently continued, but with no visible result. At last the Germans seem to be convinced that the French will yield no further, and they are unwilling to have the Conference break up with no result. There now seems some further hope, altho the French have said that they would have no further parley with the German Commissioners, but would throw the whole case into the hands of the Conference. In the joint conference the bank question has been to the front, the Germans demanding an equal position, and the French, as usually, claiming preponderant rights.—The marriage of Kaiser William's second son, Prince Eitel Frederick, to the Duchess Sophia Charlotte of Oldenburg, was celebrated on Tuesday.—The numerous deaths in the College of Cardinals has reduced the number to fifty-nine, of whom thirty-six are Italians. It seems to be the policy of the Pope to keep the Italians in the majority. There are only four French Cardinals, six Austrian, three German, one Portuguese, one Australian, one American and one South American. Only half of the Cardinals have residential sees, but the Pope is expected to increase this number.—There seems to be good evidence that the health of King Edward is by no means good. He is much lamer than he was, walking

with a decided limp. The difficulty in the leg is said to be phlebitis, or inflammation of the veins, following a hunting accident. His physicians have forbidden him the use of tobacco, which is to him a great deprivation. He has aged rapidly during the last few months, and his hair and beard are now as white as snow. His face is thin and somewhat haggard. But it is, in such a case, always the duty of the court physicians to represent their patient as in fair health.—The split in the Unionist party is making trouble in the Conservative clubs. The chief of them is the Carlton, which is now nicknamed the "Hotel des Invalides." It has just refused to elect Lord Robert Cecil, son of the Marquis of Salisbury, who has been returned to the House of Commons as a Unionist Free-trader. Another Conservative club, the Constitutional, has dropped Lord Balfour of Bureleigh from membership because he advocated a Liberal free trader against a Conservative protectionist.—That Count Witte is proceeding to extreme measures to secure funds to run the Russian Government we may well believe. It is asserted that they include the sale or mortgage of railways, monopolies and even territory. We may probably dismiss the report that an American company will lease Russian Turkestan, which is a territory with 5,000,000 population and nearly half a million square miles. The supply of gold in the treasury and banks is failing, and the suspension of gold payments is threatened. But, on the other hand, there is hope of the borrowing of \$200,000,000 in France.—The rising against the Turks in Yemen has by no means been quelled. The rebel Arabs hold the important fortress of Shakara, and the Turkish General Fezi Pasha, who has returned to Sana'a with a few prisoners, announcing his success, was unable to take that fortress, and had to leave four guns, owing to inability to obtain transport. He lost two of his officers killed or wounded. Later reports tell of a disaster by which two thousand of his troops were lost. There is great unwillingness on the part of the soldiers ordered to the front to go, and there have been serious mutinies among them.—Prince Arthur, of Connaught, who is in Japan as the messenger of King Edward,

in presenting to the Mikado the Order of the Garter, has been received with wild enthusiasm.—The new railway from Port Sudan to Berber has been opened by Lord Cromer. It connects the Nile with the Red Sea. This is very important for the opening of the Sudan. There is now complete order and tranquillity, and a satisfactory fiscal system is in operation, and schools and law courts have been established, but Lord Cromer regards the completion of these 325 miles of rail as beginning the "serious development" of the country, as it brings Khartoum 900 miles nearer the sea.

#### "Cases" in the Protestant Church of Germany

In the Protestant state churches of

Germany there is a bewildering succession of "cases" (Fälle), caused chiefly by the fact that pastors find themselves in conflict with the official confessions of the Church, caused chiefly by the radicalism prevailing at many of the universities, and the demand is then made that they be disciplined and dismissed by the church authorities. The "Fischer case," of Berlin, who had openly denied the divinity of Christ, but who had not been dismissed from his pulpit by the consistory, furnished a text and a pretext for all the provincial synods in the various provinces of Prussia to express themselves on, and as a rule to denounce, "the academic freedom" which permits professors of theology to teach what is fundamentally destructive of the confessional status of the church. In Bremen it was discovered that a liberal pastor had for years been baptizing children, but refusing to use the formula recognizing the Trinity. Meeting after meeting was held, debating the question if such a baptism was valid or if these children were to be baptized over again. Finally the authorities decided that these baptisms were to be regarded as correct. The latest "case" is that of Pastor Römer, who was an applicant for a vacant pulpit in Remscheid in the Rhine Province, and who, together with two competitors, was asked to preach a trial sermon on John 6:67 *seq.* Römer concluded that this was a demand for an open declaration of his faith in reference to the divinity of Christ, and accordingly expounded the hypothesis that the church

doctrine of the divinity of Christ was a composite taken from Jewish and from heathen sources, a deification of a national hero, just as Hercules, Romulus and Remus and others were afterward regarded as sons of divine beings. The church authorities of this province promptly refused to sanction the election of Römer to a pulpit, and the latter then secured a position as a teacher of religion in a gymnasium. It is a singular phenomenon in the Fatherland that generally, when a man is not orthodox enough for a pulpit, he is made religious instructor in catechism, Bible history and kindred branches in one of the secondary schools. Data of this sort all go to illustrate the beauties of the state church system.

#### Church Agitation in Germany

The tension between the liberals and the conservatives in the Protestant churches of Germany has become so acute that two appeals have just been published, emanating from different sections of the advanced clans, asking the people *en masse* to break away from the churches and declare themselves independent of all ecclesiastical control in faith and life. One of these is signed by the former pastor, Paul Göhre, a leader among social workers and now a member of the Social Democratic party. He bases his appeal, issued in the name of his fellow liberals, on the new educational law now being pushed by the Prussian Government, which keeps the schools under religious control. Göhre declares that this condition of affairs is worse than is found in Russia, and maintains that non-sectarian education and the religious emancipation of the youth is attainable only thru a secession. The other appeal comes from the student body of the universities, especially from Berlin and Leipzig, and declares that all adherence to a creed or confession is inconsistent with the academic freedom of research for which the universities stand. It maintains that the great body of professors and students have actually already broken with the Church, and urges, in the interests of the very existence of the universities, that this should now be done openly and honestly.

# Business Pure and Tainted

BY N. O. NELSON

[Our readers need no introduction to Mr. Nelson, the wealthy St. Louis manufacturer, whose philanthropy in so many different ways has been told in detail in our columns. If his business methods obtained largely in the business world our social system would be vastly different from what it is now. We are especially glad to append some comment to this article from Mr. Ryan, one of the world's most successful financiers.—EDITOR.]

IN a certain national convention of Christian Churches there was a series of addresses on Ideals. I was assigned to respond for the business class. For this task I was qualified by a business experience of forty years, in small and large, in manufacture and trade, American and foreign, varied in kind and methods.

Among other things, I said that the typical business ideal was profit, money getting and possessions. Notorious money makers like Carnegie and Rockefeller were types of the class made conspicuous by the extent and success with which they have played the game. Exception was taken to this by some, on the floor and in print. One Associated Press agent reported me as "indorsing Rockefeller." One clergyman told me that he hoped all business men would try to make Rockefeller money and give it as freely.

There are exceptions to all rules; there are profit makers doing a narrow business, which does not call for or admit the typical methods; there are men who do not recognize the aspects of their own affairs, to whom custom and law makes right. I believe very few men do conscious wrong; most people see the mote, but not the beam.

I am not concerned about the criticisms, but about the truth. Whatever the truth may be, it is well to know it. Especially is it important if there is a fundamental moral error in our economic system. If all profit making business rests on self seeking, then the particular methods of accomplishing the results are incidental and transitional. If it be true that in the mass of important business operations, the million making plans of Rockefeller and Carnegie and Armour are in common use as far as possible, and are less notorious only because the writers and investigators have selected the most conspicuous personalities, then we

shall be more disposed to look for constitutional rather than penal remedies. Mere repression will not then mislead us. Since the church convention episode, I have submitted impartially the question to all manner of men—trust managers, contractors, publishers, ministers, authors, *exposé* writers—and without exception they have concurred in my version.

Henry D. Lloyd was the first to exploit Standard Oil and thereafter the famous trusts. In due time he became convinced that he was attacking individual cases of a uniform system. He saw that it effected nothing, that it amounted to mere scolding, not much better than scandal-mongering. He told me he was sick of it, and asked what there was to investigate and write about, constructively. I suggested Co-operation. He went shortly to Europe, carrying my letters of introduction; he attended the International Co-operative Alliance at Delft, became deeply interested, wrote "Labor Copartnership," went next to New Zealand and wrote "Newest England." His death was hurried by work and excitement in behalf of municipal ownership in Chicago.

We need not be cynical or pessimistic for looking facts in the face and recognizing causes, but only when we pin our faith to a system that is working so badly as to discourage hope. When we remember that corporations never have had souls or consciences; that when the law abolished trust certificates consolidations took their place; that pooling and joint agreements have gone on in spite of the Interstate Commerce Law; that Senatorial convictions did not stop with the Credit Mobilier exposures; that freeing the serfs in Russia and the negroes in America did not result in equal opportunity for life, liberty and happiness; that the Homestead Law did not maintain

homes for the people; this and much more like it should convince us that the weakness is in the system, that the system educates us to act so, that our business is to study sources more than symptoms. Such a view inspires confidence, not despair. Cities eradicate malignant fevers by constructing sanitary systems, not by prosecuting and scolding and praying.

Getting money by means contrary to law or unfair by the code of custom is only one of the social wrongs; the discovered culprit may or may not be worse than his class. Selfishness and self-indulgence in their many forms are so prevalent as to be little noticed, yet these are the cause and the effect of the money getting mania. These are the spirit and substance of which the crooked money making methods are incidents. When private millions are legitimate, the typical millionaire is no social bastard. As nearly as I dare generalize, two human traits account for the almost universal and certainly general scramble for money—sensualism and self assertion. Things to gratify the senses, and property with which to exercise power and show tangible evidence of power.

We must call in question the distinction which is commonly drawn between sensualism and sensuousness. The distinction is purely conventional; not fundamental, but arbitrary and local. The sense of sight in an art gallery, the sense of hearing at an oratorio, the sense of taste at a course dinner, are rated much higher in the scale of human excellence than the farmer's admiring look at his horses and steers and dogs, or the music of Niagara, or the darky's feast on hog and hominy. It is sensuous to drink champagne, sensual to drink whiskey; it is cultured to marry for title or money, vulgar to marry the cook. To get the means by which the sensuous may be substituted for or added to the sensual is one of the mainsprings of money making. The difference between seven hundred a year and seven thousand a year is the manner more than the extent of sense indulgence. It was the distinctive message of Jesus that life does not consist in things, that life is more than food and raiment, but substantially all the outgo of a liberal living is for things. The subsistence upon which the prophets created the moral code of the world, upon which

the Great Man of Galilee and his disciples lived and preached, upon which all the pure religions have been founded, is a negligible quantity in our economy.

Closely allied to the sensual and the sensuous is the desire for power and pre-eminence. We are not here concerned with the origin of this desire; we see it in operation, and history is full of the calamities it has brought upon the human race. It is a long step from earning pre-eminence by superior service to the ambition which seeks it by any and every available means. We have such anachronisms as being "called" to the bar, or "called" by God to a church, or "chosen" to an office.

To the liberal professions, money is not a prime source of power or the chief evidence of it. They, like the prizefighter and the aeronaut, take the money as an incident. But money is the business man's tool. In it his power lies. Rarely has he any other gift that will command attention. I read today that four millionaire peers have been created by the new Liberal British ministry, and it is laconically stated that the election campaign expenses of about four million dollars will be largely supplied by these and other recently created lords. Our own Senate is called the Millionaires' Club, and Washington's Dupont Circle is a local synonym for great wealth. Undoubtedly many money makers hold Baer's consoling philosophy that God has wisely given them charge of the productive machinery, and that the money they spend on sybaritic living is giving a living to the industrious poor.

If it is true that the notorious ways of getting money are typical, and not exceptional, then many men, even those involved in it, will be disposed to question the system itself. They will ask what else there is, and what to do next. If it is also true that the million itself is questionable, and the means by which it is gotten a mere incident, then attack on individuals, except as illustrations, becomes mere scolding.

Is it true that the fabulous fortunes of Rockefeller, Carnegie and Gates are typical of the bulk of the country's business; that they are of a kind with the Guggenheims, Morgan, Clark, Agassiz and the rest?

Can any man in a lifetime do work

that is worth a million or a hundred thousand dollars? If any services were worth such sums, it would have been those of Plato and Shakespeare, George Washington, Lincoln and Darwin. But every one of these would have been disgraced had he charged such a price or lived upon ten thousand a year. When Agassiz the elder said he had not time to make money, he meant more than he said. When Cicero said that a merchant's merchandise was a badge of meanness, he had no particular trade methods in mind, but the broad fact of trade profits. From *mercator*, merchant, we get the odious term mercenary.

The economists are right in defining trade as buying in the cheapest and selling in the dearest market, but they predicate an open market, free competition. Economists are all free traders, traders are not. Presidential candidate Hancock was correct in calling the tariff a "local issue," meaning that the interest of the voters made their politics.

Resorting to the law-making power to aid in enhancing profits is not confined to traders, nor to the tariff, or monopolies in land and franchises. Profit making is hydra-headed; it is no respecter of cult or class. In a single morning newspaper I find the following typical instances of private interests seeking to profit by law at the expense of the public:

The Connecticut Valley tobacco growers protest against any reduction of duty on Philippine tobacco. They denounce bitterly their representative in Congress for supporting the President's Philippine policy. Tobacco growing in Connecticut covers a small area and supports a mere handful of people, while it is the chief commercial crop of the Philippine Islands, whose guardians we have undertaken to be. The American people are tobacco users to a many times larger extent than Connecticut could supply. A hundred thousand people pay tribute, by force of law, to one Connecticut landowner.

A meeting of representatives of railroad "brotherhoods" passed resolutions protesting against any action by Congress for the regulation of railroad rates. They naively state the reason, that any restraint on railroad rates would hamper them in securing further advances in wages.

They suggest no other reason than their own wages. They are indifferent to rebates, private car lines, discriminations or service. The National Government, acting for the whole American people, are to keep hands off on the sole ground of having the field free for the class of railroad employees.

Postmaster General Cortelyou reports a year's outlay for second class matter to be thirty-two millions, while the receipts were six millions. Letters pay a profit. The loss of twenty-six millions is on printed matter, which pays one cent a pound and costs five cents. The newspapers and periodicals which make up the bulk of this matter are published for profit, as strictly business as any other merchandise. Under the thin disguise of educating the public, the influence of the press has compelled Congress to assess the public for the profit of publishers.

The secretary of the Southern Cotton Association appeals to the "farmers" to hold their cotton for "its value," 15 cents. Only a small remnant remains unsold, he says, but if those who hold this remnant will only hold it for 15 cents, the speculators who have already bought most of the crop at from 8 to 11 cents will be able to force the mills to buy it at 15 cents or over. The public, of course, pays it. It costs about 5 cents to raise cotton at the full price of labor and expenses. Seven cents yields a good maintenance for the plantation and the planter and some surplus. From 7 to 8 cents makes prosperous times for the South. But every effort is made to restrict the acreage and hold the crop to make an additional four hundred millions for the few planters and speculators at the expense of the American people and the world. (The United States raises ten million bales of 500 pounds, which, at 15 cents, makes four hundred million dollars above the normal value of 7 cents.)

The Chicago packers are to go to trial on indictments for the obtaining of rebates from the railroads, for exorbitant refrigerating charges, for combining to depress the price of cattle and raise the price of meat, and for ignoring the laws and courts in general. They have already been tried and convicted by the public, but have been neither punished nor interrupted by law.

Immigration Commissioner Sargent reports, as a typical case of trying to influence his department in enforcing the Alien Contract Labor Law, that of a miners' union which had actively prosecuted a company for violating the law. Later they applied to the Commissioner to drop the case because they had reached a satisfactory adjustment of their difficulties—their "demands" had been submitted to by the accused employer in the hope of averting prosecution.

The "war" among the South Atlantic Coast buyers and exporters of turpentine and resin is over, an agreement having been reached by which higher prices will be maintained than for several years past. The "Big Four" are said to be in full control.

There is a deficit of fourteen millions a year in the rural mail delivery, because the business of private carriers—express companies, liverymen and the like—must not be interfered with. Were these men and horses allowed to carry packages and passengers, the deficit would be converted into a credit, and the people would be greatly accommodated.

When Wanamaker was Postmaster General he got little support for his parcel post proposal. When questioned why his bill would not pass, he answered: "For four conclusive reasons—The Adams, American, United States and Wells Fargo Express Companies."

In brief, all classes study class interests and make strenuous efforts to get legislation for the benefit of one or a few, at the expense of the whole.

The exposures are fresh in mind of the hoodlums in St. Louis and Philadelphia, of the meat packers, and the insurance officers and directors, and Wall Street financiers. Were these, like ordinary crimes, the occasional lapses of individuals, they would have little or no weight. But the remarkable thing is that wherever the probe happens to be inserted, the same condition is found. Everywhere, in every case, every railroad, every packer, every valuable franchise, every life insurance company, every tax return that has been investigated, has been found lawless, perjured, brazenly rotten, when judged by either legal or moral stand-

ards. Did not the statute of limitation intervene, Mr. Folk, Mr. Hughes, Mr. Jerome and Mr. Hitchcock could be kept busy the remainder of their days, and could every day give material for yellow head lines. It is the yellow history that is at fault, not Yellow Journalism.

We are taught to have a sublime respect for the law, and yet when we remember the legal monopolies of Elizabeth, and the one hundred and fifty different capital crimes of the old common law, and the Dred Scott decision, and see on exhibition in the national library Thomas Jefferson's bill of sale of the negro baby girl, Dorothea, we must be allowed to bring the law before the bar of justice. We may ask, is the law right, are the lawful acts right? It is lawful to charge all the traffic will bear, but is it right? It is lawful to build a mansion for fifty thousand dollars and spend ten thousand a year in running it, while the proprietor's workwomen are paid \$5 to \$8 a week and must live in one or two squalid rooms, but is it right? It is lawful to buy lots and land and hold them out of use until the price or the rent can be doubled, but is it right? It is lawful or unmolested lawlessness for employers to combine on prices, and class labor to combine on wages, which the uncombined must pay, but is it right?

We need reconstruction of public opinion and of the system and of the individual attitude. Our judgment is only blurred and muddled by the exposures which purport to be exceptional. When we haggle about accepting tainted endowments because they have a court record, we overlook the patent fact that all endowment income is drawn from the slavish labor of underpaid men and women who are taxed without their consent. Or it is drawn from the monopoly of land or franchises. There are only two legitimate ways of getting money for public uses—one is by the voice of the majority thru taxation, preferably of natural resources and social values; the other is by voluntary payment of those who have earned it by their own services at a fair exchange value. All other money and the "business" that makes it belong in one category.

# Payment for Financial Services

BY THOMAS F. RYAN

[The following is received by us in response to our request for a comment on Mr. N. O. Nelson's preceding article. As Mr. Ryan is the leader in the most gigantic financial operations lately conducted in this country his views are of very great interest.—EDITOR.]

THE article by Mr. Nelson is interesting, because it departs considerably from current criticisms of large business enterprises. The reform of our entire social system in such a way as to eliminate competitive effort to acquire money is too large a subject for me to undertake to deal with. There are two points, however, which are suggested by Mr. Nelson's article. The first is that if the element of seeking distinction above his fellows—that is, ambition—were eliminated from the nature of man, most men would be deprived of their motive for doing great things. After they have acquired a competency, it is for distinction that most men strive rather than for mere money.

The other point is that fortunes which sometimes look excessive may be the result of rendering great services to the community. If a man by intense mental application or natural aptitude can introduce economies into railroad management, he is worthy of a large salary. The salary would not in any case absorb the entire saving made to the stockholders of the railroad and to the public by the reforms introduced. In some cases this

claim of the inventor is compensated by the royalties paid under the patent law; but there are many services rendered in the matter of organization which are not patentable, but afford as striking benefits as patents. Among these, for instance, may be suggested the reduction of the cost of the manufacture of steel by Mr. Carnegie and those associated with him in the upbuilding of the industries now combined in the Steel Corporation. From such services have come many of our great fortunes. If their possessors receive what amounts to a commission on the services they render, it is only a small part of the sum of benefits they have conferred on the community. Take away the opportunity for winning either money or distinction by rendering such services, and few men, as human nature is constituted, would render them. It is right that competition between men should be brought within constantly narrower and narrower rules of justice. This is possible without taking away the initiative which makes men do things, and seems to me the direction in which, in spite of obstacles, humanity is tending.

NEW YORK CITY.

## The Democratic Party and the Railroad Question

BY JOHN SHARP WILLIAMS

DEMOCRATIC LEADER IN THE HOUSE OF REPRESENTATIVES.

THE INDEPENDENT asks me to say a few words upon "the policy of the Democratic party toward railroads and railroad rates." The demands of the Democratic platforms of 1896, 1900 and 1904 upon that question, the language of the first bill introduced upon that subject—introduced by the Democratic floor

leader in the 57th Congress, 1st Session, and the language used by him as Temporary Chairman of the Democratic National Convention at St. Louis, would seem to set forth the policy of the party sufficiently, especially when it is considered that the bill introduced into the House was introduced after consultation

with the Democratic members of the House; that the speech\* made by me in St. Louis, upon the 6th day of July, 1904, was in accordance with the results of such consultation, and my address as temporary chairman was in line with both. Nevertheless, it may be well to say something further.

The Democratic party is composed of American citizens of average intelligence. It recognizes, therefore, the immense benefits that are conferred upon any country, but especially upon a new and undeveloped one, by railroad construction and operation. They know that the railroads have done immense things for

desire to cripple a service which is even the people, but, as Mr. Russell, of Texas, in a speech upon the floor said: "They also know that the people have done very much for the railroads." There is no of more benefit to common, plain people than it is to the wealthy. The latter class could get along some way, preserving their relative advantages, if they were relegated to stage coach times. The hardships of the first class would be multiplied many fold.

An instrumentality of commerce, industry or transportation should not be allowed to run riot merely because it is highly useful. If restrained within the limits of justice and equality of treatment of all, it can be made still more highly useful. It is the maximum of utility by restraining to a minimum of abuse that Democrats seek, and that the President has joined them in attempting to obtain by the passage of the Hepburn-Davey bill. I call it by that name rather than simply the Hepburn bill, because it as much deserves to bear the name of the senior member of the minority on the House Committee on Interstate and Foreign Commerce, as that of the senior member of the majority—the chairman of that committee, Mr. Hepburn.

Several of its most indispensable—indeed its vital—features were engrafted on it by the insistence of the minority, altho by the agreement of all. What the evils at present are I need only mention—further descanting is needless for those as intelligent as the readers of THE INDEPENDENT. They are discrimination between localities, between industries, between persons and in many cases changing rates to suit the opportunity to "charge all the traffic will bear." Above all, perhaps, is the secrecy of rate manipulation and the suddenness with which secret conclusions are put in operation and the equal suddenness with which they are terminated. These abuses arise on the main line, spurs, switches, terminals and terminal bridges and, also, under guise of "contracts," between the railroad companies and other corporations operating private car lines, refrigerator lines, and so forth.

The courts have been found utterly inadequate to correct them, because of the insignificance of the amount of money

\* Our readers will remember that Mr. Williams has always been a firm advocate of Railway Rate Legislation. In the first session of the Fifty-seventh Congress he introduced a bill "To empower the Interstate Commerce Commission to fix transportation rates in certain contingencies," indicating the lines which are now being closely followed. July 6th, 1904, as Temporary Chairman of the St. Louis Convention, he said: "A more ridiculous piece of official impotency than the Interstate Commerce Commission at present does not exist."

"A bill to give the Interstate Commerce Commission power, not to prescribe rates generally, not to fix the schedule of rates for all the roads in the country engaged in interstate commerce, but power merely to prescribe a reasonable rate in a particular case where, after full investigation and hearing from both sides, the rate established has been declared unreasonable, this rate to be maintained until set aside by law, has been pending before the Committee on Interstate and Foreign Commerce in the House of Representatives since this Congress met, and altho the Democrats on that committee have demanded consideration of the bill, and although delegation after delegation of merchants and members of merchants and shippers' associations have been to Washington begging enactment of it or like legislation, nothing has been done."

January 21st, 1904, in addressing the House of Representatives, Mr. Williams said:

"We propose upon this side to say this: That whenever the Interstate Commerce Commission pronounces a given rate unreasonable they shall have then and there the power to fix in its stead a reasonable rate, and this rate shall be operative until on final judgments by proper proceedings in the proper Federal court the finding of the Commission shall be overruled. It is not arming them with the power to make an omnibus schedule all over the country, but wherever, on question raised by complaint or otherwise, they declare a given rate to be unreasonable, they shall then have the power to state what is a reasonable rate; and furthermore, that that rate shall be operative until it is set aside by due process of law. That is all. I do not think myself that any small body of men could arrange, or ought to be empowered to arrange, an omnibus schedule for so vast a country with such divergent sectional interests as ours. Are you going to stand pat against this plainly just demand of the Interstate Commerce Commission, too?"

In the message of December, 1905, the President says:

"While I am of the opinion that at present it would be undesirable, if it were not impracticable, finally to clothe the Commission with general authority to fix railroad rates, I do believe that, as a fair security to shippers, the Commission should be vested with the power, where a given rate has been challenged and after full hearing found to be unreasonable, to decide, subject to judicial review, what shall be a reasonable rate to take its place; the ruling of the Commission to take effect immediately, and to obtain unless and until it is reversed by the court of review."

It will readily appear how closely this recommendation of the President follows the measure advocated by Mr. Williams.—EDITOR.

value involved as an overcharge in any one freight bill for small shippers; the rebates given large shippers to prevent litigation by them; the multiplicity of suits rendered necessary—no shipper not a party to a suit obtaining any immediate advantage, even from the successful suit of another; the inherent inability of a court to fix a future rate, or to do anything, except to adjudge damage already done and to enjoin collection of a given rate challenged as unjust.

For a remedy, something automatic, or self-working, and applicable in its benefit as a relief to all shippers receiving like service, and operating for the future, as well as the past and present, was needed. The Democracy looked abroad and saw all civilized nations doing one of two things—either, discouraged by the problems of private ownership, owning and operating railroads, or else, as in Great Britain, strictly regulating their methods and rates of operation thru a Commission with administrative and sub-legislative power. The great party of individuality and of freedom of trade and industry could not brook the idea of governmental operation—both centralizing and socialistic in its tendency, or, if not socialistic, at least centralizing and bureaucratic. It said, however, that, without wiser and stronger and juster regulation, in the interest of equal opportunities of transportation for all places and persons—equal charges for equal service, where undertaken at equal expense, under similar circumstances—things must, in the ordinary evolution of public sentiment, among a self-governing people by nature incapable of long submitting to oppressive discrimination, come to the point of government ownership and operation.

The very reasons that led Bismarck to recommend that system in Prussia were

the reasons why the members of a party, constituted as the Democracy is, could not tolerate it here; first, to furnish strategic advantages for militarism; secondly, to render the laborers on roads more docile to imperial authority; third, "to provide his master, the King and Emperor," with a good and sufficient revenue independently of the grants of

John Sharp Williams.

the Prussian or German Parliament. In coming to the conclusion to regulate, and, after the example of Great Britain and two-thirds of our own States, to regulate through a Commission, we broached no novelty, because the idea of a Commission for interstate and foreign transportation rates was not new, as a Federal proposition even. One already existed. It owed its existence to the initiative of that "Old Roman" of a Democrat—Senator Reagan, of Texas.

We asked ourselves: "What are the very least powers which we can confer on such a tribunal, in order that its work may be effectively sufficient?" We replied: "It must have these powers—first, to substitute a reasonable, just, fairly remunerative and non-discriminating duty for one challenged as possessing either of the vices, which is the opposite of either of these requisite virtues; second, to maintain that rate in operation until set aside by a court of competent Federal jurisdiction, as being either unconstitutional—that is, confiscatory in its character, therefore transcending any power which Congress itself had, and hence any it could confer—or unlawful—that is, transcending the power conferred upon the Commission by Congress; third, the law should remove the shelter under which—the pretexts behind which—the railroads hide to work injustice, by declaring private car lines, refrigerator car lines, terminals, roads over terminal bridges, switches, and so forth, to be common carriers *pro tanto*, and subject to all the provisions of the old law and the new law, governing the fixing of rates, joint rates and the performance of other duties of common carriers.

At the last session, when the Townsend-Esch bill was offered by the Republicans and supported by the Democracy as a *dernier resort*, Mr. Williams, of Mississippi, in the name of his Democratic colleagues, offered, if the Republicans would accept certain amendments read by him, accomplishing effectively just what has been above outlined, to tear up the Democratic substitute bill and to vote for the Townsend-Esch bill in a body. The Hepburn-Davey bill contains the features sought then and there to be engrafted on the Townsend-Esch bill.

There is in it no effort to interfere with the inherent powers of the judiciary. The right to appeal or to enjoin for unlawfulness or unconstitutionality is left inviolate. The right to hear the facts all over again—to try the case *de novo*—acting as a Court of Review—is not given in the bill and is not inherent in the courts, and should not be conferred on them. That would be to entrench the railroads behind the power

of endless litigation. The Democratic party is no enemy to wealth or to any honest and unoppressive methods of earning wealth. It is no enemy of corporations which honestly and legally conduct their several businesses.

The very *grundsatz*—fundamental tenet—of its faith is "the highest possible liberty of action to individuals, industry and local governments, consistently with the safety of others and the stability of republican institutions."

It knows, however, that it was the *Noblesse* and not *Sans Culottism* which engendered the orgies and insanities of the French Revolution—necessarily engendered them.

It knows that an unswerving policy of cutting up by the roots trust monopolies, railroad abuses (not *uses*) and all other exploitations of the defenseless herd, under the forms of law, is, in the long run, *the wisest conservatism*. It is the dam that the pent up current breaks that destroys—not the stream of even and uninterrupted current. So with the River of Justice.

No honest man or corporation, thriving by an honest industry, and not looking for preferential or special legislation for support or prosperity, has anything to fear from the old historic party of America.

Grafters only—whether grafters by unlawful methods, or grafters by law conferred, or law permitted, undue and unjust advantage taken of their fellows—need to shake in their boots when they hear the old word Democracy. Others have more cause to fear all other parties, for we alone pretend to know no rightful governmental control, either of men or of corporations, save to protect other men or corporations from wrong. The proposed legislation will not injure railroads, or their stockholders, or bondholders. It may destroy the secret power, and in that far way injure the "rings within rings" of managers and manipulators of railroads, whose manipulations are wrought for selfish ends, as far from being beneficial to the real owners of the roads as to the general public.

No honest nor wisely conservative man will regret this result.

WASHINGTON, D. C.

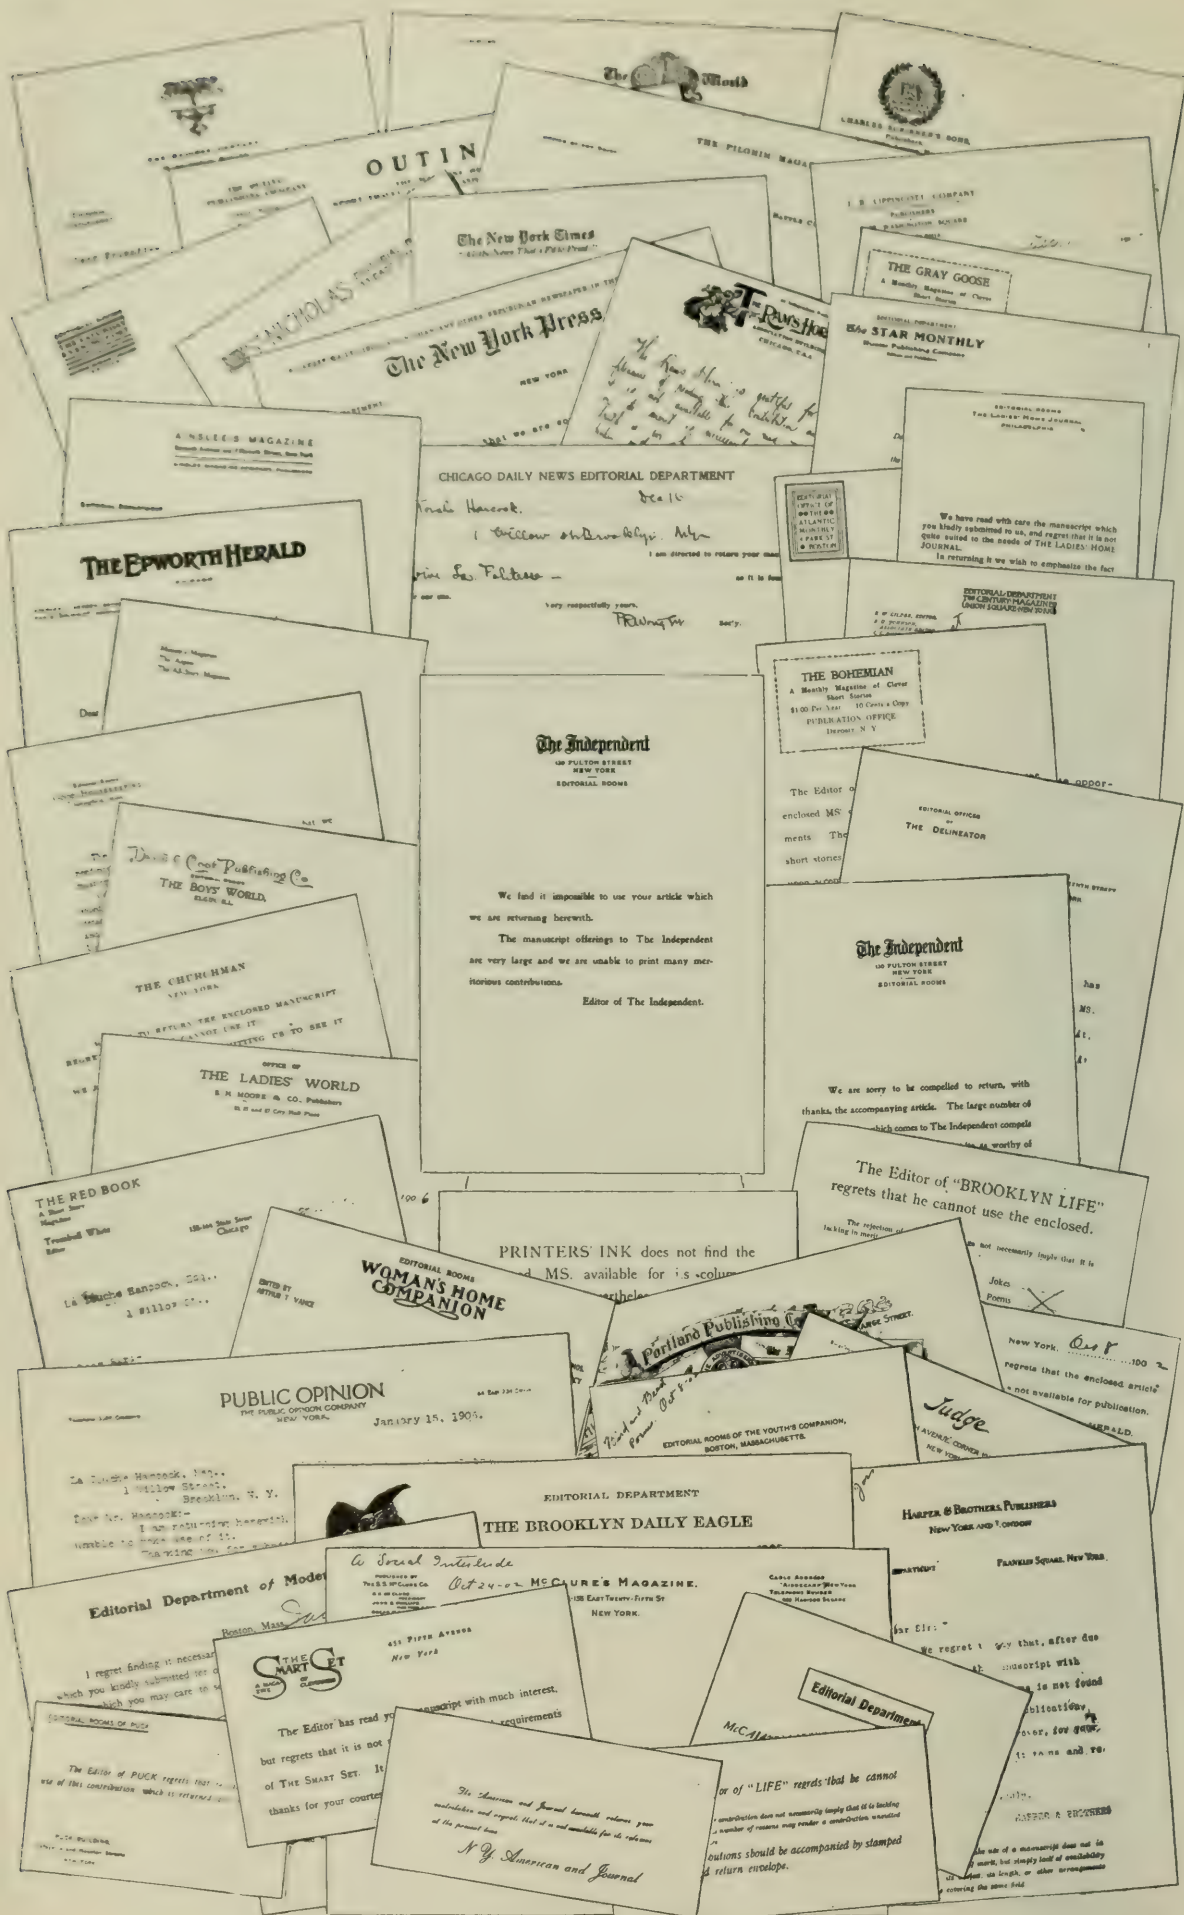

## Anatole Le Braz

Anatole Le Braz, who is now lecturing on Celtic literature in this country under the auspices of the Alliance Française, was born at Duault, Brittany, in 1859. Breton was the language of his family and of his childhood; French he learned at school. On finishing his studies in Paris, he determined to devote himself exclusively to interpreting to the world his race and his province. Accordingly, turning his back resolutely on the intellectual allurements of the French capital, he returned to Brittany. He taught in the Lycée of Quimper fourteen years and was then called to the chair of Celtic Literature at the University of Rennes, which he now occupies. By a sort of close daily collaboration with his fellow Bretons, he prepared several works of folk-lore, one of which, "La Légende de la mort chez Les Bretons Armoiraine," said to be without an equivalent in any literature, has given him a European reputation. He has also produced a thorough study of the Celtic theater, a volume of original poems on Breton subjects, which has passed thru half a dozen editions, and a number of volumes of short stories and romances which depict Breton life and character with **no little power.**

Savant, poet and romancer, M. Le Braz is the most complete literary incarnation of the Celtic revival in France, and he has done more than any other Breton to bring the Celtic revival in France into vital relations with the Celtic revival in Wales and Ireland. Indeed, he is to Brittany what his friend Douglas Hyde (whom he expects to meet on the Pacific Coast), is to Ireland. It is a happy coincidence that brings these two eminent representatives of Pan-Celtism to this country at practically the same time.

# ACCEPTED AT LAST.

By LA TOUCHE HANCOCK.

I wrote a little piece of verse,  
It really seemed quite cute to me,  
I thought it would augment my purse  
To some appreciable degree.

It came back once, it came back twice  
It came back twenty times or so,  
Each time with different device,  
Which, stript of verbiage, meant "No!"

'Twas just as if I'd wooed a maid,  
And she, not willing to offend,  
An honest answer would evade  
By saying she would be my friend.

Two negatives it's very clear  
Will make—I picked this up at school --  
A sure affirmative, but here  
Exception proves the usual rule.

I've taken what revenge I could  
By gath'ring each "Declined With Thanks"  
You'll notice quite a numerous brood—  
And placing them in serried ranks.

I must confess I'm glad sometimes  
I'm treated with polite disdain,  
There's "no reflection" on my rhymes,  
While most of them say, "Write again!"

# Confessions of a Dramatic Critic

[The author of the following confession is the same one who contributed to our columns last July the lively article on his experiences as a Theatrical Press Agent. As we remarked then, he is a gentleman who enjoys our sincere esteem and respect, and we believe his parents were foreign missionaries.—EDITOR.]

THALES invited me for the weekend to his country home and after dinner took me aside, saying:

"McWhorter wants you——"

"For what?"

"On the dramatic desk——"

"Wages?"

"Satisfactory."

"Freedom to criticise?"

"Certainly."

"Hurrah!" I shouted. "Then dramatic editor I shall be!"

Angus McWhorter (would I had known that canny Scot earlier!) was the big chief of a newspaper published not a hundred miles from Printing House Square, while Thales was his intermediary and assistant. My present high spirits sprang from the fact that the dramatic editorship was reputed as by far the most desirable berth on his journal, *The Daily Democrat*. You went there at 9 and got away at 1; at 2 o'clock hied to a matinee or amused yourself on Broadway talking to the managers and actors; and at night had your choice between the solid roast beef of the legitimate drama at one of the staidier houses or the frothy effervescence of comic opera at the Casino or Herald Square. Besides the Tuesday notices of the plays and the grist of daily notes furnished by the theatrical press agents, there was a page to be got up for Sunday, in which you gossiped and chatted with the reader as you liked or mounted your editorial pedestal for an *ex cathedra* preachment on high art. Withal there was plenty of home leisure to study the literary drama. To the young and ambitious newspaper man such as myself, held down for eight years to the routine of police court reporting, chasing sodden politicians and writing up dreary lectures and social "functions," the prospect seemed heaven.

"Now, Mr. H——," said McWhorter when I met him for an interview a little later, "we want critical and scholarly re-

views of the plays, and we want all the news of the theatre. Keep in touch with the people in the profession. Give us plenty of original matter and cut out the conventional press agents' eulogiums. Oh, by the way," he added as I turned to go; "there's another department I want you to take charge of. You are to be our Joke Editor."

"But I never wrote a joke in my life!"

"That makes no difference. You will find plenty of humor in the—er—Sunday supplements and funny papers, besides which I believe we subscribe to M. Quad's Funny Man's syndicate. It will be your task on Thursday of each week to make a proper selection of such matter and preface it with entertaining 'heads!'" Which I did faithfully according to agreement.

Aside from the little matter of the jokes, which I confess formed the most lugubrious task of the week, I took an extraordinary interest in my new profession of dramatic critic and studied keenly the work of my confrères for hint and suggestion. First there was William Winter, of the *Tribune*. One saw him on first nights a little, inoffensive old man, crowned with snowy locks, take his seat in the third or fourth row of the orchestra and sit quietly thru the performance deaf to the chatter of the professional theatergoers around him. In the morning his sweetness had turned to gall; his inoffensive air changed into the rage of the prophet scourging degenerate actors, playwrights and managers from the histrionic temple. Now and again, it is true, he would coo like a dove, did Irving or Mansfield or Mrs. Fiske, don the sock and buskin; but of the newer playwrights or of most of the rising actors he could say little that was good. Yielding full acknowledgment to the beautiful literary quality of his English and conceding his authority as an editor and critic of Shakespeare,

I was, nevertheless, forced to the conclusion that the dean of American critics lived chiefly in his own past and the past of dramatic art—I must look to others for the present.

At the other extreme from Winter stood or sat Alan Dale, the *American* scribe. This is indeed an amusing fellow, who exemplifies the French dictum that the chief aim of writing is to entertain. He exaggerates impressionism to the point of eccentricity—WHIM is written on his threshold like Emerson's. Now, it takes a man of genius to be eccentric, and, while I found that Mr. Dale had a very pretty wit and hothoused the same industriously, yet he could say rather less about a play in a thousand-word screed than many a dullard who writes "notices" as hack work. When, moreover, I read the scintillant critiques written by Bernard Shaw or Max Beerbohm for the London *Saturday Review*, I realized that the Alan Dale brand of eccentricity was rather shallow: he was handing out paste diamonds instead of real ones to his public—who took them and were content.

I struggled bravely thru the laborious reviews written by E. A. Dithmar for the *New York Times*; encountered that heavy engine of destruction, the *Evening Post* dramatic column, in which Mr. Rankin Towse is forever harking back to the "good old days"; reveled in Hilary Bell's delightful stage gossip in the *Press*; studied the late Franklin Fyles's methods in industriously propping up the Theatrical Syndicate in the columns of the *Sun*, and even peeped into the *Herald's* operatic and dramatic page occasionally to see whether the names of the stars and the opera or those of the ladies in the parterre boxes were mentioned first. The truth is, that six years ago no man of first rate ability, wide dramatic knowledge and impartial temperament had employment as critic on any New York daily. James Huneker and John Corbin have come since, for which we may be thankful.

For me dramatic art was a precious thing. The Quixotic task of condemning the lighter forms of amusement was far from my purpose. Indeed, I enjoyed the typical American vaudeville keenly; the incongruities thereof formed an endless

source of amusement. Our vaudeville art, like the Hungarian gypsy music, is a wild product. It reveals the artistic genius of the American people, which, however, is in many departments still chaotic, unorganized, a law unto itself.

Both in drama and in vaudeville I found it a sound rule of criticism that each play, performance or piece of acting should be judged after its kind. It would be as ridiculous to criticise Nat Goodwin by the standard of Sir Henry Irving as to demand a grand opera voice of a singer who warbled "Home, Sweet Home." All see the pertinence of this rule as applied to performers, but many be the prigs (particularly those fresh baked from college) who fail to acknowledge it of plays. With them it is Shakespeare or nothing; if the managers do not furnish frequent productions of Elizabethan heroics, they wail in chorus that the "drammer" has gone to the demnition bow-wows. I confess that I came perilously near being classed with these gentry. What saved me finally was a sense of humor and my realization of the truth that baying at the moon will not bring you any nearer to green cheese. A practical man will accept the world much as he finds it; and while the decline of the poetic drama on the English-speaking stage is no doubt regrettable, nevertheless the prose play suits our modern conditions far better and may be a torch of light and leading as truly. The critic of drama, as of literature, must needs cultivate a catholic taste.

He will not look only to the learned and literary classes for signs and portents of the new drama. Of late I have noticed that some of our best American plays are written by former journalists. It seems at least pertinent to inquire whether the attitude of the typical literary man of our day is not too far aloof from the concerns of everyday life for him to produce the best results. A great play must satisfy not only the critical few but the uncritical many; and to achieve the latter it must conform closely to the requirements of the modern stage and of modern audiences.

As to acquaintance with the mummers, an old time manager advised me when I started out: "Leave the actors alone—don't know 'em off the stage at all. That's

the only way to write perfectly impartial criticisms."

The nature of my duties obliged me to disregard the manager's advice, besides which I must have been indeed a stoic to withstand entirely the allurements of the green room and the joys of chop house conversations after the play. In pursuit of news I got in touch with many actors and in quest of fun I idled pleasant hours with many more.

There is a saying among the theatrical fraternity that after you have dined a critic he is yours. I learned this once to my cost. A very capable actor-playwright had made me free of his home, which I found a delightful place of resort, as the host was unusually well informed about the Continental drama and likewise took pleasure in mapping out for me his schemes for new productions. After theater usually gathered there a notable company for supper, and the "shop talk" was as witty and informing as the rarebits and tidbits were appetizing. Now, my friend, altho a foreigner, brought out an original American play which won a signal popular success altho the newspapers criticised it severely. Probably on account of my close association with Herr D—, I saw his play with friendlier eyes than any other critics and in a long article awarded full justice to its merits, adding, however, in a final paragraph that it ought to be looked upon as a bright and airy trifle and by no means to be regarded as the typical and significant American drama.

The next Sunday, by invitation, I dined with the D—s. The atmosphere was peaceful and serene. We surmounted the oysters and soup successfully, the fish was eaten in the best of harmony; now as the roast beef came on, I noticed two angry red spots on the cheeks of my hostess when the subject of the preceding week's production was casually mentioned.

"It's an outrage!" ejaculated Mrs. D—.

"What's an outrage?" queried her husband.

"The way your friend over there"—glancing at me—"cut up your play last Tuesday."

"But I didn't——" I broke in.

"Yes, you did," swept on the angry

hostess. "You abused poor Heinrich's play unmercifully, said it wasn't the real American drama and all that sort of thing—a nice return, in my opinion, for all the kindness and hospitality you've enjoyed here!"

"What can you expect?" put in the husband with a bored yet irritated air. "The critics are all alike. I don't accuse him of trying to hurt me deliberately, yet he might have adopted a different tone from those other fellows who are my avowed enemies!"

Then it was my turn. I took the clipping from my pocket and read it over to them, sentence by sentence, to prove that I was in friendliest accord with both the aim of the playwright and the spirit of the production, then set forth my ideal of the American drama and attempted to explain why a slight farcical sketch of country life, necessarily greatly overdrawn, was far from fulfilling the ideal. They listened with ill-concealed scepticism. That dinner was never completed—on my part, at least. After I had had my say, I took hat and coat and fled. As for the D—s, they have since been firmly cured of the delusion that they "owned" me.

One of the surprises of my calling was that I not only had to be a critic myself, but also to train up a whole school of others. I had thirty or forty theaters for the notices of which I was responsible, and as obviously I could attend but one show on Monday nights, volunteers were called in to help me with the others. My corps of amateur critics was as odd looking and—as nondescript as Falstaff's army. I pressed into service half a dozen typesetters from the composing room above; a friendly reporter or two who was willing to "do" a play on his night off; an advertising agent; a rhapsodical lady of the ultra-religious temperament who incorporated long discourses on Heaven in her notices, which I as religiously cut out; a brother fresh from college, who perhaps, because of his education, wrote execrably bad English and refused to be cured of the Shakespearean mania; and last, but not least, a little man of scientific and artistic yearnings, whose entrance to the office was usually accomplished on this wise:

"Aha, me noble duke!" This with a

broad wave of the hand and a stage strut that would have made the fortune of an actor in the "ten, twenty, thirty."

"Sit down," I answered as gruffly as I knew how.

"What are the commands of your Royal Highness to-day?"

"Frank Layton for yours," was my reply, handing out two pasteboards, the net value of which was at least fifteen cents.

"May I have four copies of last Tuesday's paper?" This in a meeker tone.

"No!" Then, after an interval: "Wait—I'll see," and I trudged out to the circulation department for the copies of his last week's notices, with which he departed rejoicing, to return the following morning. And this is what he brought:

"The play of 'Only a Mother,' produced by Mr. Frank Layton, Miss Emma Weed and their company, at Layton's Theater, last night, opens in Act I with a scene in which the hero, Reginald Fairfax (Mr. Layton), is making love to the heroine, Gwendolyn Thorborough (Miss Weed), and after offering her his hand, his broad acres and his ancestral hall, inquires why she is unwilling to marry him. Gwendolyn Thorborough replies that she must sacrifice herself for her mother, Constance (Miss Woods), who is pursued by a villain, George Banks (Mr. Morton), who after deserting her in Australia many years ago, has returned to England and engaged two rogues, Sam Phipps (Mr. Hastings) and Joe Black (Mr. Tillotson) to make life miserable for her. Act II, the scene of which is a forest glade on the Fairfax estate, shows Fairfax as played by Mr. Layton in deadly conflict with the three blackmailers, Banks, Phipps and Black (Messrs. Morton, Hastings and Tillotson); after subduing them he learns Constance Thorborough's (Miss Woods') guilty secret and resolves to give up his love for Gwendolyn (Miss Weed). In Act III, Constance and Gwendolyn (Miss Weed and Miss Woods) are discovered in poor circumstances in London; George Banks (Mr. Hastings) enters the room and offers to give up his persecution of Constance (Miss Woods) and to bring about the marriage of Reginald (Mr. Layton) and Gwendolyn (Miss Weed) if she, Constance (Miss Woods), will only be his, George Bank's (Mr. Morton's); but after consulting with her daughter (Miss Weed), she replies, 'Never!' Act IV. In this act, the scene of which is laid in the ancestral home of the hero, Fairfax (Mr. Layton), the latter discovers that he has been misinformed about the character of Constance (Miss Woods), in consequence of which he sees to it that Banks (Mr. Morton), Phipps (Mr. Hastings) and Black (Mr. Tillotson) are sent to prison, the Thorboroughs (Miss Weed and Miss Woods) are raised from poverty to riches, and the hero and heroine (Mr. Layton

and Miss Weed) are happily married, to the great satisfaction of the audience. Between the second and third acts the well-known African song, 'I Certainly Loves Chicken!' was interpolated by the accomplished Afro-American artist, Claus Mardo, and was well received. The moving picture machine, which gave an amusing exhibition between the third and fourth acts, was, however, moved too rapidly, and as a result some of the pictures were blurred. Next week, 'East Lynne.'

"What do you mean by this thing?" I shouted after a hasty glance; then seizing a blue pencil, proceeded to rewrite it, thus, while the little man, looking over my shoulder, followed every movement of the pencil:

"Frank Layton and Emma Weed played 'Only a Mother' at their theater on the East Side last night. Their lovemaking as hero and heroine pleased the audience as it always does, while Miss Woods in the title part exhibited considerable emotional ability as a mother persecuted by a wretch of a former husband from Australia. There's not merely one villain in this play, but there are three, the parts being taken acceptably to the spectators by Messrs. Morton, Hastings and Tillotson. They worked hard to effect the ruin of the good people, but they were foiled, as usual, and the lovers married in the last act to live happy ever after. The somewhat distressful nature of the earlier proceedings were relieved between the second and third acts by the coon shouting of Claus Mardo. A later entr'acte was enlivened by cinematograph pictures, and what with pictures, the coon shouting and the tear-producing melodrama, patrons of Layton's certainly had their fill of entertainment. Next week, 'East Lynne.'"

Week by week the little man brought me his budget of notice, review and criticism, and week by week he carefully watched me chop it to bits or merely edit it as occasion required. He learned that a play or an actor needn't be scientifically described like a beetle or a piece of quartz—that in criticism, as in art, the merely literal fact is nothing—the point of view, the spirit of the art product everything. In the end he became a most valued assistant, and breaking into the magazine field by means of indefatigable industry and the "never-say-die" spirit, landed as associate editor of one of our leading magazines, where I am often glad to have an article accepted. From his editorial pinnacle he no doubt surveys me indulgently, chuckling in secret triumph over the reversals of time; but in spite of mutual jibes we remain fast friends; and had I another theatrical assignment to give out I should select some

more aristocratic playhouse for my pseudo-theatrical colleague than Layton's tinsel temple of fame.

The theatres looked upon the *Democrat* and my service therefor as strictly a business proposition. Were they not extensive patrons of the *Democrat's* advertising columns? Were they not virtually paying my salary? When, therefore, I said that a play was bad or that an actor lacked merit, they looked upon me as a traitor in camp. I remember a little musical comedy produced one summer by the sea. It was a feeble, inept affair, and I said so in qualified terms. Two days later the advertising agent appeared in the editorial rooms with a rueful face. "You have lost us a hundred dollar ad," he explained.

"How's that?"

"Why, I had the manager at Forest Beach almost landed for a big display—was showing him proof, in fact—and was sure of acceptance, when he saw your article and canceled us off the books!"

These tidings were, of course, also communicated to our Big Chief, McWhorter, who frowned.

A year or so later the manager of one of the popular-priced houses rose in revolt. His was one of a chain of theatres all under a single executive control and six of which advertised with us. Of a sudden all six withdrew from our columns, involving the prospective loss of at least \$5,000 a year. McWhorter surveyed the clipping of the offending article dubiously, read it thru closely, and upon my asking—

"Isn't it a fair criticism, in your judgment, Mr. McWhorter? Aren't praise and blame fairly apportioned according to the merits of the play?"—replied:

"The first thing to do is to get that advertising back. I'll see you about this (pointing to the clipping) later."

We moved upon the executive offices of the theatrical circuit, and after a week's struggle succeeded in inducing them to replace their patronage. Then McWhorter called me into the sanctum for a conference.

"In future," he said coldly, "you will pass up the popular-priced houses so far as relates to the merits or demerits of their actors and plays. You will merely describe what you see; criticise never."

"And the other houses?"

"I want scholarly reviews of the first-class plays," he continued, "which expect and can stand some criticism. But I do not want," he added emphatically, "detraction of any of the cheaper productions so as to cause us a money loss!"

Thus, with my wings clipped, I was obliged to form my dramatic plans anew. About the houses given over to melodrama and burlesque, over which the flare-up had occurred, I did not greatly care, as my assistants generally reported them anyway, and it was rather advantageous than otherwise to relieve them of the difficult burden of criticism. I secretly rejoiced that hereafter my critical attention would be confined to the so-called "dollar and a half" productions, and I selected, as my personal assignment on Monday nights, an important playhouse where the legitimate drama flourished. There I could study the best that was offered with a free spirit and the assurance that my position was as unpugnable (?) as a Sarcey's or an Archer's.

Every Monday night found me in my appointed seat. I enjoyed myself hugely. I probed the weaknesses and commented upon the fine points of our American dramatists; viewed the foreign offerings with a critical eye, and eagerly compared the differing artistic methods of English and native actors; studying stage management the while, was quick to recognize a masterly hand in the putting on of a play and equally quick to detect error in this regard. Yes, I will confess it—I was not above poking fun at what I thought bad actors and bad plays, or using the weapons of satire, irony and sarcasm when I believed the occasion fit.

I must have been living in a fool's paradise, for after six months of this sort of thing, without a word of warning, the storm broke over my head. The "storm"—it must necessarily seem a very slight and casual affair to the readers of this story; tho big for me—consisted in the long pent-up, explosive anger of the manager of the theater I had been attending.

"You are an enemy of this house!" he exclaimed violently.

"I thought I was one of its best friends," I replied in blank astonishment.

"For six months you have been doing all that lay in your power to injure this theatre and effect my ruin as its proprietor. Now don't interrupt me—your hostility to us has been so marked and outrageous that I am done with you and your paper forever!"

"I wish you would tell me why."

"Why? You ask why when you have treated every other house on this street nicely, but have continually singled out my plays and my actors as frequent objects of abuse and attack? I have stood it for six months. I'll stand it no longer. Not only will I not have anything to do with your paper again, but your money even cannot procure for you a seat if you apply at the box office!"

I had fallen into the pit which McWhorter had digged. In following out his instructions to favor the cheaper theaters and criticise only the first class ones, I had unwittingly laid myself open to the charge of rank favoritism. As there was no talking to the angry manager—fisticuffs would have been the only answer to his fury were there merit in assault and battery—I repaired to the office. Surely the Big Chief would take fire at this attack on the prerogatives of his critic; surely he would throw the manager's dirty money in his face and inaugurate a red hot newspaper campaign against him for presuming to lay down the law to a conscientious reviewer.

At least so I imagined.

Tidings of the storm had already arrived at the *Democrat* office. In the counting room they knew all about it, and as I passed the money clerks and "ad" agents wore tongue in cheek. After I had entered the editorial sanctum and laid my case before McWhorter, he said:

"I'm sorry, but I'll be obliged to accept

your resignation at a date not later than two weeks from Saturday night."

It seems he knew, too. I alone, around whom the storm had focussed, had been left in ignorance. After my two weeks had expired, McWhorter went personally to the manager's office and ate humble pie. I learned this five years afterward. Great man as he was, he, too, on occasion could grovel and lick the feet of the Money God like any starveling. *But the advertising came back.*

Such was my finish as dramatic critic. I do not feel any shame in the narration of the facts just set forth. Other decent critics not a few have been forced out of place by angry managers who have brought the pressure of the counting room directly to bear on the advertising department. My only regret was that I did not happen to be employed on a newspaper with sufficient sand—and capital—to make the issue squarely with the theatrical magnate and fight it to a finish. I have always much admired the answer given by the proprietor of a great New York newspaper to a leading manager who threatened dire things: "You withdraw your advertising on account of —'s criticisms, and the full strength of this paper, with its hundred reporters and editors, will be directed to the merciless exposure of the methods of the Syndicate!" The advertising was not withdrawn, and the critic kept on.

Independence is even a more valuable thing to self-respecting Journalism than money, and while a good newspaper should be grateful for all patronage and extend due courtesies for the same, yet it cannot abate jot or tittle of essential truth and still retain the entire support and respect of the whole community.

NEW YORK CITY.

# The Cremation of a Buddhist Monk

BY THE REV. C. R. CALLENDER

MISSIONARY AT KENCUNG, IN THE SOUTH SHAN STATES, BURMA.

THE cremation ceremonies of a Buddhist monk who died here a few months ago have just been held. His monastery is located not far from our compound, and the ceremonies in his honor could be seen from the veranda of our house.

The catafalque was constructed out of

have seen prepared in the Siamese country were built on sledlike runners, on which they were drawn to their destination, but this one was built on rollers made out of logs hewn into shape resembling barrels.

The day on which the reigning prince had invited us to attend having arrived,

Embellished Incasement Enclosing Casket.

strong timbers for its foundation, and the top with bamboo, paper and other light, combustible material, wrought with tinsel and artistic work. The handiwork of this catafalque cost 250 rupees (equivalent of \$83.33). Some cost many thousands of rupees. The catafalques that I

we went to the place designated and sat in the improvised pavilion for the royalty to view the sports. The whole thing is sport from start to finish. It begins when the people have a mind and ends when they get tired.

The main feature on this occasion was

Attaching Ropes to Catafalque for Pulling.

Pulling the Catafalque—Tug of War.

what may well be termed "tug of war." Two long, large ropes, twisted out of bamboo fibre, were attached to either end of the catafalque, at the bottom, stretching over a distance of, say, forty rods. The people then divided at random into two companies and pulled against one another till one end broke, when away went the catafalque to the opposite side, amidst cheers and shouts of laughter and waving of hats, that would do justice to an American crowd on a college campus. First one side succeeded, then the other. The Sawbwa, reigning prince, joined heartily in the vocal part of the sport. When one realizes that a corpse is in the casket taking its final ride the ridiculous side begins to appear, and when one sees the crowd gambling hard by the gap of incongruity widens. In this country when one dies it is a time of weeping and

was drawn to the top of a hill, where a large pile of wood had been placed for the burning. Over this pile of wood was placed a white canopy suspended from the tops of four high bamboo poles, from the center of which a yellow hat of the late monk was suspended.

The casket, overlaid with gold leaf, was taken from the catafalque and placed upon the funeral pyre, together with other ornaments, such as umbrellas, fans, etc. (In the Siamese country the casket is usually left in the catafalque and all burned up together.) The monks then went up to the dead and chanted their requiem, after which the casket was broken open. The rope with which the body had been wrapped was cut with a native hatchet, the dull thudlike strokes causing the chills to creep up one's spinal column. The rope and the yellow robe

Casket Placed on the Pyre for Burning.

wailing, but when the same body is to be cremated the ceremony is characterized by rejoicing, sporting, gambling, drinking. The sport on this occasion lasted several days, gambling being carried on at night as well as in the daytime.

On the last afternoon the catafalque

in which the corpse was shrouded were torn into pieces and given to the superstitious crowd, who eagerly seized them and took them home as protective relics. As the body had been in the coffin for months the odor emitted at this time can be imagined.

Igniting Pyre by Means of Skyrockets.

Four ropes had been stretched from points several rods distant from the pyre, one joining each corner of the pyre. On these ropes little skyrocketlike pieces

were shuttled into the pyre, igniting it at the four corners, and the whole went up in flames.

KENG TUNG, BURMA.

## Elizabeth Barrett Browning

BY GEORGE PERRY MORRIS

[Tuesday of next week, March 6th, is the centenary of the birth of Mrs. Browning. She was, forty to fifty years ago, a much honored contributor of poetry to *THE INDEPENDENT*. We are glad to publish this discriminating account of her as patriot and social reformer, from the pen of an editor of *The Congregationalist*.—EDITOR.]

THE centenary of Mrs. Browning's birth must call forth new appraisal of her as poet and lover; but it will be well if scrutiny of her life and output focuses on something more than her technical skill or her beautiful love for her husband. She had a theory of her art as a weapon for social transformation which was vastly superior to the conception of poetry held by many singers today, and her love for her husband

and her child was not so exclusive as to prevent her from loving and serving humanity.

When comparison is made between Robert and Elizabeth Browning as to the effect which residence in Italy at a time of social revolution and evolution had upon them, the line of demarcation between them is seen to be one of theme as well as method. The evidence is clear that in the earlier days of the struggle

Browning was stirred as much as his wife and planned to collaborate with her in voicing sympathy and in singing the praise of Napoleon III. But this never was other than an impulse or an intention. Garibaldi, Victor Emmanuel, Pius X, Cavour and Mazzini, all the leading participants in the strife which made modern Italy, went unsung by him, save Napoleon III, and he was not dealt with until 1871, in the poem "Prince Hohenstiel-Schwangau, Saviour of Society," in which the monarch serves as a sort of lay figure, around which was draped a subtle analysis of the problem of opportunism in politics.

To Mrs. Browning, on the other hand, the struggle for Italian freedom meant so much that it can be said of her what George William Curtis said of Lowell—"Literature was his pursuit, but patriotism was his passion"; and she flung herself into ardent championship of the Italian cause, into stern rebuke of England's recreancy to moral ideals—as she believed—and into portraiture in verse of the men of her time, whom she either revered or despised.

One does not have to defend every line that Mrs. Browning wrote for Italy or against Great Britain and the United States or claim that her utter faith in men, notably in Napoleon III, was always justified by subsequent developments, or assert that responsible statesmen can always guide nations promptly and obediently into paths of peace at poet-idealists' bidding—to assert, nevertheless, the splendor of Mrs. Browning's moral ardor or the general soundness of her allegiance both as patriot and poet. The men whom she believed in had the honor, as Mr. Morley says, "of guiding a people through the ferments of revolt, with discipline, energy, legality, order, self-control, to the achievement of a *constructive* resolution." Her denunciation of Great Britain—was it very much astray in the light of Mr. Gladstone's admission, described by Mr. Morley, as to the callousness of British public opinion at the time, and his description of the injustice done Napoleon III for the compact at Villa Franca? "Both Italians and Englishmen," adds Mr. Morley, "have been too ready to forget that the freedom of Italy would have remained an empty

hope if Napoleon III had not unsheathed his sword." "Sublime deliverer"—as Mrs. Browning put it—Napoleon III may not have been, but deliverer he certainly was.

This ardor of Mrs. Browning's for Italian liberty, like unto that of Harriet Beecher Stowe's, Harriet Martineau's, Olive Schreiner's, this literature of invective against those whom she deemed cold-hearted, unsympathetic, pathetic or craven, called forth from Matthew Arnold in his day the dictum that she was hopelessly confirmed in her "aberration from health, nature, beauty or truth"; and there are moderns who echo this opinion. Thus Mr. A. C. Benson, in his essay on Mrs. Browning, does not hesitate to dwell on what he calls her morbidity, her unbalanced faculties, etc., and he even goes so far as to taunt her with the advocacy of freedom and her interest in servitude's abolition, because forsooth her income was derived from slave labor in Jamaica. Which is as if Miss Helen Gould were to be damned for giving succor to Russian Jewry because of her father's treatment of American investors in railway stocks. How does Mr. Benson know but that it was just *because* Mrs. Browning knew of her ancestors' iniquities that she was determined to remedy as many evils of her own time as she could.

Another modern social philosopher, Mr. Henry James, in his life of W. W. Story, the sculptor and author long resident in Rome, who knew Mrs. Browning well, and whose contemporary judgment on her is much preferable to Mr. James's later one, writes of Mrs. Browning's participation in the Italian struggle as if it were a feverish obsession, reprehensible because it was so deeply felt by her, disquieting in its example on all who would like to see poets entirely just, perfectly proper, and supremely devoted to their art. Mrs. Browning's judgment on men and events were not "conveniently loose" enough to suit Mr. James. "Her beautiful mind and high gifts" were, for him, discredited by their "engrossment," and he thinks latter-day judgment on her will be that her "Poems Before Congress" and the like show "what becomes of distinguished spirits when they fail to keep above." To which, no doubt, not

a few admirers of Mrs. Browning will be inclined to retort to this

"Master of riddles most obscure  
Expert in periphrastic fiction,  
Whose devious characters abjure  
A too pellucid style of diction,"

somewhat after the fashion of Mr. Gilbert K. Chesterton, who, after reading the "Awkward Age," and hearing that it was taken as proof by some readers that Mr. James was a prophet and leader, remarked ironically:

"I like to think of a crowd with pikes and torches shouting passages from the 'Awkward Age.'"

If Mr. James would only reveal some convictions which he holds as "a malady and a doom," he would be read more and respected more by virile manhood.

The fundamental issue raised by Mrs. Browning's participation in the politics of her adopted land and by her denunciation of the land of her birth, is that of the legitimacy her assumption that poetry is to be used for political ends, for making history as well as voicing the song of the heart and the flight of the imagination. Mrs. Browning, in her letter to her friend Mr. Chorley, rebutting the arguments which he and other English friends who in 1860 were condemning her "Poems Before Congress" advanced, said:

"That any school, any critic should consider the great tragic movements (such as the war for the life of a nation) unfit occasions for poetry . . . fills me with an astonishment I can hardly express adequately. . . . If, while such things are done and suffered, the poet's business is to rhyme the stars and walk apart, I say that Mr. Carlyle is right and the world requires more earnest workers than such dreamers can be. For my part, I have always conceived otherwise of poetry . . . I don't dream and make a poem of it. Art is not either all beauty or all use; it is essential truth which makes its way through beauty into use."

Nothing better can be quoted to express Mrs. Browning's attitude toward herself, her art and her themes; and nothing better can be found to define the attitude of any poet like minded in the desire to play the prophetic and patriotic rôle. To condemn her is to condemn Milton, Byron, Shelley, Coleridge, Wordsworth, Swinburne, William Watson and Kipling of her English peers, or Lowell, Whittier, Emerson, Holmes, Julia Ward Howe, Whitman and Lanier

of our own singers. The point is not whether every estimate of character, every dictum as to policy of state, which these poets have put forth at various critical epochs in European and American history, has been just or statesman-like, as Mr. James would seem to insist the poet should be if he ventures to speak. The point is whether their "beautiful minds and high gifts" also were discredited by their "engrossment" and partisanship in a lofty cause with human liberty in peril. If they were discredited then Mrs. Browning was. If they were not, then she was not.

The point to be kept in mind by critics of today, in so far as they approach Mrs. Browning as a poet, is not so much her technical attainments, as the validity of her conception of the poetic art which led her to take contemporary rather than past heroes for analysis and eulogy, which led her to be objective usually rather than subjective, which enabled her to share humbly, but none the less truly in the creation of a modern state—so that if it was possible for Browning to say that Italy was written on 'his heart, it is possible to say of Mrs. Browning that her name is written on Italy's heart—which is a greater attainment—and which made her a prophet of social righteousness rather than a philosopher in search of the absolute, or a theologian defining the mysteries of divinity, or a dramatist in play with puppets of the imagination.

It was as a prophetess that Mrs. Browning impressed Mr. W. W. Story, her friend and neighbor, for a time in Rome. Her energy and fire, the glorious courage with which she attacked error, however strongly entrenched in custom, because she had a faith "rooted in the center of her being," profoundly impressed him; and his testimony is worth more than those who prate of "her clear stream having run thick" because she wrote "Poems Before Congress," and who intimate that she committed an unpardonable sin because she had a moral purpose.

Browning's democracy and patriotism, in the presence of the same tragic events in Italy, did not find expression in any way to identify him with the cause of Italian liberty or with nationalism any-

where. His democracy and liberalism were of the mid-nineteenth century, individualistic type. His love for England has comparatively little in verse to show for it. Neither in theme nor in method did he express his democratic convictions in concrete ways, which will lead patriots thru coming years to turn to him for apposite sonnets, short poems or tragedies. Greek, Italian and English life preceding his own he dealt with, and the characters he made live said much that, when taken from its context, can be aptly applied to modern conditions because of the continuity and sameness of life in all lands and all times, so far as fundamentals go. But if you go to a collection of verses like Salt's "Songs of Freedom," how many poems by Browning do you find? One: "The Lost Leader."

Browning, unlike Shelley, as Miss Vida Scudder has pointed out, was not interested in the destiny of nations or of collective humanity. He was interested in the destiny of individual souls. "The rights and wrongs, the habits and fears and the fates of classes, do not interest him," says another of his critics, Rev. Philip Wicksteed. This charge is substantially admitted by his latest biographer, Mr. Hereford, as well as by Mr. Stopford Brooke and Professor Dowden in so far as it applies to his lack of interest in affairs of State, and to his lack of intention or service in shaping history by his voice or his pen. Compared with Tennyson, Swinburne, William Watson or Rudyard Kipling, in this legitimate and vital aspect of a poet's possible career, he is sadly deficient and much inferior to his wife.

The explanation, framed in part by Mr. Wicksteed, no doubt would run something like this: His democracy was of an ultra-individualistic type at a time when the current of political and social development had started the craft of society in Europe toward the uncharted sea of social democracy. Fundamentally an individualist in temperament, in his processes of thought and in his attitude toward truth co-ordinated in philosophy and theology, it is not surprising that in his social science, as in his religion, he was more concerned with the destiny of souls than with the fate of classes or nations. Moreover, he was prevented, so Mr. Wicksteed claims, from be-

ing an ardent, unquestioning moral reformer or partisan patriot, either English or Italian, or for any cause involving decisive choice and unreserved championship, by that very enlargement of ethical sympathy, that doctrine of the relativity in ethics, of the presence of good in evil, and the moral significance of "individual point of view" in forming judgments, which is so consistently set forth typically in the "Ring and the Book." Byron could write of Napoleon, Shelley of George III, Tennyson of Napoleon III, Swinburne of the Czar, as William Watson has of the Sultan of Turkey and Kipling of contemporaneous English muddlers in statecraft, with a tone of dogmatic moral authority that Browning never felt equal to, but which Mrs. Browning did. They all had the conception of poetry which Whittier claimed was one of its greatest if not its greatest ends, namely, rhadamantine justice, "meting out honor to whom honor is due, infamy to whom infamy." But the "Ring and the Book" or "Prince Hohenstiel-Schwangau" are not thus writ.

Mrs. Browning's methods, themes and ideals were such as to make her collected verse a storehouse of verse which never will lost its appositeness to social conditions the world over, as men struggle against tyranny, political and industrial. Foes of child labor today can quote her with a pertinency that is startling. London's hordes of starved, workless degenerates call for a champion as clear visioned as she was in her day, facing the beginnings of the evils of pauperism and overcrowding. "Aurora Leigh" is but an up to date dispute between the individualist and the socialist with a Christian faith. All this lies open to the most casual reader of her verse or to the ever increasing army of social workers who have need of poetic stimulation and comfort. It is not hidden away on lengthy monologs or intricate dialogs. In sonnets, lyrics and narrative poems that the plain man may read, understand and profit by, it may be found. Moreover, it conforms in its broad philosophy of action and human betterment more closely to the popular conception of this generation's thought than does the individualism and abstention from service of society through song, for which her husband stood.

# Statehood Rights of Arizona and New Mexico

BY J. W. BABCOCK

[Mr. Babcock, member of Congress from Wisconsin; member of the Ways and Means Committee, and Chairman of the National Republican Committee in the campaigns of 1894, 1898, 1900, 1902 and 1904, is one of the most influential members of the House of Representatives, and is leading the fight against the statehood bill which is now up before the country and Congress for discussion.—EDITOR.]

IF the Statehood bill, which has recently passed the House, and is now pending in the Senate, should be enacted into law it would, in my opinion, be one of the greatest legislative outrages ever perpetrated in this country. I refer particularly to the proposed merger of Arizona and New Mexico into one State, and I believe that future events would prove it to be a serious mistake. I opposed the Statehood joint bill in the House from principle and without complaining have borne the brunt of criticism from those intent upon forcing the bill through the House. As long as I have a vote, and a voice, I will continue to oppose this legislation.

In my opinion, neither Arizona nor New Mexico is at this time ready for Statehood. It will be many years before New Mexico reaches the worthy stage which will entitle the people of that Territory to the rights of Statehood and give them two votes in the United States Senate, on an equality with Pennsylvania, New York, Illinois, or my own State of Wisconsin. It will not be so long before Arizona is fitted to come into the Union of States, but when she does reach that stage of preparedness every consideration of justice and fair play demands that she shall take her place in the sisterhood in her own right and unhampered by a union which could almost be called miscegenation, with comparatively an alien race. If let alone, Arizona's future is assured and will be glorious. Resources of mineral wealth that hardly have been scratched on the surface; possibilities of agricultural development almost boundless, promise for the territory growth in the future which will make Arizona one of the richest regions of the West. To yoke her with

New Mexico will inevitably stunt her growth, check her development and make her secondary to a community which does not begin to approach her in worth in any material way.

It is only natural that the people of Arizona should feel themselves entitled to the privileges of Statehood, and should chafe at being held out of the Union. They are ambitious folk, brothers of yours and mine, coming from all of the States of the East, pushing their fortunes in a new country and desirous of advancing them. They recall that other Territories far less worthy have been admitted, citing Nevada and Utah. They point to the fact that the great Territory of Dakota was divided into two States. Because political considerations in the past may have dictated the admission of other Territories they see no reason why other considerations should not now prevail to obtain for them a like privilege.

But is it not significant that with all this eagerness to secure the coveted prize of statehood, which would mean so much to their material development, nine-tenths of the people of Arizona are willing to defer it, and defer it indefinitely, rather than be drawn into the Union shackled to New Mexico? There are reasons geographical, racial, historical, moral, and I might also say constitutional, why this outrage should not be perpetrated upon the people of Arizona. The geographical reason alone should be enough to prohibit the joining of the two territories into one State. The combined area of New Mexico and Arizona is 235,380 square miles. With the exception of Texas this would make the State the largest in the Union. When Texas was admitted by treaty it was provided that she should have the privilege of dividing

herself at any time into five States. The two territories are separated by deserts and mountains to a degree which would make physical jointure impossible from a practical viewpoint. The dividing ridge comprises one of the most difficult mountain regions on this continent. Wagon roads and trails, not to speak of railroads, are almost impossible between the settled communities on either side of the Divide. Inter-communication between Arizona and New Mexico will always be difficult. The trade of Arizona goes to Los Angeles and the Pacific Coast. The well-to-do people spend their vacations in California. The citizens of New Mexico trade with El Paso, Tex., and Denver, Colo. They rarely go across the Divide to the coast. Consider for a moment some of the difficulties in this country of magnificent distances.

The shortest distance from Santa Fé, New Mex., to Yuma, Ariz., is 791 miles by rail. From Santa Fé to Phoenix the distance is 661 miles. There is scarcely a town of any importance in Arizona that is nearer to Santa Fé than Boston is to Washington. The traveler consumes twenty-eight hours' constant travel in a journey from Phoenix to Santa Fé, twenty-four hours from Tucson and thirty-two hours from Yuma. The citizen of Yuma who had business in the capital of the proposed new State would spend fourteen hours longer in the journey than is required to go from New York to Chicago. His railroad fare would be \$40.25.

This is not a small item by any means. The expense upon the new State would be very heavy to send members of the Legislature to Santa Fé and to pay the cost of transacting all the business of the Government which would arise in this vast area. It must not be overlooked that the original reason for the separation of Arizona and New Mexico in 1863 was that the distances between settled communities were so great that the expense of taking part in the government of the Territory was almost prohibitive to the people living in the region now comprised by Arizona.

I desire particularly to call attention to the difference between the classes of people who inhabit the two Territories. In my opinion this racial difference is

exceedingly important. Experience has shown that it is not wise to combine two distinct races under one government, where each will be striving for control of the government. The men who have built up Arizona are Americans, natives of the Eastern States. New England and New York are well represented. The Middle States have their quota in the citizenship and the States of the Mississippi Valley have sent their young men to this rich and growing country. The population is representative of sturdy Americanism in its best form. The bulk of the population in New Mexico is of Spanish origin. Their mode of life, their thought, their customs and even their local laws are different from those of the residents of Arizona. According to the report of the Governor of New Mexico, to the Secretary of the Interior for the year 1902, there are eight Spanish-Americans to five of all other races. Governor Otero once expressed the sentiment of a large number of people in New Mexico against joint Statehood in the following language:

"There is no doubt that the great majority of people of New Mexico are opposed to joining New Mexico and Arizona into one commonwealth, as proposed by pending legislation. Even a small percentage who would acquiesce in such legislation prefer single and separate statehood for each Territory. This is not due to any innate animosity between the two Territories, but to the inherent differences in population, in legislation, in industries, in contour, in ideals and from an historical and ethnological standpoint, not to mention that the consolidation of two commonwealths like New Mexico and Arizona into one is unprecedented in American history.

"The new State would be an unnatural and an unwilling alliance. It would be the coercion of two populations which are unlike in character, in ambition and largely in occupation. The union would be abhorrent to both. Simply because the two populations are in the Southwest the country should not suppose that they are alike or sympathetic."

It passes my comprehension how in face of such solemn warning as this the intelligent American Congress can persist in forcing upon the people of these two Territories an alliance which not only is objected to by both of them, but which it is shown by irrefutable evidence would be productive of nothing but evil. The people of Arizona are more bitterly opposed to the union than the citizens of New Mexico. That is due to the fact

that the New Mexico folk realize that in the forced union they would derive some compensation from being in the majority, numerically. They would dominate the situation at all times. They would outvote the Arizona faction on every proposition. It would be as if Connecticut should be joined to New York—Arizona typified by Connecticut.

The legislation contemplated in this bill has been pending since April 4, 1904, when the Hamilton bill, providing for joint Statehood between Arizona and New Mexico and Oklahoma and Indian Territory, was brought in. The bill was the result of a compromise among members of the House Committee on Territories, reached without consulting the wishes of the people of either Arizona or New Mexico or of their delegates in Congress. The first bill was jammed thru the House under whip and spur of a rule reported by the Committee on Rules, which limited debate, cut off intervening motions, prohibited amendments and fixed an hour for a vote.

It failed of enactment at that session of Congress.

As soon as the people of Arizona awoke to realization that there was danger of their being consolidated with New Mexico they began to express their opposition to the proposed legislation. This disapproval was nearly unanimous. The Legislature of Arizona adopted a resolution of protest. Commercial bodies met and objected vigorously, while local officials and private citizens all joined in objection. A delegation from the Territorial Bar Association was sent to Washington to labor with Congress. On May 27, 1905, a convention was held in Phoenix to organize an Anti-Joint Statehood League. Mayors of every city in Arizona, the county boards of supervisors and various commercial organizations sent delegates. A bi-partisan meeting of the campaign committees of the two political parties adopted resolutions. The convention unanimously adopted a set of resolutions which, since, have met with universal approval of the people of the Territory, which declared, in part:

"We profoundly believe that the union of the two Territories as one State would be inimical to the best and highest interests of both, and because of the differences in our history, laws, customs and races, and because

of the geographical division which naturally separate and divide us, such union would be particularly harmful to the people of Arizona. We believe that the complications which would inevitably result from an attempt to adjust impartially the burden of the debts of the Territories and of the various counties and municipalities thereof would result in irreconcilable differences, and that the prosperity and welfare of the various Territorial institutions would be endangered.

"We believe that it would be impossible to adopt such a code of laws as would meet the conditions in each Territory and yet which would be just to the whole people of the proposed State."

The people of Arizona claim that the organic act creating the Territory of Arizona passed by the Congress during Lincoln's administration promised them separate Statehood. That act of date of February 24, 1863, provided:

"That said Government shall be maintained and continued until such time as the people residing in said Territory shall apply for and obtain admission as a State on an equal footing with the original States."

Former Governor Murphy, of Arizona, an Eastern man, once analyzed that declaration.

"This is a distinct promise of ultimate Statehood for Arizona within her boundaries. The time when it shall be admitted is left to the discretion of Congress, but the first move must come from the people of Arizona.

"It has been argued that this promise on the part of that Congress cannot be binding on any other Congress. Strictly speaking, from a legal standpoint, this is true; but in all fairness and justice, we submit that it is not morally right for Congress to force us into this union in the face of our opposition. A large number of the people of Arizona have come here from Eastern States, and with infinite labor they have built up communities which we believe are a credit to the whole country. We have wrested the land from the desert by irrigation; we have sought for and found gold, silver, copper and other minerals valuable to the development of the industries of the United States; we have invested our capital and our lives in the success of our ventures.

"We are not seeking now for separate Statehood, but we believe that our autonomy should be preserved and that we should not be deprived forever of the hope of entering the Union as a State. Not as a tribe of Filipinos in a far distant colony, but as American citizens, we ask that Congress shall preserve our right to self-government, and the privilege of working out our own destiny under our own laws and our own institutions, and not place us under the domination of a people who greatly outnumber us and who are widely different in language, in race, in laws and in ideals."

The principal test as to whether Ari-

zona should remain separate from New Mexico with the expectation of eventually becoming a State, so far as it affects the United States as a whole is whether the resources of the territory will bring a population that will convince the whole country of its fitness to take a place among the States of the Union. The citizens of the Territory are so confident that this test will decide the question in the affirmative that they are willing to wait until the development which they expect warrants admission as a separate State. I do not care to go at length into statistics of the resources of Arizona, but I would like to recite a few to refute the statements which have been made about the territory and the misapprehension which seems to exist.

In 1905 there were more than 11,000,000 acres of land located in tracts. There were nearly 14,000,000 acres of grazing lands on the public domain. There were 26,000,000 acres in Indian and forest reserves. Of the balance of the Territory, consisting of 21,000,000 acres, the greater portion cannot be reclaimed, but is marvelously rich in copper, silver, gold and other minerals. The irrigation projects now in contemplation or under construction by the Federal Government will supply 520,000 acres of land with water. The United States Geological Survey is authority for the statement that there are 800,000

acres in Arizona which can be reclaimed by irrigation. The pine forests of Arizona cover an area of over 12,000 square miles and the value of Government timber is estimated at \$300,000,000. The total yield of gold, silver and copper from 1870 to 1894 was \$156,000,000. Within the succeeding ten years the gold and silver output amounted to nearly \$56,000,000, notwithstanding the great depreciation in the price of silver and the production of copper to \$120,000,000. The total farm products in 1899 amounted to \$10,000,000 and the live stock was valued at \$15,000,000. There is not the slightest doubt that Arizona, at her present rate of development, within a few years will be ready to claim by right membership in the sisterhood of States.

Before I close I would like to refute one base charge that has been made in the course of this contest against joint Statehood. It has been alleged as an ulterior motive for opposition that if Statehood is defeated, railroad and mining corporations will be permitted to enjoy continued immunity from adequate taxation under Territorial law. Only one answer is necessary to that: If Arizona remains a Territory the Congress of the United States has the power at all times and any time to regulate taxation in the Territory, and if the system is wrong Congress can change it.

WASHINGTON, D. C.

## The Café—A Substitute for the Saloon

BY LOUIS H. PINK

[Mr. Pink is one of the residents at the University Settlement in this city, and has, therefore, exceptional opportunities for studying the workings of the cafés on the East Side.  
—EDITOR.]

THE power of the saloon in populous centers is not far to seek. But how combat it? Substitutes, of one sort or another, have been forced down the people's throats; none have offered a solution of the problem. Is there not something as warm and personal as the saloon, but which is run on a different plan; something that has been

developed by the people themselves? On the East Side of New York the café is competing with the saloon and driving it from business. The café is partly of foreign origin, partly a natural outgrowth of the tea and coffee saloons found in such large numbers east of the Bowery. On the continent of Europe the café is part and parcel of the life of

all peoples. Conditions here have not proven happy for its growth. In no city other than New York has it become an important factor in the life even of the immigrant population.

The Italians have brought the café with them, tho so stunted is it by congestion in the tenements and enforced indoor life as to be hardly recognizable. "*Kapheneia*" are strung out along Washington street and dot the crooked lanes of that other Greek quarter huddled under the old bridge. But it is only among the Hungarians and the Russian Jews that the café is powerful enough to conduct a house to house conflict with the saloon and triumph.

These Russian and Hungarian cafés much resemble "Will's," the "Cocoa Tree" and other English coffee houses of the seventeenth century. The coffee house was but an inn or tavern, with rows of little round tables about where the guests grouped themselves to talk. The important fact is that Addison, Swift, Steele and Dr. Johnson met there to discuss learning and the day's topics. Conversation gave them a place in history.

The café on the East Side is a store. Near the window is a counter where are cakes and rolls and machines bubbling with the making of tea and coffee. There are usually two rows of tables. Most of these cafés—all that are noteworthy for their intellectual discussions—appear to be rather cheap and not at all attractive restaurants. Some, like "Lorber's" and "Eisner's," on Grand street, compare favorably with many "uptown" places. But the café is not merely for the sale of food and drink—it is an institution, perhaps the foremost on the lower East Side. The turbulent intellectual life of the neighborhood centers there. Business is transacted; the drama, art, religion and philosophy are discussed. Socialism, bred in the café, radiates from it, and, whether impossible of realization or not, sets the blood tingling with high ideals and desire for a better order; it voices the unutterable sadness of the Ghetto, the cry of the discontented, the moan of the sweatshop.

The saloon has no serious purpose. Congeniality is dampened by the constant coming and going of strangers. At the

café the same groups may be found night after night. There is a natural grouping. Artists frequent one café, Socialists another; laborers, actors, journalists—each have their favorite meeting places. It is not until close to morning that the café is transformed from an eating house to a forum.

The materialistic school of the drama holds forth on Canal street near Chrystie, where, when the theatre is out, Jacob Gordin, the great Jewish playwright, leads the discussion. "Herrick's," on Division street near Seward Park, is perhaps the best known of the Socialist strongholds. Here all talk earnestly and excitedly, the hum of voices rising and falling lulls one like the lapping of waves by the sea shore. Sometimes, when the talk at any table becomes unusually interesting, conversation elsewhere ceases and the men and women gather around to listen. Music hall performers gather at the "Café Marcus," opposite the Grand Theatre. To the more elegant of the Grand street cafés the young men take their sweethearts after the play. Business men frequent places such as "Burger's" on Avenue C. Laborers' cafés are on every block. To such an extent is natural selection carried that on Second avenue is a café where pickpockets and small crooks gather on one side and prostitutes on the other.

It is reported that in the days of the coffee houses in England many, when asked where they lived, gave the name of the inn they frequented. The café is far more pleasant than is the tenement home for the spending of leisure time. Patrons often receive their mail there and conduct their correspondence over the marble topped tables. Newspapers and magazines in many languages are on file. Waiters are always polite, and in the Hungarian resorts wear evening dress even when serving breakfast. A regular dinner of several courses served on spotless linen seldom costs more than a quarter; in the laborers' cafés a hearty meal can be had for from eight to fifteen cents.

Intellectual fervor is by no means equally marked in the Hungarian and the Russian cafés. The Magyar is more fiery, more buoyant and pleasure loving than the Russian. He has never been

persecuted nor forced to cringe. Thought has been free. Life has been easily supported by a fruitful soil. The Russian has from birth had to face grave social and economic problems; thought to him has been life. What wonder that sometimes it has not only been deep, but bitter! Cards and chess are always in progress at the Hungarian places; even breakfast, which consists of coffee and rolls neatly served on a tray, cannot be rightly enjoyed unless over a friendly game. Both peoples are inveterate smokers; both from habit and economy are wedded to the cigarette. Coffee is the Hungarian's favorite drink, tea the Russian's. Almost all of the Hungarian cafés have liquor for sale, while the great majority of Russian cafés do not. The license fee is too high and the demand is too small.

But to be specific—why is the café in advance of the saloon? There is no bar. Drinks are served at the tables by the waiters. The treating habit, which causes men to spend more than they can afford and to drink more than they can stand, is unknown. There is no rear entrance for women and children with pails and bottles to fill. Tho women are often seen at the café, they come openly, in family groups, without shame and as a matter of course. Working women need recreation as much as working men. It is the woman who drinks at home that is most in danger of ruining herself and destroying the family bond.

It is the usual custom to lounge at the café an entire evening talking with friends, playing cards, listening to music, and to order drinks or food but once. The atmosphere is restful. Excessive drinking is so rare as to be almost unknown.

The café is to the older generation what the night schools and settlements are to the younger. It is a mart for the exchange of ideas, a forum for the discussion of the common good. It is inspired by the same vital spirit that ruled the philosophers' schools of the Greeks

and also the law courts of the Romans. Yet it is by no means a perfect institution. It is not at all certain that because the café is a power on the East Side it would get the support of workingmen in other sections of the city. Its great weakness is that the young men forsake it for social and political clubs.

It is an object lesson. It sheds new light upon the problem. It is not a charity. It merits a trial far more than do the schemes that have been devised out-of-hand and thrust upon the people. The Subway Tavern is barren and a "to-let" sign hangs in front; it has met its just fate. Its proclaimed purpose was the salvation of the drunkard. This doomed it at its birth.

The workingman does not class himself as a drunkard, nor does he go to the saloon for salvation. The problem of the saloon must be solved by business men in a business way. In England, coffee houses, devised to take the place of the saloon, pay substantial dividends and are admitted to have great practical effect. In New York, high class tenements, far better than the law called for, the Mills hotels and the Provident Loan Association, have proven paying investments.

Anything of which there is genuine need can be made to pay.

If a business company, satisfied with 4 or 5 per cent. profit, were to establish bright and attractive cafés, with music, newspapers, books, cards, chess, pool tables—where one could sit as long as he liked, talk, smoke, bring his wife or his sweetheart—where coffee, chocolate, tea, sandwiches, cake, were served and more substantial food could be ordered, where beer or wine could be had if desired, where certain groups could have the same tables night after night—can it be believed that such places would not be always crowded? To doubt the ultimate victory of the café over the saloon is to doubt the intelligence and foresight of the workingman and his desire for better things.

NEW YORK CITY.

# Literature

## Colonial Administration

PROF. PAUL S. REINSCH, who holds the chair of Political Science in the University of Wisconsin, and who contributed a volume on World Politics to the Citizens' Library of Economics, Politics and Sociology, is also the author of the latest volume of this series, a review of the principal problems of colonial government.\* This book deals almost entirely with the problems arising in the administration of colonial possessions, not with true "colonies," *i. e.*, territories subject to settlement and occupation in large numbers by the people of the sovereign nation and which become self-governing communities after the model of the home country. It deals mainly, though not exclusively, with tropical and sub-tropical possessions. For Americans who have an eye on our Philippine problems this book is thus all the more valuable, its chapters forming abstracts of the experience of other nations in dealing with Education and General Social Improvement, Colonial Finance, Currency, Banking and Credit, Colonial Commerce, Communication, Agricultural and Industrial Development, Land Policy, Labor Question, and Defense and Police.

It should, however, be distinctly understood by the reader that the book is only a series of abstracts on these various colonial problems, and not in any sense an exhaustive treatment of any one of them. If any criticism were to be offered on this admirable and useful piece of work, it would be, first of all, that the author himself does not seem always to bear in mind his own limitations as a library worker. In striving after the necessary brevity, he must deal with many phases of colonialism but curtly at the best, omitting diversions to one side or the other in his discussion, though much light might thus be shed upon the questions at issue; and in summarizing his conclusions he has too often given the touch of finality to his statements. For

instance, one would like specifications and examples before he accepts quite all that may be implied in the following general pronouncements (pp. 41-2):

"Where savage races have had their original social cohesion destroyed, either by being transported to other countries as slaves, or, as in the Philippine Islands under Spain, by an attempt to level their institutions and to assimilate their life to that of a European nation, there is perhaps the nearest approach to an open field for educational experiments. As indigenous social institutions do not exist among such natives, they are more readily influenced to adopt new standards. But even here a little deeper study reveals the presence of psychological factors, which necessitate a modification of all our educational ideas. For it is impossible to destroy all social affinities, and the mental constitution persists even thru radical political changes."

Is this persistence of the "mental constitution" a proved factor? If so, how much does the phrase cover, and how apply the teachings of experience? In another place (p. 32) we find it said: "Psychological characteristics are perhaps subject to modification, but only very gradually, in the course of centuries, and as a result of radical structural modifications." Such sentences leave us with too many loose ends of thought. The author has at an earlier stage (p. 21) told us something about the Filipinos which is a little more specific along this same line, but which, if not squarely open to question, might at least be considerably modified if examined in detail.

"Parts of the Malay race have been for centuries under the rule of three different European peoples, nevertheless the Filipinos, with their Spanish instruction; the Javans, trained under the Dutch colonial system, and the Malays of the mainland, who have been under English tutelage, all display identical characteristics and have the same intellectual constitution which the earliest explorers noted in their day."

The author, in fact, seems to be less well prepared to deal with the Philippines than with the colonial possessions of Great Britain, France, Germany, and even Java. This appears not so much in the few errors of statement he has made

\* COLONIAL ADMINISTRATION. By Paul S. Reinsch. New York: The Macmillan Co. \$1.25.

as in his failure to treat of Philippine matters, except very sparingly, in his summaries. For instance, he does not directly discuss Philippine commerce at all in the appropriate chapter. His otherwise very useful chapter bibliographies are very noticeably deficient with reference to the Philippines, or to Spanish colonial administration in general.

The new internal revenue imposts in the Philippines were *not* levied in addition to the old industrial taxes (p. 117), the latter having coincidentally been abolished. There *was* no land tax, on agrarian property, under Spanish rule in the Philippines (p. 137).

Some of Professor Reinsch's summing up are, however, very pertinent with reference to questions in Philippine administration which will come immediately before Congress and the public. This is notably true with reference to means of providing agricultural credit, a crying need in the Philippines just now. Great Britain's failure to provide for this want in India and Ceylon is clearly pointed out.

"When we consider the total volume of colonial trade, we shall find that while it constitutes an important item in the world's commerce, it is not by far important enough to allow us to place it ahead of the commerce between independent nations, so as to neglect the latter or interfere with it with the purpose of developing colonial trade.

"By attempting to establish a monopoly of commerce in favor of the mother country in such colonies as Madagascar and Indo-China. France has indeed succeeded in securing for herself the bulk of the actual commerce of these dependencies, but she has at the same time seriously handicapped their economic development, and it is almost certain that her absolute share in their commerce would actually be larger under a more liberal policy."

## The Character of Renaissance Architecture

FOLLOWING his epochal treatise on Gothic architecture, published fifteen years ago, Professor Charles Herbert Moore, of Harvard University, has now issued a volume\* devoted to the exposition of the real significance of Renaissance architecture, which, for insight, scholarship and creative criticism will rank of equal value with the earlier work. Many

a superficial student and many a Renaissance worshipper among practicing architects will no doubt be startled by Professor Moore's findings, but none of them will be able to assail successfully his position. Starting with a brief comparison of the antecedent conditions of life and thought—of which the fine arts are always an expression—in the Middle Ages on the one hand and in the period of the Renaissance on the other, Professor Moore, in his introduction, develops the idea that:

"The Renaissance was by no means an entirely noble movement in the interest of spiritual and intellectual emancipation, or an unqualified advance in ideas and attainments beyond those of the Middle Ages. With all of its abuses, the Church still stood for moral order and spiritual aspirations. The revolt against it was in part a revolt against both religion and morals. The animating spirit of the movement contained much that was unchristian and destructive of high ideals."

The fine arts were called into the service of a luxurious and immoral life. And the architecture of the Renaissance, instead of being a consistent and distinctive style (such as the Greek, the Byzantine and the Gothic), is "composed of styles made up of mixed elements not in process of organic fusion." It is the varied expression of individual artists, is usually neo-pagan in form and inspiration, and does not (except in Venice alone) represent the thought and culture of a people.

"In so far as the development of the individual in the period of the Renaissance differed from that of the Middle Ages, it did so mainly in favoring individual caprice at the expense of harmonious, collective effort."

There follows a minutely analytical consideration of the notable architectural monuments of the Renaissance, from the work of Brunelleschi in Florence to that of Sir Christopher Wren in London—the churches and the palaces built by architects who were primarily sculptors and painters, and who learned architecture from the surviving monuments of transplanted Greek art in Italy and in the school of experience. As a result of his investigations Professor Moore concludes that the architecture of the Renaissance is an art without consistent principles; that the architects of the Renaissance were strangely inconsistent. "While in practice constantly violating

\* CHARACTER OF RENAISSANCE ARCHITECTURE. By Charles Herbert Moore. New York: The Macmillan Co. \$3.00.

the principles of classic design, they were in theory ardently advocating these principles"; and that the "claims which have been advanced for the architecture of the Renaissance as the only architecture of correct principles since that of classic antiquity, and as an architecture in comparison with which the Gothic art of the Middle Ages should be considered as the barbarous product of an unenlightened age, are without justification."

More than one hundred and fifty illustrations, from the author's drawings and from photographs, add much to the interest and value of the book.

### A Great Pioneer Missionary\*

No nobler figure than Father De Smet—none for his time more heroic—is to be found in the succession of the missionary priesthood in America from those who accompanied the *conquistadores* to Mexico and to the interior of our country and from the writers of the Jesuit Relations in the North to the nineteenth century evangelists. His adventurous life came to an end only a generation ago. Born in Belgium in 1801, he came to America in 1821, and in 1838 began the great work of his life among the Pottawotomies near the present city of Council Bluffs. From that time until his death in 1873 his life was a part of the pioneer history of the West, from St. Louis to the Straits of Juan de Fuca. To the general reader of American history his name may be assumed to be known, but even the special historical student will find himself lacking adequate knowledge of the great work and widespread influence which are set forth in these admirably edited volumes. In the extent of his travels, the number of missions which he founded, and in his influence among the Indians, Father De Smet was probably unequaled by any of his predecessors. How far his benign influence extended is shown by the fact that he was often ap-

pealed to by our Government to act the part of a semi-official ambassador in our relations with the Indians. In the middle of the last century, when the pressure westward was driving powerful tribes to the warpath, their trust in Father De Smet was the barrier more than once against devastating outbreaks. He assisted at great councils. He accompanied the Utah and Oregon expeditions and acted the part of peacemaker. In the sixties he was able three times to pacify the Indians of the Upper Missouri, and the treaty with the hostile Sioux in 1868 was due to his influence.

It was not only as an ambassador of the frontier, but as an unofficial foreign envoy that Father De Smet played his part, since several times in the course of his nineteen crossings he was a bearer of dispatches from this Government to European courts. All this, of course, was secondary to his life work of spreading the gospel among the Indians, organizing their religious training and founding missions, some of which remain to this day.

Like the early Jesuits whose Relations Dr. Thwaites has so admirably edited, Father De Smet recorded his perilous journeys in the wilderness, his manifold adventures, in short, all his varied experiences, in letters to his superiors and his friends. Some were published in his lifetime, others have remained inaccessible. The published works upon Father De Smet are either out of print or untranslated from the French, and no fully satisfactory biography exists.

The volumes before us include a complete biography, all the important letters, a map and characteristic illustrations. The letters have been arranged according to periods and subjects. The new matter alone is nearly equal in volume to everything heretofore published. That the work has been done with care, with alert intelligence and sympathy need hardly be urged upon those who are acquainted with Major Chittenden's "Fur Trade and Missouri River." His research work has been thoro and fruitful. It is interesting, on the other hand, to note the emphasis placed upon Father De Smet's desire to secure Oregon for the United States, in view of the hostility of the priests alleged by some ultra-zealous Whitman champions.

\* LIFE, LETTERS AND TRAVELS OF FATHER PIERRE-JEAN DE SMET, S. J. 1801-1873. Edited from the original unpublished manuscript journals and letter books, and from his first printed works, with historical, geographical, ethnological and other notes; also a Life of Father De Smet. By Hiram Martin Chittenden, Major, Corps of Engineers, U. S. A., and Alfred Talbot Richardson. With map and illustrations. Four volumes, 8vo, pp. 1,624 + xv. New York: Francis P. Harper.

**Religion and Politics.** By Algernon S. Crapsey. New York: Thomas Whittaker. \$1.25.

*Religion and Politics*, whose title is, as it were defiantly, composed of the two themes never mentioned in polite society, upon which discreet people agree to differ, is an altogether lively little book. Here is an unusual note to proceed from the pulpit—tho gradually the unusual is becoming the usual even in, and because of and despite of, these degenerate days: so clear, so clean, so straightforwardly plain-spoken all the way thru. The author is evidently a student and a thinker, a man of distinction and independence, and also of deep feeling, of lonesome feeling livingly expressed in conviction and devotion. Here is blunt statement of acute truth, unmediated, unrestrained for fear or favor, and sure touch on the corruption and defection of to-day; yet everywhere a championship of the genuine and the modern, the centrally moral, the essentially true, as against the crooked, the oblique, the indirect and the evasive. Such language, naturally, is seldom pleasing to those in power, for such truth is not with them; and man, strange animal, would rather be what he is, and even be known for what he is, than ever be told what he is. Yet publicity and proclamation are the sure paths to reformation and repentance, only we are so coy. Nowadays it is not enough for a man to be evidently truthful and in earnest, or even scholarly also and instructed, in spirit and in main contention sound; there are so many antecedent discounts to be taken, so many impairing influences to be refined away and analysed out, before men are ready to receive and to believe anything for their good “against the grain,” that they omit to live, defer reform into the broad hereafter—which never comes! A characteristic of the work is its facile and affluent reference to history, and in some judgments, like the relation of Jesus to the state, the writer seems exaggerated and mistaken; but this does not affect the argument, and his description of “The Commercialized Church,” and finally of “The American Church-State,” holds pungent truths of biting, and also of beautiful, timeliness. Much must shock many, as unconventional handling always does, and strength ex-

erted, however gently tempered; but to the alive it will be the shock of life, enkindling them to better thinking and living. On matters of politics and industry, as well as history, and on the spirit of American institutions, and on the church as the incarnation of that spirit—yet no more than the school or the health department, if these are rightly administered—on all such themes this will be found a simple yet a stimulating book, brave and persuasive, conferring dignity upon the writer, transferring worth unto the reader, a book of dear ideas that may be cheaply had (by us) but never cheaply practiced.

**The Wisdom of the Simple.** By Owen Kildare. New York: Fleming H. Revell Company. \$1.50.

In “My Mamie Rose” Owen Kildare ventures the statement that “there are gentlemen who live in tenements on the East Side,” and his new novel is the life-story of one of these gentlemen, written by another of them. *The Wisdom of the Simple* describes conditions incredible to most readers, and yet it persuades us of their reality by little turns of phrase rather than by the main lines of the plot, which is more hackneyed than the bits of description, by the way. Martin Toner, unable to read at thirteen, is a resident of Wittle street, “a connecting link between two important thoroughfares and one block distant from the river front,” a foul place, full of grime, rags and poverty, yet with a fierce independence of its own, because its men are wage earners and not beggars, “pay day being one of the fifty-two great days” in its calendar:

“It would have been better for them had they been poor, abjectly poor, and depending on charity. No crust of bread is ever offered without exacting an equivalent in goodness, sincere or pretended. And so the wards of charity, because they must obey, become possessed of some goodness—again—sincere or pretended.”

This amazing social philosophy does not come from an outsider, an alien investigator, but from one who has lived the life he portrays and has struggled up, against incredible odds, to a position of honor, quite as his hero, Martin Toner, does, who becomes the alderman of his ward after a spirited campaign, which

gives an opportunity for an exposure of political methods used in the slums before the book ends. The wings of the soul are pretty closely folded in the crowded tenement districts, but give them room to expand, the result is inspiring. The influence of the stars is felt in many streets where we have cut the sky into strips with our colossi of brick and steel, and the stars are the only pure and lovely things to be seen except the eyes of the babies, which so soon are to grow hard and cunning, like the rest. The novel of slum life has heretofore been written by observers on the outside, for no one can claim that the most devoted settlement worker is an "insider" in the sense that a native citizen of the slum must be, and the peculiar interest of *The Wisdom of the Simple* as a sociological study lies in the ethics and ideals that are of indigenous growth, and not transplanted or imposed from without. "The Men's Club" is worth study as an expression of what the "Lower New York" men wish as social beings. In the chapter or two on ward politics as they are and as they might be conducted, another trembling ideal emerges from the uncouth chrysalis of present conditions and spreads quivering, iridescent wings for upward flight. Another indigenous ideal is that of a clean, well ordered and appointed Home, and tho the love story is disappointing and the heroine not in the least worthy of the hero in this instance, the vision and the glory of love are the wisdom of the simple.

**James G. Blaine.** By Edward Stanwood. American Statesmen Second Series. Boston: Houghton, Mifflin & Co. \$1.25.

The second series of biographies of American statesmen could not open more fittingly than with the life of Blaine. The series is to include men who have been prominent in statesmanship since the Civil War, and perhaps no man in public life since that time has a more interesting personality than the "plumed knight," whose dash and fire in his tilts in the political lists won the admiration of so many thousands. Few scholars have better prepared themselves for writing Blaine's life than Mr. Stanwood, whose "History of the Presidency" and "American Tariff Controversies in the Nine-

teenth Century" have led him to make a careful study of the background upon which the statesman's figure must be drawn. It is, perhaps, too early to pass judgment upon the position of Blaine in the political controversies of his time, and Mr. Stanwood does not attempt it, but he does examine judicially the truth or falsity of the charges against Blaine's personal character which so unfortunately formed the basis of hostility to him on the part of many high-minded men. The quarrel with Roscoe Conkling, the "Mulligan Letters," the "Crédit Mobilier" charges, and the general consistency of his career are admirably and fairly presented. It is a fascinating story, for Blaine's career was one of singular contrasts—of brilliant successes and of failures as striking. He enjoyed extraordinary popularity, and suffered from opposition such as no other public man in our history has encountered. The startling changes in his fortunes could not be rivaled in the carefully contrived plot of a powerful drama. Altho Mr. Stanwood has not the skill of a truly great biographer, yet the very logic of the events themselves, plainly and simply told, furnishes a stirring narrative. The author makes a number of strong claims for his hero's lasting fame, but perhaps the most notable is that

"When the time is ripe for the inquiry how the public sentiment of the American people was led to accept . . . the functions, duties and obligations resulting from expansion beyond the continental limits, it will be found that the first and strongest impulse in that direction was due to the national self-assertion contained in Mr. Blaine's diplomatic correspondence and action."

**The Life of Oliver Ellsworth.** By William Garrett Brown. 8vo, pp. xi, 369. New York: The Macmillan Company. \$2.00.

The series of biographies coming from this house is of no little value; and one of the more important is *The Life of Oliver Ellsworth*. And yet our people are forgetting who was one of the principal founders of our judiciary system, at the head of our Supreme Court, and a distinguished representative of Connecticut at the time of the Revolutionary War and the years following it. A clear and sane account of a worthy patriot and jurist is given by a practiced historian in this volume.

**Constructive Democracy.** *The Economics of a Square Deal.* By William E. Smythe. New York: The Macmillan Company. \$1.50.

Taking for his motto De Tocqueville's apothegm, "The remedy for the evils of democracy is more democracy," Mr. Smythe advocates popular control of the nation's monopolies. He gives a perfectly fair and intelligible statement of Socialism—an achievement not usual to non-Socialist writers—but holds that whatever the future may bring, the American people are not now in any considerable degree open to Socialist propaganda. Nor are they in any degree now ready for purely Socialist experimentations. We are faced, it is declared, by certain problems which demand immediate attention, and neither the Republican nor the Democratic party as now constituted is capable of effecting a solution. Both are more or less completely in the hands of political bosses acting as the agents of the magnates for the further exploitation of the American people. Political divisions in the near future, he maintains, will be marked by a conservative party, pledged to the support of capitalist property; a revolutionary Socialist party, and a party which is neither one nor the other, but is constructive and democratic. It is to the last named party that he looks for the working out of the more pressing problems of the time. Whatever may be thought of its conclusions, or even of its general standpoint, by either conservative or Socialist, it is a book that deserves the widest reading. No adequate notion of its many excellent qualities can be given in this brief space. It is enough to say that its style, vivified by a peculiar aptness of illustration, is attractive, and that it reveals a clear understanding of the problems with which it deals.

**The War in the Far East.** New York: E. P. Dutton & Co. \$5.00.

This is not a descriptive work. It will disappoint the unwary buyer, but it is marrow and richest wine to the student of war as an art. The military correspondent of the *London Times* is the author who condenses in a volume his criticisms, made week by week and day by day, from February, 1904, until the

rival fleets, two in number, met to melt into one. It is very rich in maps and battle plans, has a full chronological order of events, roster of the fleets, the Russian *ordre de bataille* and outline of the Japanese forces, and a full index, which all together furnish a capital handbook for the critical student. Its homiletical point of view is, of course, the English audience, with deductions, warnings and glorifications, with plenty of scolding and contempt for the Prussian critics, who have pens and plenty of ink, but no experience. Taken for what it professes to be, this book is of eminent value, but since each chapter was written within a short time after the battle it narrates, and so based upon what information was allowed to transpire in this very secretive campaign, the historian of the future, with the official records at his command, will doubtless find in it many errors in detail. It shows the Russians campaigning in the style of a century ago, and the Japanese, trained under Meckel, with twenty years for digestion and preparation, fighting thru telephones. It makes pretty plain the fact that the Muscovite problem was to get a very clumsy and old fashioned camel thru the Manchurian needle's eye; or, as a Russian prisoner put it, "the Japanese mosquito succeeded in stinging the nose of the Russian lion." Tho this may seem hyperbole and rhetoric, the actual facts were well understood by the wise men who signed the Treaty of Portsmouth.

**The Industrial History of the United States.** By Katherine Coman. New York: The Macmillan Co. \$1.25.

This is an instructive and a much needed work. It will serve as a corrective of that sentimental idealism, too common in America, which holds political changes and institutional development to be the result of social ideals rather than of economic needs and aims. The economic force, as Miss Coman unanswerably shows, is the main determinant of social and political development. With a great wealth of detail, systematically arranged and accurately stated, she reveals the economic conditions and movements which have prompted social and political action in America. The illusory notions we get

in school rooms as to the causes of the American Revolution suffer a shock as one reads her careful showing of the real causes, and the student who follows her can never get back to his earlier standpoint. A like treatment is given to the fundamental causes of the Civil War. Ethical and material considerations are there shown in sharp contrast. So far as purely ethical considerations—that is, considerations uninfluenced by personal interests—are concerned, it is demonstrable that the anti-slavery sentiment was stronger in Virginia during the first decade of the nation's life than in New England. Even in the farther South it was usual to consider slavery as morally indefensible, and temporarily justifiable only on the score of necessity. But as cotton culture became the dominant pursuit of the South, and as slavery admirably fitted in with this pursuit, the justification of slavery gradually rose from that of expediency to that involving the highest considerations of ethics and religion. The Bible was held to be its bulwark, and every moral need of the people was held to be subserved by its continuance. The fervor of its defense carried some of its champions to attacks on the wage-slavery of the North so cogent and powerful that even a modern Socialist could echo them with entire approval. Seen now, at a distance of nearly two generations, the climax of the struggle between North and South reveals itself as an inevitable clash between two antagonistic systems of production for the right to invade and hold the new territories. Whatever purely moral sentiments were involved in it grew spontaneously out of this conflict of economic interests. And when Lincoln was elected, the South saw its dream of empire shattered, and could only choose that last alternative in conflict—war. This work will find its most general use, no doubt, as a text book in high schools and colleges; but it is hoped that it may also find a widely disspread favor among the general public.

**The Baglioni.** By Henry Lane Eno. New York: Moffat, Yard & Co. \$1.25.

*The Baglioni* is a tragedy of passion, crime and violence, in blank verse and five acts. It is laid in Perugia, at the be-

ginning of the fifteenth century—why is it that tragedy always occurs at the other end of the world and in “the dark backward and abysm of time”?—and it turns upon the ambitions, jealousies and intrigues of one of those rascally old Italian houses which have come to be veritable mines of riches for the after-poet. As a play it is impossible on the stage, otherwise it would never have been printed, but it is by no means uninteresting reading, in spite of the whirl of incidents and the tangle of family relationship, for almost everybody in the piece is kin to everybody else. There is always virtue in a brisk, exciting action; but in this case it rather looks as tho the writer had been carried away by his story and the torrent of historical events on which it is founded. In the general confusion the finer points of character and emotion are lost sight of, not because the poet is unequal to such matters—he has given proof of the contrary—but because he has allowed himself to be distracted by dramatically irrelevant circumstances.

**Collected Sonnets of Lloyd Mifflin.** London: Henry Frowdes. \$2.60.

We have spoken of Mr. Mifflin's poetry from time to time, as it has come out. As a sonneteer Mr. Mifflin has few rivals in point of productivity and technical excellence. The present volume, tho it includes comparatively little hitherto unpublished, is none the less likely to enhance the writer's reputation by accumulating his scattered treasure and concentrating its effect. It contains three hundred or more sonnets of a very high order of merit—a remarkable exhibition for any poet. The one regret to which this extraordinary body of work gives occasion is that its writer should, after all, be so consummate an artist. It is impossible to escape the uneasy suspicion that the sonnet has absorbed him even to the extent of obliterating those amiable traces of the man in the writer of which Pascal speaks with applause. To the generality of human beings, who delight more in the generous inadvertences of the man than the cautious calculations of the artist, he is not unlikely, perhaps, to appear merely *un homme de son métier* and to find his art mistaken for coldness or even insincerity.

**St. Cuthbert's.** By Robert E. Knowles. New York: Fleming H. Revell Company. \$1.50.

*St. Cuthbert's* is a Canadian church and parish, but it might well be in Scotland, for the breath of the heather bells pervades it, and its Presbyterianism is of a stern and uncompromising Caledonian Calvinism. The young Irish minister who is called to its pulpit has his fight to make before the hearts of his people are wholly his, as the memory of the first incumbent, the Rev. John Grant, a mighty man in the pulpit, was potent still. The loving references to a predecessor are not always easy for a newcomer to bear. A bright woman once confessed that her husband's first parish reminded her of a gently reminiscent widower, who was always praising to his second wife the virtues of "his dear first." But the young minister loves their loyalty to the dead man, whose voice would be forever silent but for its echo in their faithful hearts, and wins his own place among them. Manfully enduring many things, including the fearsome music of the bagpipe, unsweet to an Irish ear attuned to the gentler sound of the harp, he becomes a minister in very deed to his grim parishioners. There is displayed very little skill in story telling, and a ruthless use of the pruning knife among the exuberant growths of rhetoric and sentimentality would have helped the book to a stronger and more fruitful vitality; but the value of the portraits of the Scotch-Canadians, at once dour and tender, is reason enough for its welcome, and its dialectic humor and pathos will be enjoyed by many of the admirers of Barrie and Ian Maclaren.

**Introduction to the Old Testament.** By John Edgar McFadyen. New York: A. C. Armstrong & Son. \$1.75.

It is evident that Professor McFadyen has not prepared this excellent Introduction to the Old Testament because of dissent from the well known work of Cannon Driver. In general the critical position of the two is the same, but while Driver's Introduction is heavy with detail, full of references and cross-references, and entirely intelligible only to the student of Hebrew, the new work of McFadyen is usable for all and presents the important points in a clear and inter-

esting manner. It is brief, eight pages sufficing for Judges and five for Amos, yet the distinctive character of the several books is made to stand out plainly. The documentary composition of the Pentateuch, as well as of Judges, Samuel and Kings, is accepted and made clear without multiplication of references or appeal to literary characteristics not easily appreciated. The author believes there are at least four Isaiahs, that Daniel is Apocalypse, not Prophecy, and that it dates from the Maccabæan age, and that Jonah is fiction and not history. For a readable account of what scholars hold regarding the Old Testament without discussion of what is still problematical and uncertain, Professor McFadyen's treatise can be heartily commended. A special feature is the presentation in the case of each book of its religious spirit and its place in the development of Israel's faith, it being the author's opinion that as "the Old Testament is first and last a religious book, an *Introduction* to it should introduce us not only to its literary problems, but to its religious contents."

**Ben Blair.** By Will Lillibridge. Chicago: A. C. McClurg. \$1.50.

*Ben Blair* is a story of the Western Plains, when the ranch and the saloon were the only landmarks of civilization and when a misdeal or an unbranded horse might mean the death of half a dozen sons of fortune. In these surroundings Ben Blair came into the world, with no father, and a mother who died soon after his birth. The boy grew up with the one idea of following the man who had caused his mother's misery and death, and to avenge the wrong. Another prominent character in the book is Florence Baker, whose father came from England to try his luck in the Far West. How Ben Blair carries out his revenge, and wins Florence Baker, will at least hold the reader's attention, tho at the end he may realize that the book has a touch of the dime novel. A hero, we are told, must be "a strong but imperfect character"; Ben Blair, however, is endowed with all the virtues and powers yet discovered. His perfection makes him somewhat impossible.

## Literary Notes

....*The English Dialect Dictionary*, in six volumes, edited by Joseph Wright, LL. D., is now completed. (Joseph Wright, Oxford, England, \$73.05.)

....*Reminiscences of My Childhood and Youth*, by the great Danish critic, George Brandes, is announced for May publication by Fox, Duffield & Co.

....Ginn & Co. have republished in pamphlet form the 1905 Rectorial Address of Mr. Andrew Carnegie to the students of St. Andrew's University, entitled *A League of Peace*.

....In these days of sensational exposés Upton Sinclair's *The Jungle*, published last week by Doubleday, Page & Co., will take front rank. What the Beef Trust will do about it remains to be seen.

....Perhaps the most interesting articles in the March magazines are Joseph B. Bishop's record of his friendship with John Hay, in the *Century*, and Jack London's confession of his philosophy of life in the *Cosmopolitan*. The latter we comment on in our editorial columns.

....*The Book of the Singing Winds*, by Sara Hamilton Birchall, issued thru Alfred Bartlett, of Boston, is a very attractive little publication. It contains some clever verse that breathes with the spirit of out-of-doors. The author is said to be a young lady who makes Pegasus work for a living by ticking a typewriter in a Chicago business office.

....Those who have difficulty in catching the attention of Sunday School scholars may find it advantageous to use some of the simple chemical experiments which Prof. Leonard W. Doolan, of Waco, Tex., has put into the "Bible Chemistry Course" that he publishes (50 cents). Every child is interested in such chemical magic, and, if the speaker is ingenious, he may use it as an illustration to emphasize some religious truth.

....*A Guide to the Local History of Fremont, Ohio*, by Miss Lucy E. Keeler, suggests to us that young graduates of women's colleges, eager for something to do, may equally find it a labor of love to gather up the history of their native town, especially if it be one of the younger towns. It was a note like this on a local guide to Brookline, Mass., in THE INDEPENDENT, that started Miss Keeler ten years ago in her search for the perishing history of her own town.

....The spring list of Henry Holt & Co. includes *The Negro and the Nation*, by George S. Merriam; *The Social Basis of Education*, by Professor Jenks, of Cornell; *The Atlas of European History*, with thirty-two colored maps, by Prof. E. W. Drew; *The Seamaid*, by Ronald MacDonald; *Studies in American Trades Unionism*, a series of original investigations in the labor movement by the professors and graduate students of Johns Hopkins University, and *The Nonchalante*, by Stanley Olmsted.

....The J. B. Lippincott Company, of Philadelphia, announce the publication of a strictly

limited edition of *Newport: Our Social Capital*, by Mrs. John King Van Rensselaer, the versatile author of *Crochet Lace*, and *How to Make It*, *New Yorkers of the Nineteenth Century*, *The Devil's Picture Books*, etc. The present volume will have a frontispiece in color by Henry Hutt, and will include many illustrations in photogravure and double tint, as well as others from drawings by Edward Stratton Holloway. Buckram copies are priced at \$30, and those in full levant at \$50 each.

## Pebbles

PEOPLE who live in glass houses shouldn't bathe.—*Cornell Widow*.

"DID the captain lose his head during the football game?"

"No, only an ear."—*Judge*.

MRS. TALKWORDS—Henry, you were talking in your sleep last night.

Henry—Pardon me for interrupting you.—*Smart Set*.

"HE married beneath him—an impossible person."

"Ah, I see. A mesalliance, eh?"

"No, a Miss Smith, I believe."—*Cleveland Leader*.

"WHEW! What! Lottie Brown engaged? That proves what I've always said, that no matter how plain and bad tempered a girl may be, there's always a fool ready to marry her. Who's the poor man?"

"I am."—*Punch*.
